[After arguing that under §1221, all property constitutes "capital assets" unless explicitly excluded from that category by one of the subsections of §1221 and that "a court, facing such explicit statutory exceptions, has no power to invent another by recourse to other general statutory provisions," such as §162(a) or §165(a) "which do not refer to [§1221] and to which [§1221] does not refer," Judge Frank went on to discuss the cases relied upon by the majority.]

In Exposition Souvenir Corp. v. Commissioner, 2 Cir., 163 F.2d 283, the taxpayer, a concessionaire, purchased debenture bonds, of New York World's Fair 1939, Inc., as required by a contract in which the Fair awarded concession rights to the taxpayer corporation, held the debentures until six months after the close of the Fair, and then sold them at a net loss. The taxpayer urged, in the alternative, that the debentures were held for sale in the ordinary course of business or that the loss constituted an ordinary and necessary business expense deductible under [§162(a)]. The Tax Court ruled against both contentions and this court affirmed. The loss in that case, as in the case at bar, was a business expense, in that the concessionaire would probably not have purchased World's Fair debentures except to secure the concession. So here, taxpayer, in all probability, would not have purchased government bonds but for the expectation of contracting with the Finnish government. The bonds in both cases were capital assets, and did not lose that status because their purchasers were not primarily motivated by hopes of interest payments or a rise in their market value. In the earlier case of Helvering v. Community Bond & Mortgage Corporation, 2 Cir., 74 F.2d 727, per Manton, J., the taxpayer, in order to extinguish a troublesome agency contract, bought up the capital stock of the company with which it had contracted, reissued the stock to dummy stockholders, and promptly voted cancellation of the agency contract and the dissolution of the company. This court allowed the cost of the capital stock to be deducted as an ordinary and necessary expense of doing business. The question was not raised whether the loss was a capital loss. Without discussion of that question, the court treated the case just as if the taxpayer had directly paid money for cancellation of an exclusive-agency contract. Such a decision cannot serve as a precedent here. See Webster v. Fall, 266 U.S. 507, 511: "Questions which merely lurk in the record, neither brought to the attention of the court nor ruled upon, are not to be considered as having been so decided as to constitute precedents." . . .

I turn to cited cases decided in other circuits: In Commissioner v. The Hub, 4 Cir., 68 F.2d 349, 350, the taxpayer, a Wheeling, West Virginia, clothier, joined with other Wheeling retailers in organizing the Ohio Valley Industrial Corporation. The purpose of the corporation was to arrest the economic decline then experienced in Wheeling, by planning for and assisting in the settlement of new industry in the Wheeling area. Taxpayer's subscriptions to the capital of the corporation were permitted to be deducted as a business expense. In that case, however, the stock of the corporation, as distinguished from the government bonds in the instant case or from the Fair bonds in *Exposition Souvenir*, could not

be regarded as an investment. The Ohio Valley Industrial Corporation was a non-profit corporation, exempt from state and local taxes. The certificate of incorporation, after declaring that " 'This Corporation is not organized for personal gain, but only as a civic-undertaking,' " specifically provided that " 'there shall never be any dividends declared from profits, and all profits accruing shall be placed in a surplus fund for the objects and purposes of the Corporation.' " In those unusual circumstances, the court did not consider the stock purchase a purchase of capital assets.

In Edwards v. Hogg, 5 Cir., 214 F.2d 640, the taxpayer, engaged in the business of selling liquor, purchased all the shares of stock of a distilling company for the sole purpose of obtaining the liquor owned by the distilling company, and which the taxpayer intended to sell to its own customers in the ordinary course of its business. Looking through the distilling company to its assets, it was apparent that the purchase of that company's stock was but a means of acquiring the liquor which was then in short supply, i.e., obtaining the liquor was taxpayer's essential purpose. The liquor itself was property of a kind which came within one of the exceptions explicitly stated in [§1221]. Gilbert v. Commissioner, 1 Cir., 56 F.2d 361, presents a case where a building contractor received, as compensation, shares of stock in the company for which the building was erected. As found by the trial court, he accepted them in lieu of cash and intended to convert them into cash as soon as possible (a practice not uncommon among engineering and contracting firms of that day). The court found that, in those circumstances, the stock was property held by the taxpayer primarily for sale in the course of his trade or business. I think a better rationale of that decision would be that, whenever a taxpayer receives property as compensation, the situation is to be regarded as if he had received cash and had then invested it in that property; the cash value of the property is therefore part of his ordinary gross income and taxable as such. Section [1221] has no application to a case of that sort. If, however, such a taxpayer retains the property, then it is a "capital asset" — i.e., an investment in that property — and [§1221] applies to its subsequent disposition.

There is no need to consider here the problem which would arise if a taxpayer, as part of a contract, obligated himself to buy some securities, from the other party to the contract, at a price above the market price. For that was not the case here. Indeed, the contract here did not require taxpayer to buy any government bonds but merely to put such bonds in escrow, a requirement which could have been met without a purchase of bonds, if the taxpayer had already owned a sufficient amount of them. . . .

NOTE

1. *Scope of Bagley & Sewall Co. case.* If the taxpayer had retained the bonds after they were released from escrow and sold them some years later, would the result be different? Would this depend upon whether they were held solely in the hope of recouping the decline in value that had occurred during the escrow period? Should the gain or loss realized on selling the bonds be allocated between the escrow period and the post-escrow period, with the gain or loss attributable to the former period being treated as business income or loss and the post-escrow amount treated as capital gain or loss? See Gulftax Drug Co. v. Commissioner, 29 T.C. 118 (1957), aff'd per curiam, 261 F.2d 238 (5th Cir. 1958) (property acquired for business use but converted thereafter to an investment purpose; held, capital loss); but compare the treatment of losses on the disposition of property acquired for personal use but subsequently dedicated to a business purpose, supra page 245.

If the agreement in *Bagley & Sewall* had required the taxpayer to keep marketable securities with a value of at least $800,000 on deposit at all times, but permitted securities

to be sold on the taxpayer's order so long as securities of sufficient value were substituted, how would profits and losses realized on such sales be treated?

2. *Stock acquired to insure a source of supplies.* Taxpayers have frequently been allowed an ordinary loss deduction on a sale of stock acquired to insure a source of supplies used in their business. See, for example, Booth Newspapers, Inc. v. United States, 303 F.2d 916 (Ct. Cl. 1962) (stock of paper manufacturer acquired by newspaper publisher to insure source of newsprint during period of acute shortage); Tulane Hardwood Lumber Co. v. Commissioner, 24 T.C. 1146 (1955) (debentures of plywood manufacturer bought by lumber dealer). Judging from the reported cases, these transactions more often produce a loss than a gain. It is possible, of course, that taxpayers who report capital gains do not usually encounter any resistance from the Internal Revenue Service because profits on the sale of stock are ordinarily taxable as capital gain and there is no formal way in which the taxpayer's business purpose in acquiring the stock would come to the Service's attention. In Mansfield Journal Co. v. Commissioner, 274 F.2d 284 (6th Cir. 1960), however, the court held that a newspaper company's profit on the sale of a long-term contract for the purchase of newsprint was ordinary income under the *Corn Products* rationale; and the same result would seem proper if the taxpayer had sold the stock of the supplier.

See also Hagan v. United States, 221 F. Supp. 248 (W.D. Ark. 1963) (salesman purchased stock of a customer in order to protect his source of commissions; held, loss on worthlessness deductible from ordinary income).

2. *Substitute for Ordinary Income*

HORT v. COMMISSIONER

313 U.S. 28 (1941)

Mr. Justice Murphy delivered the opinion of the Court.

We must determine whether the amount petitioner received as consideration for cancellation of a lease of realty in New York City was ordinary gross income as defined in [§61(a)], and whether, in any event, petitioner sustained a loss through cancellation of the lease which is recognized in [§165(a)].

Petitioner acquired the property, a lot and ten-story office building, by devise from his father in 1928. At the time he became owner, the premises were leased to a firm which had sublet the main floor to the Irving Trust Co. In 1927, five years before the head lease expired, the Irving Trust Co. and petitioner's father executed a contract in which the latter agreed to lease the main floor and basement to the former for a term of fifteen years at an annual rental of $25,000, the term to commence at the expiration of the head lease.

In 1933, the Irving Trust Co. found it unprofitable to maintain a branch in petitioner's building. After some negotiations, petitioner and the Trust Co. agreed to cancel the lease in consideration of a payment to petitioner of $140,000. Petitioner did not include this amount in gross income in his income tax return for 1933. On the contrary, he reported a loss of $21,494.75 on the theory that the amount he received as consideration for the cancellation was $21,494.75 less than the difference between the present value of the unmatured rental payments and the fair rental value of the main floor and basement for the unexpired term of the lease. He did not deduct this figure, however, because he reported other losses in excess of gross income.

The Commissioner included the entire $140,000 in gross income, disallowed the asserted loss, made certain other adjustments not material here, and assessed a deficiency. The Board of Tax Appeals affirmed. 39 B.T.A. 922. The Circuit Court of Appeals affirmed per curiam on the authority of Warren Service Corp. v. Commissioner, 110 F.2d 723. 112 F.2d 167. Because of conflict with Commissioner v. Langwell Real Estate Corp., 47 F.2d 841, we granted certiorari limited to the

that Congress intended to allow petitioner to reduce ordinary income actually received and reported by the amount of income he failed to realize. . . . We may assume that petitioner was injured insofar as the cancellation of the lease affected the value of the realty. But that would become a deductible loss only when its extent had been fixed by a closed transaction. Regulations [§1.165-1(b)]; United States v. White Dental Mfg. Co., 274 U.S. 398.

The judgment of the Circuit Court of Appeals is affirmed.

NOTE

1. *Significance of §61(a).* Mr. Justice Murphy suggests in *Hort* that the amount received by the taxpayer was taxable as ordinary income partly because it was a substitute for rental payments that are "expressly characterized as gross income" by what is now §61(a)(5). Does this imply that the term "gross income" does not embrace capital gains as well as ordinary income? Are stock market profits to be denied capital gain treatment because §61(a)(3) expressly characterizes "gains derived from dealings in property" as gross income?

2. *The "substitute for ordinary income" theory.* Assume that Smith owns a parcel of vacant land that can be most profitably used, for the foreseeable future, as a parking lot. Jones offers to take the property on a 99-year lease for a rental of $5000 per year or to buy it outright for $100,000; both Jones and Smith think that these alternative proposals are of equal value because $100,000 invested in an annuity would yield, assuming a 5 per cent interest factor, about $5000 per year for 99 years and the residual value of the land at the end of 99 years can be ignored; they also think that if Smith were to go into the parking lot business himself he would earn about $5000 per year above his expenses (including reasonable compensation for his own services). If Smith decides to sell the land to Jones, would his profit constitute ordinary income on the ground that it is a substitute either for the rent that he might otherwise have obtained by leasing the property to Jones or for the investment return that he might have realized by operating it himself? See Samuelson, Economics 647 (5th ed. 1961): "What exactly is the formula for the capitalized market value of *any* asset? . . . Under absolute certainty, every asset will be capitalized by the price bids of buyers and sellers in the market place at the present discounted value of all its future net receipts." See also Bonbright, Valuation of Property 216-266 (1937 ed.).

In United States v. Dresser Industries, Inc., 324 F.2d 56, 58-59 (5th Cir. 1963), involving an agreement under which the taxpayer authorized another company to use a patent for $500,000, to be paid out of the fees received by the latter company for using the patent in work for third parties, the court said:

> The government did not, below, raise the first point, that is, that the gain is anticipated future income, and cannot raise it here on appeal for the first time. . . . But we feel that the broad assertion made that, in any case where the purchase price includes anticipated income there can be no capital gains treatment, must be answered. . . . As a legal or economic position, this cannot be so. The only commercial value of any property is the present worth of future earnings or usefulness. If the expectation of earnings of stock rises, the market value of the stock may rise; at least a part of this increase in price is attributable to the expectation of increased income. The value of a vending machine, as metal and plastic, is almost nil; its value arises from the fact that it will produce income.
>
> At common law, the right to receive income from land was ownership of the land. Lord Coke said: "If a man seized of land in fee by his deed granteth to another the profits of these lands, to have and to hold to him and his heirs, and maketh livery secundum forman chartae, the whole land itself doth pass. *For what is land but the profits thereof?*" Co. Lit. 45. [Emphasis added.]
>
> There is, in law and fact, a vast difference between the present sale of the future right to *earn* income and the present sale of the future right to *earned* income. If an asset will not in the future be useful, or capable of earning income, it is worthless in the business world.

question whether, "in computing net gain or loss for income tax purposes, a taxpayer [can] offset the value of the lease canceled against the consideration received by him for the cancellation." 311 U.S. 641.

Petitioner apparently contends that the amount received for cancellation of the lease was capital rather than ordinary income and that it was therefore subject to [the provisions of the Code] which govern capital gains and losses. Further, he argues that even if that amount must be reported as ordinary gross income he sustained a loss which [§165(a)] authorizes him to deduct. We cannot agree.

The amount received by petitioner for cancellation of the lease must be included in his gross income in its entirety. . . . [§61(a)] reached the rent paid prior to cancellation just as it would have embraced subsequent payments if the lease had never been canceled. It would have included a prepayment of the discounted value of unmatured rental payments whether received at the inception of the lease or at any time thereafter. Similarly, it would have extended to the proceeds of a suit to recover damages had the Irving Trust Co. breached the lease instead of concluding a settlement. Compare United States v. Safety Car Heating Co., 297 U.S. 88; Burnet v. Sanford, 282 U.S. 359. That the amount petitioner received resulted from negotiations ending in cancellation of the lease rather than from a suit to enforce it cannot alter the fact that basically the payment was merely a substitute for the rent reserved in the lease. So far as the application of [§61(a)] is concerned, it is immaterial that petitioner chose to accept an amount less than the strict present value of the unmatured rental payments rather than to engage in litigation, possibly uncertain and expensive.

The consideration received for cancellation of the lease was not a return of capital. We assume that the lease was "property," whatever that signifies abstractly. Presumably the bond in Helvering v. Horst and the lease in Helvering v. Bruun were also "property," but the interest coupon in *Horst* and the building in *Bruun* nevertheless were held to constitute items of gross income. Simply because the lease was "property" the amount received for its cancellation was not a return of capital, quite apart from the fact that "property" and "capital" are not necessarily synonymous in the Revenue Act of 1932 or in common usage. Where, as in this case, the disputed amount was essentially a substitute for rental payments which [§61(a)(5)] expressly characterizes as gross income, it must be regarded as ordinary income, and it is immaterial that for some purposes the contract creating the right to such payments may be treated as "property" or "capital."

For the same reasons, that amount was not a return of capital because petitioner acquired the lease as an incident of the realty devised to him by his father. Theoretically, it might have been possible in such a case to value realty and lease separately and to label each a capital asset. Compare Maass v. Higgins, 312 U.S. 443; Appeal of Farmer, 1 B.T.A. 711. But that would not have converted into capital the amount petitioner received from the Trust Co., since [§102(b)(1)] would have required him to include in gross income the rent derived from the property, and that section, like [§61(a)], does not distinguish rental payments and a payment which is clearly a substitute for rental payments.

We conclude that petitioner must report as gross income the entire amount received for cancellation of the lease, without regard to the claimed disparity between that amount and the difference between the present value of the unmatured rental payments and the fair rental value of the property for the unexpired period of the lease. The cancellation of the lease involved nothing more than relinquishment of the right to future rental payments in return for a present substitute payment and possession of the leased premises. Undoubtedly it diminished the amount of gross income petitioner expected to realize, but to that extent he was relieved of the duty to pay income tax. Nothing in [§165(a)] indicates

> We conclude, therefore, that the sale was not merely the present sale of the right to earned income, to be paid in the future. Taxpayer had an asset, a right, a property which would produce income. The fact that the income which *could* be earned would be ordinary income is immaterial; such would be true of the sale of all income-producing property.

See also the concurring opinion of Judge John R. Brown at 61-62:

> Running through several of our prior opinions is the asserted concept that capital gains versus ordinary income is to be determined by the status of current earnings were the asset to have remained in the hands of the transferor. On this approach it is reasoned that if the current income would have been taxable ordinary income, then the sales price which represents the substitute for such future earnings is likewise taxable ordinary income.
>
> I think this is both bad economics and faulty law. A person acquires property for one of two, or both reasons. The first is to receive earnings, i.e., income. The other is to hold the property for appreciation resulting from long or short range economic conditions, inflation or the like. Normally, of course, the predominant reason is to acquire the earning capacity represented by the earnings which the property will generate.
>
> Hence it is that among those who trade in corporate securities on established national exchanges or over-the-counter markets, there are recognized rules of thumb by which the present value, hence market price, is determined for a given stock. The same is true in the contemporary, frequent practice of large-scale corporate acquisitions by one corporation of the stock or assets of another corporation. Value — market or sales price — is determined by capitalizing earnings. Whether the formula is the conservative one of 6 or 7 times earnings, or something less, or one considerably more speculative, what the buyer offers is his estimate of the present, discounted value of the future earnings of the assets or enterprise.
>
> But although this sales price is determined by future earnings, and to the seller it takes the place of what he would have received had he continued his ownership, under no stretch of the imagination is it "ordinary income" either in the business world or in the sometimes more weird, tax world. Were this so, then every such sale for a price in excess of cost would entail this analysis and this tax consequence.

3. *"Premium value" of inherited lease.* The father of the taxpayer in *Hort* died in 1928, one year after the lease was executed, and it may not have had a premium value as of that time. By 1933, however, the lease was a valuable asset, as is evidenced by the lessee's willingness to pay $140,000 to be relieved of its obligations. If the taxpayer's father had died in 1932 or in early 1933, would the taxpayer have been entitled to a basis for the lease (separate from his basis for the underlying land and building) equal to its value on the date of his father's death? If so, could this basis have been (a) amortized against the rents paid by the tenant, (b) taken into account in computing gain or loss if the taxpayer sold the lease, or (c) offset against the $140,000 received on cancellation of the lease? See World Publishing Co. v. Commissioner, supra page 306; Commissioner v. Moore, 207 F.2d 265 (9th Cir. 1953), noted in 67 Harv. L. Rev. 894 (1954).

McALLISTER v. COMMISSIONER

157 F.2d 235 (2d Cir. 1946), cert. denied, 330 U.S. 826 (1947)

Before SWAN, CLARK, and FRANK, Circuit Judges.

CLARK, Circuit Judge.

This petition for review presents the question whether the sum of $55,000 received by petitioner on "transfer" or "surrender" of her life interest in a trust to the remainderman constitutes gross income under [§61(a)], or receipts from the sale of capital assets as defined in [§1221]. As we shall see, some significance seemingly is attached to a choice between the two words set in quotation marks as a description of the transaction. Petitioner contends that the life estate was a capi-

tal asset, the transfer of which resulted in a deductible capital loss, leaving her with no taxable income for the year. A majority of the Tax Court agreed with the Commissioner that the receipt in question was merely an advance payment of income, while four judges dissented, Judges Opper and Disney writing the opposing opinions. 5 T.C. 714.

The will of Richard McAllister established a trust fund of $100,000, the income of which was to be paid to his son John McAllister for life and, on the latter's death without children, to John's wife, the petitioner herein. On her death, the trust was to terminate, the residue going to the testator's wife and his son Richard. The testator died in 1926, his widow in 1935, and John in 1937. Except for stock in the R. McAllister corporation, not immediately salable at a fair price, John left assets insufficient to meet his debts; and in order to obtain immediate funds and to terminate extended family litigation according to an agreed plan, petitioner brought suit in the Court of Chancery of New Jersey to end the trust. The parties then agreed upon, and the court in its final decree ordered, a settlement by which the remainderman Richard, in addition to taking over the stock for $50,000, was to pay petitioner $55,000, with accumulated income and interest to the date of payment, in consideration of her release of all interest in the trust and consent to its termination and cancellation. Receiving payment on July 19, 1940, petitioner, in accordance with the court order, executed a release, providing:

> I do further consent and agree that my estate in the aforesaid trust, created under the third paragraph of the . . . will . . . shall be and the same is hereby terminated absolutely, and I do decline to accept further any benefits therefrom or interest therein.

For the year 1940, she reported a capital loss on the transaction of $8,790.20, the difference between the amount received and the value of the estate computed under I.T. 2076.* The Commissioner disallowed the loss and made the deficiency assessment which was upheld by the majority below.

The issue, as stated by the Tax Court and presented by the parties, reduces itself to the question whether the case is within the rule of Blair v. Commissioner [supra p. 350], or that of Hort v. Commissioner [supra p. 499]. In the *Blair* case, the life beneficiary of a trust assigned to his children specified sums to be paid each year for the duration of the estate. The Supreme Court held that each transfer was the assignment of a property right in the trust and that, since the tax liability attached to ownership of the property, the assignee, and not the assignor, was liable for the income taxes in the years in question. The continued authority of the case was recognized in Helvering v. Horst [supra p. 352], although a majority of the Court thought it not applicable on the facts, and in Harrison v. Schaffner [supra p. 356], where the Court very properly distinguished it from the situation where an assignor transferred a portion of his income for a single year. We think that its reasoning and conclusion support the taxpayer's position here. It has been relied upon by other cases cited below which we find indistinguishable from the present case.

Petitioner's right to income for life from the trust estate was a right in the estate itself. Had she held a fee interest, the assignment would unquestionably have been regarded as the transfer of a capital asset; we see no reason why a different result should follow the transfer of the lesser, but still substantial, life interest. As the Court pointed out in the *Blair* case, the life tenant was entitled to enforce the trust, to enjoin a breach of trust, and to obtain redress in case of breach. The proceedings in the state chancery court completely divested her of these rights and of any possible control over the property. The case is therefore distinguishable from that of Hort v. Commissioner, supra, where a landlord for a consideration

* For this ruling see editor's note, infra page 507. — Ed.

cancelled a lease for a term of years, having still some nine years to run. There the taxpayer surrendered his contractual right to the future yearly payments in return for an immediate payment of a lump sum. The statute expressly taxed income derived from rent [§61(a)(5)]; and the consideration received was held a substitute for the rent as it fell due. It was therefore taxed as income.

What we regard as the precise question here presented has been determined in the taxpayer's favor on the authority of the *Blair* case by the Eighth Circuit in Bell's Estate v. Commissioner, 8 Cir., 137 F.2d 454, reversing 46 B.T.A. 484. . . .

The Tax Court and the government have attempted to distinguish both the *Bell* and the *Blair* cases on grounds which seem to us to lack either substance or reality. The principal ground seems to be the form the transaction assumed between the parties. Thus the Court says that petitioner received the payment for "surrendering" her rights to income payments, and "she did not assign her interest in the trust, as did petitioners in the *Bell* case." But what is this more than a distinction in words? Both were cases where at the conclusion of the transaction the remaindermen had the entire estate and the life tenants had a substantial sum of money. There surely cannot be that efficacy in lawyers' jargon that termination or cancellation or surrender carries some peculiar significance vastly penalizing laymen whose counsel have chanced to use them. And the fact that the whole affair was embodied in a court decree can add nothing more than a seal of legal validity to it. What was practically accomplished remained the same. And that here, as in the *Bell* case, there was a "surrender" to the remainderman, rather than a "transfer" to third persons as in the *Blair* case, does not change the essentially dispositive nature of the transaction so far as the former property owner is concerned.

Other suggestions seem equally dubious. Thus it is said that the transfer in the *Blair* case was without consideration. But it is hard to see how this affects either the fact or the validity of the transfer; if anything, the odds should favor the conveyance for a consideration — the income of which will yield taxes in the future. Naturally, since there were no capital gains or losses, the *Blair* case does not discuss them. (Actually it cites neither the gross income nor the capital assets statutes.) But its holding that the assignment leaves no taxable income with the assignor is just as potent here on the like point, even though we do have the further problem posited by the claim of a capital loss. And there was very definitely a consideration paid in the *Bell* case. Next it is urged that there could be no assignment because this was a spendthrift trust where the creator had forbidden assignment or anticipation by a beneficiary. (The form of prohibition here was an express command as to a vested equitable interest; there was no grant of discretionary power to the trustees to withhold income.) But the answer is that it was done by a series of transactions affirmed by the state court. That is, the trust provisions made passing of the interest somewhat more difficult, but not beyond the ingenuity of lawyers, when the parties were agreed. So in the *Blair* case the government argued that the trust was a spendthrift trust under Illinois law. Said the Court, 300 U.S. 5, 10:

> The point of the argument is that, the trust being of that character, the state law barred the voluntary alienation by the beneficiary of his interest. The state court held precisely the contrary. The ruling also determines the validity of the assignment by the beneficiary of parts of his interest. That question was necessarily presented and expressly decided.

Setting the bounds to the area of tax incidence involves the drawing of lines which may often be of an arbitrary nature. But they should not be more unreal

than the circumstances necessitate. Here the line of demarcation between the *Blair* and the *Hort* principles is obviously one of some difficulty to define explicitly or to establish in borderline cases. Doubtless all would agree that there is some distinction between selling a life estate in property and anticipating income for a few years in advance. It is the kind of distinction stressed in Harrison v. Schaffner, where the Court said:

> Nor are we troubled by the logical difficulties of drawing the line between a gift of an equitable interest in property for life effected by a gift for life of a share of the income of the trust and the gift of the income or a part of it for the period of a year as in this case.

The distinction seems logically and practically to turn upon anticipation of income payments over a reasonably short period of time and an out-and-out transfer of a substantial and durable property interest, such as a life estate at least is. See 57 Harv. L. Rev. 382; 54 Harv. L. Rev. 1405; 50 Yale L.J. 512, 515. Where the line should be finally placed we need not try to anticipate here. But we are clear that distinctions attempted on the basis of the various legal names given a transaction, rather than on its actual results between the parties, do not afford a sound basis for its delimitation. More rationally, to accept the respondent's contention we ought frankly to consider the *Blair* case as overruled, 50 Yale L.J. 512, 518, a position which, as we have seen, the Supreme Court itself has declined to take.

The parties are in conflict as to the valuation of the life estate; and we are returning the case to the Tax Court for computation, without, of course, assuming that there will necessarily be some tax.

Reversed and remanded.

FRANK, Circuit Judge (dissenting).

Taxpayer's father-in-law, by his will, created a trust by which taxpayer during her life was to receive the income from a fund of $100,000; the will provided that she was not to dispose of her interest or otherwise to anticipate the income. She joined with others interested in the trust to demolish it; in consideration of her doing so, she received a lump sum of $55,000. The question is whether, with respect to that $55,000, resulting from the frustration of the testator's purpose through the destruction of the trust, she is entitled to the exceptional advantages of the capital gains provisions.

We must, then, ascertain the intention of Congress expressed in those provisions — especially [§1221] — in the light of the language it employed and the policy there embodied, i.e., we must determine whether Congress intended that a taxpayer who receives income in those circumstances should come within that exception.

My colleagues avoid a direct discussion of that problem. Instead, they rely on Blair v. Commissioner, which they hold to be controlling. But the court in the *Blair* case had no occasion to, and did not, consider [§1221]; it considered solely the interpretation of [§61(a)]. There, the holder of a life interest, created by a trust, had made a gift for life of a share of the future income. The only question was whether thereafter the donor, notwithstanding the gift, should be regarded, under [§61(a)], as the recipient annually of that part of the income which was the subject of the gift and, consequently, should be taxed each year thereon. In other words, no capital gain or loss was involved, and the one issue was whether the donor or donee was annually taxable. The only conceivable ground for holding the donor liable was — as the court recognized in Helvering v. Horst and Harrison v. Schaffner — that which moved the Court in Helvering v. Clifford [supra p. 372], i.e., that, in terms of "non-material satisfactions" the donor had not, by the

gift, changed his position and, because of his continued "enjoyment of the economic benefit," must still be regarded, within [§61(a)], as receiving the income actually paid to the donee. . . .

The policy of the capital gains provisions is not in doubt: Congress believed that the exaction of income tax on the usual basis on gains resulting from dispositions of capital investments would undesirably deter such dispositions. To put it differently, Congress made an exception to [§61(a)], in order to give an incentive to the making of such transfers. Having regard to that purpose, the courts have been cautious in interpreting the clauses creating that exception. They have refused to regard as "capital" transactions for that purpose divers sorts of transfers of "property," especially those by which transferors have procured advance payments of future income.

Those cases and Hort v. Commissioner seem to me to render it somewhat doubtful whether any transfer of a life estate for a valuable consideration is within [§1221]. The consideration paid for such a transfer is a substitute for future payments which would be taxable as ordinary income, and resembles the advance payment of dividends, interest or salaries. I am, therefore, not at all sure that Bell's Estate v. Commissioner, 8 Cir., 137 F.2d 454, is correct (although, for reasons noted below, I think it is not apposite here). It may well be that, had Congress specifically thought of the problem, it would explicitly so have defined "capital assets" as to exclude such an interest. I do not say that Hort v. Commissioner conclusively fixes that interpretation, but it does so suggest.

It suggests far more strongly that we cannot reasonably extrapolate the language of [§1221] to include the transaction before us in the instant case. In the *Hort* case, the Supreme Court held that the "prepayment of the discounted value of unmatured rental payments" to a landlord on the cancellation of a lease constituted "ordinary income," coming within [§61(a)], and not within the capital gains clauses. The Court said, "Simply because the lease was 'property' the amount received for its cancellation was not a return of capital"; and it also said that

> it is immaterial that for some purposes the contract creating the right to such payments may be treated as "property" or "capital." . . . The cancellation of the lease involved nothing more than the relinquishment of the right to future rental payments in return for a present substitute payment and possession of the leased premises . . .

and it added that [§61(a)] "does not distinguish rental payments and a payment which is clearly a substitute for rental payments."

That ruling is indeed suggestive here. For here we have these facts: The creator of the trust did everything he could to keep the taxpayer from disposing of her life interest.[1] Aided by what my colleagues described as "the ingenuity of counsel," she succeeded in frustrating his effort to prevent such alienation, by joining with the other persons interested in the trust to "extinguish" and "cancel" it; the instruments she executed in that connection recited that the payment to her was "to represent the value of her life interest" and that the "settlement is

---

1 His will and codicil contained the following provisions:

"I further direct that the income from the various trusts hereinabove created shall not be subject to any transfers, assignments or encumbrances, made or created by any of the respective beneficiaries, and shall not be subject to any suits, liens, judgments, attachments, or executions resulting from any debts or acts of any of the respective beneficiaries, nor shall the same be subject to any suits, actions or proceedings, of any kind, brought against any of them. . . .

"I will and direct that all the shares of principal and income by this my will given to or directed to be held for the use and benefit of the several and respective beneficiaries in the Trusts in this my will mentioned or set out shall not be in any way or manner subject or liable to their or either of their anticipation, sale, pledge, debts, contracts, engagements or liabilities, and not subject or liable to attachment or sequestration under any legal or equitable or other process."

based to a large extent upon her life expectancy." In that way, what the testator intended should be given to her only in instalments, she procured, in effect, in a lump sum payment.

I think it most unlikely that Congress intended by [§1221] to relieve such a taxpayer of the ordinary tax burdens, to supply an incentive for the demolition of such a trust. That the life tenant in the *Blair* case in somewhat similar manner avoided the intent of the trust's creator is, I think, of no moment; for that conduct was not relevant to the issue of Congressional purpose there before the Court, i.e., whether [§61(a)] made her taxable on the income subsequently paid her donee. But here the question is whether Congress meant that the exceptional benefits of [§1221] should be accorded a taxpayer who, in disposing of her life interest, circumvented the avowed purpose of the creator of the trust. I think not.

Perhaps Bell's Estate v. Commissioner is distinguishable from the instant case. For there the creator of the trust had not sought to prevent alienation of the life interests, and it is arguable that furtherance of sales of such interests falls within the intention of [§1221]. But, since that question is not present here, I think we should leave it unanswered.

For the foregoing reasons, I think the Tax Court's decision should be affirmed.

NOTE

1. *Is a life estate better dead than alive?* This case should be studied in conjunction with the rule of Irwin v. Gavit, and its statutory codification, supra page 145. Because of §102(b)(2) and §273, the life tenant is taxed on the entire income of the trust, without allowance for the fact that the rights which he inherited will decline in value during his lifetime and be obliterated by his death. But the Regulations provide that the life tenant has a basis for his interest in the trust, for purposes of computing gain or loss on a sale, even though under §273 no part of this basis can be amortized against his receipts if he retains his interest. Regs. §1.1014-5. If the life tenant sells his interest under a testamentary trust immediately after the testator's death, his basis under §1014 is the value of his life estate on the date of death. If he holds the interest for a period of time, however, it is not clear whether the date-of-death basis remains intact, Allen v. First National Bank & Trust Co., 157 F.2d 592 (5th Cir. 1946), cert. denied, 330 U.S. 828 (1947), or must be adjusted downward to reflect the reduction in value owing to the life tenant's greater age, see Regs. §1.1014-5, Example; I.T. 2067, III-2 C.B. 18, referred to by the court in the *McAllister* case. The taxpayer in *McAllister* followed the latter theory, and computed her basis by reference to her age when the life interest was sold in 1940, rather than using the value of the interest when acquired by inheritance in 1927. Use of the 1927 value would have increased her basis and, therefore, her loss.

Did the court hold that the entire proceeds of the sale was to be reported as capital gain? See the last paragraph of the opinion. Under the court's theory, could there have been a deductible loss, as the taxpayer reported?

If the *McAllister* case can be relied on, how can life tenants afford *not* to sell their interests? What practical obstacles stand in their way?

2. *Short-term transactions.* The taxpayer in the *McAllister* case was 35 when she sold her life estate, and her life expectancy was about 37 years. Would the court have reached the same result if she had been much older and had a life expectancy of only 5 or 10 years? See Rev. Rul. 55-38, discussed in paragraph 10 of the editor's note, supra page 380, for a possible analogy.

3. *Treatment of remainderman.* After the remainderman in *Bell's Estate* (followed by the court in the *McAllister* case) acquired the life tenant's interest, he sought to amortize his cost, over the life expectancy of the life tenant, against the income that he derived from the property. Rejecting the government's contention that the amount paid to acquire the life estate was a capital investment to be recovered only when the property itself was sold because there had been a "merger" of the life estate and the remainder, the Court of Appeals for the Seventh Circuit upheld the taxpayer's right to amortize his cost

currently, and the Internal Revenue Service has announced its acquiescence. Bell v. Harrison, 212 F.2d 253 (7th Cir. 1954); Rev. Rul. 62-132, 1962-2 C.B. 73 (acquiescence limited to transactions that are bona fide and not for tax avoidance).

COMMISSIONER v. LAKE

356 U.S. 260 (1958)

MR. JUSTICE DOUGLAS delivered the opinion of the Court.

We have here, consolidated for argument, five cases involving an identical question of law. Four are from the Tax Court whose rulings may be found in 24 T.C. 1016 (the *Lake* case), 24 T.C. 818 (the *Fleming* case), 24 T.C. 1025 (the *Weed* case). (Its findings and opinion in the *Wrather* case are not officially reported.) Those four cases involved income tax deficiencies. The fifth, the *O'Connor* case, is a suit for a refund originating in the District Court. 143 F. Supp. 240. All five are from the same Court of Appeals, 241 F.2d 71, id., p. 65, id., p. 78, id., p. 84, id., p. 69. The cases are here on petitions for certiorari which we granted because of the public importance of the question presented. 353 U.S. 982.

The facts of the *Lake* case are closely similar to those in the *Wrather* and *O'Connor* cases. Lake is a corporation engaged in the business of producing oil and gas. It has a seven-eighths working interest[1] in two commercial oil and gas leases. In 1950 it was indebted to its president in the sum of $600,000 and in consideration of his cancellation of the debt assigned him an oil payment right in the amount of $600,000, plus an amount equal to interest at 3 percent a year on the unpaid balance remaining from month to month, payable out of 25 percent of the oil attributable to the taxpayer's working interest in the two leases. At the time of the assignment it could have been estimated with reasonable accuracy that the assigned oil payment right would pay out in three or more years. It did in fact pay out in a little over three years.

In its 1950 tax returns Lake reported the oil payment assignment as a sale of property producing a profit of $600,000 and taxable as a long-term capital gain . . . The Commissioner determined a deficiency, ruling that the purchase price (less deductions not material here) was taxable as ordinary income, subject to depletion. The *Wrather* case has some variations in its facts. In the *O'Connor* case the assignors of the oil payments owned royalty interests[2] rather than working interests. But these differences are not material to the question we have for decision.

The *Weed* case is different only because it involves sulphur rights, rather than oil rights. The taxpayer was the owner of a pooled overriding royalty in a deposit known as Boling Dome.[3] The royalty interest entitled the taxpayer to receive $0.00966133 per long ton of sulphur produced from Boling Dome, irre-

1 An oil and gas lease ordinarily conveys the entire mineral interest less any royalty interest retained by the lessor. The owner of the lease is said to own "the working interest" because he has the right to develop and produce the minerals.

In Anderson v. Helvering, 310 U.S. 404, we described an oil payment as "the right to a specific sum of money, payable out of a specified percentage of the oil, or the proceeds received from the sale of such oil, if, as and when produced." Id., at 410. A royalty interest is "a right to receive a specified percentage of all oil and gas produced" but, unlike the oil payment, is not limited to a specified sum of money. The royalty interest lasts during the entire term of the lease. Id., at 409.

2 See note 1, supra.

3 Boling Dome is a tract composed of various parcels of land. The owners of the royalty interests in sulphur produced from the separate parcels entered into a pooling agreement by which royalties from sulphur produced anywhere in Boling Dome were distributed pro rata among all the royalty interest holders. In that sense was the interest of each "pooled."

spective of the market price. Royalty payments were made each month, based on the previous month's production.

In 1947, the taxpayer, in order to obtain a sure source of funds to pay his individual income taxes, agreed with one Munro, his tax advisor, on a sulphur payment assignment. The taxpayer assigned to Munro a sulphur payment totaling $50,000 and consisting of 86.254514 percent of his pooled royalty interest, which represented the royalty interest on 6,000,000 long tons of the estimated remaining 21,000,000 long tons still in place. The purchase price was paid in three installments over a three-year period. Most of the purchase price was borrowed by Munro from a bank with the sulphur payment assignment as security. The assigned sulphur payment right paid out within 28 months. The amounts received by the taxpayer in 1948 and 1949 were returned by him as capital gains. The Commissioner determined that these amounts were taxable as ordinary income, subject to depletion.

The *Fleming* case is a bit more complicated and presents an additional question not in the other cases. Here oil payment assignments were made, not for cash but for real estate. Two transactions are involved. Fleming and others with whom he was associated made oil payment assignments, the rights and interests involved being held by them for productive use in their respective businesses of producing oil. Each oil payment was assigned for an interest in a ranch. Each was in an amount which represented the uncontested fair value of the undivided interest in the ranch received by the assignor, plus an amount equal to the interest per annum on the balance remaining unpaid from time to time. The other transaction consisted of an oil payment assignment by an owner of oil and gas leases, held for productive use in the assignor's business, for the fee simple title to business real estate. This oil payment assignment, like the ones mentioned above, was in the amount of the uncontested fair market value of the real estate received, plus interest on the unpaid balance remaining from time to time.

First, as to whether the proceeds were taxable as long term taxable gains . . . or as ordinary income subect to depletion. The Court of Appeals started from the premise, laid down in Texas decisions, see especially Tennant v. Dunn, 130 Tex. 285, 110 S.W.2d 53, that oil payments are interests in land. We too proceed on that basis; and yet we conclude that the consideration received for these oil payment rights (and the sulphur payment right) was taxable as ordinary income, subject to depletion.

The purpose of [the capital gains provisions] was "to relieve the taxpayer from . . . excessive tax burdens on gains resulting from a conversion of capital investments, and to remove the deterrent effect of those burdens on such conversions." See Burnet v. Hormel, 287 U.S. 103, 106. And this exception has always been narrowly construed so as to protect the revenue against artful devices. See Corn Products Refining Co. v. Commissioner, 350 U.S. 46, 52.

We do not see here any conversion of a capital investment. The lump sum consideration seems essentially a substitute for what would otherwise be received at a future time as ordinary income. The pay-out of these particular assigned oil payment rights could be ascertained with considerable accuracy. Such are the stipulations, findings, or clear inferences. In the *O'Connor* case, the pay-out of the assigned oil payment right was so assured that the purchaser obtained a $9,990,350 purchase money loan at 3½ percent interest without any security other than a deed of trust of the $10,000,000 oil payment right, he receiving 4 percent from the taxpayer. Only a fraction of the oil or sulphur rights were transferred, the balance being retained.[4] Except in the *Fleming* case, which we will discuss

[4] Until 1946 the Commissioner agreed with the contention of the taxpayers in these cases that the assignment of an oil payment right was productive of a long-term capital gain. In 1946 he changed his mind and ruled that "consideration (not pledged for development) received for the

later, cash was received which was equal to the amount of the income to accrue during the term of the assignment, the assignee being compensated by interest on his advance. The substance of what was assigned was the right to receive future income. The substance of what was received was the present value of income which the recipient would otherwise obtain in the future. In short, consideration was paid for the right to receive future income, not for an increase in the value of the income-producing property.

These arrangements seem to us transparent devices. Their forms do not control. Their essence is determined not by subtleties of draftsmanship but by their total effect. See Helvering v. Clifford, 309 U.S. 331; Harrison v. Schaffner, 312 U.S. 579. We have held that if one, entitled to receive at a future date interest on a bond or compensation for services, makes a grant of it by anticipatory assignment, he realizes taxable income as if he had collected the interest or received the salary and then paid it over. That is the teaching of Helvering v. Horst, 311 U.S. 112, and Harrison v. Schaffner, supra; and it is applicable here. As we stated in Helvering v. Horst, supra, 117, "The taxpayer has equally enjoyed the fruits of his labor or investment and obtained the satisfaction of his desires whether he collects and uses the income to procure those satisfactions, or whether he disposes of his right to collect it as the means of procuring them." There the taxpayer detached interest coupons from negotiable bonds and presented them as a gift to his son. The interest when paid was held taxable to the father. Here, even more clearly than there, the taxpayer is converting future income into present income.

Second, as to the *Fleming* case. The Court of Appeals in the *Fleming* case held that the transactions were tax-free under [§1031(a), relating to "like kind" exchanges]. . . .

We agree with the Tax Court, 24 T.C. 818, that this is not a tax-free exchange under [§1031(a)]. Treasury Regulations . . . provide in [§1.1031(a)-1(b)] as respects the words "like kind," as used in [§1031(a)], that "One kind or class of property may not . . . be exchanged for property of a different kind or class." The exchange cannot satisfy that test where the effect under the tax laws is a transfer of future income from oil leases for real estate. As we have seen, these

---

assignment of a short-lived in-oil payment carved out of any type of depletable interest in oil and gas in place (including a larger in-oil payment right) is ordinary income subject to the depletion allowance in the assignor's hands." G.C.M. 24849, 1946-1 Cum. Bull. 66, 69. This ruling was made applicable "only to such assignments made on or after April 1, 1946," I.T. 3895, 1948-1 Cum. Bull. 39. In 1950 a further ruling was made that represents the present view of the Commissioner. I.T. 4003, 1950-1 Cum. Bull. 10, 11, reads in relevant part as follows:

"After careful study and considerable experience with the application of G.C.M. 24849, supra, it is now concluded that there is no legal or practical basis for distinguishing between short-lived and long-lived in-oil payment rights. It is, therefore, the present position of the Bureau that the assignment of any in-oil payment right (not pledged for development), which extends over a period less than the life of the depletable property interest from which it is carved, is essentially the assignment of expected income from such property interest. Therefore, the assignment for a consideration of any such in-oil payment right results in the receipt of ordinary income by the assignor which is taxable to him when received or accrued, depending upon the method of accounting employed by him. Where the assignment of the in-oil payment right is donative, the transaction is considered as an assignment of future income which is taxable to the donor at such time as the income from the assigned payment right arises.

"Notwithstanding the foregoing, G.C.M. 24849, supra, and I.T. 3935 supra, do not apply where the assigned in-oil payment right constitutes the entire depletable interest of the assignor in the property or a fraction extending over the entire life of the property."

The pre-1946 administrative practice was not reflected in any published ruling or regulation. It therefore will not be presumed to have been known to Congress and incorporated into the law by re-enactment. See Helvering v. N.Y. Trust Co., 292 U.S. 455, 467-468. Cf. United States v. Leslie Salt Co., 350 U.S. 383, 389-397. Moreover, prior administrative practice is always subject to change "through exercise by the administrative agency of its continuing rule-making power." See Helvering v. Reynolds, 313 U.S. 428.432.

oil payment assignments were merely arrangements for delayed cash payment of the purchase price of real estate, plus interest. Moreover, [Regs. §1.1002-1(c)] states that the "underlying assumption of these exceptions is that the new property is substantially a continuation of the old investment still unliquidated." Yet the oil payment assignments were not conversions of capital investments, as we have seen.

Reversed.

NOTE

1. *Depletion and the Lake case.* As the taxpayer in the *Lake* case viewed its transfer of the oil payment, it was entitled to report $600,000 as capital gain and the transferee of the oil payment was entitled to deduct cost or percentage depletion on his "economic interest" in the oil in place. The court, however, held that the transferor realized ordinary income subject to depletion, which presumably bars the transferee from deducting depletion on the same $600,000 worth of oil. How should the transferee — whose basis for the oil payment was $600,000 — report his gain or loss on the transaction? If he receives more than $600,000, is he — or anyone else — entitled to deduct percentage depletion on the excess?

2. *"ABC transactions."* If A, the owner of a working interest in oil property with a fair market value of $15 million, sells it to B for that amount, A will be entitled to report his profit as capital gain (assuming he is not a dealer in such property) and B will be entitled to deduct either cost depletion based on his $15 million investment or percentage depletion based on the gross income from the oil property. The same results will obtain if B must borrow (e.g., $10 million) to finance the purchase, except for his right to deduct the interest paid on the loan. Since B will have to repay the loan with after-tax dollars, an alternative method of financing such purchases from A has been developed — the "ABC transaction." Instead of selling the entire working interest to B, A reserves an oil payment (e.g., in the amount of $10 million, plus interest) and sells the working interest to B, subject to this reserved payment, for $5 million. At the same time, or later, A sells the oil payment for $10 million to C, who finances the acquisition by borrowing $10 million from a bank, insurance company, or other investor, pledging the oil payment as security.

In a series of unpublished rulings on ABC transactions, the Internal Revenue Service has ruled that A is entitled to capital gain on the sale of both the working interest and the reserved oil payment. (As to the latter, note that I.T. 4003, quoted in footnote 4 of the *Lake* opinion, implies that the sale of an oil payment may be reported as capital gain if the payment "constitutes the entire depletable interest of the assignor in the property.") The ABC rulings also state that the $10 million received by A from C is not includible in B's gross income and that C is entitled to depletion on account of the oil payment. The ABC transaction thus reduces the amount that B must pay for the property (by $10 million in the foregoing example); this amount is also eliminated from B's gross income from the property and hence reduces B's deduction for percentage depletion by $2.75 million (i.e., 27½ per cent of $10 million). But C has a $10 million basis for the oil payment, which can be fully recovered by using cost depletion. Thus, the only taxable income arising from the production that is devoted to the oil payment is C's margin or profit, which will be the modest difference between the interest received by C on the $10 million oil payment and the interest that C must pay to the lender. For B, there is no substantial economic difference between a two-party transaction and an ABC transaction, since in the latter case he pays $10 million less for, and receives $10 million less from, the property; but the ABC transaction reduces his taxable income by $6.25 million (i.e., $10 million less $2.75 million of depletion). In practice, this comparison between the two alternatives must be modified to take account of the interest factor, the pay-out period, and certain limitations on B's use of percentage depletion, but ordinarily these modifications will not impair the essential validity of the comparison itself.

If the ABC transaction were viewed as a purchase by B of both the working interest *and* the oil payment, coupled with a pledge of the latter to C for a non-recourse loan,

how would its tax consequences be altered? Does the *Lake* case buttress, undermine, or leave unaltered the industry's case for the ABC transaction?

For discussion of the possibility of using the ABC pattern to finance the acquisition of real estate by having A sell the property to B subject to a leasehold sold simultaneously to C (who then leases the property to a tenant on a long-term "net" lease), see Tanenbaum, The ABC Technique of Financing Real Estate Acquisitions: The Tax Motivated Leasehold, 111 U. of Pa. L. Rev. 161 (1962).

3. *Sales price measured by income.* On retirement from active service, stockholders of a corporation were required by the corporate charter to surrender their shares to the corporation; at the shareholder's option, he was entitled to receive in exchange either a lump sum payment or a certificate providing for payments equal to the dividends payable on the surrendered stock for the subsequent 10-year period. In Marshall's Estate v. Commissioner, 20 T.C. 979 (1953), it was held that a shareholder who elected to exchange his stock for a 10-year certificate could report the receipts thereunder as capital gain rather than ordinary income. Does the subsequently decided *Lake* case impair the validity of this decision? See also Ayrton Metal Co. v. Commissioner, 299 F.2d 741 (2d Cir. 1962), to the effect that "the fact that payment for a capital asset is measured in terms of income or profits does not necessarily change the payments into ordinary income." But see Wiseman v. Halliburton Oil Well Cementing Co., 301 F.2d 654 (10th Cir. 1962), where the taxpayer relinquished an exclusive license to use, and grant sub-licenses to use, a patented process; in exchange, the owner of the process granted the taxpayer a non-exclusive license to use it and agreed to pay the taxpayer one third of the royalties received from other licensees. On the ground that the amounts received by the taxpayer under this agreement constituted a substitute for amounts it would have earned had it retained its right under the original agreement to issue sub-licenses, they were held to be taxable as ordinary income rather than capital gain.

4. *"Bootstrap" sales.* What if a capital asset is sold to an impecunious third party, with the purchase price to be paid by installments dependent either in amount or in time upon the income produced by the transferred property? The following is an intra-office memorandum of the Internal Revenue Service, reprinted in Hearings, Subcommittee of House Ways and Means Committee, 83d Cong., 1st Sess. 1368-1369 (1953):

> In 1941, the Lasdon family group — consisting of about 10 individuals — acquired from their wholly owned corporation, for the consideration of $10,000, certain patents and patent applications relating to sulfadiazine. On the following day they granted to the American Cyanamid Co., an exclusive license to exploit sulfadiazine in return for a royalty of 16 percent of the net sales value thereof, plus 25 percent of royalties received from sublessees, the license to continue for 18 years. On an application made by the Lasdons in 1945, the Bureau ruled that the "inventions and the patents, patent applications and contract rights pertaining thereto" constituted capital assets, that they had been held for more than 6 months, and that gain or loss from the sale thereof would constitute long-term capital gain or loss. About a year and a half later the Lasdons established the Lasdon Foundation, Inc., which was to support certain projects in medical research. In September 1947, this foundation was held to be exempt under section 101(6) [now §501(c)(3)]. In that same month, the Lasdons proposed to sell to the foundation the sulfadiazine patents and patent applications and their contract rights under the contract with American Cyanamid for the consideration of $6,500,000, or 90 percent of the payments to be received under the American Cyanamid contract, whichever was the lesser. The foundation would assume the Lasdons' obligation under the 1941 license contract to protect the inventions, and Cyanamid would accept this substitution of the foundation for the Lasdons individually. The foundation would be prohibited from selling the Cyanamid license contract without the consent of Cyanamid, and the Lasdons would guarantee the foundation's performance of the licensor's obligations under the 1941 contract. On the basis of this proposal, the Lasdons requested a prospective ruling that this transaction would be deemed to be the sale of a capital asset, the gain therefrom returnable on the installment basis. In a separate request, the foundation requested [a ruling] that its receipt of proceeds under the Cynamid license contract would be tax exempt. In

March 1948, the Lasdons amended their plan by making the consideration payable by the foundation to be the fixed sum of $6 million payable in equal quarterly sums over a period of 10 years. In September 1947, when the original requests were filed, the foundation had approximately $90,000 worth of assets. Over the life of the Cyanamid license contract the Lasdons have heretofore received from Cyanamid an average of approximately $1,100,000 annually. . . .

There are now pending . . . 4 cases, in addition to this case, all 5 of which involve prospective transactions and have these elements in common: (a) a "seller" who is a taxpaying individual or corporation; (b) a "buyer" which is a tax-exempt corporation; (c) a "sale" by the first to the second of these parties of income-producing property; (d) immediately prior to the transfer, the buyer has no substantial amount of assets; (e) provision is made for the deferred payment of the consideration by the "buyer," and it is obvious that such consideration must be derived from income produced by the property transferred. In all of these cases, the "seller" desires a ruling holding the transaction to be the sale of a capital asset, the proceeds of which are returnable on the installment basis.

According to the subcommittee's report, an attorney in the chief counsel's office of the Internal Revenue Service recommended against issuing a favorable ruling, four different law firms were unsuccessful in obtaining a ruling, and one was finally issued only after "endeavors of a less orthodox nature" were initiated by the taxpayers. Report on Internal Revenue Investigation, Subcommittee on Administration of the Internal Revenue Laws, House Committee on Ways and Means, 83d Cong., 1st Sess. 10-11 (1953); see also Mayock v. Commissioner, 32 T.C. 966 (1959) (tax liability of Lasdons' attorney on $65,000 paid to him in cash in connection with ruling).

The Internal Revenue Service has litigated a number of "bootstrap" purchase cases, but the taxpayers have generally prevailed. The leading case is Brown v. Commissioner, 325 F.2d 313 (9th Cir. 1963), upholding the transaction, in which certiorari was granted; see also Kolkey v. Commisioner, 254 F.2d 51 (7th Cir. 1958); Royal Farms Dairy Co. v. Commissioner, 40 T.C. 172 (1963), and cases there cited.

COMMISSIONER v. PITTSTON COMPANY

252 F.2d 344 (2d Cir. 1958), cert. denied, 357 U.S. 919 (1958)

Before CLARK, Chief Judge, MOORE, Circuit Judge, and SMITH, District Judge.

SMITH, District Judge:

This is a petition by the Commissioner of Internal Revenue for review of a decision of the Tax Court of the United States reported in 26 T.C. 967, holding the taxpayer The Pittston Company entitled to treat the sum of $500,000 received in 1949 as consideration for the termination of an exclusive contract to purchase the output of Russell Fork Coal Company's leased Pike County coal mines, as long term capital gain, derived from a sale or exchange within the meaning of [§1222(3)]. . . .

[In 1944 Russell held a lease on certain real estate in Pike County, Kentucky.

In order to enable it to install a coal mining plant thereon Pittston, pursuant to a contract with Russell dated January 25, 1944, agreed to loan Russell $250,000 to be advanced in such amounts as required for "the installation by it of a coal mining plant, and for the operation thereof." Pittston was given the right to designate a director or directors to the extent of one third of the board, and Russell's expenditures of the proceeds of the loan had to be approved by him or them. Restrictions were placed upon the payment of salaries to Russell's officers and the use of net earnings. Notes evidencing the loan were to be secured by a mortgage upon the lease and structures to be placed upon the property. At the same time Russell and Pittston made a second contract whereby Russell agreed to sell to Pittston "all of the coal which shall be mined and sold for resale from the mining plant or plants which the Seller expects to install or does install upon its leased property in Pike County, Kentucky, as set forth in the agreement executed simultaneously herewith," i.e., the loan agreement, for a period of ten years. Ten cents per ton was to be deducted by Pittston from all coal sold "pursuant to the coal sales agreement entered into simultaneously herewith" to be applied on the loan. By reason of these provisions the $250,000 loan was repaid by the end of 1948.] *

On October 14, 1949, Russell paid $500,000 to taxpayer in consideration of taxpayer's surrender of all of its rights under the coal agreement of January 25, 1944. The transaction was reflected in a letter agreement dated October 14, 1949; the letter was sent to Russell by taxpayer, and read as follows:

> In consideration of the payment by you to us of the sum of Five Hundred Thousand Dollars ($500,000), receipt of which is hereby acknowledged, it is understood that you have as of this day acquired all of our right and interest in and to the agreement dated January 25, 1944 between us, which agreement provides for the exclusive right . . . to purchase all of the coal produced by you at your Russell Fork Mine, said contract expiring by its terms on January 25, 1954.

In its income tax return for the year 1949, taxpayer reported the $500,000 as long-term capital gain. In his notice of deficiency, the Commissioner determined that this amount "was not received as the result of a sale or exchange and therefore is reportable as ordinary income." The Tax Court held that the $500,000 was taxable as long-term capital gain, not as ordinary income, and accordingly overruled the Commissioner.

The courts have not been entirely consistent in their treatment of lump sum payments received by a taxpayer for the termination of jural relations between the taxpayer and another as falling within or without the area entitled to more favored treatment as long-term capital gains rather than ordinary income. This circuit has steered a middle course. In McAllister v. C.I.R., 2 Cir., 157 F.2d 235, payment received for transfer by a taxpayer of a life interest in a trust to a remainderman was held a capital gain, Judge Frank dissenting. The McAllister holding and its possible consequences were criticized in Judge Frank's dissent and in comments on the problem in law journals (see 56 Yale L.J. 570-574 and 14 U. of Chic. L. Rev. 484-493). The court thereafter held in C.I.R. v. Starr Bros., 2 Cir., 204 F.2d 673, that payment received by a taxpayer, a New London retail druggist, for relinquishing its rights under a provision in a contract with a manufacturer, binding the manufacturer not to sell drugs to taxpayer's competitors in New London, was ordinary income and not a capital gain. In the same year, consistently with *Starr,* the court in General Artists Corp. v. C.I.R., 2 Cir., 205 F.2d 360, cert. den. 346 U.S. 866, held that payments received by a taxpayer for transfer of its contracts with a singer as his exclusive booking agent

* This portion of the statement of facts is from the dissenting opinion of Judge Moore.

to another such agent by an agreement providing for cancellation of the contracts and execution of new contracts with the singer by the transferee were ordinary income and not capital gains received as gain from sale of a capital asset. However, in C.I.R. v. McCue Bros. & Drummond Inc., 2 Cir., 210 F.2d 752, the court held a payment received by a taxpayer lessee from a landlord for vacating premises where the taxpayer had a right to continued possession under rent control laws was a capital gain from the sale or exchange of a capital asset held more than six months. In so doing the court followed the third circuit in C.I.R. v. Golonsky, 3 Cir., 200 F.2d 72, cert. den. 345 U.S. 939, holding payment received by a lessee from the landlord for cancelling the lease and surrendering the premises to be a capital gain. The court distinguished *Starr* and *General Artists* because there the contractual right was not transferred, but was released and merely vanished. The right to possession of the realty was considered a more substantial property right which does not lose its existence when it is transferred.

The Tax Court in the instant case concluded that the contractual right held by the taxpayer constituted capital assets, which petitioner does not dispute, and concluded that the right was not extinguished by its cancellation, but continued to exist as property of the transferee-payor. It distinguished *Starr* and *General Artists* on the ground that the court had held in those cases the contractual right was not transferred, but was released and merely vanished. The Tax Court says in effect that the extinguishment of a contract duty to deal only with one person transfers to the one formerly bound a right to deal with all the world. It would be more in accord with common understanding to say that the payment is solely for the termination of the right-duty relationship between the two parties to the agreement. To be sure, the same might be said of the termination of lessee's or life tenant's rights, but they have been distinguished as relating to matters of greater "substance" than mere contract rights.

The instant case appears on the facts closer to the payment for the extinguishment of the taxpayer's rights under the negative covenant in *Starr* than to the cases such as *McAllister* where a life estate was transferred to the remainderman, or the release of right to possession of realty under lease or otherwise as in *McCue* and in *Golonsky*. While the contract right here surrendered was "property" of value it carried with it no direct interest in the mine itself, or in the coal produced until delivery f.o.b. car or truck. It was a naked contract right, not in the nature of a lease or profit *à prendre*. If Russell Fork was able to do better elsewhere it might have sold its coal through anyone, responding in damages to the taxpayer, for so far as appears similar coal would have been obtainable elsewhere by taxpayer at a price. The large amount received by the taxpayer for the 4½ years the contract had to run compared with its gross returns for the 5½ years already expired,* while not explained on the record, may reflect an expectation of lower expense to the taxpayer since taxpayer no longer is financing Russell. In any case, the cancellation brought the taxpayer at one time a return which it might otherwise have realized over a relatively short period of years as ordinary income under the sales contract. Whatever brought it about, it suggests a possible method of returning future income to a taxpayer in a lump sum from the other contracting party in advance for tax avoidance purposes, which the court has been unwilling to sanction except where the consideration surrendered had more "substance" than mere contract rights.

The Congress has since the tax year here in question more fully provided for the application of the sale or exchange concept when a lease or distribution

* The facts as stated by the Court of Appeals represent the taxpayer's gross profit as about $275,000, but the stipulation in the Tax Court shows that the correct figure is about $725,000. — Ed.

agreement is cancelled, by [§1241, enacted in 1954], allowing the more favorable capital gains treatment of the amount received on cancellation, but in case of distributorships only where the distributor has a "substantial investment" in the distributorship, as in facilities for storing, processing, etc. the physical product or as in maintaining a substantial inventory. This amendment is not applicable in this case, and of course no showing was made as to whether such a substantial investment in facilities or inventory was or was not maintained. The amendment is of little assistance in interpreting the original provision for we cannot tell whether the intent of Congress was to broaden or narrow the capital gains on sale or exchange exception to the income tax, and its apparent result falls somewhere between the contentions of the opposing parties here. [S. Rept. 115, 444.] The heavy burden of income taxation inevitably leads to the broadening of exceptions such as the capital gains provision. This court has endeavored to define what it conceived to be the limits to this exception in *Starr* and *United Artists* by a somewhat literal definition of "sale or exchange." Even though the logic of setting the limit by drawing the line where it now is may be open to debate, any line set must be to some degree arbitrary. This case falls outside the limit thus far set for the exception by this court. We should leave further expansion of the exception, to include the release of naked contract rights as a "sale," to legislative action.

The judgment of the Tax Court is reversed and the case is remanded for entry of judgment in favor of the Commissioner in accordance herewith.

MOORE, Circuit Judge (dissenting):

. . . [T]he business arrangement between these companies was not confined to a "naked contract right" (as the majority holds) to buy coal but was an integrated transaction whereby Pittston financed the construction of a coal mining plant on Russell's leasehold and agreed to take the entire output, f.o.b. the mine, for ten years with conditional extension possibilities. The two simultaneous agreements, each referring to the other, evidenced the transaction. These contract rights can only be rendered "naked" by stripping from them and discarding the raiments which the parties found to be essential. To say that Russell despite its commitment could sell to anyone responding only in damages on the assumption that similar coal could have been obtained elsewhere (as to which there is no proof in the record) is, first, to suggest that these companies would not honor their mutual obligations and, second, that the courts in view of the investment of Pittston in the Russell operation and the nature of the agreement (entire output for a period of years) would restrict relief to damages. "Contracts for the delivery of goods will be specifically enforced, when by their terms the deliveries are to be made and the purchase price paid in installments running through a considerable number of years" . . . Specific performance is particularly applicable to a contract "to continue over a period of years without rigidity of price" . . .

The mutual rights and obligations created by these two agreements were most substantial. Russell as effectively deprived itself of any other use of its property for ten years as the owner of a building granting a leasehold for ten years to a tenant who had loaned the money to construct it. Russell could only regain for itself the unrestricted use of its property by a surrender by Pittston tantamount to the voluntary termination of a leasehold prior to the expiration date. Pittston, in turn, not only had an investment in Russell's lease, plant and equipment but had a property right to acquire the entire output of the Russell mine which proved to be a right of substantial value.

Nor can the $500,000 payment be regarded as anticipated income for the five remaining years of the contract. As the majority concede, the large amount paid

bears no relationship to future income projected on the basis of the gross income realized by Pittston for the previous five and one-half years. Pittston's income was not assured or guaranteed; it was entirely dependent upon its ability to conduct its business operations at a profit. The $500,000 paid was the value to Russell to get its property back and also represented Pittston's opinion of the contract's worth. If the contract were assigned to a third party there would be no question that the consideration received would reflect the value of the asset sold. Yet for all practical purposes Pittston by such assignment would thereby have terminated or cancelled its right to purchase coal from Russell.

In endeavoring to find a guide as to the type of transaction which will be construed as resulting in a capital gain as distinguished from ordinary income, the decisions reveal uniform consistency in holding that the surrender, termination or cancellation for monetary consideration of a capital asset results in a capital gain. Neither the petitioner nor the majority assail the correctness of the Tax Court's conclusion that the contract right here was in itself a capital asset. For this reason I must disagree with the majority that "the termination of the right-duty relationship between the two parties" results in ordinary income to the taxpayer; particularly since they concede that "the same might be said of the termination of the lessee's or life tenant's rights" which clearly produces a capital gain. Judge Goodrich noted the fallacy of this approach when he wrote "To call the transaction a cancellation or termination of a lease and not a sale is, we think, to assume the point to be decided." . . .

Searching for a firmer support, an attempt is made to find in the words "substance" or "substantial rights" whether a capital asset is involved and then give uniform treatment regardless of whether the asset is "sold" or "terminated." Prior to the decision of the majority in this case there seemed to be consistency among the various Courts of Appeals in applying this test. In 1950 the Tenth Circuit (Jones v. Corbyn, 10 Cir., 1950, 186 F.2d 450) held that the surrender of an exclusive life insurance agency to an insurance company for a lump sum payment of $45,000 was a long-term capital gain and not ordinary income. Answering the Collector's argument that the contract was not a capital asset the court said "The contract or franchise had at all times substantial value. It was capable of producing income for its owner. It was enforceable at law and could be bought and sold" (p. 452). The court's conclusion was that "By terminating the contract and transferring the business to the company, there was a sale and transfer of a capital asset within the meaning of the statute" (p. 453). In the Fifth Circuit a lessee merely surrendered to his lessor a restriction against renting any space in the block to a Variety Store for which surrender he received $20,000. Despite the fact that this was the surrender of only one of the many rights granted under the lease the court affirmed a decision of the Tax Court in holding the amount received to be a capital gain (Commissioner v. Ray, 5 Cir., 1954, 210 F.2d 390) . . . In the same year the Third Circuit . . . considered a problem of the surrender of contract rights to the exclusive product of four machines in exchange for stock in Commissioner v. Goff, 3 Cir., 1954, 212 F.2d 875, the Commissioner contending that the transfer of these rights constituted ordinary income relied on the *Starr Bros.* and *General Artists* cases in this Circuit but Judge Goodrich pointed out that "the last word on the subject in the Second Circuit is Commissioner v. McCue Bros. & Drummond, Inc., 2 Cir., 1954, 210 F.2d 752, which held that payment made by a lessor to a lessee so that he would vacate the premises was a capital gain." He found that "[T]he *Starr* and *General Artists* decisions were distinguished on the ground that the rights therein involved were less substantial." Referring to McCue Bros. & Drummond he recognized this decision as being "in accord with the cases cited above, and we think it is right" but that

"whether the Second Circuit cases are in harmony is not a matter for us to decide" (212 F.2d 875, 876). The court affirmed the Tax Court decision saying "there is certainly no doubt that the right that Saxon had to the exclusive product of these four machines was a substantial right and, if it is important, it was a right connected with the use of specific tangible property, that is, the machines themselves" (pp. 876, 877).

Legal rights should not be adjudicated by mere choice of words: "There surely cannot be that efficacy in lawyers' jargon that termination or cancellation or surrender carries some peculiar significance vastly penalizing laymen whose counsel have chanced to use them" (McAllister v. Commissioner, supra, p. 236). Moreover, here the parties did not even use the word "surrender" but said that Russell had "acquired all of our right and interest." That "there was a 'surrender' to the remainderman, rather than a 'transfer' to third persons . . . does not change the essentially dispositive nature of the transaction so far as the former property owner is concerned" (*McAllister*, supra, p. 237). So here Pittston had effectively disposed of its property interest. Whether by surrender or transfer or acquisition the legal consequences should be the same.

NOTE

1. *The Internal Revenue Service's position.* In Rev. Rul. 56-531, 1956-2 C.B., 983, the Internal Revenue Service announced that, following the *Golonsky, McCue* and *Ray* cases, it would recognize that "amounts received in consideration of the surrender or release by the tenant to the landlord of possessory rights in real estate under a lease or under a statute entitling the tenant to continue in possession following expiration of a lease, or amounts received by a tenant from the landlord in consideration of the relinquishment of a lease covenant restricting the use of the real estate by the landlord, constitute proceeds from the sale of a capital asset. . . ." On the other hand, the Service "will continue to regard the relinquishment of simple contract rights as not involving the sale or exchange of a capital asset . . . and will treat amounts received in consideration of such relinquishment as constituting ordinary income . . . ," citing the *General Artists Corp.* and *Starr Bros.* cases.

See Note, Distinguishing Ordinary Income from Capital Gain Where Rights to Future Income Are Sold, 69 Harv. L. Rev. 737 (1956).

2. *Cancellation of lease or of distributor's agreement.* Section 1241 of the 1954 Code provides a statutory guide to certain aspects of these problems. Does it insure capital gain or loss treatment for the amounts in question, or does it simply get the taxpayer over the "sale or exchange" hurdle, leaving him to establish independently that the lease or distributor's agreement is a "capital asset"? Under §1241 a distributor must have a "substantial capital investment in the distributorship." What does this mean? Is a distributor's inventory an "investment in the distributorship"? Must the investment be "substantial" in relation to the amount received by the taxpayer? Why are only distributors of goods, and not other agents and holders of franchises, included in the statute? The Senate Report states (p. 115) that "the section is limited in scope and it does not constitute a re-examination of present law relating to contracts to which the section does not specifically apply." Note that as to leases, §1241 applies to payments received by the lessee, but not to those received by the lessor, and that only amounts "for the cancellation" of a lease qualify.

3. *The case law.* Disputes over the proper treatment of amounts received on the transfer or termination of contract rights have multiplied in recent years, as the government has pressed, separately or in combination, the following arguments: the contract right was not "property"; it was not the subject of a "sale or exchange"; the amount received was a substitute for ordinary income. Among many cases, the following may be noted:

United States v. Eidson, 310 F.2d 111 (5th Cir. 1962). The taxpayers were general agents and managers of the life insurance business of an insurance company, under a

"General Agency-Managerial-Service Contract" giving them the exclusive right to solicit business and to employ agents in return for a stated percentage of the premiums paid less the company's expenses. Another insurance company acquired the outstanding policies and business of their company by a series of transactions that included a payment to the taxpayers of $170,000 for a transfer of their rights under the contract, which was promptly canceled. Held: ordinary income.

Nelson Weaver Realty Co. v. Commissioner, 307 F.2d 897 (5th Cir. 1962). The taxpayer, engaged in the business of procuring, selling, brokering, and servicing mortgage loans, was the mortgage sales and servicing agent for New York Life Insurance Company in a number of Alabama cities, under a contract that was terminable by either the taxpayer or New York Life on short notice. Another mortgage servicing company paid the taxpayer about $122,000 for transferring its rights under the contract (subject to New York Life's approval) and for delivering all of its files and papers relating to the mortgages then being serviced under the contract. Held (one judge dissenting): capital gain.

Bisbee-Baldwin Corp. v. Tomlinson, 320 F.2d 929 (5th Cir. 1963). On substantially the same facts as in *Nelson Weaver Realty Co.*, supra, another panel of the Fifth Circuit held that the transaction was partly a sale of future commissions, taxable as ordinary income, and partly a sale of goodwill, files, and equipment, taxable as capital gain.

Commissioner v. Ferrer, 304 F.2d 125 (2d Cir. 1962). The taxpayer (Jose Ferrer) entered into a contract with the author of a novel and play based on the life of Toulouse-Lautrec, under which he had the exclusive right to produce the play on the stage in the United States and Canada, as well as the right to prevent the making of a motion picture, radio, or television version of the play for a specified period of time and the right to receive 40 per cent of the proceeds of the motion picture and other rights. When John Huston displayed an interest in producing a motion picture based on the play and starring Ferrer himself, the contract between Ferrer and the author was canceled, the author sold the motion picture rights to Huston, and Ferrer was employed to play the leading role under a contract providing for a "salary" and for "percentage compensation" dependent on the profits of the production. The Tax Court held that the latter amounts were paid to Ferrer for relinquishing his rights under the original agreement (rather than as compensation for his personal services) and that they were taxable as capital gain. The Court of Appeals, accepting the Tax Court's determination that the percentage payments were not additional salary, held that they constituted capital gain to the extent that they compensated Ferrer for his right to produce the play and to prevent a motion picture, radio, or television production, but that they were a substitute for, and taxable as, ordinary income to the extent allocable to his right under the original contract to receive a portion of the motion picture proceeds.

Holt v. Commissioner, 303 F.2d 687 (9th Cir. 1962). Under a contract for the production of motion pictures, taxpayer became entitled to a percentage of certain gross receipts to be derived by Paramount Pictures from their release. Several years later, as part of an arrangement for terminating their relationship, Paramount paid taxpayer in cash the estimated value of his claim. Held: ordinary income.

4. *Do the cases fit a pattern?* In Commissioner v. Ferrer, supra, the court summarized and classified the cases in this area as follows:

> Perhaps we can get more help from analyzing the fact situations in cases in adjacent areas, including those decided since Judge Smith's careful review in C.I.R. v. Pittston Company, 252 F.2d 344 (2 Cir.), cert. denied, 357 U.S. 919, than from the language of the opinions. Putting aside Jones v. Corbyn, 186 F.2d 450 (10 Cir. 1950), which we have disapproved, C.I.R. v. Starr Bros., Inc., 204 F.2d 673, 674 (2 Cir. 1953) and whose status in its own circuit has now become rather doubtful, Wiseman v. Halliburton Oil Well Cementing Co., 301 F.2d 654 (10 Cir. 1962), a case to which we refer below, and C.I.R. v. Goff, 212 F.2d 875 (3 Cir.), cert. denied, 348 U.S. 829, which is only dubiously reconcilable with our *Pittston* decision, the principal relevant authorities on the two sides of the line in the Supreme Court and in the courts of appeals are as follows: There is no sale or exchange of a capital asset when a lessor receives payment for releasing a lessee from an obligation to pay future rent, Hort v. C.I.R., 313 U.S. 28. The same was true of the cancellation of an exclusive distributorship, C.I.R. v. Starr Bros., Inc., 204 F.2d 673 (2 Cir. 1953); Leh v. C.I.R., 260

F.2d 489 (9 Cir. 1958), although §1241 of the 1954 Code now rules otherwise if the distributor has a substantial capital investment therein. The transfer of exclusive agency rights to a third person likewise did not qualify, General Artists Corp. v. C.I.R., 205 F.2d 360 (2 Cir.), cert. denied, 346 U.S. 866; whether it now does if the capital investment requirement of §1241 is met is another question. The sale of oil payment rights, C.I.R. v. P. G. Lake, Inc., 356 U.S. 260, the temporary taking of a taxpayer's right to use his own transportation assets, C.I.R. v. Gillette Motor Transport, Inc., supra, and the surrender of an exclusive contract to purchase coal, C.I.R. v. Pittston Co., supra, do not meet the statutory test. Neither does the receipt of a lump sum in liquidation of a percentage of the gross receipts of motion pictures otherwise payable to a producer solely in return for personal services not yet performed, Holt v. C.I.R., 303 F.2d 687 (9 Cir. 1962). On the other hand, a lessee's surrender of his lease to the lessor, C.I.R. v. Golonsky, 200 F.2d 72 (3 Cir. 1952), cert. denied, 345 U.S. 939; C.I.R. v. McCue Bros. & Drummond, Inc., 210 F.2d 752 (2 Cir.), cert. denied, 348 U.S. 829, now in effect ratified by §1241 of the 1954 Code, his relinquishment of a right to restrict the lessor's renting to another tenant in the same business, C.I.R. v. Ray, 210 F.2d 390 (5 Cir.), cert. denied, 348 U.S. 829, and his release of his entire interest to a sublessee, Metropolitan Bldg. Co. v. C.I.R., 282 F.2d 592 (9 Cir. 1960), but see Voloudakis v. C.I.R., 274 F.2d 209 (9 Cir. 1960), constitute the sale or exchange of a capital asset. So does the abandonment of an option to acquire a partnership interest, Dorman v. United States, 296 F.2d 27 (9 Cir. 1961).

One common characteristic of the group held to come within the capital gain provision is that the taxpayer had either what might be called an "estate" in (*Golonsky, McCue, Metropolitan*), or an "encumbrance" on (*Ray*), or an option to acquire an interest in (*Dorman*), property which, if itself held, would be a capital asset. In all these cases the taxpayer had something more than an opportunity, afforded by contract, to obtain periodic receipts of income, by dealing with another (*Starr, Leh, General Artists, Pittston*), or by rendering services (*Holt*), or by virtue of ownership of a larger "estate" (*Hort, P. G. Lake*). We are painfully aware of the deficiences of any such attempt to define the wavering line even in this limited area, but it is the best we can do. We add, with greater confidence, that more recent cases, such as *McCue & Drummond, Ray, Metropolitan,* and *Dorman,* have moved away from the distinction, relied upon to some extent in *Starr Brothers* and *General Artists,* between a sale to a third person that keeps the "estate" or "encumbrance" alive, and a release that results in its extinguishment. Indeed, although reasoning from another section of a statute so full of anomalies is rather treacherous business, we take §1241 of the 1954 Code as indicating Congressional disenchantment with this formalistic distinction. . . . Tax law is concerned with the substance, here the voluntary passing of "property" rights allegedly constituting "capital assets," not with whether they are passed to a stranger or to a person already having a larger "estate." [304 F.2d at 130-131.]

5. *Discount bonds and other obligations.* If a bond is issued at a discount, the purchaser's profit when it is retired at face amount is the equivalent of interest. Despite this fact, it was held in Commissioner v. Caulkins, 144 F.2d 482 (6th Cir. 1944), that the purchaser realizes capital gain when the bond is paid at maturity. The court rested its decision on the statutory provision (§1232(a), infra page 583) that the retirement of a bond is to be treated like a sale or exchange:

> Clearly $20,000 was the amount received on the retirement of the certificate, and under the plain wording of [§1232(a)], it was taxable as a capital gain. A provision that the increment in such cases should be taxable under [§61(a)] might or might not have been wise and fair; but Congress has not enacted it, and the courts cannot supply it by judicial legislation. [144 F.2d at 484.]

Legislative legislation was the result; §1232 is now qualified to insure that the interest represented by the original discount will be taxed as ordinary income rather than capital gain, subject to exceptions if the original issue discount was minimal or if the bond was purchased by the taxpayer at a premium.

In addition to being prospectively rejected by Congress, the *Caulkins* case was rejected by a number of courts even for pre-1954 transactions: United States v. Harrison, 304 F.2d 835 (5th Cir. 1962); but see Midland-Ross Corp. v. United States, 214 F. Supp. 631 (N.D. Ohio, 1963).

The *Caulkins* problem did not arise with Series E war bonds (and certain other United States bonds), even though issued at a discount, because §22(c) of the Second Liberty Bond Act, as amended, 49 Stat. 21 (1935), requires the increment to be reported as ordinary income. A cash basis taxpayer may report the income either annually, as the redemption value increases, or at maturity; and if the bond is held for a second 10-year period, he may postpone reporting the income until final maturity. §454(a) and (c).

Even though a bond is issued at face value rather than at a discount, a taxpayer who buys it at a discount because interest coupons have been detached enjoys the equivalent of interest on his investment when he receives the principal at maturity. Section 1232(c) requires the gain on such "stripped" bonds to be reported as ordinary income to the extent that it constitutes implicit interest.

See generally Zafft, Discount Bonds — Ordinary Income or Capital Gain? 11 Tax L. Rev. 51 (1955).

6. *Deferred payment for capital assets — "implicit" interest.* If a taxpayer sells a capital asset (adjusted basis: $500,000) for $1,000,000, to be paid in ten annual installments of $100,000, without interest until after maturity, the debt being evidenced by ten bonds or promissory notes, does the taxpayer realize $500,000 of capital gain, or is the profit partly capital gain and partly imputed interest on postponed payments of the sales price? Before 1964, the courts did not ordinarily treat any part of the profit as interest income. See Paine v. Commissioner, 236 F.2d 398 (8th Cir. 1956); Kingsford Co. v. Commissioner, 41 T.C. No. 64 (1964).

By virtue of §483 (enacted in 1964), however, the interest element in such deferred payments must be treated as ordinary income, unless the sales price is fixed and does not exceed $3,000, the property is neither a capital nor a §1231 asset, or certain other conditions are met. Moreover, §483 applies even if the property is sold at a loss. For an analogy, see §163(b), permitting the taxpayer who buys personal property on the installment plan to deduct the implicit interest charged by the seller, even though the interest charge is not separately stated.

3. *Payment for Personal Services*

McFALL v. COMMISSIONER
34 B.T.A. 108 (1936)

The Commissioner determined deficiencies in income tax for 1929 of $15,027.-44 as to McFall and $12,235.73 as to McGowan, holding as to each that $175,000 which he received in that year was ordinary income and not capital gain.

Findings of Fact

After preliminary negotiations, the petitioners, under date of December 31, 1926, made written contracts with the Sparta Foundry Co. whereby petitioners agreed to give their services as superintendent and metallurgist, respectively, and the corporation employed them as such for five years and agreed to pay them each $100 a week, plus one sixth of its annual profits computed as prescribed. The contract, so far as appears, was continuously performed in 1927 and 1928 by both employer and employee. McFall had meanwhile bought some Sparta shares, and on June 21, 1928, had become a director. McGowan was a shareholder from the beginning, and on June 21, 1928, became secretary and treasurer.

On April 2, 1929, A. W. Clutter & Co. made a written agreement with each petitioner whereby petitioner agreed to sell and Clutter & Co. to buy "all right,

title and interest of the vendor in and to said employment contract for the sum of $175,000 payable at . . . Grand Rapids . . . on or before June 5, 1929, against delivery of the original employment contract . . . accompanied by a valid assignment of said contract which in the opinion of counsel for the purchaser validly transfers to the purchaser all right, title and interest of the vendor in said employment contract." This agreement of petitioners was independently made and not related to any plan of theirs for corporate financing or stock readjustment. A week or so later, petitioners learned that it was part of such a plan of Clutter & Co. Thereafter Clutter & Co., among other terms, agreed with the corporation and with a number of shareholders to secure petitioners' release of the corporation from the employment contracts in consideration for 8,088 shares. Petitioners caused their contracts to be delivered to Clutter & Co. in May 1929, and received the latter's promissory notes for $175,000 each. On June 5, 1929, they received checks for $175,000 and releases from the Sparta corporation from their obligations under the employment contracts.

The financial plan proceeded to a conclusion in 1929. The corporation, on its 1929 income tax return, deducted $404,400, the value of the 8,088 shares, as "Expense of Obtaining Release of Liability and Cancellation of Profit-sharing Contracts," and the Commissioner allowed the deduction.* The petitioners each treated the $175,000 as capital net gain. . . . The Commissioner has determined the amount to be ordinary income.

Opinion

STERNHAGEN: The Commissioner first thought, when determining the deficiency, that what petitioners received from Clutter & Co. was by way of damages for a supposed breach of the contract of employment. But there is nothing to support such a hypothesis either as to breach or damage, and this contention is not now made.

The petitioners' contention is that they sold their contracts in 1929, that the contracts were property, that they had owned the contracts since 1926, more than two years,† and that the resulting gain, admitted to be $175,000 each, was a capital net gain under the Revenue Act of 1928, section 101, and not ordinary income. The Government argues, (1) that there is nothing to bring the 1929 transaction within section 101, Revenue Act of 1928, as a sale or exchange of capital assets, for there was no property transferred; (2) that there was only a termination by the parties of their contracts as a part of a wider plan, the effect of which was an anticipation by petitioners of their contractual compensation for services; and (3) if petitioners could be regarded as selling anything of their contracts, it was nothing they had held for two years but only a contingent right to receive compensation in the future.

The determination of deficiencies must, we think, be sustained. Petitioners did not sell their contracts, for inherently this they could not do. The contracts bound them to perform services of skill. Arkansas Valley Smelting Co. v. Belden Mining Co., 127 U.S. 379. Before they had any contractual rights which they could sell, they were obligated to perform services for the company. All past services had been fully paid for and there was no due and unpaid amount to constitute a chose in action subject to assignment. On April 2, 1929, there was

* Although the findings of fact do not fully disclose the mechanics of the transaction, evidently the corporation transferred 8088 of its shares to Clutter & Company as consideration for Clutter's having paid the taxpayers for their releases. — ED.

† Under the Revenue Act of 1928, the holding period was part of the definition of "capital assets"; the term including only property held for more than two years. — ED.

a right of petitioners to continue to perform service and then to be paid — to persist in their contractual relation for its agreed term. While this right is property in the constitutional sense in that it could not be arbitrarily legislated away, it is not capital. Beals v. Commissioner, 82 Fed. (2d) 268. It is a continuing right which goes hand in hand with performance. Before performance it is in embryo, and after payment it is exhausted. Obviously it is not the sort of property which is susceptible of ownership for a length of time as is a share of stock, a bond, or a thing. If services were performed and payment withheld for two years thereafter, there might be another question. . . .

There is, we think, no need to attempt a discussion of the various meanings in law of the word "property," or to define the term as used in [§1221]. The purpose of the statute, whether it be liberal or strict, is not served by including within it the contractual expectation of receiving pay for services not yet performed. The petitioners argue that they are like a lessor having a lease more than two years old, for a term still to run, who "sells" his remaining leasehold interest — the right to rent — for a lump sum. But this does not help their case, for if the analogy holds good, such a transfer is of the right to what is to come; and, like this case, is not the basis of a statutory capital gain. Nothing owned for two years has been sold, but only a potential right to be paid contemporaneously with performance.

Holding, for this reason, that the amount received was not a statutory capital gain, it is not necessary to agree with respondent's argument that petitioners were receiving in advance the pay which they would have received and for that reason the amount was ordinary income; or that petitioners were parties to a general plan to readjust the business and this was the price to them of ending their contract, and not of selling it. Our decision is sufficiently founded, we think, upon the transactions as they were stated by the parties themselves. It may be, however, that the anomalous sale by petitioners of their rights in a personal contract which they had yet to perform, to another not in position to perform it, for cash, straightens out in the subsequent treatment of the contract. For notwithstanding the legal forms which were employed or the artificial conception that the contract was sold for cash, ultimately the parties to it abrogated it in the full light of the earlier transactions. It is not, therefore, a stretch of reason to say that this is what, in a layman's way, the petitioners had intended throughout their negotiations and agreement with Clutter & Co. to be understood as promising to do — to hold themselves bound, for a price, to terminate their employment contracts. Clearly, if the agreement with Clutter & Co. had been thus stated, the cash consideration received would have had no semblance of sale of property held for over two years.

Judgment will be entered for the respondent.

NOTE

1. *Profit-sharing contracts.* Note that the taxpayers were to receive a share of the corporation's profits for their services. If they had established that a change in economic conditions had made their profit-sharing arrangement far more valuable than their services could be worth to the corporation, could the "excess value" of the contract be taxed as capital gain on a sale? If they were to receive a share of the corporation's profits in exchange for not competing with it for a specified future period, would the proceeds of a sale of the contract qualify as a capital gain? Consider the relationship of the *Lake* case to such transactions.

See O'Neill v. Commissioner, ¶64,003 P-H Memo T.C. (sale by lawyer of contract to receive percentage of sales price for negotiating sale of client's business; held, ordinary income).

2. *Sale of claim created by personal services.* In *McFall,* the court reserved judgment on the proper treatment of a past-due claim for payment for personal services already rendered. But see §1221(4), enacted in 1954. Does §1221(4) prevent a person who buys a wage claim at a discount (e.g., because the employer is in financial distress and unable to pay promptly) from reporting his profit on a resale of the claim as capital gain? Does it insure that he will enjoy an ordinary loss on reselling the claim for less than its cost, despite his having purchased the claim as an investment? How would a loss arising from his inability to collect the claim be treated?

3. *Employee stock options.* In 1950, Congress enacted a complex provision granting capital gain treatment to so-called "restricted stock options." If the option price was 95 per cent or more of the stock's fair market value when the option was granted, if the shareholder did not sell the stock until more than two years after the option was granted and six months after it was exercised, and if certain other conditions were satisfied, the shareholder realized no gain when the option was granted or exercised, and was permitted to report his profit on the sale (i.e., the difference between his cost and the sales price) as capital gain. Thus, for employees who met the statutory requirements, the "restricted stock option" was similar to the "proprietary stock option" of pre-1946 case law, discussed supra page 44.

President Kennedy's 1963 Tax Message recommended a return to the result in the *LoBue* case, under which the difference between the option price and the value of the stock would be taxed as ordinary income when the option was exercised. In the Revenue Act of 1964, Congress responded to this proposal by eliminating the "restricted stock option" of pre-1964 law (except as to options granted or contracted for before 1964), and substituting the "qualified stock option" of §422. To qualify under this provision, the option must be granted pursuant to a plan approved by the corporation's shareholders. may not run for more than five years, must specify a price equal to or greater than the value of the stock when the option is granted, and meet certain other requirements; employees who own directly or constructively more than a specified percentage of the corporation's stock (5 to 10 per cent, depending on the amount of the corporation's equity capital) may not participate. To obtain the maximum tax benefit, the employee must hold the stock for at least three years after the option is exercised. The 1964 legislation also provides (§423) for "employee stock purchase plans," under which tax advantages comparable to those enjoyed by pre-1964 "restricted stock options" are accorded to certain plans that are open to a broad spectrum of employees, provided that no more than $25,000 of stock (by value at the time the option is granted) accrues for purchase per employee per year. Employees owning directly or constructively five per cent or more of the corporation's stock are excluded from participation.

Stock options that do not meet the statutory requirements are governed by the case law considered supra pages 45-46.

See Sellin, Taxation of Deferred Employee and Executive Compensation 530-669 (1961); Griswold, The Mysterious Stock Option, 51 Ky. L.J. 246 (1962); Rudick, Compensation of Executives Under the 1954 Code, 33 Taxes 7 (1955).

4. *Employee participation in affiliated enterprises.* Time Magazine (May 18, 1953) contained this report on the then recent financial success of the Ford Motor Company:

> The management team that put the whole works in the black is getting rewards commensurate with its achievement. To get the new men the Ford company wanted — and to keep valuable old hands from being lured away — the Ford brothers let the top brass write out their own incentive plan. A new company, Dearborn Motors, Inc. was set up by the executives as the selling agent for tractors, and the stock was split among Breech, former Sales Manager Jack Davis, Production Boss Del Harder, Labor Boss John Bugas, Ford Division Boss Crusoe and eight others.
>
> The Ford company will soon buy up the stock of Dearborn Motors at a price which will give the holders huge capital gains. . . .

When common stock of Ford Motor Company was sold to the public in 1956, the prospectus gave the following details on the incentive plan described by the Time article:

> From 1947 to July 31, 1953 Dearborn Motors Corporation, the stockholders of which included certain directors and officers of the Company and their families, was

engaged in the distribution in the United States, Canada and elsewhere of Ford tractors pursuant to agreements with the Company, and in the manufacture and distribution of other farm equipment and implements and related parts and accessories. During the seven month period preceding the latter date, sales by the Company to Dearborn of tractors and related parts amounted to $62.4 million. The Company terminated the arrangement with Dearborn as of July 31, 1953, and on that date the Company . . . acquired such of the assets of Dearborn . . . as the Company considered would be useful to it in the business of manufacturing and distributing Ford tractors and a line of farm equipment, implements and accessories. These assets, which included among other things land and office and other buildings, inventories, accounts receivable, and machinery and equipment, constituted substantially all of the assets of Dearborn . . . other than cash and other than the assets employed by Dearborn's wholly owned subsidiary, Dearborn Motors Credit Corporation in the financing of tractors and other farm implements and equipment at wholesale and retail. The consideration paid by the Company . . . for these assets was $13,790,027 in cash and the assumption by the Company . . . of liabilities aggregating $3,041,656. The face amount of the accounts receivable and the cost to Dearborn, less depreciation and other charges to income, of the additional assets acquired, amounted in the aggregate to $14,801,301.

Dearborn Credit has continued to engage in a financing business, and during the past three years has financed, and currently is financing, more than half of the wholesale sales of tractors, farm equipment and implements by the Company's distributors to their dealers and smaller portions of the purchases of such products from the Company by such distributors and of retail sales by their dealers.

Another unusual compensatory device that has been recently employed by some publicly held corporation is "phantom" or "shadow" stock: employees are entitled to benefits on retirement measured by the dividends paid on the corporation's stock during the employment period, plus the appreciation in value on the number of "phantom" shares allocated to the employee. For discussion, see Note, Phantom Stock Plans, 76 Harv. L. Rev. 619 (1963).

5. *Other capital gain opportunities for employees.* Section 1240 permits certain amounts received by an employee on termination of employment, under a long-term employment agreement, to be reported as capital gain. This provision was allegedly enacted for the benefit of Louis B. Mayer; Cary, Pressure Groups and the Revenue Code: A Requiem in Honor of the Departing Uniformity of the Tax Laws, 68 Harv. L. Rev. 745, 747-749 (1955). Section 402(a)(2) provides that certain distributions by an exempt employees' trust are to be taxed as capital gain, rather than ordinary income. Both §1240 and §402(a)(2) use the capital gain provisions as an averaging device; with them, compare the more general approach to averaging of above-normal amounts of income under §§1301-1305, infra pages 827 et seq.

4. *Anticipatory Transactions*

RHODES' ESTATE v. COMMISSIONER
131 F.2d 50 (6th Cir. 1942)

Before HAMILTON, MARTIN, and MCCALLISTER, Circuit Judges.

Per Curiam.

On petition for review of a decision of the United States Board of Tax Appeals, it appears from the record that on November 18, 1937, the Carroll Furniture Company of Atlanta, Georgia, declared a cash dividend of $20.00 per share

payable on December 18, 1937, to stockholders of record at 12:00 o'clock noon on November 26, 1937. The taxpayer, Herman W. Rhodes, was the record owner of 600 shares of stock of said company on each of the three said dates.

The taxpayer offered to sell his dividend right for $11,925.00 to C. H. Patton of Memphis, Tennessee, an intimate friend. The offer was accepted and on December 7, 1937, Patton borrowed $12,000.00 from a bank for the purpose of making the purchase and pledged the assigned dividend right as collateral for the loan.

The check in payment of said dividend when issued on December 18, 1937, was made payable to Patton, who indorsed it to the bank from which he had obtained the loan, and the bank stamped the note paid and returned it to Patton.

The question is whether the amount received by the taxpayer from Patton should be treated as ordinary income as held by the Board, or whether such amount constitutes capital gain which is available as an offest against capital losses as the petitioner contends.

In our opinion under the circumstances here present, the sum received by the taxpayer was not capital gain as that phrase is used in [§1221(1)], but was taxable as ordinary income under [§61(a)]. Compare Helvering v. Horst, 311 U.S. 112; Helvering v. Eubank, 311 U.S. 122; Harrison v. Schaffner, 312 U.S. 579.

The order of the Board is affirmed.

NOTE

1. *Sale of stock with dividend right.* Would the result have been different if the taxpayer had sold the dividend right before the record date (November 26)? If the taxpayer had sold the *stock* on December 7, reserving the right to collect and retain the dividend, to whom would it be taxable? See Regs. §1.61-9(c), noting especially the qualifying adverb "ordinarily" in the second and third sentences. Why this caution in the Treasury's position?

2. *Amount taxable.* Should the taxpayer in the *Rhodes' Estate* case be taxed on $11,925 or on $12,000? If the dividend was sold in one year and paid in another, in which year is the taxpayer taxable? In Gleason v. Commissioner, ¶42,572 P-H Memo T.C., a taxpayer who engaged in this practice was apparently taxed on the amounts received from his assignee in the years the assignments occurred rather than when the dividends were paid:

> He cannot escape or change the tax upon them [the dividends] by any anticipatory arrangement even though he may anticipate the realization of income by means of a transaction which he chooses to call a sale.

What if the taxpayer sells the dividends not in the hope of getting capital gains but solely to realize the income in an earlier year?

3. *Disputed or doubtful claims.* Would the same result as in the principal case be reached if the taxpayer sold a claim for a dividend when the obligor corporation's liability or capacity to pay was uncertain and the transaction was entirely at arm's length?

4. *Bonds with accrued interest.* If a bond is sold between interest dates, the seller must report the accrued interest as income; the buyer treats it as return of capital. Fisher v. Commissioner, 209 F.2d 513 (6th Cir. 1954). (Why are bonds sold between interest dates treated differently from stock sold between dividend dates?) If a taxpayer purchases a bond on which interest is past due, however, a payment of the arrearages is a return of capital (or capital gain to the extent it exceeds his cost); only the interest accruing during his ownership is taxed as ordinary income. Regs. §1.61-7(c). How should a taxpayer who buys a defaulted bond and sells it "flat" (i.e., without allocation between principal, interest due at the time of his purchase, and additional interest accruing during his ownership) treat the lump sum sales price? Jaglon v. Commissioner, 303 F.2d 847 (2d Cir. 1962); see also United States v. Langston, 308 F.2d 729 (5th Cir. 1962) (especially Judge Brown's dissenting opinion).

5. *Other anticipatory transfers.* Twelve days before the maturity of a paid-up endowment policy, the taxpayer sold it to his law partners, reporting the difference between his cost and the sales price as long-term capital gain. Because a surrender of the policy to the issuer at or before its maturity would have produced ordinary income (for want of a "sale or exchange"), the gain on the sale was held taxable as ordinary income in Commissioner v. Phillips, 275 F.2d 33 (4th Cir. 1960); see also First National Bank v. Commissioner, 309 F.2d 587 (8th Cir. 1962). The court in *Phillips* relied primarily on the *Lake* case, without emphasizing the fact that the policy was sold just before its maturity. But would *Lake* preclude a capital gain if the policy lacked a cash surrender value and was sold long before maturity or if, though having a cash surrender value, it was sold before maturity to a buyer who intended to hold it for its long-term appreciation?

5. *Meaning of Term "Property" in §1221*

MILLER v. COMMISSIONER
299 F.2d 706 (2d Cir. 1962)

Before WATERMAN, KAUFMAN and MARSHALL, Circuit Judges.

KAUFMAN, Circuit Judge.

Petitioner is the widow of Glenn Miller, a band leader who achieved world fame about twenty-five years ago. Although Glenn Miller died in 1944, petitioner has been able to engage in a number of enterprises actively exploiting his continuing popularity. Apparently "the good that men do," if sufficiently publicized, does live after them, for petitioner's commercial efforts have met with appreciable financial success.

Thus, in 1952, she entered into a contract with Universal Pictures Company, Inc. (Universal) in connection with the production of a motion picture film entitled "The Glenn Miller Story"; and in the calendar year 1954, she received $409,336.34 as her share of the income derived from that theatrical venture. According to the terms of the 1952 contract, petitioner had purportedly granted to Universal "the exclusive right to produce, release, distribute and exhibit . . . one or more photoplays based upon the life and activities of Glenn Miller throughout the world"; and had warranted that she was "the sole and exclusive owner of all the rights" conveyed by her.

Petitioner now contends that the payment received in 1954 from Universal pursuant to that contract should be considered, for income tax purposes, as a "gain from the sale or exchange of a capital asset held for more than 6 months"; while the Commissioner, whose position was sustained by the Tax Court, contends that the 1954 payment must be treated as ordinary income. That is the difference between the parties, and in terms of taxes allegedly due in this case, it amounts to $159,850.71. Since there is little doubt on the facts presented here that there was a "gain," a "sale or exchange," and a holding "for more than 6 months," the specific question dividing the parties relates to the meaning of the term "capital asset." Furthermore, since Section 1221 of the Internal Revenue Code of 1954 defines the term "capital asset" as "*property* held by the taxpayer . . ." (emphasis supplied), and since, if anything was held by anyone it was held by the petitioner, the conflict is narrowed to the meaning of the word "property" for purposes of this section of the Code.

One would assume that since the question is so easily narrowed, the answer would be correspondingly free of difficulty. The assumption is unwarranted. The narrowing of a question does, ordinarily, reduce the *complexity* of the answer; but it also tends to increase the difficulty of reaching it. Moreover, in order to avoid creating more problems than we resolve, we wish to emphasize

that throughout the ensuing discussion, our analysis of the term "property" is made within the context of capital gains taxation; universality in definition is not only unlikely, but undesirable.

The Internal Revenue Code does not define "property" as used in Section 1221. . . . Therefore, we must look outside the eight corners of the code for some elucidation. The ordinary technique is to refer to principles of state property law for, if not an answer, at least a hint. Since ultimately it is the Congressional purpose which controls, such non-tax definitions are certainly not binding on us. . . . On the other hand, Congress may be presumed to have had ordinary property concepts in mind so they are relevant to our inquiry.

Most people trained in the law would agree that for many purposes one may define "property" as a bundle of rights, protected from interference by legal sanctions. Cf. Restatement, Property, §§1-5. This concept is behind one prong of petitioner's attack. She cites several cases, claiming they indicate that if Universal had made its motion picture without contracting with her, it would have been the victim of a substantial lawsuit.

Even if this were so, those cases would not compel this court to recognize, for income tax purposes, a "property right" in Glenn Miller himself if he were still alive. However, it is not necessary for us to reach a determination upon such an assertion. Those cases do not even remotely bear on the question whether such a property right, if it existed, could pass to the sole beneficiary under his will; and certainly they lend no support to petitioner's theory that the reputation or fame of a dead person could give rise to such "property rights." In fact, in the only case cited in which the rights of a dead man were considered at all, the court held against the claimant. Runyon, Jr. v. U.S., 281 F.2d 590, 592 (5th Cir. 1960). Indeed, petitioner is well aware of this, for she concedes that at the time of the "sale" there were "no *clear-cut* decisions . . . protecting publicity rights of a deceased celebrity . . ." (Pet. Br. p. 43).

Undeterred by her failure to find case authority which would substantiate the existence of "property rights" petitioner invokes the authority of logic. With considerable ingenuity, she argues:

(1) Universal paid petitioner $409,336.34 in 1954, which is a great deal of money.

(2) Universal was a sophisticated corporate being to which donative intent would be difficult to ascribe.

(3) If there was no danger in free use of Glenn Miller material, why did Universal pay?

Petitioner appears to find this question unanswerable unless it is conceded that there was a sale of a "property right." Petitioner is wrong.

It is clear to this Court, at least, that many things can be sold which are not "property" in any sense of the word. One can sell his time and experience, for instance, or, if one is dishonest, one can sell his vote; but we would suppose that no one would seriously contend that the subject matter of such sales is "property" as that word is orinarily understood. Certainly no one would contend that such subject matter was inheritable. We conclude, therefore, that not everything people pay for is "property."

In the instant case, "something" was indeed sold. And the expedient business practice may often be to sell such "things." But the "thing" bought, or more appropriately "bought off," seems to have been the chance that a new theory of "property" might be advanced, and that a lawsuit predicated on it might be successful. It was a purchase, so to speak, of freedom from fear. In effect, it was a hedge against the chance that the Miller "property" might exist. Because Universal feared that it might sometime in the future be held to have infringed

a property right does not mean, however, that a court presently considering whether that property right *did* exist in 1952 must realize Universal's worst fears. That does not mean that Universal's payment was foolish or illusory. It got what it contracted for in 1952 and what it later paid Mrs. Miller for: freedom from the danger that at a future date a defensible right constituting "property" *would* be found to exist. But it didn't pay for "property." [1]

It may be helpful to compare this situation with one which involves the settlement of a tort claim, e.g., a negligence lawsuit. No one doubts the existence of a legal principle creating liability for negligence. If the facts are as a plaintiff contends, and they come within that principle, the defendant's liability exists. Even if they do not, the defendant, for his own reasons, may agree to make a payment in settlement of his alleged liability. Moreover, the Commissioner, for purposes of taxation, may accept that settlement as an implied affirmation that the *facts* were substantially as the plaintiff contended, and treat the recovery accordingly. But no two individuals can, by agreement between themselves, create a *legal* principle, binding upon everyone else, including the Commissioner, where none existed before. This is the exclusive domain of the legislature and the courts as repository of the public will. Admittedly, this court cannot overlook the fact that much of the work of a lawyer is predicting future judicial advances (or aberrations, perhaps); and that is undoubtedly what Universal's lawyers were doing in 1952. But, a lawyer's prediction of the future, as some lawyers know, is not law.

In any event, we are unwilling to accept the fact of substantial payment as proof that "property" within the meaning of Section 1221 of the Code exists; and for the reasons stated, we must reject this argument as being in reality a makeweight. Petitioner conceded that at the time of the "sale" there had been no authoritive decision holding that a decedent's successors had any "property right" to the public image of a deceased entertainer; and therefore it follows that their bargain was not, at that time, a bargain that both parties knew involved a "property right." Furthermore, we do not find it necessary to decide whether the parties were then bargaining for a property right. The case before us only involves the meaning of language in a highly technical statute and the legal effects flowing from that language.

"[I]t is evident that not everything which can be called property in the ordinary sense and which is outside the statutory exclusions qualifies as a capital asset . . ." C.I.R. v. Gillette Motor Transport, Inc., 364 U.S. 130, 134 (1960); C.I.R. v. Phillips, 275 F.2d 33, 35 (4th Cir. 1960). Gains which result from the sale or exchange of capital assets receive preferential tax treatment. Therefore, "the definition of a capital asset must be narrowly applied," Corn Products Refining Co. v. C.I.R., 350 U.S. 46, 52; Mansfield Journal Co. v. C.I.R., 274 F.2d 284, 286 (6th Cir. 1960), in order to effectuate the basic Congressional purpose "to relieve the taxpayer from . . . excessive tax burdens on gains resulting from a conversion of capital investments, and to remove the deterrent effect of those burdens on such conversions." Burnet v. Harmel, 287 U.S. at p. 106; Corn Productes Refining Co. v. C.I.R., supra. We do not believe that for income tax computation purposes the beneficiaries of the estate of a deceased entertainer receive by descent a capitalizable "property" in the name, reputation, right of publicity, right of privacy or "public image" of the deceased; or that in this case the petitioner, for tax purposes, owned any "property" which came into existence

1 One must remember that, the techniques of advertising and promotion being what they are, timing is very important and a successful motion for a preliminary injunction made by one who *claims* a "property right" might be as disastrous as a final award of damages. One can easily find wisdom in this payment by Universal without finding that it paid for "property."

after Glenn Miller's death. Therefore, income received by Mrs. Miller from contractual arrangements made by her with Universal dealing with deceased's intangible rights of the nature above specified is "ordinary" income as opposed to capital gain or loss under §1221 of the Internal Revenue Code of 1954.

Affirmed.

NOTE

1. *Basis of the Miller case.* In reaching its decision, did the court decide that Mrs. Miller would have had no claim against Universal under New York law had the motion picture been made without her permission; that until the New York courts or legislatures clearly recognized such a claim, it would not consider it as "property" within the meaning of §1221; or that the extent of her rights under state law is irrelevant? If the opinion is based on the second of these possibilities, how could the taxpayer have established the scope of her rights under New York law?

Mrs. Miller sued Universal for damages arising out of the use by Decca (Universal's parent corporation) of the motion picture sound track in the manufacture of phonograph records. The New York courts held that she did not have "any property interests in the Glenn Miller 'sound' [i.e., the mode of musical rendition employed by the Glenn Miller orchestra]," but that she might have a claim based on breach of contract. Miller v. Universal Pictures Co., Inc., 201 N.Y.S.2d 632 (1960), aff'd per curiam (3 judges dissenting, with opinion), 10 N.Y.2d 972, 180 N.E.2d 298 (1961).

See also Runyon v. United States, 281 F.2d 590 (5th Cir. 1960) (alleged right to privacy not a capital asset).

2. *Payment for use of taxpayer's property.* In Commissioner v. Gillette Motor Transport, Inc., cited in the *Miller* case, the taxpayer claimed that compensation received for the temporary requisition of its facilities by the government during World War II was taxable as capital gain. Although the controlling statutory provision was §117(j) of the 1939 Code (now §1231, infra page 552), the ultimate question (as framed by the Court) was whether the right that was seized by the government was a "capital asset." The Court held that it was not:

> While a capital asset is defined in [§1221] as "property held by the taxpayer," it is evident that not everything which can be called property in the ordinary sense and which is outside the statutory exclusions qualifies as a capital asset. . . .
>
> In the present case, respondent's right to use its transportation facilities was held to be a valuable property right compensable under the requirements of the Fifth Amendment. However, that right was not a capital asset within the meaning of [§§1221 and 1231]. To be sure, respondent's facilities were themselves property embraceable as capital assets under [§1231]. Had the Government taken a fee in those facilities, or damaged them physically beyond the ordinary wear and tear incident to normal use, the resulting compensation would no doubt have been treated as gain from the involuntary conversion of capital assets. See, e.g., *Waggoner,* 15 T.C. 496; *Henshaw,* 23 T.C. 176. But here the Government took only the right to determine the use to which those facilities were to be put.
>
> That right is not something in which respondent had any investment, separate and apart from its investment in the physical assets themselves. Respondent suggests no method by which a cost basis could be assigned to the right; yet it is necessary, in determining the amount of gain realized for purposes of [§1222], to deduct the basis of the property sold, exchanged, or involuntarily converted from the amount received. [§1001(a).] Further, the right is manifestly not of the type which gives rise to the hardship of the realization in one year of an advance in value over cost built up in several years, which is what Congress sought to ameliorate by the capital-gains provisions. . . . In short, the right to use is not a capital asset, but is simply an incident of the underlying physical property, the recompense for which is commonly regarded as rent. [364 U.S. at 135.]

With the first two sentences in the above extract from the *Gillette Motor Transport* case, compare Regs. §1.1221-1(a): "The term 'capital assets' includes all classes of property not specifically excluded by section 1221."

6. *Correlation with Prior Related Transaction*

MERCHANTS NATIONAL BANK v. COMMISSIONER

199 F.2d 657 (5th Cir. 1952)

Before BORAH, STRUM, and RIVES, Circuit Judges.

STRUM, Circuit Judge.

This is a petition to review a decision of the Tax Court which sustained deficiency assessments in petitioner's income taxes for the years 1943 and 1944. . . .

The 1944 deficiency arose from the following facts: On January 1, 1941, the petitioner held notes of Alabama Naval Stores Company, representing loans made by the bank to the Naval Stores Company, on which there was an unpaid balance of $49,025.00. In 1941 and 1943, at the direction of national bank examiners, the bank charged these notes off as worthless, thereafter holding them on a "zero" basis. Deductions for the charge-offs, as ordinary losses, were allowed in full by the Commissioner on petitioner's income tax returns in 1941 and 1943. In 1944, petitioner sold the notes to a third party for $18,460.58, which it reported on its return for 1944 as a long term capital gain and paid its tax on that basis. The Commissioner held this sum to be ordinary income, taxable at a higher rate than long term capital gains, and entered a deficiency assessment accordingly, in which he was sustained by the Tax Court. This is the basis of the 1944 controversy.

The rule is well settled, and this Court has held, that when a deduction for income tax purposes is taken and allowed for debts deemed worthless, recoveries on the debts in a later year constitute taxable income for that year to the extent that a tax benefit was received from the deduction taken in a prior year. Commissioner v. First State Bank of Stratford [infra page 668], cert. denied, 335 U.S. 867 (1948); National Bank of Commerce v. Commissioner, 9 Cir., 115 F.2d 875.

When these notes were charged off as a bad debt in the first instance, the bank deducted the amount thereof from its ordinary income, thus escaping taxation on that portion of its income in those years. The amount subsequently recovered on the notes restores pro tanto the amount originally deducted from ordinary income, and is accordingly taxable as ordinary income, not as a capital gain. When the notes were charged off, and the bank recouped itself for the capital loss by deducting the amount thereof from its current income, the notes were no longer capital assets for income tax purposes. To permit the bank to reduce its ordinary income by the amount of the loss in the first instance, thus gaining a maximum tax advantage on that basis, and then permit it to treat the amount later recovered on the notes as a capital gain, taxable on a much lower basis than ordinary income, would afford the bank a tax advantage on the transaction not contemplated by the income tax laws.

The fact that the bank sold these notes to a third party, instead of collecting the amount in question from the maker of the notes does not avoid the effect of the rule above stated. Nor are the cases just cited distinguishable, as contended by appellant, because in the first the notes were distributed as a dividend in kind, and in the second were received by the taxpayer as part of a non-taxable reorganization. The controlling point in both cases is, as here, that the amount of

the notes was originally deducted from ordinary income, and the owner-bank allowed a tax benefit on that basis, from which premise both courts concluded that the taxpayer should settle on the same basis as to sums subsequently recovered, since those sums stand in place of the income which escaped taxation in the year when the deduction was taken.

As the recoveries in question were ordinary income, not capital gains, the 1944 deficiency was properly entered.

Affirmed.

NOTE

1. *Scope of correlation with prior transaction.* Note the court's reference to "a tax advantage not contemplated by the income tax laws." What if, by reason of changing tax rates or the taxpayer's fluctuating income, reporting the proceeds of the notes in 1944 as ordinary income would produce a tax greater than the tax that was saved by the 1941 and 1943 deductions? If a taxpayer deducts a non-business bad debt as a capital loss under §166(d), can he treat a later recovery on it as capital gain rather than ordinary income even though he has not engaged in a sale or exchange? Is the opinion applicable to a sale of materials and supplies whose cost was deducted on acquisition under §162?

2. *"Recapture" of depreciation deductions.* By virtue of §1245 and §1250, enacted in 1962 and 1964, taxpayers must report a gain on the sale of certain depreciable property as ordinary income, rather than as capital gain, to the extent that the property gave rise to depreciation deductions from ordinary income in prior years. See Section G infra, page 561.

ARROWSMITH v. COMMISSIONER

344 U.S. 6 (1952)

MR. JUSTICE BLACK delivered the opinion of the Court.

This is an income tax controversy growing out of the following facts as shown by findings of the Tax Court. In 1937 two taxpayers, petitioners here, decided to liquidate and divide the proceeds of a corporation in which they had equal stock ownership. Partial distributions made in 1937, 1938, and 1939 were followed by a final one in 1940. Petitioners reported the profits obtained from this transaction, classifying them as capital gains. They thereby paid less income tax than would have been required had the income been attributed to ordinary business transactions for profit. About the propriety of these 1937-1940 returns, there is no dispute. But in 1944 a judgment was rendered against the old corporation and against Frederick R. Bauer, individually. The two taxpayers were required to and did pay the judgment for the corporation, of whose assets they were transferees. [§6901(a)(1)(A).] Classifying the loss as an ordinary business one, each took a tax deduction for 100% of the amount paid. Treatment of the loss as a capital one would have allowed deduction of a much smaller amount. . . . The Commissioner viewed the 1944 payment as part of the original liquidation transaction requiring classification as a capital loss, just as the taxpayers had treated the original dividends as capital gains. Disagreeing with the Commissioner the Tax Court classified the 1944 payment as an ordinary business loss. 15 T.C. 876. Disagreeing with the Tax Court the Court of Appeals reversed, treating the loss as "capital." 193 F.2d 734. This latter holding conflicts with the Third Circuit's holding in Commissioner v. Switlik, 184 F.2d 299. Because of this conflict, we granted certiorari. 343 U.S. 976.

[Section 165(f)] treats losses from sales or exchanges of capital assets as "capital losses" and [§331(a)(1)] requires that liquidation distributions be treated as ex-

changes. The losses here fall squarely within the definition of "capital losses" contained in these sections. Taxpayers were required to pay the judgment because of liability imposed on them as transferees of liquidation distribution assets. And it is plain that their liability as transferees was not based on any ordinary business transaction of theirs apart from the liquidation proceedings. It is not even denied that had this judgment been paid after liquidation, but during the year 1940, the losses would have been properly treated as capital ones. For payment during 1940 would simply have reduced the amount of capital gains taxpayers received during that year.

It is contended, however, that this payment which would have been a capital transaction in 1940 was transformed into an ordinary business transaction in 1944 because of the well-established principle that each taxable year is a separate unit for tax accounting purposes. United States v. Lewis, 340 U.S. 590; North American Oil v. Burnet, 286 U.S. 417. But this principle is not breached by considering all the 1937-1944 liquidation transaction events in order properly to classify the nature of the 1944 loss for tax purposes. Such an examination is not an attempt to reopen and readjust the 1937 to 1940 tax returns, an action that would be inconsistent with the annual tax accounting principle.

The petitioner Bauer's executor presents an argument for reversal which applies to Bauer alone. He was liable not only by reason of being a transferee of the corporate assets. He was also held liable jointly with the original corporation, on findings that he had secretly profited because of a breach of his fiduciary relationship to the judgment creditor. Trounstine v. Bauer, Pogue & Co., 44 F. Supp. 767, 773; 144 F.2d 379, 382. The judgment was against both Bauer and the corporation. For this reason it is contended that the nature of Bauer's tax deduction should be considered on the basis of his liability as an individual who sustained a loss in an ordinary business transaction for profit. We agree with the Court of Appeals that this contention should not be sustained. While there was a liability against him in both capacities, the individual judgment against him was for the whole amount. His payment of only half the judgment indicates that both he and the other transferee were paying in their capacities as such. We see no reason for giving Bauer a preferred tax position.

Affirmed.

Mr. Justice Douglas, dissenting.

I agree with Mr. Justice Jackson that these losses should be treated as ordinary, not capital, losses. There were no capital transactions in the year in which the losses were suffered. Those transactions occurred and were accounted for in earlier years in accord with the established principle that each year is a separate unit for tax accounting purposes. See United States v. Lewis [supra page 103]. I have not felt, as my dissent in the *Lewis* case indicates, that the law made that an inexorable principle. But if it is the law, we should require observance of it — not merely by taxpayers but by the Government as well. We should force each year to stand on its own footing, whoever may gain or lose from it in a particular case. We impeach that principle when we treat this year's losses as if they diminished last year's gains.

Mr. Justice Jackson, whom Mr. Justice Frankfurter joins, dissenting.

This problem arises only because the judgment was rendered in a taxable year subsequent to the liquidation.

Had the liability of the transferor-corporation been reduced to judgment during the taxable year in which liquidation occurred, or prior thereto, this problem, under the tax laws, would not arise. The amount of the judgment rendered against the corporation would have decreased the amount it had available for distribution, which would have reduced the liquidating dividends proportion-

ately and diminished the capital gains taxes assessed against the stockholders. Probably it would also have decreased the corporation's own taxable income.

Congress might have allowed, under such circumstances, tax returns of the prior year to be reopened or readjusted so as to give the same tax results as would have obtained had the liability become known prior to liquidation. Such a solution is foreclosed to us and the alternatives left are to regard the judgment liability fastened by operation of law on the transferee as an ordinary loss for the year of adjudication or to regard it as a capital loss for such year.

This Court simplifies the choice to one of reading the English language, and declares that the losses here come "squarely within" the definition of capital losses contained within two sections of the Internal Revenue Code. What seems so clear to this Court was not seen at all by the Tax Court, in this case or in earlier consideration of the same issue; nor was it grasped by the Court of Appeals for the Third Circuit. Commissioner v. Switlik, 184 F.2d 299 (1950).

I find little aid in the choice of alternatives from arguments based on equities. One enables the taxpayer to deduct the amount of the judgment against his ordinary income which might be taxed as high as 87%, while if the liability had been assessed against the corporation prior to liquidation it would have reduced his capital gain which was taxable at only 25% (now 26%). The consequence may readily be characterized as a windfall (regarding a windfall as anything that is left to a taxpayer after the collector has finished with him).

On the other hand, adoption of the contrary alternative may penalize the taxpayer because of two factors: (1) since capital losses are deductible only against capital gains, plus $1,000, a taxpayer having no net capital gains in the ensuing five years would have no opportunity to deduct anything beyond $5,000; and (2) had the liability been discharged by the corporation, a portion of it would probably in effect have been paid by the Government, since the corporation could have taken it as a deduction, while here the total liability comes out of the pockets of the stockholders.

Solicitude for the revenues is a plausible but treacherous basis upon which to decide a particular tax case. A victory may have implications which in future cases will cost the Treasury more than a defeat. This might be such a case, for anything I know. Suppose that subsequent to liquidation it is found that a corporation has undisclosed claims instead of liabilities and that under applicable state law they may be prosecuted for the benefit of the stockholders. The logic of the Court's decision here, if adhered to, would result in a lesser return to the Government than if the recoveries were considered ordinary income. Would it be so clear that this is a capital loss if the shoe were on the other foot?

Where the statute is so indecisive and the importance of a particular holding lies in its rational and harmonious relation to the general scheme of the tax law, I think great deference is due the twice-expressed judgment of the Tax Court. In spite of the gelding of Dobson v. Commissioner, 320 U.S. 489, by the recent revision of the Judicial Code, Act of June 25, 1948, §36, 62 Stat. 991-992, I still think the Tax Court is a more competent and steady influence toward a systematic body of tax law than our sporadic omnipotence in a field beset with invisible boomerangs. I should reverse, in reliance upon the Tax Court's judgment more, perhaps, than my own.

NOTE

1. *Applications of Arrowsmith doctrine.* A taxpayer sold real property, reporting a capital gain on the transaction. Several years later the vendees discovered that the building encroached on the land of a third party and paid $3000 to relocate it. The tax-

payer, who had sold the property by warranty deed, reimbursed the vendees for this expense and sought to deduct it as an ordinary loss. The Tax Court held that only a capital loss could be taken, since the "adjustment under the warranty was a part and parcel of the sale of the property," on which capital gain rather than ordinary income was realized. Estate of Shannonhouse v. Commissioner, 21 T.C. 422 (1954). See also Machris' Estate v. Commissioner, 34 T.C. 827 (1960) (on sale of corporate stock, sellers were to get specified amount plus additional amounts dependent on subsequent determination of oil reserves on corporation's property; held, expenses of engineering surveys to establish amount of reserves, to extent paid by sellers under agreement, constituted long-term capital loss, not an expense under §162 or §212); Wener v. Commissioner, 242 F.2d 938 (9th Cir. 1957) (partners sold their partnership interests for $75,000, of which $15,000 was paid in cash and $60,000 was evidenced by notes, and deducted as a loss the difference between their basis for the interests and $75,000; at a later date, they accepted $35,000 in full settlement of the notes; held, difference between face amount of notes and $35,000 was a long-term capital loss under *Arrowsmith*); Note, Tax Treatment of Stockholder-Transferees' Payments in Satisfaction of Dissolved Corporations' Unpaid Debts, 61 Yale L.J. 1081 (1952).

If the taxpayer engages in a tax-free exchange (e.g., under §1031) and later makes a payment to the transferee because the transferred property did not meet its specifications, does he have an ordinary loss, a capital loss, or an adjusment to the basis of the property received in the exchange? See Rees Blow Pipe Mfg. Co. v. Commissioner, 41 T.C. No. 58 (1964).

2. *Impact of §1341.* Would the result in *Arrowsmith* have been changed if §1341 had been in effect for the taxable year in question? See, for §1341, page 104 supra.

3. *Expenses of realizing capital gain.* Does *Arrowsmith* afford a basis for requiring the taxpayer to treat business expenses as capital losses if they are incurred in realizing capital gains? (This treatment is imposed on selling expenses, in effect, by requiring them to be offset against the sales proceeds, supra page 460.)

SECTION D. PROPERTY HELD FOR SALE TO CUSTOMERS

Section 1221(1), relating to property held for sale to customers, is a re-enactment of §117(a)(1)(A) of the 1939 Code.

VAN SUETENDAEL v. COMMISSIONER

¶44,305 P-H Memo T.C. (1944)

MEMORANDUM FINDINGS OF FACT AND OPINION

HARRON, Judge: . . .

During the taxable years, and for some years prior thereto, the petitioner was primarily engaged in buying and selling securities. Approximately 90 per cent of the securities purchased by him were interest-bearing bonds and the other 10 per cent consisted of preferred and common stock. His income was derived principally from interest on the bonds purchased and from interest on bank deposits. He maintained an office in Yonkers and had one employee who acted as his secretary-typist and general assistant. He was not a member of any stock exchange. His name was listed in several statistical financial publications as a dealer in securities, and in the Yonkers city and telephone directories under the classification of "investments." He also listed offerings to buy or sell securities at a certain price in the National Daily Quotation Service, for which he paid an annual subscription fee. This service was circularized among investment and trading houses in the United States. Petitioner has registered with the Securities and Exchange Commission, the State of New York, and the Bureau of Internal Revenue as a broker or dealer in securities. From time to time he has advertised in a Yonkers

newspaper offering to buy or sell certain securities. Occasionally, his name appeared in the advertising section of the Columbia Alumni News under the caption "Investment Securities." He has also written to individuals, banks, and insurance companies offering securities at stated prices. Over a period of years, he has occasionally distributed calendars and pocket manuals containing data on securities of companies listed on the leading stock exchanges. Prior to the taxable years, petitioner, to a small degree, had participated in selling groups for the purpose of distributing new issues of securities. . . .

During the taxable years, petitioner maintained separate accounts with Eastman, Dillon & Company, Ira Haupt & Company, and Chisholm & Chapman, all of whom were brokers, having membership on the New York Stock Exchange and the New York Curb Exchange. The great proportion of the securities sold by the petitioner during these years were sold to or through Eastman, Dillon & Company and Ira Haupt & Company. Excluding sales to petitioner's wife and son, approximately 77 per cent of petitioner's total sales in these years were made to or through Eastman, Dillon & Company and Ira Haupt & Company. Some of the securities purchased by petitioner from these brokers were kept by them for petitioner. Many of the specific securities sold to or through Eastman, Dillon & Company and Ira Haupt & Company had been previously purchased by petitioner from these same brokers. . . .

In reporting the transactions of the sales of securities in each year on his return, petitioner took the view that all of the securities sold were non-capital assets, so that he computed the result of all the transactions in each year simply by taking the total cost of the securities and the total receipts from sales. . . .

The respondent, in determining the deficiencies, held that the securities sold by petitioner were capital assets, and he therefore applied the limitations of [§1211(b)] in computing petitioner's net income from the sale of such securities.

Opinion

In this proceeding, as well as in a former proceeding before the Board of Tax Appeals involving prior taxable years, the petitioner has attempted to show that he was recognized in the security trade as a dealer in securities. He has placed great emphasis on the fact that he had registered with the Securities and Exchange Commission and the State of New York as a security dealer. Similarly, he has pointed to advertisements placed by him in newspapers, bulletins, and pamphlets indicating that he dealt in securities during the taxable years. On brief, he argues that the entire case resolves itself to the one question of whether he was engaged in business as a dealer in securities. That, however, is not the issue. The phrase "dealer in securities" is not defined in the statute, although it is defined in [Regs. §1.471-5]. The only issue for determination here is whether the securities sold by petitioner during the taxable years were capital assets under [§1221].

Under [§1221], all property is to be treated as capital assets unless the taxpayer is able to bring himself within one of the stated exceptions in the definition of capital assets. As far as this proceeding is concerned, the only possible exceptions which petitioner could rely upon are that the securities sold were

> stock in trade of the taxpayer or other property of a kind which would properly be included in the inventory of the taxpayer if on hand at the close of the taxable year, or property held by the taxpayer primarily for sale to customers in the ordinary course of his trade or business.

The securities which petitioner sold during the taxable years cannot be classified as stock in trade or property subject to inventory in his hands unless they were held by him primarily for sale to customers in the ordinary course of his business. Thus, the issue turns on whether or not the securities sold by petitioner during the taxable years were held by him primarily for sale to customers in the ordinary course of business. This is probably the reason why petitioner has placed such stress upon the contention that he was a dealer in securities since securities in the nature of stock in trade held primarily for sale to customers are held only by dealers in securities. See Francis Shelton Farr, 44 B.T.A. 683. However, there may be many sales of securities by so-called dealers in securities which do not come within the exceptions set forth in the definition of capital assets. The fact that petitioner had a teletype machine, four telephones and statistical financial publications in his office, was listed as a "dealer" in certain publications, and advertised himself as willing to buy or sell securities is not determinative of the issue. The subject matter of the cited sections is property and it must be shown that the property itself comes within the exceptions stated in the definition of capital assets.

The respondent has determined that the securities sold by the petitioner during the taxable years were not held by him primarily for sale to customers in the ordinary course of his business. The burden of proving otherwise is upon petitioner. The question is predominantly one of fact. . . .

From an analysis of the schedule showing all of petitioner's transactions in securities during these years, we cannot find as a fact that petitioner held the securities sold by him during the taxable years primarily for sale to customers in the ordinary course of his business. The facts are just as consonant with the theory that petitioner held the securities for speculation or for investment. It is well established that taxpayers who buy securities for speculation or investment hold them as capital assets and not primarily for resale to customers. Seeley v. Helvering, 77 F.(2d) 323; O. L. Burnett, 40 BTA 605, affirmed on point considered here, 118 F.(2d) 659; Vaughan v. Commissioner, 85 F.(2d) 497, certiorari denied, 299 U.S. 606. One who holds securities in the nature of stock in trade primarily for resale to customers is regularly engaged in the purchase of securities at wholesale. Francis Shelton Farr, supra. He is a middleman in distributing the securities and he does not resell to the same class of persons from whom he buys. Seeley v. Helvering, supra. Here, petitioner did not make wholesale purchases of securities. The securities purchased were in relatively small quantities and were diversified. In this respect, he acted no differently from an ordinary purchaser. Most of the securities purchased by petitioner were resold to or through the same brokers from whom they were bought. Here again, petitioner acted in the same manner as an ordinary purchaser having an account with a broker. Approximately 77 per cent of all the securities sold by petitioner during the taxable years, excluding those sold to his wife and son, were sold to or through Eastman, Dillon & Company and Ira Haupt & Company. In most of these transactions, the companies acted as brokers and did not purchase the securities as principals for their own account. These brokers or their clients cannot be considered as petitioner's customers. Francis Shelton Farr, supra; Seeley v. Helvering, supra; Vaughan v. Commissioner, supra. Over 92 per cent of the securities sold by petitioner to or through Eastman, Dillon & Company and Ira Haupt & Company had been previously acquired by him from the same two brokerage houses. Many of these securities were resold by petitioner at a profit on the same day on which he purchased them or a short time thereafter. Obviously, in those cases, he never actually received the securities since the brokers who purchased

and sold them for him were the same. The result of those transactions was that petitioner merely received or was credited with the profit. In this respect, his operations were similar to a trader purchasing securities on margin. Petitioner could not have intended to purchase these securities for resale to "customers" as that word is used in the statute. Some of the securities purchased through the two brokerage houses were not delivered to petitioner, but were kept by the brokers. It may be that they were retained as collateral for loans, which would be another indication that petitioner was purchasing and holding the securities for speculation. Our analysis of these schedules, together with the record as a whole, warrants the conclusion that the securities purchased by petitioner were not held as stock in trade primarily for resale to customers. Although petitioner did make efforts to sell some of the securities through channels other than brokers and dealers, and actually did sell a small amount of the securities to other parties, we cannot find even as to those securities that they were purchased primarily for resale to customers. A mere statement in behalf of petitioner that they were purchased or held for that purpose is insufficient. Vaughan v. Commissioner, supra. We think that the purchases and sales of all of the securities were engendered by the speculative advantage which might be derived by petitioner, or the income which he might receive therefrom.

Respondent points out that during the taxable years, petitioner's principal source of income was derived from interest on the bonds owned by him and that the great proportion of his losses resulted from securities which he had held for a long period of time. He argues that petitioner, during each of the taxable years, selected securities which he had held for a long time and which were then unprofitable to him and disposed of those securities at the best possible price to anyone who would buy them in order that the loss sustained thereon should offset his income from the interest-bearing bonds held by him. The facts indicate that petitioner received interest on bonds in 1936 in the amount of $25,012; in 1937 in the amount of $27,120.23; and in 1938 in the amount of $31,683.25. During the same period, petitioner reported on his income tax returns, business losses in substantially the same amounts. The facts also show that in 1936, of the total losses of $35,796.68 sustained by petitioner from the sale of securities, $32,659.67 was sustained on securities held by him for more than five years. In 1937, of the total losses of $37,660.91 sustained by petitioner, $16,096.34 was sustained from securities held more than five years. In 1938, of the total losses of $25,806.13 sustained by petitioner, the amount of $21,441.41 was a long-term loss sustained on securities held for more than 18 months. Respondent also argues that as to the securities held for a long period, petitioner did not hold them for resale to customers, but for the income which he might derive therefrom. The facts apparently support respondent's contentions. Respondent also states in his brief that in all of the years since 1929, petitioner has reported substantial income from interest and dividends, yet, in all of these years, his sales of securities have resulted in substantial annual losses which were offset against his income. There appears to be ground for this statement. See Achille O. Van Suetendael, ¶40,269 P-H Memo BTA. . . .

A careful study of the whole record, including all of the exhibits in evidence, convinces us that petitioner has not sustained the burden of proof imposed upon him of showing that the securities sold during the taxable years were held by him primarily for sale to customers in the ordinary course of his business. The proof is just as susceptible of a construction that some of the securities were acquired and held by petitioner for speculation and some for investment. We think that a reasonable conclusion from all of the facts is that petitioner intended to sell the securities in any way he could and to any purchaser regardless of whether or not

the purchaser could be deemed a "customer" within the meaning of the statute. It is therefore held that the securities sold by petitioner during the taxable years were capital assets and subject to the limitations of gain and loss set forth in [§1211(b)]. Respondent's determination is sustained.

NOTE

1. *"Traders" and "dealers."* The Tax Court's decision was affirmed per curiam, Van Suetendael v. Commissioner, 152 F.2d 654, 654 (2d Cir. 1945):

> This issue was predominantly one of fact and the Tax Court's finding was adverse to the taxpayer. We cannot say that "the Tax Court's inferences and conclusions on this factual matter are so unreasonable from an evidentiary standpoint as to require a reversal of its judgment." . . . [W]ith respect to some of the securities sold the taxpayer may have been a dealer and with respect to others a trader, investor or speculator. In his returns he made no attempt to distinguish one sale from another; nor did he present sufficient evidence to enable the Tax Court to do so.

In Commissioner v. Burnett, 118 F.2d 659 (5th Cir. 1941), a leading case in this area, it was held that a "trader" in securities and commodities, whose trading averaged over $10,000,000 per year, did not hold these assets "primarily for sale to customers in the ordinary course of his trade or business."

See also Smith v. Commissioner, 33 T.C. 465, 482 (1959), holding that commodities and commodities futures were capital assets despite the fact that the taxpayer was a business enterprise (an association taxable as a corporation) whose sole business activity was commodity trading.

Should a "trader" in securities be treated differently from a dealer, either when he has gains or when he suffers losses?

The requirement that property, to avoid capital asset treatment, be held for sale "to customers" came into the statute in 1934. It was designed to prevent "a stock speculator trading on his own account" from claiming ordinary losses on his transactions and thus canceling out his income from dividends, interest, etc. by what were apparently thought by Congress to be frequently fictitious transactions, H.R. Rept. No. 1385, 73d Cong. 2d Sess., 1939-1 C.B. (Part 2) 627, 632; Wood v. Commissioner, 16 T.C. 213, 219-220 (1951). In enacting the restriction, Congress seems to have overlooked the possibility that, in another part of the business cycle, "traders" might realize profits and would be able to report them as capital gains.

In retrospect, the 1934 amendment may appear superfluous; in 1941, the Supreme Court refused to upset a determination by the Tax Court that a wealthy investor's activities in managing his own estate did not constitute a "trade or business" under §162(a), and it would not stretch the reasoning of the opinion to interpret it as also meaning that his securities were not held for sale "in the ordinary course of trade or business" within the meaning of §1221(1). Higgins v. Commissioner, supra pages 204-205. To be sure, the taxpayer in *Higgins* was interested in long-term investments rather than in short-run trading profits, but his investments were worth over $25 million and required the attention of a regular office staff; the approach of the case strongly suggests that even a trader like Van Suetendael is not engaged in a "trade or business." The question cannot be considered as closed, however, since some courts recognize, in applying §162, the "business of trading in securities." See Main Line Distributors, Inc. v. Commissioner, 321 F.2d 562 (6th Cir. 1963), and cases there cited; Commissioner v. Levis' Estate, 127 F.2d 796 (2d Cir. 1942), cert. denied, 317 U.S. 645.

Are securities held by a "promoter" (as that term is used in the *Whipple* case, supra page 285) embraced by §1221(1)? See Katz v. Commissioner, ¶60,200 P-H Memo T.C. (stock of corporations owning luncheonettes held for sale to customers in ordinary course of business; the profits on sale of stock represented remuneration for the shareholders' activities in creating and promoting the luncheonette businesses).

2. *"Investment" securities held by dealers.* A dealer in securities may hold some of his securities in an "investment account" rather than for sale and thus qualify them as capi-

tal assets. Carl Marks & Co. v. Commissioner, 12 T.C. 1196 (1949). Section 1236, added by the Revenue Act of 1951, requires such investment securities to be clearly identified as such, to prevent the taxpayer from claiming capital asset treatment if they are sold at a profit, but non-capital treatment if a loss is incurred. A dealer may not treat a security as a capital asset unless it was "clearly identified" in his records as held for investment within thirty days after its acquisition; even if so identified, it will lose its capital asset status if in fact it is held for sale. If the dealer has failed to label a security as held for investment, will the ordinary income taint run with the property if he gives it to his wife or child and the donee sells it? By virtue of §1236(b), once a security has been identified as held for investment, any loss on a subsequent sale or exchange by the dealer will be a capital loss; the security cannot be effectively transferred to the category of property held for sale to customers.

See also Frank v. Commissioner, 321 F.2d 143 (8th Cir. 1963) (taxpayers subscribed to shares of insurance company stock in connection with promotional and sales activities conducted for the company through taxpayers' corporation; held, profit on sale of taxpayers' own shares is taxable as ordinary income, not capital gain).

There is no statutory counterpart of §1236 requiring other types of property to be formally labeled if a dealer wants to distinguish between property held for sale and property of a similar character held for investment. For instances in which dealers have successfully established that they held property for investment, see United States v. Bondurant, 245 F.2d 265 (6th Cir. 1957) ("investment" cotton held by dealer in cotton); Eline Realty Co. v. Commissioner, 35 T.C. 1 (1960) (undeveloped strip of subdivided tract held as investment by real estate dealer). In Stefka v. United States, 2 A.F.T.R.2d 5538 (W.D. Tex. 1958), a partnership engaged in cotton farming reported income at the prevailing market price when the cotton was harvested and then stored it for a time and treated any subsequent profit or loss as capital gain or loss; this practice was upheld, but without opinion. Could a persuasive opinion have been written?

3. *Is §1221(1) repetitious?* In *Van Suetendael,* the court says that the taxpayer's securities "cannot be classified as stock in trade or property subject to inventory in his hands unless they were held by him primarily for sale to customers in the ordinary course of his business." Does this imply that "stock in trade" is no different from "inventory property" and that both coincide completely with "property held for sale to customers" — with the result that §1221(1) embraces not two or three categories of property, but only one? In Gilbert v. Commissioner, 56 F.2d 361 (1st Cir. 1932), the court denied that §1221(1) was redundant, and held that shares of stock received by a construction company as compensation were held for sale in the ordinary course of business (the term "to customers" has not yet been added to the statute) even though they were not "stock in trade" or "inventory property." The Regulations provide that the taxpayer's inventory "should include all finished or partly finished goods and, in the case of raw materials and supplies, only those which have been acquired for sale or which will physically become a part of merchandise intended for sale. . . ." Regs. §1.471-1. Is this provision applicable not only to §471 (use of inventories in determining income) but also to §1221(1)? If a business sells an excess stock of supplies that were not to be physically incorporated in its merchandise (e.g., office supplies, cleaning materials, or repair parts for machinery), do they come within §1221(1)? Should the fact that their cost was deducted (from ordinary income) as a business expense be relevant in determining whether a sale produces ordinary income or capital gain? See Merchants' National Bank v. Commissioner, supra page 531.

Section 1221(1) speaks of property which would be includible in inventory "if on hand at the close of the taxable year." Does this afford an alternative route to the result reached by the Supreme Court in the *Corn Products* case?

4. *Unvarying treatment of §1221(1) property.* As will be seen, some types of property, though they do not constitute "capital assets," receive capital gain or loss treatment in special circumstances. Property that falls under §1221(1), however, is never so treated; it always gives rise to ordinary income or loss.

5. *Accounts receivable.* Note that §1221(4) takes accounts receivable arising on the sale of inventory property out of the capital asset category. See page 573 infra.

MAULDIN v. COMMISSIONER

195 F.2d 714 (10th Cir. 1952)

Before HUXMAN, MURRAH and PICKETT, Circuit Judges.

MURRAH, Circuit Judge.

This is an appeal from a decision of the Tax Court, holding that certain lots sold by petitioners during the taxable years 1944 and 1945, were "property held by the taxpayer primarily for sale to customers in the ordinary course of his trade or business" within the exclusionary clause of [§1221(I)]. If a gain from the sale of these lots was derived in this manner, it constituted ordinary income taxable under [§61(a)], and not a capital gain taxable under [§1221 (1)]. Petitioners, residents of the State of New Mexico, are husband and wife, and all income involved is community income. . . .

C. E. Mauldin, a graduate veterinarian since 1904, who also engaged in some road contracting, moved to Albuquerque, New Mexico in 1916, where he organized a road construction company. While in Clovis, New Mexico in 1920, to bid on a sewer project, he decided to move there and engage in the cattle business. Later in the same year, he contracted to buy 160 acres of land one-half mile from the city limits of Clovis for $20,000.00. This land was particularly suitable for cattle feeding, but was not at that time considered suitable for residential development, because the City, with a population of 5000, was not growing in that direction.

By the time Mauldin finally received title to the land in June 1921, he decided that it was not the time to go into the cattle business because of drought, crop and bank failures, and a decline in the cattle business which continued through 1924. He tried to sell the entire tract in 1924 for less than he paid for it, but was unable to do so, partly because a highway had been surveyed diagonally across the land, splitting it into two tracts and rendering it less suitable for cattle feeding. A real estate agent with whom he listed the property for sale advised him that they would have better success if he divided it into small tracts and blocks. The land was accordingly platted into 29 tracts and 4 blocks containing 88 lots each, and called the "Mauldin Addition." At the time the land was platted in 1924, there was still no demand for residential property in the area. In 1927, he built a home for himself near the center of the Addition.

There were no sales of any consequence until the land commenced to be included in the city limits of Clovis in 1931. By 1939, it was wholly within the city limits, and without Mauldin's request, the City began a paving program in the area, for which he was assessed approximately $25,000.00. When he was unable to pay this assessment, the City instituted suits on its paving liens, and in order to save his property, he divided some additional tracts into lots and devoted most of his time to the sale of the lots in the Addition. He listed the property with real estate agents and otherwise promoted sales through personal solicitations, signs, newspaper advertisements, and gifts of lots to a school and the builder of the first F.H.A. house in Clovis. He stated that at times he would "chase" a prospective purchaser "around the block." During 1939 and 1940, he sold enough lots to liquidate the paving indebtedness.

Mauldin testified that with the indebtedness to the City paid, he decided to hold the remaining portions of the original tract for investment purposes, and after 1940, did nothing to promote sales. He stated, "I cut it up and tried my best to sell it to clear it, and when I cleared it, I quit." From 1940 until 1949, when his health failed, Mauldin devoted full time to the lumber business he organized in 1939. During this period, he had no real estate office, no license to

sell real estate, did not advertise the properties by newspapers or signs, had no fixed price for lots, and at times refused to sell certain lots, either because the prospective purchaser would not pay the asked price, or Mauldin did not wish to sell the particular property at that time. The only real estate purchased by Mauldin after acquiring the 160 acres in 1920 was one "unsightly" block of lots near his residence, and some commercial properties to be used in connection with his lumber business.

Due primarily to the location of war facilities nearby, the City of Clovis grew in population to 14,000 in 1940 and to 20,000 to 25,000 in 1945, and the lots in Mauldin Addition were in great demand. By the end of 1945, Mauldin had disposed of all but 20 acres of his original 160 acre tract. This 20 acres was considered by him and real estate dealers to be his most valuable property. Mauldin's records show that he sold 2 lots in 2 transactions in 1941; 11 in 1942 in 2 transactions (6 lots were given to his daughter as a wedding present); 5½ in 1943 in 3 transactions; 5½ in 1944 in 3 transactions; 44½ in 1945 in 15 transactions; 39 in 1946, 1 in 1947 and 2 in 1948. For the taxable years in 1939 and 1940, the taxpayers' income tax returns showed income from real estate only; for each of the years 1941 and 1944 (returns for 1942 and 1943 not shown) they showed net income of approximately $3,000.00 from sales of real estate and approximately $12,000.00 from the lumber business; for the year 1945, $20,484.84 from real estate and $12,339.80 from lumber; and in 1946, $21,942.88 from real estate and $25,005.07 from lumber. On his 1940 return, Mauldin stated that the nature of his business was "real estate"; in 1943 it was shown as "lumber business"; in 1944 he did not designate the nature of his business; and in 1945 it was shown as "lumber and real estate."

In their income tax returns for the years 1944 and 1945, petitioners showed the lots sold during those years as long-time capital assets, and computed the tax accordingly. The Commissioner determined that the profit realized was ordinary income within the meaning of [§1221(1)], and assessed the additional tax. This appeal is from the judgment of the Tax Court sustaining the Commissioner, and the only question is whether its judgment on these facts can be said to be clearly erroneous.

It is admitted by taxpayer that during 1939 and 1940, he was engaged in the business of selling the tracts and lots in Mauldin Addition. He earnestly contends, however, that after 1940, his business status was changed; that his full time thereafter was devoted to the lumber business, and [he] held the remaining lots for investment purposes, selling them only through unsolicited offers when the price was right.

There is no fixed formula or rule of thumb for determining whether property sold by the taxpayer was held by him primarily for sale to customers in the ordinary course of his trade or business. Each case must, in the last analysis, rest upon its own facts. There are a number of helpful factors, however, to point the way, among which are the purposes for which the property was acquired, whether for sale or investment; and continuity and frequency of sales as opposed to isolated transactions. Dunlap v. Oldham Lumber Co., 5 Cir., 178 F.2d 781; Annot. 106 A.L.R. 254; Mertens, Vol. 3, Sec. 22.08. And, any other facts tending to indicate that the sales or transactions are in furtherance of an occupation of the taxpayer, recognizing however that one actively engaged in the business of real estate may discontinue such business and simply sell off the remnants of his holdings without further engaging in the business. Snell v. Commissioner, 5 Cir., 97 F.2d 891. Thus, where residents of New York bought land in Florida and elsewhere from time to time for investment, a part of which was platted and improved, it was held that the occasional sale of lots through local brokers was

not sufficiently frequent or engrossing to give the taxpayers the vocation of real estate dealers. Phipps v. Commissioner, 2 Cir., 54 F.2d 469. And, in Foran v. Commissioner, 5 Cir., 165 F.2d 705, a taxpayer admittedly engaged as a broker of nonproducing oil and gas leases and royalties purchased a producing property which he sold within eighteen months. The profit realized therefrom was held to be income from a long-time capital asset, the court reasoning that since this was the first producing property purchased by the taxpayer, there was no occasion to disbelieve his statement that he acquired it for investment or his motive for selling it.

On the other hand, sale and exchange of lots in 1939 and 1940 from a 92 acre tract of land, partially subdivided in 1932, was held to be in the ordinary course of business where the taxpayer had been continuously engaged in the real estate business since 1908, and had divided a part of the tract into lots in order to facilitate the sale of the land. Gruver v. Commissioner, 4 Cir., 142 F.2d 363. So too was the sale of lots from a tract of land which had been originally purchased for and used as a lettuce farm, but subdivided into lots when it became too valuable for truck farming operations. Richards v. Commissioner, 9 Cir., 81 F.2d 369, 106 A.L.R. 249. See also Oliver v. Commissioner, 4 Cir., 138 F.2d 910. And, lots sold through sales agencies after reacquisition at a trustee's sale, were held to be in the ordinary course of trade or business, as against the contention that they were sold in furtherance of an orderly liquidation in Ehrman v. Commissioner, 9 Cir., 120 F.2d 607. While the purpose for which the property was acquired is of some weight, the ultimate question is the purpose for which it was held. Rollingwood Corp. v. Commissioner, 9 Cir., 190 F.2d 263.

Admittedly, Mauldin originally purchased the property for purposes other than for sale in the ordinary course of trade or business. When, however, he subdivided and offered it for sale, he was undoubtedly engaged in the vocation of selling lots from this tract of land at least until 1940. As against his contention that he ceased to engage in the business after 1940, the record evidence shows that he sold more lots in 1945 on a sellers market without solicitation than he did in 1940 on a buyers market. It seems fairly inferable from the record that at all times he had lots for sale, and that the volume sold depended primarily upon the prevailing economic conditions, brought on by wartime activities and their aftermath. It is true that he was in the lumber business, but his returns plainly show that a substantial part of his income was derived from the sale of the lots. In these circumstances, we cannot say that the Tax Court's conclusions are without factual basis.

The decisions are affirmed.

NOTE

1. *Real estate "dealers."* Compare this taxpayer with the taxpayer in Van Suetendael v. Commissioner. Is there any reason of policy why one should realize ordinary income and losses on his transactions while the other has capital gains and losses? If the persons to whom Mr. Mauldin sold his land were "customers," as that term is used in §1221(1), why were not the persons who bought securities from Mr. Van Suetendael also "customers"? Neither taxpayer had a "clientele" of the kind enjoyed by a department store or other dealer in merchandise. In Black v. Commissioner, 45 B.T.A. 204 (1941), it was stated that for a taxpayer regularly engaged in the business of buying and selling real estate, "any person who can be found to buy such property is a customer." This seems to mean that as respects real estate, the term "to customers" adds nothing to the statutory requirement that the property be held "primarily for sale . . . in the ordinary course of his trade or business." It has already been pointed out, supra page 539, that the phrase "to customers" may have been an unnecessary precaution in the case of traders

or speculators in stock. Does a seller of building lots have "customers" if he sells exclusively to a related corporation which builds houses on the lots to the order of *its* customers? Yes, according to Kaltreider v. Commissioner, 255 F.2d 833 (3d Cir. 1958).

As *Mauldin* indicates, it has not been easy to distinguish real estate held for sale from real estate held for investment. Fink, "Dealing" in Real Estate, 2 Tax L. Rev. 111 (1946), cites many of the cases, and there have been more since 1946; among others, see Friend v. Commissioner, 198 F.2d 285 (10th Cir. 1952); Gamble v. Commissioner, 242 F.2d 586 (5th Cir. 1957); Tidwell v. Commissioner, 298 F.2d 864 (4th Cir. 1962).

If the taxpayer employs an agent to advertise, promote, and sell a subdivided tract, the agent's activities are imputed to him. But what if he offers to sell the lots to a real estate dealer (or to the dealer's customers) at fixed prices, under an arrangement providing that the dealer will defray all development and sales expenses and will derive his profit from selling the lots at whatever prices he can obtain? What if the amount to be paid to the taxpayer is to vary with the prices charged, or the profits realized, by the dealer? See Fishback v. United States, 215 F. Supp. 621 (D.S.D. 1963), and cases there cited; Fahs v. Crawford, 161 F.2d 315 (5th Cir. 1947); Voss v. United States, 329 F.2d 164 (7th Cir. 1964) (owner of farm land authorized real estate dealer to arrange for subdividing and selling property, for a fee; held, capital gain).

In determining the character of gain or loss on the sale or lapse of an option to buy or sell property, §1234 looks to the character which the property to which the option relates has or "would have" in the hands of the taxpayer. If the taxpayer acquires an option to buy a large tract of real estate and realizes a gain (or loss) on selling the option, does the character of his gain or loss depend upon whether he would have become a dealer in building lots if he had exercised the option?

2. *The statutory rules of §1237.* See §1237, added in 1954. What is the significance of its basic principle that qualifying property "shall not be deemed to be held primarily for sale to customers in the ordinary course of trade or business at the time of sale solely because of the taxpayer having subdivided" the tract, etc.? If there are other factors pointing to a trade or business, is §1237 inapplicable? May the fact of subdividing a tract be regarded as a persuasive factor, even though it is not the sole reason for denying capital gain or loss treatment? On these questions, see Regs. §1.1237-1(a)(1)-(3); Hvidsten v. United States, 185 F. Supp. 856 (D.N.D. 1960). The Regulations go on to provide that §1237 is not the exclusive route to capital gains on subdivided realty. Regs. §1.1237-1(a)(4).

3. *Corporation as intermediary.* Suppose Mr. Mauldin organized a corporation, transferred one of the lots to it in exchange for its stock, and then sold the stock. His profit would be the difference between (a) his basis for the stock (which, as is seen infra page 633, would be the same as the basis of the land transferred to the corporation) and (b) the sales price, which presumably would be about the same as the value of the land itself. Would this profit be capital gain? Would he be a "dealer" in the shares of realty corporations? Section 341, which will be met again, expressly provides that the profit on certain transactions of this type is ordinary income, despite the fact that ordinarily the profit on a sale of stock is capital gain. Even without this elaborate statutory provision, the transfer of the real property to the corporation might be disregarded as a sham. Jacobs v. Commissioner, 224 F.2d 412 (9th Cir. 1955). What are the taxpayer's prospects for converting some of the lots into capital assets by giving them to members of his family? Bittker, Charitable Gifts of Income and the Internal Revenue Code: Another View, 65 Harv. L. Rev. 1375, 1385-1388 (1952).

4. *References.* Pennell, Capital Gains in Real Estate Transactions, 1959 Tulane Tax Inst. 23; Weithorn, Subdivisions of Real Estate — "Dealer" v. "Investor" Problem, 11 Tax L. Rev. 157 (1956); Groh, Tax Problems in Real Estate, 36 Taxes 267 (1958).

HOLLIS v. UNITED STATES

121 F. Supp. 191 (N.D. Ohio, 1954)

McNAMEE, District Judge.

In this action . . . plaintiffs seek to recover $4,502.61 with interest, on the

ground that the Commissioner of Internal Revenue erroneously assessed and collected this amount as income tax for the year 1949.

The issue presented is whether oriental art objects sold by the partnership of Hollis & Company were capital assets or property held primarily for sale to customers in the ordinary course of business within the meaning of [§1221(1)]. . . .

The facts are not in dispute but are unique and merit a somewhat extended statement. Howard Hollis was Curator of Far Eastern and Near Eastern Art at the Cleveland Museum of Art from 1929 through 1948. He is one of the leading authorities in the United States on Chinese and Japanese art. In the summer of 1946 he was granted a year's leave of absence from the Museum to take the position of Chief of the Arts and Monuments Division of the Allied Forces in Japan. His duties in that position were to make recommendations to General MacArthur for the protection, salvage, preservation or disposition of certain arts and monuments. While in Japan Hollis became aware of the opportunity to acquire unusual and unique objects of art at most attractive prices. Many wealthy Japanese who possessed rare and valuable art objects and who had suffered serious economic loss from the war were willing for the first time to dispose of these art objects. This condition, together with the favorable rate of exchange, made possible the purchase of these items at comparatively low prices. Upon his return to the United States Hollis interested a limited number of his friends in the possibilities of profit inherent in this situation. Under date of August 1, 1948 a syndicate agreement was executed by Hollis and six other persons. The name of the syndicate is Hollis & Company and its stated purpose is "acquiring as an investment a limited number of oriental art objects to be purchased by Hollis on a trip which he proposed to make to Japan, such objects to be disposed of as and when their potential increment in value appears to be fully realized and inflationary economic trends warrant."

Provision was made in the syndicate agreement for a capital investment of $33,000, to be increased by an additional $16,500 if circumstances warranted. Hollis himself was without available capital, but through advancements from the other members of the syndicate (which he agreed to repay with interest) he received a fifty per cent interest therein. The agreement also provided that Hollis was to receive a ten per cent. commission on the gross selling price of all art objects, which was to be deducted before computation of the net profits, and provision was also made for a drawing account to Hollis of $500 per month. As of January [December?] 31, 1948 Hollis resigned his position with the Cleveland Museum of Art and left for Japan on January 3, 1949. He was in Japan about three months, during which time he purchased 157 art objects consisting of 194 individual pieces. Apparently, in order to purchase some of the more valuable objects, Hollis was required to and did buy some objects in the lower price range. All of these objects were shipped by air to the United States and arrived in this country about the same time that Hollis returned. Immediately after his arrival on the West Coast Hollis commenced selling the art objects. Sales were made to the Seattle Museum of Art, the Cleveland Museum of Art, the Toledo Museum of Art, and others. Some sales were made within three weeks of the purchase of the objects in Japan. The objects were kept at Hollis's home in Cleveland Heights, where they were displayed to prospective purchasers. There was no advertising and no published price lists. Hollis was well known to the connoisseurs of foreign art objects in the United States as well as to art collectors and art museums in this country. During the year 1949 Hollis had no other business and devoted most of his working time to the affairs of Hollis & Company. His only sources of income during that year were the commissions on sales and his share of the profits of the syndicate. He made three short trips and two long trips out of

Cleveland in furtherance of the sale of the art objects. The gross sales of the syndicate for the year 1949 amounted to $65,165, which yielded a substantial profit. From his share of the profits and his commissions in 1949 Hollis received about $29,000. The number of objects sold during 1949 was twenty-five, representing fourteen separate transactions. It was understood at the time of the formation of the syndicate that it was to be a "one venture proposition," and that the disposition of all the objects purchased probably could not be made for a period of several years. A distribution of profits was made by Hollis & Company in 1949 and annually thereafter. In accordance with the syndicate agreement no additional art objects were purchased. However, on April 1, 1950 a second syndicate was formed. This was known as Howard Hollis & Company. Its purpose was to deal in oriental art objects and it differed from the original syndicate in its stated purpose and in the method of distributing profits. Hollis received a sixty per cent. interest in the second partnership and it was agreed that only fifty per cent. of the net profits of Howard Hollis & Company were to be distributed annually to the syndicate members. Unlike the first syndicate, Howard Hollis & Company could thus use part of its undivided profits for the replenishment of its inventory of art objects. The second syndicate agreement was executed by Hollis and four of the original six members of the first partnership. Under the terms of the second agreement Hollis also was to receive a ten per cent. commission on sales and a drawing account of $500 per month. Hollis made trips to Japan and purchased additional art objects on behalf of Howard Hollis & Company. Meanwhile, in the year 1950, sales were made by Hollis & Company in the amount of $51,675. In the years 1951, 1952 and 1953 sales were made on behalf of both partnerships. The inventory of each partnership was segregated and displayed at the home of Hollis, and, as was true in the case of the first partnership, there was no advertising or publication of price lists of the objects owned by the second syndicate. The accounts of both partnerships were kept by a bookkeeper in the office of the law firm representing the syndicates and were designated as "Hollis No. 1" and "Hollis No. 2."

In the first year of its operation Howard Hollis & Company sold only eight more objects than did the first syndicate. In its second year Howard Hollis & Company sold eight less objects than Hollis & Company, and in the third year both partnerships sold the same number. The ratio of gross profits to gross sales of both partnerships for a period of three years shows a slightly higher average percentage of profits for Hollis & Company, but this is accounted for largely by the more favorable rate of exchange that was in effect at the time the purchases were made for the first syndicate. . . .

It is conceded by plaintiffs that Howard Hollis & Company is a dealer in oriental art objects and that the profits realized by that partnership constituted ordinary income. However, plaintiffs contend that the art objects of Hollis & Company were held for investment and that profits derived from their sale must be treated as capital gains. Plaintiffs' argument is premised in part upon the declared purpose of the syndicate members of Hollis & Company to hold the art objects as an "investment." But merely designating the purchase and sale of art objects as an "investment" is not decisive. While the stated purpose for which property is acquired is entitled to some weight, "the ultimate question is the purpose for which the property is held." Rollingwood Corp. v. C.I.R., 9 Cir., 190 F.2d 263, 266; Mauldin v. C.I.R., 10 Cir., 195 F.2d 714; Richards v. C.I.R., 81 F.2d 369, 106 A.L.R. 249.

Plaintiffs also rely upon the fact that Hollis & Company was a "one venture proposition" and contemplated no replenishment of inventory. In Ehrman v. C.I.R., 9 Cir., 120 F.2d 607, 610, the court said:

We fail to see that the reason behind a person's entering into a business — whether it is to make money or whether it is to liquidate — should be determinative of the question of whether or not the gains resulting from sales are ordinary gains or capital gains.

Cf. Richards v. C.I.R., supra.

Hollis was impressed with the opportunities for profit in selling art objects that resulted from the post-war economic condition of the Japanese people. He enlisted the financial aid of his associates and offered them a chance to participate in what promised to be a profitable venture. The members of the syndicate knew they were entering into a new and untried business venture but were willing to finance and participate in the enterprise as an experiment. Notwithstanding the stated purpose of "acquiring an investment" it was contemplated that sales efforts were to be made immediately upon the return of Hollis from Japan. After nine months of operation it was demonstrated that Hollis's optimistic view of the possibilities of profit were fully warranted. The profits realized from the sale of but a small portion of the objects purchased indicated that the long-term prospects of such a business were most favorable. Hollis then decided that it would be advantageous to engage in the business of dealing in oriental art on a permanent basis. This was the purpose of the formation of the second syndicate. Following the organization of Howard Hollis & Company and for a period of several years, art objects purchased by both syndicates were sold, and the plans, policies and procedures followed in connection therewith were the same for each partnership. It is conceded that all of the essential criteria of a business enterprise are present in the operations of Howard Hollis & Company. I am of the opinion that the same criteria appear in the operation of Hollis & Company. The syndicate of Hollis & Company provided for a drawing account of $500 per month for Hollis, effective upon his return from Japan. Hollis was to receive a commission on sales, and his selling efforts began immediately upon his return to this country. Sales were made within a short time after his return, and the sales were regular, substantial and continuous. As is clearly shown by the evidence, there is a limited number of potential buyers of oriental art objects. Because of the restricted market and the nature of the business, it was probably considered unnecessary to advertise or to publish price lists. Both in the number of transactions and in the amounts realized from sales there was little difference in the operations or results of the two partnerships. The sales of Hollis & Company were not extraordinary. As is true with the sales of Howard Hollis & Company, they were sales in the ordinary course of business.

Plaintiffs also contend that being the first to sell oriental art objects in this country, Hollis & Company had no customers. I suppose it fair to say that the first person who in 1859 bought a pound of tea from the Great Atlantic & Pacific Tea Company was just as truly a customer as the housewife who does her weekly shopping in one of the corporation's modern chain stores. Those whose custom the taxpayer seeks are its customers. Goldsmith v. C.I.R., 2 Cir., 143 F.2d 466. Hollis & Company was a "middleman" engaged in the distributon of art objects to a class different from those from whom it bought. Seeley v. Helvering, 2 Cir., 77 F.2d 323. Although the *Goldsmith* case, supra, involved the wholly dissimilar subject-matter of the sale of motion picture rights by a playwright, the concurring opinion of Judge Learned Hand in that case is instructive and relevant here. Among other things, Judge Hand said [143 F.2d at 468]:

Nevertheless, the business may consist of selling these goods in "ordinary course," to those whose custom the taxpayer seeks; and these are his "customers." That the purpose of Congress was also not to treat such transactions as "capital gains or losses" is patent. Although each transaction is the sale of "property held by the taxpayer," it is not con-

sidered as separate, but the transactions are all massed together for tax purposes as a single source of ordinary income, quite as though the taxpayer were giving his services for hire upon separate occasions. How numerous such transactions must be the statute answers only by the test that collectively they must constitute a "trade or business."

. . .

In 59 Yale Law Journal, page 838, Peter Miller of the New York Bar says:

Assuming that the federal income tax should treat like transactions alike, the special treatment accorded capital gains can be justified only if the transactions giving rise to such gains have characteristics which set them apart from transactions resulting in ordinary income.

The transactions of Hollis & Company are in all their essentials like the transactions of Howard Hollis & Company. And for the purposes of the Internal Revenue Act should be treated alike.

Judgment may be entered for defendant.

NOTE

1. *Single or liquidating venture.* Should the court have given more weight to the claim that the original syndicate was a "one venture proposition"? (Was *Mauldin* also concerned with a single venture?) When property is acquired by inheritance, the fact that the taxpayer does not intend to replace it as sales are made may help to establish that he does not hold it for sale to customers in the ordinary course of business. In Yunker v. Commissioner, 256 F.2d 130 (6th Cir. 1958), for example, a taxpayer inherited a large tract which she subdivided and sold piecemeal after trying unsuccessfully to sell it as a single parcel; emphasizing that the taxpayer had not entered upon this venture by choice and that she bought no additional property, the court held that the profit was taxable as capital gain. This "orderly liquidation" theory has not been confined to inherited property, and it has been invoked successfully by some taxpayers whose transactions were remarkably frequent and continued over many decades. See Chandler v. United States, 226 F.2d 403 (7th Cir. 1955) (liquidation commenced in 1915; property acquired in 1882-1888 by taxpayer's predecessor as compensation for constructing Texas state capital building); Alabama Mineral Land Co. v. Commissioner, 250 F.2d 870 (5th Cir. 1957) (liquidation started before 1913; property acquired by foreclosure in 1883 by taxpayer's predecessors); Western & Southern Life Insurance Co. v. United States, 163 F. Supp. 827 (Ct. Cl. 1958), and cases there cited.

If the taxpayer in the *Mauldin* case had sold all of the building lots on hand at the end of 1945 in a single transaction to one buyer, would his profit be capital gain or ordinary income? In Grace Bros., Inc. v. Commissioner, 173 F.2d 170 (9th Cir. 1949), inventory property was held to produce ordinary income when sold in bulk on discontinuance of the business; but see Greenspon v. Commissioner, 229 F.2d 947 (8th Cir. 1956) (contra, where property was sold by shareholders after liquidation of corporation, rather than by corporation itself); Ferber's Estate v. Commissioner, 22 T.C. 261 (1954) (on death of individual proprietor, inventory sold in bulk by executors; held, capital gain); Acro Manufacturing Co. v. Commissioner, 39 T.C. 377 (1962) (inventory property acquired by parent corporation on tax-free liquidation of subsidiary; held, capital assets).

2. *Single sale after many purchases.* The subdivision cases, and some others arising under §1221(1), typically involve piecemeal sales of a large tract or unit of property, permitting the government to argue that the taxpayer has performed the function of a middleman by buying in one market and selling in another. Note that Seltzer, supra page 475, regards this as the hallmark of "ordinary profits," as distinguished from capital gains, and that the court in *Van Suetendael* said that the taxpayer there was not a "middleman." What if the taxpayer *buys* at retail and sells at wholesale, e.g., by slowly acquiring contiguous parcels of real estate in order to sell the assembled tract in one transaction? In Thomas v. Commissioner, 254 F.2d 233 (5th Cir. 1958), involving the acquisition over a 3-year period of several mineral properties each of which was too small

for profitable exploitation, the court held that the taxpayer realized a capital gain on selling the entire tract, but without rejecting the possibility that a large number of purchases might be as damaging to the taxpayer's claim to capital gain as a large number of sales.

SECTION E. PROPERTY USED IN THE TRADE OR BUSINESS

Section 1221(2), under which real property used in the taxpayer's trade or business and depreciable personal property so used are denied the status of "capital assets," is a re-enactment of §117(a)(1)(B) of the 1939 Code.

CARTER-COLTON CIGAR CO. v. COMMISSIONER
9 T.C. 219 (1947)

Petitioner is engaged in the business of distributing tobacco products in North Carolina and South Carolina on a wholesale basis. It was incorporated in 1917, its two principal stockholders being L. J. Carter and W. E. Colton, both of whom were active in the management of petitioner's affairs. At that time, it occupied uptown leased store and warehouse quarters in Charlotte, where it kept its inventory stock of tobacco products, from which deliveries to the trade were made.

In February of 1926 petitioner purchased a vacant lot, without improvements, on West Morehead Street in Charlotte with the intention and for the purpose of having erected thereon a warehouse and store building, which was to be occupied by petitioner as its principal place of business. In the years immediately following the purchase of the lot petitioner had plans and specifications prepared for the erection of the building, but construction was not actually begun on account of the economic dislocation in connection with the depression which occurred about that time. In 1934 Carter died as the result of an accident and Colton was thereafter in responsible charge of petitioner's affairs. He decided to abandon the idea of building and to continue the business in its established location.

In 1935 the unimproved lot was offered for sale and in the years following it was placed in the hands of various real estate agencies for sale. It was finally sold in 1943.

During the years 1937 through 1943 petitioner rented billboard advertising space rights, for which it received the following rentals:

1937 and 1938	$25 per year
1939 through 1941	15 per year
1942 and 1943	10 per year

A part of the 1943 rental was refunded to the lessee because of the sale of the property before the expiration of the year.

In September of 1943 petitioner received its first and only offer to buy the property, and the sale above referred to was arranged, for $4,000. The sale resulted in a loss to petitioner in the amount of $3,068.67. Petitioner claimed a deduction for the loss in that amount as an ordinary loss. Petitioner realized no gain in 1943 from the sale of any capital asset.

OPINION

KERN, Judge: The single question for decision here is whether the loss sustained by petitioner from the sale in 1943 of the vacant lot was an ordinary or a capital loss.

It is petitioner's position that the lot was not a capital asset by reason of the 1942 amendment to [§1221(2)] of the Internal Revenue Code, which excluded from the definition of capital assets "real property used in the trade or business of the taxpayer." *

Respondent, on the other hand, contends that the real estate involved here was a capital asset, since it was never actually *used* in petitioner's trade or business, although he does not question the fact that it was bought for the purpose of being so used.

The facts are simple and undisputed; the legal question is novel, but not, we think, too difficult.

It is our view that the real property involved here was "used in the trade or business" of the petitioner, within the meaning of the statute, when it was purchased for the business purpose of causing a building to be constructed thereon to be occupied by the petitioner corporation and steps were taken looking toward the consummation of that plan, to the extent of causing plans to be drawn and specifications to be prepared for use in building on that particular lot. It seems to us that at that time some use, normal for that state of proceedings, had begun to be made of the lot for the petitioner's business purposes. Full or maximum use, of course, had not yet been made, and was finally prevented by later-developing circumstances over which petitioner had no control.

A similar question, arising under this relatively new amendment to the code, has recently been considered by this Court. Solomon Wright, Jr., 9 T.C. 173. In that case the real estate involved had ceased to be actively used in the taxpayer's business, since his business had ceased, yet we held it nevertheless not to be a capital asset.

Where the statute [§167(a)(1)] allows deductions for depreciation of property "used in the trade or business," it has been held that "used in the trade or business" means "devoted to the trade or business," and includes all such property, whether actually in use during the taxable year or not. Kittredge v. Commissioner, 88 Fed. (2d) 632; Yellow Cab Co. of Pittsburgh v. Driscoll, 24 Fed. Supp. 993; P. Dougherty Co., 5 T.C. 791, 795. The acquisition of real estate for use at its principal place of business by a corporation is a proper business purpose and function, and the real estate so purchased, in our opinion, is devoted to and "used in" the business of the corporation during the planning and building stages preparatory to actual occupancy. Its character as "real property used in . . . trade or business" continues even after the planned use becomes impossible. *Solomon Wright,* supra.

The fact that petitioner received some slight income from the property by leasing it for advertising space after petitioner had listed it for sale and pending its sale, does not seem to us to be particularly pertinent to the question before us. Such use of the property was in no way connected with petitioner's business, but was more in the nature of an incidental attempt to keep the property from being a total loss during the period when attempts were being made to dispose of it.

Upon the issue presented, we decide in favor of petitioner.

NOTE

1. *Property unsuited to business use.* The taxpayer in the *Wright* case, cited in *Carter-Colton Cigar Co.,* had held several summer cottages for rental. One of the cottages was destroyed by a hurricane; he listed the land for sale several months later and sold it at

* Before this amendment to §1221(2), only depreciable property used in the trade or business was excluded from the term "capital assets." See paragraph 3 of editor's note, infra page 552. — Ed.

a loss five years after the hurricane. The court held that the property was used in the taxpayer's trade or business.

The *Carter-Colton Cigar Co.* case was cited and followed by the Internal Revenue Service in Rev. Rul. 58-133, 1958-1 C.B. 277, involving land purchased for business use but sold at a loss after an engineering study disclosed that it was not suited to the taxpayer's needs. But see Nulex, Inc. v. Commissioner, 30 T.C. 769 (1958), holding that a fishing boat acquired by a previously dormant corporation in order to enter into the commercial charter business but not put into use because extensive alterations would be necessary before a Coast Guard license could be obtained was a capital asset.

2. *Small-scale rental activity.* In the *Carter-Colton Cigar Co.* case, the court said that the "slight income" derived from leasing the land for billboard advertising "does not seem to us to be particularly pertinent." If the rent had been more nearly commensurate with the cost or value of the property, would it have offered an alternative ground for holding that the property was used in the taxpayer's business? If the taxpayer owns an apartment house or office building, the activity incident to finding and negotiating with tenants, collecting the rents, and maintaining the building will put the taxpayer in the real estate rental business, whether he sees to the details in person or entrusts them to an agent, with the result that the property is "used in his trade or business" within the meaning of §1221(2) and does not constitute a capital asset. The leading case is Fackler v. Commissioner, 133 F.2d 509 (6th Cir. 1943):

> It is a fair inference from the evidence that petitioner acquired the [property] with the primary intention of operating the building upon it for profit and that he was not holding the property merely as an investment and solely for the purpose of collecting rents without rendering personal service to tenants. The fact may not be disputed that a person may engage in both a profession and a business [Mente v. Eisner, 266 Fed. 161 (2d Cir.)] and the fact that petitioner was engaged in the practice of law does not at all negative the fact that he was also engaged in the business of operating the building. The management of the property necessarily involved alterations and repairs commensurate with the number of tenants who occupied the building. It was also necessary to furnish elevator service, heat, light and water which required regular and continuous activity and the employment of labor, the buying of material and many other things which come within the definition of business.

The services referred to were supplied by Mr. Fackler through agents or employees; he was "a busy and successful lawyer" who "visited the . . . premises once or twice each month, which consumed one or two hours of his time."

If the property consists of a single-family dwelling, however, it is less clear that it will be treated as business property, especially if it was acquired by an individual by inheritance rather than purchased for rental purposes. Compare Grier v. United States, 120 F. Supp. 395 (D. Conn. 1954), aff'd per curiam, 218 F.2d 603 (2d Cir. 1955) (one-family house, inherited by taxpayer; held, capital asset), with Hazard v. Commissioner, 7 T.C. 372 (1946) (personal residence rented by taxpayer when he moved to another city; held, used in his trade or business). See also Union National Bank of Troy v. United States, 195 F. Supp. 382 (N.D.N.Y. 1961) (property rented on a "net" lease, requiring minimal services by owner, held a capital asset).

The proper characterization of rental property under §1221(2) is enmeshed in a bit of ancient statutory history. Before 1942, when §167(a)(2) was enacted, depreciation was allowable on property only if it qualified under §167(a)(1) — "property used in the trade or business." Similarly, until the enactment of §212 in 1942, an individual could deduct the expenses of managing property only if they qualified as business expenses under §162. Rather than deny depreciation and expenses on small parcels of rental property held by individuals, however, the government evidently allowed these deductions on the theory that all rental property is used in trade or business. Since 1942, of course, there has been less pressure on the "trade or business" concept, since depreciation is now allowed for all property held for the production of income, and an individual's expenses incurred in managing or maintaining such property are now deductible under §212.

Do the arguments for special treatment of capital gains and losses suggest how property like that in the *Fackler* case should be treated? Is there any reason why securities held by a trader like the taxpayer in the *Van Suetendael* case, supra page 535, should be a capital asset while rental property owned by an investor is not?

See Comment, The Single Rental as a "Trade or Business" Under the Internal Revenue Code, 23 U. of Chi. L. Rev. 111 (1955); Roehner, Tax Court in Error in Holding All Rental Property Is "Used in Trade or Business," 25 Taxes 1000 (1957).

3. *Section 1221(2) and non-depreciable property.* Before 1942, §1221(2) embraced only depreciable property used in the trade or business. As applied to real estate, this meant that a building used in the taxpayer's trade or business was not, although the land on which it stood was, a capital asset. To avoid the resulting difficulty of allocating a lump sum sales price between land and building, the statute was amended in 1942 to remove all real estate used in the trade or business from the capital asset category, whether it is depreciable or not. H.R. Rept. No. 2333, 77th Cong., 1st Sess., 1942-2 C.B. 372, 414. The price must still be allocated in calculating the buyer's deduction for depreciation.

Unlike real property, personal property is subject to §1221(2) only if it is depreciable; non-depreciable personalty used in the trade or business is, therefore, a capital asset. Except for antiques and works of art used for display purposes, most tangible personal property used in the trade or business is depreciable. In the case of intangible personalty, however, non-depreciable property is encountered with greater frequency. Of special importance, because of the amounts involved, are decisions holding or assuming that goodwill is a capital asset because non-depreciable (infra page 573); see also Cummins v. Commissioner, 19 T.C. 246 (1952) (seat on produce exchange is a capital asset); Huckins v. United States, 5 A.F.T.R.2d 1222 (S.D. Fla. 1960) (secret process; held, capital asset); United States v. Jones, 194 F.2d 783 (10th Cir. 1952) (bus franchise; held, capital asset).

4. *Property used in business as "quasi-capital assets."* Although §1221(2) denies capital asset status to real property and depreciable personal property used in the trade or business, property of this type ordinarily is subject to the special rules of §1231. Under this provision, described in the next section of this chapter, qualified property frequently gives rise to capital gain if it is sold at a profit, but to a deduction from ordinary income if it is sold at a loss.

SECTION F. "QUASI-CAPITAL ASSETS"

Section 1231, giving special status to gains and losses from certain types of property depending upon whether a net gain or a net loss is realized for the taxable year, is identical in principle and in most details with §117(j) of the 1939 Code.

In 1942, with the enactment of §1231, Congress added a new category of property to the pre-1942 dichotomy between capital and non-capital assets — property whose sale at a gain will usually produce a capital gain, but whose sale at a loss will ordinarily give rise to an ordinary loss. If the taxpayer sells real or depreciable personal property used in his trade or business and held for more than six months (e.g., industrial equipment, a factory, or rental real estate) and if this is his only "§1231 transaction" for the year, a gain on the sale will be treated as a capital gain, but a loss will be treated as an ordinary loss. If the taxpayer engages in more than one "§1231 transaction" during the taxable year, however, all gains and losses subject to §1231 must be aggregated; if taken together, they show a net gain, each constituent item results in capital gain or loss, but if the aggregate result is a net loss, each of the transactions gives rise to ordinary income or loss. To be more explict, the §1231 "hotchpot" embraces all recognized gains and losses during the taxable year:

(1) on the sale or exchange of real and depreciable personal property used in the trade or business and held for more than six months (excluding property

includible in inventory or held for sale to customers and most copyrights and similar property);

(2) on the sale or exchange of certain livestock, unharvested crops, timber, and coal; and

(3) on most (but not all) compulsory or involuntary conversions (resulting from destruction, theft, condemnation, etc.) of property described in (1) and (2) above or of capital assets held for more than six months.

If the hotchpot just described shows a net gain, then all gains and losses therein are treated as capital gains and losses; if it produces a net loss, the individual items are treated as ordinary income and ordinary losses.

Section 1231 is encountered most frequently on the sale of rental property (e.g., apartment houses and office buildings), business real estate, and business machinery and equipment. Because of §1231, the sale of such property at a profit usually produces capital gain, while its sale at a loss usually results in a deduction from ordinary income. This reduces the importance of cases like *Grier* and *Fackler*, supra page 551, since the taxpayer with a profit will not care whether it is a capital gain under §1221, or only by virtue of the intricacies of §1231. The cases remain important for the taxpayer who incurs a loss, however; and even for the taxpayer who has a gain, the *Grier* case assures that it will be taxed as capital gain, whereas a capital gain under §1231 depends upon the outcome of the hotchpot. It should also be noted that a taxpayer who can postpone or accelerate his §1231 transactions may be able to determine the outcome of the hotchpot in any single year and thus insure for himself a happy succession of capital gains and ordinary losses in alternate years.

In conception, §1231 was addressed to a problem of limited scope. In the early days of World War II, many shipping companies whose vessels possessed a wartime fair market value greatly in excess of adjusted basis were realizing involuntary profits upon the destruction of insured vessels by enemy action and upon the requisition of vessels for military use. Some industrial firms were also realizing involuntary profits upon the condemnation of plants and equipment by the United States for use in the war program. It seemed unfair to tax these unsolicited profits at the high rates applicable to wartime income and excess profits. To be sure, §1033 (supra p. 473) provided that the victim of an involuntary conversion need not recognize his gain; but §1033 was applicable only if the taxpayer either replaced the property, which was often impossible because of wartime priorities and shortages, or established a "replacement fund" with the proceeds of the conversion, which might have required the freezing of business capital for an unpredictable period of time. Because of these shortcomings in §1033, it seemed appropriate to provide that the gain on an involuntary conversion of business property should be taxed at the capital gains rate. At the same time, it was thought desirable to preserve the ordinary loss deduction for those taxpayers whose property had not benefited from wartime inflation, since a loss on a sale of such property merely anticipated deductions for depreciation or abandonment that would otherwise offset ordinary income. It is in order to permit gains to be reported at the favorable capital gains rate, while preserving an ordinary loss for taxpayers whose property has declined in value, that §1231 differentiates between the taxpayer with an aggregate gain and the taxpayer who, on balance, breaks even or suffers a loss.

It should not be surprising that, having decided to provide this type of relief for taxpayers whose property had been destroyed by enemy action or taken by eminent domain, the draftsmen of §1231 made it applicable to other involuntary conversions as well; the profit realized by a taxpayer whose insured property was destroyed by fire or taken by a thief was equally involuntary, §1033 was equally

unsatisfactory as a solution, and there was already statutory warrant in §1033 for treating all "involuntary conversions" the same. It is surprising, however, that §1231 as enacted was not restricted to involuntary conversions, but also included any sale or exchange of business property. Evidently the reason for such a broad reach was that some taxpayers were selling plant, machinery, and equipment, either under the implicit threat of condemnation or because of other wartime conditions (e.g., merchandise shortages), and it was thought impossible or undesirable to distinguish such sales from wholly voluntary transactions. Moreover, sales of business property to more efficient producers would stimulate war production. The upshot was a statute that went beyond its original rationale, and that has persisted long after even that has disappeared.

The hotchpot, which groups all §1231 transactions together in determining how they shall be treated, presumably reflects a theory that the impact of wartime conditions in the aggregate should be controlling, rather than the gain or loss on each item by itself. If §1231 were concerned only with wartime involuntary conversions of business property, this theory would perhaps be sound; but it is hard to explain why today the tax on the sale of an apartment house should be affected by the destruction of the taxpayer's home by fire or by his sale of a stud horse.

The inclusion in §1231 of gains or losses on the involuntary conversion of capital assets is puzzling. As to gains, some involuntary conversions (e.g., the collection of insurance proceeds upon a fire) do not constitute "sales or exchanges," infra page 581, and for such events §1231 is an indirect way of dispensing with the requirement of a sale or exchange. But why should a loss on the involuntary conversion of a capital asset be deductible from ordinary income, as §1231 will permit in cases where the hotchpot produces a net loss?

The inclusion of certain livestock, timber, and coal in §1231 represents a utilization of §1231 as a repository of tax "relief" for particular industries. In the case of timber, by virtue of §1231(b)(2) and §631, the taxpayer may elect to treat the cutting of timber as a sale, reporting as capital gain the difference between his adjusted basis and the fair market value of the uncut timber. Any additional income on the actual sale is ordinary income. In effect, the taxpayer may segregate the increment in value attendant upon natural growth (or inflation) from his lumbering profits, reporting the former as capital gain and the latter as ordinary income. An investor could achieve somewhat the same result by selling the uncut timberland, and one of the reasons for bringing the cutting of timber into §1231 was to equalize the tax treatment of two transactions (outright sale vs. cutting) having certain similarities. In vetoing the Revenue Act of 1943, President Roosevelt said in his veto message that "as a grower and seller of timber, I think that timber should be treated as a crop and therefore as income when it is sold." The bill was passed over the veto, Senator Barkley saying that President Roosevelt's timber business consisted of selling Christmas trees and that their "easy growth and short life" might justify treating them like a farmer's crop, but that "to compare these little pine bushes with a sturdy oak . . . is like comparing a cricket to a stallion." 90 Cong. Rec. 1965. In 1954, however, "these little pine bushes" found their way into §631(a) (last sentence), with no apparent complaint from the sturdy oaks. Lefevre, Tax Aspects of Timber Transactions, 18 N.Y.U. Inst. on Fed. Taxation 577 (1960); Wineberg v. Commissioner, 326 F.2d 157 (9th Cir. 1963) (§1231(b)(2) is subordinate to exclusion of inventory property, and may not be employed by dealer in timber).

In the case of coal royalties, inclusion in §1231(b)(2), via §631(c), came about in 1951. The stated reason was simply that most owners of coal properties had leased them for long terms in return for a royalty of a stated amount per ton

mined by the operator rather than for a percentage of the sales price, as in some other extractive industries. Because these fixed amounts paid by coal companies did not rise with inflation in the value of the ore, the recipients were allowed to report them as capital gain. Apart from these provisions, could a landowner who is not in the coal business report his coal royalties as capital gain? Even though the coal might be a capital asset, the "lease" would probably not constitute a "sale or exchange" because of the taxpayer's retained economic interest, namely, the right to receive a stated royalty when, as, and if coal was mined by the "lessee." Infra page 584. In 1964, §631(c) was enlarged to extend capital gain treatment to iron ore royalties to "encourage domestic leasing of iron ore properties to operators, and therefore [to] improve the position of domestic iron ore production relative to foreign production." S. Rep. No. 830, 88th Cong., 2d Sess. 120.

The inclusion in §1231 of livestock and of unharvested crops is explained infra page 560.

Section 1231 is ordinarily favorable to the taxpayer, since it holds out the possibility of capital gain treatment on assets like business real estate and depreciable equipment that would otherwise produce ordinary income.

But §1231 can also work against the taxpayer's interest. Suppose in a given taxable year the taxpayer suffers a loss of $10,000 on the sale of an apartment house and a gain of $8000 on the sale under threat of condemnation of his own residence, both items having been held for more than six months. Assume also that the taxpayer has taxable income, apart from these two transactions, of $15,000. The tax results under §1231 (the hotchpot producing a net loss), as compared with those that would obtain in the absence of §1231, are as follows:

Under §1231		*Without §1231*	
Gain on residence (ordinary income)	$ 8,000	Capital gain on residence	$ 8,000
Other taxable income	15,000	Other taxable income	15,000
	$23,000		$23,000
Loss on apartment house (ordinary)	−10,000	Loss on apartment house (ordinary)	−10,000
Taxable income	$13,000		$13,000
		Less: ½ capital gain (§1202)	−4,000
			$ 9,000

If this taxpayer's gain on his residence had been $12,000 instead of $8000, the hotchpot would produce a net gain, but the results under §1231 are still unfavorable:

Under §1231		*Without §1231*	
Net long-term capital gain	$ 2,000	Capital gain on residence	$12,000
Other taxable income	15,000	Other taxable income	15,000
	$17,000		$27,000
Less: ½ capital gain (§1202)	−1,000	Loss on apartment house (ordinary)	−10,000
Taxable income	$16,000		$17,000
		Less: ½ capital gain (§1202)	−6,000
			$11,000

By and large, however, §1231 is favorable to the taxpayer. The adverse results just noted could sometimes be avoided by postponing one transaction to another

year. Husband and wife might on occasion file separate returns, rather than a joint return, if both had §1231 transactions in the same year and two hotchpots would produce a better tax result than one.

ROLLINGWOOD CORP. v. COMMISSIONER

190 F.2d 263 (9th Cir. 1951)

Before BONE and ORR, Circuit Judges, and FEE, District Judge.

BONE, Circuit Judge.

The question to be determined by the petitions for review of a decision of the Tax Court is whether that court erred in determining that the proceeds from the sale of certain houses by the Rollingwood Corporation should be taxed as ordinary income instead of gains from the sale of capital assets. The applicable statutory provision is [§1231] . . .

The case was presented to the Tax Court on stipulated facts, a summary of which follows:

Prior to December 7, 1941 David Bohannon, one of the petitioners, was engaged in the real estate business; the business of subdividing and selling real property; and in the business of constructing homes. After the outbreak of World War II he disbanded his sales force and devoted his time and attention to war housing projects including the Rollingwood Project. Prior to the incorporation of the Rollingwood Corporation (referred to herein as Rollingwood) Bohannon was induced by the General Manager of the Richmond shipyards to sponsor a single family dwelling project in Richmond, California. Richmond and the surrounding area was a critical war effort area and suffered from a manpower shortage and inadequate housing. Bohannon was aware of the policy of the United States to provide low-cost rental housing so that war workers would not have to buy homes to stay on the job. Bohannon made two applications to the National Housing Administration and to the War Production Board for priorities and commitments to construct a total of 700 houses in Richmond. The Rollingwood Corporation was incorporated on January 9, 1943 as a California Corporation to undertake the construction and management of this project. The corporation issued fifty shares of common capital stock of a par value of $100 per share. Twenty-six of these shares were issued to Bohannon and twenty-four to Ross Chamberlain, Bohannon's partner in other ventures. On May 10, 1945 Rollingwood reacquired the twenty-four shares issued to Chamberlain.

Rollingwood acquired a tract of land in Richmond and the construction of the project was commenced in the spring of 1943. The applications for commitments and priorities made by Bohannon were assigned to Rollingwood. Certain conditions were imposed on Rollingwood by virtue of these commitments and priorities. Among them were the following: All of the houses had to be rented with an option to the tenant to purchase; the option was to extend for a period of thirty months; no initial payment could be required other than the first month's rent; the tenant could not be obligated to purchase; the houses could not be disposed of other than in accordance with the required lease without the approval of the Director of Industry Operations of the War Production Board. . . .

The 700 houses were completed by August 14, 1943 and were advertised for rent for $50.00 per month. All the houses, upon completion, were rented to war workers under rent-option agreements which agreements were in accordance with the conditions imposed by the United States. Rollingwood never employed any sales force other than general office employees to sell the houses. No "for sale" signs were ever displayed on the houses or on the Rollingwood Tract. By May

31, 1947 Rollingwood had sold 801 houses at a gross profit of $587,234.36. The total number of houses sold exceeded the number constructed because Rollingwood had re-acquired 81 by "repossession" and 24 by "repurchase." It still owned four houses on May 31, 1947. About the latter date the Rollingwood Corporation was dissolved and all its assets distributed to Bohannon. Bohannon, as transferee of the assets, is liable for whatever deficiencies are found to be due.

Coming to the merits the first contention of the petitioners is that the facts necessitate a finding that the houses were constructed primarily for rental purposes. In support of this contention they rely on the facts which show that Bohannon was aware of the "policy" of the United States to provide rental housing for war-workers; that many conditions were imposed on Rollingwood by the United States; that the houses were advertised for rent and actually rented for an average time of twenty-two months under a rental-option agreement which restricted the possibility of sale.

But these facts are not inconsistent with a purpose to sell. It is a logical inference from the above facts that Bohannon and his associate realized that to stay in the building and selling business they would have to engage in housing construction under government priorities and commitments which contained some restrictions. Nor are we convinced that they felt that the rental option agreements would tend to restrict sales. It might well be that they contemplated that these agreements would furnish a ready buyer for the individual houses.[1]

While the purpose for which the property was acquired is of some weight the ultimate question is the purpose for which the property is held. Richards v. C.I.R., 9 Cir., 81 F.2d 369. Most of the cases dealing with the problem of whether property is held primarily for sale to customers in the ordinary course of trade or business involve situations where the taxpayer is engaged in some activity apart from his usual occupation and the question is whether this activity amounts to a business. The test normally applied in these situations is the frequency and continuity of the transactions claimed to result in a trade or business. Applying that test to the facts of the instant case we have no difficulty in finding support in the record for the finding that Rollingwood is in the business of selling real property.[2]

Although the requirements of the statute are to some extent overlapping, the emphasis in this case is whether the houses were held primarily for sale or primarily for rent. Petitioners contend that the word "primarily" means "principal" or "chief," while the Commissioner contends it means "essential" or "substantial."

---

[1] Many of the Tax Court decisions relied on by the petitioner and the case of Fahs v. Crawford, 5 Cir., 161 F.2d 315, are cases dealing with property originally acquired as an investment. No facts in the record in the instant case compel the assumption that the houses involved were investment property.

[2] The following table was compiled from the exhibits by the Tax Court.

Fiscal Year Ending	No. of Houses Sold (1)	(2)	(3)	(4)	Gross Profit on Sales
May 31, 1944	32	4	28	0	$ 15,946.04
May 31, 1945	224	46	175	3	144,191.74
May 31, 1946	357	221	136	0	183,421.46
May 31, 1947	188	15	165	8	243,675.12
Totals	801	286	504	11	$587,234.36

(1) The total number of houses sold exceeds 700, the number constructed because the petitioner reacquired 81 houses by repossession and 24 by repurchase. On May 31, 1947, it owned 4 of the houses.

(2) Number of houses sold under option.

(3) Number of houses sold to non-tenants.

(4) Number of houses sold to tenants who rerented without option to buy.

For reasons hereinafter stated we think the latter view is more consonant with the legislative policy.

Suppose the taxpayer in the instant case intended to rent the houses for as long as he was required to do so under existing regulations and then to sell them. Or suppose his intention was to pursue whichever of these activities proved to be the most profitable, that is, if the *rental market* were good he would continue to rent but if the *sales market* were high he would sell. In either of these suppositions we think it is fair to say that one of the essential purposes (in acquiring or holding the houses) is the purpose of sale. Under such circumstances, if the taxpayer does dispose of the houses by sale, is it within the legislative *purpose* to allow him to treat the proceeds of these sales as a capital gain? We think not.

The capital gains provisions are remedial provisions. Congress intended to alleviate the burden on a taxpayer whose property has increased in value over a long period of time from having the profits from sales taxed at graduated tax rates designed for a single year's income. The purpose is to protect "investment property" as distinguished from "stock in trade" or property bought and sold for a profit. It is our view that this policy was not meant to apply to a situation where one of the essential purposes in holding the property is *sale*. . . .

NOTE

1. *The statutory framework.* The full circle of statutory reasoning in *Rollingwood* is not explicitly stated. The houses did not constitute "capital assets" because they were disqualified by either §1221(1) (property held for sale to customers) or §1221(2) (real property used in the taxpayer's trade or business), or by both. But real property used in the trade or business, if held for more than six months, goes into the hotchpot of §1231, while property held for sale to customers, by virtue of §1231(b)(1)(B), does not. Does the court make the assumption that property used in the trade or business may *also* be held primarily for sale to customers? If so, does the statute support this assumption? Or did the court hold that the property was not used in the trade or business *because* it was held for sale to customers? If so, is depreciation pending a sale to be denied because the property does not qualify under §167(a)?

2. *Other instances.* How influential was the fact that Bohannan had engaged in the business of constructing and selling houses before 1942 and organized Rollingwood to build houses for rental only because his old method of conducting business was no longer feasible? In Victory Housing No. 2, Inc. v. Commissioner, 205 F.2d 371 (10th Cir. 1953), the court emphasized the fact that the taxpayer itself was organized to build houses for rental (under Title VI of the Federal Housing Act — the same statute that was involved in *Rollingwood*), even though there too the shareholders had previously been engaged in building houses for resale, and held that §1231 was applicable to sales of the houses once the wartime restrictions were lifted. See also Curtis Co. v. Commissioner, 232 F.2d 167 (3d Cir. 1956) (taxpayer evidently preferred to build for rental; §1231 held applicable to profit of over $3.8 million on 1100 houses sold over a 4-year period); and compare Blake v. Kavanagh, 107 F. Supp. 179 (E.D. Mich. 1952), where houses built for sale in 1926 were held to retain this character in 1942, although they had been rented in the interim.

Were there two strings to the government's bow in *Rollingwood:* that the houses were *built* with a view to sales as soon as the law permitted; and that the *process of selling* necessarily threw them into the "held for sale to customers" category? In both *Victory Housing No. 2, Inc.* and *Curtis Co.*, supra, the taxpayers successfully invoked the "orderly liquidation of capital investment" cases that are cited in the editor's note following the *Hollis* case (supra page 548); the business activity incident to selling the houses was held insufficient to convert them into property held for sale to customers.

In 1955, the Internal Revenue Service ruled that a motion picture producer who sold 200 old films, manufactured in the period 1931-1946, in a single transaction could claim the benefit of §1231; the films were used in the taxpayer's trade or business of renting

films for exhibition and were not held for sale to customers because it had never previously sold films to exhibitors. The purchaser of the films evidently was primarily interested in their use on television. Rev. Rul. 55-706, 1955-2 C.B. 300. In 1962, this ruling was superseded, on the ground that since August 1, 1948, the motion picture industry has "recognized the distinct possibility that its films might be sold for exhibition on television after being leased for theater showings and that producers generally contemplated sales to television following such showings as a likely means of exploiting their product." Assuming this to be true, does it bar recourse to §1231? Rev. Rul. 62-141, 1962-2 C.B. 182.

Do automobiles used in a car rental business (e.g., as in *Massey Motors*, supra p. 300) qualify under §1231 if the taxpayer regularly retires them from his rental fleet and sells them after a year or two of service? Does the answer depend on how much profit or loss is realized on the sales, on whether the taxpayer sells the cars at wholesale or at retail, or on whether the taxpayer is also engaged in the business of selling new cars? Note that in *Massey Motors*, supra page 302, the Supreme Court said that "the 'profits' of the taxpayers here are capital gains and incur no more than a 25% tax rate" and that "the taxpayers are able, through the deduction of this depreciation from ordinary income, to convert the inflated amounts from income taxable at ordinary rates to that taxable at the substantially lower capital gains rates." But see Greene-Haldeman v. Commissioner, 282 F.2d 884 (9th Cir. 1960) (profits on selling rental cars taxable as ordinary income); Rev. Rul. 54-229, 1954-1 C.B. 124. What is the status of an automobile dealer's gain on selling "demonstrators" or "company cars"? Latimer-Looney Chevrolet, Inc. v. Commissioner, 19 T.C. 120 (1952); Rev. Rul. 54-222, 1954-1 C.B. 19, amplified by Rev. Rul. 60-15, 1960-1 C.B. 22.

For other rental-sale transactions, see Recordak Corp. v. United States, 325 F.2d 460 (Ct. Cl. 1963) (sale of microfilming equipment on change of policy by taxpayer that had previously rented but not sold its machines; held, ordinary income); American Can Co. v. Commissioner, 317 F.2d 604 (2d Cir. 1963) (under antitrust decree, taxpayer offered for sale equipment that it previously had rented but refused to sell; held, ordinary income); Meridian, Inc. v. Commissioner, 322 F.2d 198 (6th Cir. 1963) (construction company organized taxpayer as an affiliate to construct and lease buildings, under leases with option to purchase; held, buildings held for sale as well as for lease, and profit is ordinary income).

3. *Relation of depreciation deductions to §1231.* Although the taxpayer's profit on §1231 property is ordinarily taxed as long-term capital gain, it may constitute in whole or in part a "recapture" of depreciation that was deducted in past years from ordinary income. This disparity gives the taxpayer a powerful incentive to employ one of the accelerated depreciation methods authorized by the 1954 Code (supra p. 296), as well as to use the shortest useful life and smallest salvage value that can be expected to pass the scrutiny of the Internal Revenue Service. Sections 1245 and 1250 were enacted in 1962 and 1964 to impose statutory limitations on these practices. See Section G of this chapter.

4. *Relation of Corn Products Refining Co. doctrine to §1231.* In duPont & Co. v. United States, discussed in paragraph 1 of the editor's note following the *Corn Products Refining Co.* case, supra page 494, the government argued that profits realized on the unclaimed deposits should be taxed as ordinary income because, even if there had been a sale of the containers that met the technical standards of §1231, the income arose "from the everyday operation of the business." Admitting arguendo that "gain from the disposition of property used in the trade or business may be so closely allied to the main sources of business income that *Corn Products* may be properly applied," the court refused to apply the doctrine to the facts before it. Would *Corn Products* be relevant to a sale of houses held by a business corporation for rental to its employees, if it put them up for sale partly because the employees' union attacked the concept of company housing as "economic paternalism"? Should the answer depend on whether the taxpayer realized a gain or a loss? See Oahu Sugar Co., Ltd. v. United States, 300 F.2d 773 (Ct. Cl. 1962) (sale of houses and of building lots; held, capital gain under §1231).

Recall that in *Corn Products*, the Supreme Court said that "the definition of a capital asset must be narrowly applied and its exclusions interpreted broadly . . . to effectuate

the basic congressional purpose." If the concept of "property used in the trade or business" is given an expansive interpretation in order to take borderline items out of the capital asset category, they ordinarily qualify for the even more favorable treatment of §1231. Does this help "to effectuate the basic congressional purpose"?

5. *Livestock held for breeding.* Animals held exclusively for breeding purposes are depreciable property used in the trade or business and even though sold when their usefulness for breeding is exhausted are not *held* primarily for sale. Hence they have always qualified under §1231. But suppose a farmer's practice is to use a substantial number of all the animals he raises for breeding purposes and to sell them after a season or two. Are such animals held primarily for sale to customers in the ordinary course of the taxpayer's business, and thus ineligible under §1231? The Treasury's attempt to deny capital gain treatment under §1231 was on the whole unsuccessful in the courts, but it litigated the issue so persistently that Congress finally intervened in 1951 to insure §1231's applicability. See §1231(b)(3). The leading case under §1231 prior to its amendment is Albright v. United States, 173 F.2d 339 (8th Cir. 1949); and see Halstead, Capital Gains of Farmers, 25 So. Calif. L. Rev. 36, 57-64 (1951).

Under §1231(b)(3), the livestock owner is assured of capital gains treatment if the animals are held for draft, breeding, or dairy purposes even though they are also held for sale. The application of §1231 to such animals is a shining example of bartering deductions from ordinary income for capital gains. The cost of raising the animals is usually deducted from ordinary income; but if the §1231 hotchpot shows a net gain, the profit on sale is long-term capital gain. To illustrate by an extreme example, assume that the cost of raising an animal is $100, deducted from income that would otherwise be taxed at the rate of 50 per cent, and that the animal is sold for $100. Has the owner made a profit? What if he sells the animal for $80?

6. *Unharvested crops.* If a farmer sells a farm with an unharvested crop at a profit, and this is his only transaction under §1231 for the taxable year, is the entire profit taxable as a capital gain under §1231, or is the profit allocable to the crop taxable as ordinary income on the theory that the crop, even though unharvested and unripe, is held primarily for sale to customers? In Watson v. Commissioner, 345 U.S. 544 (1953), the Supreme Court held that the profit on the crop must be taxed as ordinary income. Under a line of lower court cases to the contrary, the taxpayer might have had a taxable loss despite his enjoyment of an economic gain. Assume that the land cost $10,000, that the expenses of raising the crop were $2000, that the "package" is sold for $13,000, and that the sales price is allocable $10,000 to the land and $3000 to the crop. Under the decisions rejected by the *Watson* case, the farmer would have $3000 of capital gain, of which 50 per cent could be deducted under §1202, and $2000 of expenses deductible under §162(a). The Revenue Act of 1951 added §1231(b)(4), §268, and §1016(a)(11) to the Code; they have the effect of allowing capital gain on the sale, but at the expense of capitalizing the costs of raising the crop. How would the example just given be affected by these sections? See Halstead, Capital Gains of Farmers, cited supra paragraph 5.

7. *Uncompensated casualty losses under §1231.* Note that §1231(a) speaks of "gains from the compulsory or involuntary conversion . . . of property used in the trade or business and capital assets held for more than 6 months *into other property or money*" (emphasis supplied) and of "losses from such . . . conversions." Does this imply that a loss resulting from an involuntary conversion (e.g., destruction by fire, or theft) is subject to §1231 only if the taxpayer receives some "other property or money" from his insurance company or the thief? The Regulations state that such losses are within the scope of §1231 even though the taxpayer receives no compensation, Regs. §1.1231-1(e), but Maurer v. United States, 284 F.2d 122 (10th Cir. 1960), holds that uncompensated casualty losses are deductible under §165, and need not go into the §1231 hotchpot. (If the taxpayer has no other §1231 transactions during the taxable year, the result would be the same whether he relies on §165 or on §1231; but if there are other §1231 transactions, the *Maurer* case insures that the uncompensated casualty loss will be deductible from ordinary income regardless of the outcome of the §1231 hotchpot.)

The last sentence of §1231(a), enacted in 1958, takes uncompensated casualty losses out of the hotchpot if the property is used in the trade or business or is a capital asset held for the production of income. The taxpayers in *Maurer* could not rely on this provision,

however, because their dispute involved the taxable year 1954, and the property (their residence) was not held for the production of income. In recommending enactment of the 1958 provision, the Senate Finance Committee expressed the view that it represented a change in the law and removed "an unintended hardship." S. Rept. No. 1983, 85th Cong., 2d Sess., reprinted in 1958-3 C.B. 922, 995. The Internal Revenue Service has announced its non-acquiescence in *Maurer*. Rev. Rul. 61-54, 1961-1 C.B. 398.

SECTION G. CAPITAL GAINS AND THE DEPRECIATION DEDUCTION

Section 1245, providing for the "recapture" (as ordinary income) of post-1961 depreciation deductions when certain classes of property are sold at a gain, was enacted in 1962.

Section 1250, providing for the "recapture" of some post-1963 depreciation deductions taken with respect to real estate, was enacted in 1964.

Section 1239, requiring the gain on a sale of depreciable property between spouses or between an individual and a corporation controlled by him or certain members of his family to be reported as ordinary income, is identical with §117(o) of the 1939 Code.

Before enactment of the Revenue Act of 1962, and to a lesser degree even thereafter, §1231 encouraged the taxpayer to depreciate business property as rapidly as possible, since depreciation deductions reduce ordinary income, while any profit realized on an ultimate sale of the property goes into the §1231 hotchpot and is ordinarily taxable as long-term capital gain. This disparity was accentuated by the enactment in 1954 of §167(b), sanctioning the use of accelerated methods of depreciating property. The Internal Revenue Service, for its part, has adopted some countermeasures to restrict this opportunity to obtain current deductions from ordinary income in return for reporting long-term capital gains in the future. Closer administrative attention to estimated salvage values tends to prevent the "over-depreciation" of property; indeed, if the salvage value used in computing the amount to be depreciated turns out to correspond precisely with the amount realized on an ultimate sale of the property, the taxpayer's depreciation deductions will be equal to the cost of using the property during its business life and there will be no gain at the time of the sale. Although salvage values need not be re-estimated from year to year in the light of current market values, the courts have given powerful support to the Service's campaign by holding that the salvage value of property that is customarily retired before its physical exhaustion (e.g., automobiles used in a car rental business) must be based on the property's resale or second-hand value, not on its value to a junk dealer. Massey Motors, Inc. v. United States, supra page 300; see also Hertz Corp. v. United States, supra page 305 (applying same rule to property depreciated by declining balance method). Moreover, the Internal Revenue Service has ruled that no depreciation may be taken in the year an asset is sold if the sales price equals or exceeds its adjusted basis at the beginning of the year. Rev. Rul. 62-92, 1962-1 C.B. 29; Cohn v. United States, 259 F.2d 371 (6th Cir. 1958); but see Motorlease Corp. v. United States, 215 F. Supp. 356 (D. Conn. 1963) (ruling not applicable if estimates of useful life and salvage value were reasonable when made).

A more radical remedy for the ordinary-income, capital-gain syndrome, however, was prescribed by §1245 of the Revenue Act of 1962: when the taxpayer disposes of certain depreciable property, his gain (if any) must be reported as ordinary income to the extent of his post-1961 depreciation deductions. This "recapture" of depreciation applies only to "§1245 property" — depreciable per-

sonal property (except livestock) and depreciable tangible real property (other than buildings and their structural components) if devoted to certain uses (manufacturing, extraction, transportation, communications, gas and electric services, etc.). (The term "§1245 property" is substantially identical with the term "§38 property," used in computing the investment credit of §38, but it does not contain a useful life restriction.) Depreciation is "recaptured" by §1245(a) not merely when property is sold, but also when it is distributed as a corporate dividend, transferred in a corporate liquidation, or disposed of in certain other ways; if there is no "amount realized" because the property is not sold, exchanged, or involuntarily converted, the property's fair market value at the time of the disposition is employed in determining whether the taxpayer has realized a gain.

Although §1245 thus reaches many transactions that do not fall into the §1231 hotchpot, the existence of §1231 was undoubtedly the principal reason for its enactment, and §1231 transactions will probably furnish the principal occasions for its application. It should be noted, however, that §1245 does not totally eliminate the possibility of reporting a profit on the sale of depreciable property as long-term capital gain under §1231: buildings and their structural components, as well as some other categories of property, are not subject to §1245; pre-1962 depreciation deductions are not taken into account by §1245; and gain is unaffected by §1245 to the extent that it exceeds post-1961 depreciation. To illustrate the latter two limitations on §1245, assume that the taxpayer purchased a ship for $500,000 on January 1, 1961, deducted $40,000 as depreciation annually during the years 1961, 1962, and 1963 and sold the ship (because of a war scare) for $600,000 on December 31, 1963. His gain is $220,000 (i.e., $600,000 less adjusted basis of $380,000); his "recomputed basis" under §1245(a)(2) is $460,000 (adjusted basis of $380,000 plus post-1961 depreciation of $80,000), and $80,000 of his gain (excess of recomputed basis over adjusted basis) is taxable as ordinary income under §1245(a). The balance of his gain ($140,000) is untouched by §1245 and goes into the §1231 hotchpot. Note that if the taxpayer enjoys a gain on §1245 property, it is taxable as ordinary income to the extent of his post-1961 depreciation, whether the gain results from depreciating the property faster than the "normal" decline in its market value or from unanticipated inflation. Thus, if the ship had a market value on December 31, 1962, equal to its then adjusted basis ($420,000), the taxpayer would have realized no gain on selling it on that date; a sale for $600,000 on December 31, 1963, however, produces $80,000 of ordinary income under §1245 even though the entire gain is attributable to inflation induced by a war scare.

The enactment of §1245 should serve to reduce friction between taxpayers and revenue agents over the useful lives and salvage values employed in depreciating §1245 property, since excessive depreciation will be recaptured on most transfers of such property. But can §1245 be reconciled with legislative efforts to encourage new investment by sanctioning rapid depreciation methods in 1954 and enacting the investment credit in 1962? Note that the ordinary income implications of §1245, as well as the fact that it creates taxable income on some transfers that were not previously taxable occasions (e.g., certain corporate liquidations), may lead some taxpayers to abandon the use of rapid depreciation methods for §1245 property. This possibility was explicitly acknowledged by the enactment of §167(e) (allowing taxpayers to shift from declining balance and sum-of-the-year-digits methods to straight-line depreciation) as a companion to §1245.

The willingness of the Internal Revenue Service to promulgate the 1962 depreciation guidelines (supra p. 298), with their shorter lives for machinery and other business equipment, is partly explained by the enactment of §1245: taxpayers

using the guideline lives for property that is later sold at a profit will have to "give back" the excess depreciation as ordinary income under §1245.

By the enactment of §1250 in 1964, the recapture mechanism was extended to buildings and other real property not subject to §1245, but the reach of §1250 is more modest than that of §1245. Under §1250, depreciation is fully recaptured only if the property was held for 12 months or less; thereafter, only the excess (if any) of the depreciation taken over straight-line depreciation is subject to recapture, and even this excess is subject to §1250 only on a sliding scale under which the percentage taken into account is reduced if the property is held for more than 20 months by one percentage point for each month thereafter. Thus, 100 per cent of the excess is subject to recapture if the property is held for 20 months, 99 per cent if it is held for 21 months, etc., so that §1250 ceases to operate if the property is held for more than 120 months.

By virtue of §47, the investment credit of §38 is recaptured in whole or in part if there is an early disposition of property that qualified for the credit (i.e., if the property is disposed of before it has been used for the period of time used in computing the credit).

Section 1238, requiring the profit on a sale of "emergency facilities" (supra p. 298) to be reported as ordinary income rather than capital gain to the extent that the rapid amortization deducted by the taxpayer exceeded normal depreciation, may be regarded as a prototype — albeit in a very limited area — of §1245.

Section 1239 is still another statutory provision that was enacted by Congress (in 1951) because of §1231's favorable treatment of gain realized on depreciable property used in the trade or business. It provides that gain on a sale or exchange of depreciable property between spouses or between an individual and a corporation controlled (as defined) by him or certain members of his family is to be reported as ordinary income. Previously a stepped-up basis for depreciable property could be obtained by selling it to a controlled corporation; the gain would go into the §1231 hotchpot and would usually come out as long-term capital gain (possibly to be reported on the installment basis over a period of years), while the transferee would acquire a new basis for computing depreciation. See Sun Properties v. United States, 220 F.2d 171 (5th Cir. 1955). Section 1239 does not apply to all intra-family transactions, however, and although §1245 now supplies a second string to the government's bow, it seems likely that most transactions of this type involve buildings rather than §1245 property. Moreover, the owner of an apartment house or similar rental property whose property is fully depreciated or who has a low depreciable basis for property that has risen substantially in market value can sell his property to an outsider and invest the proceeds in comparable property, thus getting a stepped-up basis at the capital gain rate basis without running afoul of §1239. Indeed, several taxpayers who have "run out of depreciation" may find it possible to sell their assets to each other, taking care to avoid §1031 (non-recognition of gain on exchanges of investment property), and thus start with clean slates in computing depreciation on their newly acquired properties. These possibilities were, of course, made less attractive by the enactment of §1250 in 1964.

Section 707(b)(2) is a counterpart, in the partnership area, of §1239.

See generally Schapiro, Recapture of Depreciation and Section 1245 of the Internal Revenue Code, 72 Yale L.J. 1483 (1963).

Section H. Patents, Copyrights, and the Like

1. *Before 1950*

Until 1950, the Code did not explicitly prescribe the tax treatment of patents, inventions, copyrights, manuscripts, and similar property. Capital gains and losses would be realized only if, under the general provisions of the statute, the patent, copyright, or other item was a "capital asset" and was "sold or exchanged."

To meet the first requirement — that the property be a capital asset — the taxpayer had to show that it was neither held for sale to customers in the regular course of trade or business nor depreciable property used in his trade or business. In general, capital gains were thus confined to "amateur" inventors and authors, though this category might embrace a person who was employed to invent or write if what he sold was the result of spare-time work outside the scope of his employment. See Myers v. Commissioner, 6 T.C. 258, 266 (1946); Pike v. United States, 101 F. Supp. 100 (D. Conn. 1951). Patents and copyrights might also have qualified as "quasi-capital" assets under what is now §1231, if used in the trade or business and not held for sale to customers, though this was not entirely clear. See Avery v. Commissioner, 47 B.T.A. 538 (1942); Diescher v. Commissioner, 35 B.T.A. 732, 743; General Spring Corp. v. Commissioner, ¶53,257 P-H Memo T.C.; cf. Rev. Rul. 55-706, 1955-2 C.B. 300 (§1231 applicable to unusual sale of motion picture films held for rental), superseded by Rev. Rul. 62-141, 1962-2 C.B. 182.

Meeting the second requirement — that the capital asset be "sold" or "exchanged" — was easy if the patent or invention was sold for a specified sum. But the typical method of exploiting inventions and literary works is to allow commercial enterprises to use them in return for royalties, and the Internal Revenue Service took the position that a patent or copyright that was licensed for use on a royalty basis was not "sold" or "exchanged" within the meaning of what is now §1222. This argument was rejected in a number of cases; see, for example, Dreymann v. Commissioner, 11 T.C. 153, 162-163, where the court said:

> We do not agree with respondent's contention that to apply the benefits of the long term capital gains provisions . . . would be repugnant to the "underlying theory of the capital gains limitations." He argues that the purpose of the capital gains limitations is to lessen the impact of the Federal income tax "on the realization in one lump sum in one taxable year of an increment in value which had taken place over a number of years." Since petitioner here did not sell the process for one lump sum, he concludes, the application of the capital gains limitations in the case at bar would defeat the intent and purpose of Congress. In the first place, the applicable statute does not contain any provision to the effect that payment from the sale of a capital asset must be in one lump sum. Respondent supports his position, however, by pointing to House Report No. 350, 67th Cong., 1st sess. (C.B. 1939-1 (Part 2), p. 176). That report accompanied the Revenue Act of 1921, which first introduced the capital gains provision into our taxing statute. It reads in part as follows:
>
> > Section 206: The sale of farms, mineral properties, and other capital assets is now seriously retarded by the fact that gains and profits earned over a series of years are under the present law taxed as a lump sum (and the amount of surtax greatly enhanced thereby) in the year in which the profit is realized. . . .
>
> There is nothing in the House report or in the Senate report which supports respondent's assertion that a taxpayer, in order to have the tax benefit of the capital gains provisions, must sell his asset for one lump sum. As a matter of fact, this and other courts

have held that where, as here, the consideration for the sale of a capital asset was in the form of periodic payments based on a percentage of the gross sales made during the year, the taxpayer was entitled to a capital gains limitation on the sums received in each year. See Commissioner v. Celanese Corporation, 140 F.2d 339; George James Nicholson, 3 T.C. 596, and cases cited therein. We can find no valid reason for holding otherwise in this case.

See also Myers v. Commissioner, 6 T.C. 258 (1946), holding that an exclusive license of a patent is a sale, as required for capital gain treatment. Despite its failure to persuade the courts, the Internal Revenue Service persisted in its view — no doubt much influenced by the anomaly of capital gains being realized for the product of personal service and skill — until 1958. In that year, the Service finally acquiesced in the *Myers* case as to patent royalties, and in 1960 it announced that it would apply the same principle to copyrights. Rev. Rul. 58-353, 1958-2 C.B. 408; Rev. Rul. 60-226, 1960-1 C.B. 26.

Another problem in this area was whether the transfer of rights in a copyright or patent was a "sale" if the transferee was restricted to a particular medium (e.g., motion pictures, magazine publication, etc.) or to a prescribed geographical area. The Internal Revenue Service for some time insisted that such transfers were "licenses" rather than "sales," relying mainly on precedents from the law of patents and copyrights which drew these distinctions, e.g., in determining the proper party to sue for infringement. After losing Herwig v. United States, 105 F. Supp. 384 (Ct. Cl. 1952), holding that Kathleen Winsor's transfer of the motion picture rights to "Forever Amber" was a "sale" rather than a "license," however, the Internal Revenue Service issued Rev. Rul. 54-409, 1954-2 C.B. 174, acknowledging that a copyright can be divided into separate properties, provided an exclusive right to exploit it in a particular medium is granted. But see Cory v. Commissioner, 230 F.2d 941 (2d Cir. 1956) (transfer of part of the bundle of rights in a manuscript is not a sale when the consideration is wholly indeterminate at the time of transfer).

The transfer of an exclusive right to exploit a patent in a limited geographical area has also been held to be a "sale." Marco v. Commissioner, 25 T.C. 544 (1955) (exclusive rights under an American patent in the United States west of the Mississippi River); Cleveland Graphite Bronze Co. v. Commissioner, 10 T.C. 974, 988 (1948), aff'd per curiam, 177 F.2d 200 (6th Cir. 1949) (rights under British patent limited to England); Reid v. Commissioner, 26 T.C. 622 (1956) (rights limited to United States). In Dairy Queen, Inc. v. Commissioner, 250 F.2d 503 (10th Cir. 1957), the transfer of the exclusive use of a patented machine in a restricted area, under an agreement by the transferee to maintain quality and other standards, was held to be a "sale" rather than a "license." There is a conflict on whether a transfer of the right to exploit a patent in a particular industry is a "sale" or "license." Compare United States v. Carruthers, 219 F.2d 21 (9th Cir. 1955) (finding no reason for distinguishing between a geographic and an industry limitation), with American Chemical Paint Co. v. Smith, 131 F. Supp. 734 (E.D. Penn. 1955) (distinguishing *Carruthers* on the ground that the patents involved there had established value in only one industry).

Up to this point, as stated above, there was no distinction between the inventor and the author. From 1950 on, however, their paths diverged.

2. *The 1950 Amendments: Authors, Composers, and Artists*

Section 1221(3), providing that a copyright, literary composition, or similar property, held by its creator or by a person whose basis is determined by reference to the creator's basis, is not a "capital asset," is identical with §117(a)(1)(C) of the 1939 Code.

Section 1231(b)(1)(C), providing that such assets do not qualify for "quasi-capital asset" treatment under §1231, is identical with §117(j)(1)(C) of the 1939 Code.

In 1948 the financial arrangements for the publication of General Eisenhower's "Crusade in Europe" were extensively discussed in the press. The New Yorker reported:

> The manuscript was finished on March 24th and sold to Doubleday early this month [October, 1948] for a sum that has been rumored to be somewhere between a hundred thousand and a million dollars. There hadn't been any doubt that Doubleday would buy the book. The reason for the hiatus, and for an outright sale rather than the usual royalties deal, was a ruling by the income-tax people that in this way Eisenhower would qualify for a twenty-five-per-cent capital-gains tax on the transaction, instead of being subject to the graduated income tax. The capital-gains tax is limited to twenty-five per cent only in the case of so-called capital assets held at least six months, and apparently writers can get in under it when they are non-professionals. If the General should write a second book, he might find himself in the same tax boat as Norman Mailer and Dale Carnegie. We note that he has recently taken up painting, on an amateur basis.

During the 1952 Presidential campaign General Eisenhower made public the Treasury's ruling, which was followed a year later by a closing agreement, to the effect that capital gain would be realized on the assumption that

> you propose to sell to a publisher in one transaction all of your right, title and interest in your literary work, and that after such sale, you would have no further control over the manuscript or its exploitation in any field or medium of publication . . . that there would be no further income of any kind accruing to you after the single transaction. [New York Times, Oct. 15, 1952, p. 22.]

The emphasis on the sale of all rights for a lump sum reflects the Internal Revenue Service's pre-1958 view that a royalty arrangement would defeat the concept of a "sale," as well as its pre-1954 theory that a division of publication rights among several transferees was a "license," not a "sale." Supra page 565.

About the same time that General Eisenhower's transaction occurred, it was reported that the Columbia Broadcasting Company had lured Amos 'n Andy, Jack Benny, and other performers away from the National Broadcasting Company by a series of "capital gains deals." The details were not publicly announced at the time, but it was reported that the performers sold the "shows" — embracing scripts, trade names, goodwill, rights to the characters and manner of rendition, etc. — for flat sums, simultaneously entering into long-term employment contracts. Every Broadway and Hollywood columnist had his own explanation of the tax advantages thereby gained; speculation was reported on whether Faust's sale of his soul to the Devil gave rise to ordinary income or capital gain.

The bubble was pricked on January 3, 1949, when the Internal Revenue Service issued this laconic statement:

> The tax effect of any business transaction is determined by its realities.
>
> Accordingly, proposals of radio artists and others to obtain compensation for personal services under the guise of sales of property cannot be regarded as coming within the

capital gains provisions of the Internal Revenue Code. Such compensation is taxable at ordinary income tax rates.

While this announcement evidently discouraged further transactions of this type, it did not prevent Jack Benny from litigating a deficiency assessed against him based on his sale of the stock of a corporation that was under contract to produce several radio shows (including Benny's). To refute the government's claim that 90 per cent of the sales price (about $2.2 million) was in reality compensation for his personal services, Benny established that his agents negotiated with CBS for the sale of the stock and arrived at a price before discussing his services, and that they threatened to break off negotiations entirely if CBS tried to discuss both subjects simultaneously. CBS, the court concluded, agreed to buy the stock without any assurance that Benny would switch from NBC to CBS. With three judges dissenting, the court held that the form of the transaction corresponded with its substance, and that Benny's profit was capital gain. Benny v. Commissioner, 25 T.C. 197 (1955). On somewhat similar facts, Groucho Marx also enjoyed a capital gain; his method of separating the consideration for the literary properties from the compensation to be paid for his personal services was to require CBS and NBC to submit separate offers in the form of sealed bids. Marx v. Commissioner, 29 T.C. 88 (1957). For discussion, see Rosenbaum, Entertainer's Corporations and Capital Gains, 12 Tax L. Rev. 33 (1956).

In 1950, Congress enacted what is now §1221(3) to exclude copyrights, literary, musical and artistic compositions, and similar property from the term "capital assets" when held either by the creator or by a person whose basis for the property is determined by reference to the creator's basis (e.g., a donee or a controlled corporation). At the same time, to prevent such assets from producing capital gain indirectly, §1231(b)(1)(C) was enacted to keep them out of the hotchpot of §1231.

The House of Representatives proposed to treat inventors like authors, but the Senate Finance Committee demurred:

> Your committee believes that the desirability of fostering the work of such [occasional] inventors outweighs the small amount of additional revenue which might be obtained under the House bill, and therefore the words "invention," "patent," and "design" have been eliminated . . . [S. Rept. No. 2375, 81st Cong. 2d Sess., reprinted in 1950-2 C.B. 483, 515.]

It should be noted that the 1950 legislation may have failed to touch the radio performers whose antics evoked the amendments; Jack Benny sold the stock of a corporation, not literary or musical properties, and Groucho Marx sold his interest in a partnership. Does §1221 (3) disqualify the stock of a corporation if its assets include, or consist wholly of, literary properties?

When do copyrights, literary and musical compositions, and similar property constitute capital assets despite §1221 (3)? See Fidler v. Commissioner, 231 F.2d 138 (9th Cir. 1956) (literary property purchased as an investment with the hope of a profitable resale; held, under pre-1950 law, capital assets).

The Internal Revenue Service has ruled that motion picture films produced by a publicly held corporation did not come within the scope of §1221(3):

> No participating interests in the films sold were held by any individuals as joint venturers in a particular production. The films sold were produced by the efforts of individuals who were paid . . . the then full market value of their efforts and services. None of such individuals owned stock in the corporation at the time the films were made, or owned any stock or stock options in the corporation at the time of the sale of the films. None of the individuals contributed efforts and services to the production of these films with a view toward subsequently realizing additional money returns, directly or indirectly,

through the medium of the sale of the films upon a capital gain basis. [Rev. Rul. 55-706, 1955-2 C.B. 300, superseded (on other grounds) by Rev. Rul. 62-141, 1962-2 C.B. 182.]

On the meaning of "literary composition" and "similar property" as used in §1221(3), see Stern v. United States, 164 F. Supp. 847 (E.D. La. 1958), aff'd per curiam, 262 F.2d 957 (5th Cir. 1959) (motion picture rights to "Francis," the talking mule; held, a "literary composition" even if not subject to copyright). In Regenstein v. Commissioner, 35 T.C. 183 (1960), the court suggested that a plan for group insurance for government employees, devised by an agent who specialized in group insurance plans, constituted "similar property" within the meaning of §1221(3) (assuming that it constituted "property" at all), but the case was decided on the ground that a disputed payment received by the taxpayer was for personal services rather than for the plan or idea.

It should be noted that §§1301-1307 (relating to income averaging, infra page 827) may provide some tax relief for authors and inventors whose income is "bunched" and does not qualify for the capital gain rate. Another method of avoiding the telescoping of income is to make an "installment sale" of the copyright or other property. Under §453(b) the income realized on the sale is taxed as the installments are received. Ex-President Truman, who decided to sell his memoirs after the enactment of §1221(3), was granted a ruling in late 1953 approving a proposed installment sale under §453(b). Infra page 813.

3. *The 1954 Amendment: Inventors*

Section 1235, providing that royalties and other income received by inventors and certain other persons on the transfer of "all substantial rights" to a patent or interest therein qualify as long-term capital gains, was enacted in 1954, but was subsequently made retroactive to 1950 by §117(q) of the 1939 Code.

In 1954, just four years after Congress amended §1221 so that the transfer of a copyright or similar property would generate ordinary income even for the *amateur* author, it enacted §1235 to insure that income from certain transfers of patents will be taxed as long-term capital gain even if received by a *professional* inventor. The purpose of the legislation was "to provide an incentive to inventors to contribute to the welfare of the Nation." S. Rept. on 1954 Code, 439. The professional inventor thus joins the stock "trader" in the select group of taxpayers who can report their regular income — not just occasional supplements to it — as long-term capital gains. For the background of §1235, see United States v. Zacks, 375 U.S. 59 (1963).

Section 1235 applies only to a "holder" of a patent (or of an undivided interest therein), a term that refers to an individual "whose efforts created such property" or who acquired his interest from the creator for a consideration in money or money's worth before the invention covered by the patent was reduced to practice. Neither the creator's employer nor a person related to the creator within the degrees specified in §267(b) and §1235 (d), however, can qualify as a "holder." If a holder transfers "property consisting of all substantial rights to a patent, or an undivided interest therein which includes a part of all such rights," the transfer is to be treated as the sale or exchange of a capital asset held for more than six months. Moreover, §1235 applies even if the payments received by the holder are contingent on the transferee's use of the patent and payable over the period of use. To prevent a holder from exploiting a patent through a related corporation or family partnership and employing §1235 to draw off manufacturing

profits in the form of long-term capital gains, however, the patent may not be transferred to a related person, as defined by §267(b) and §1235(d).

The Regulations provide that the requirement of a transfer of "all substantial rights" is not satisfied by a license limited geographically, functionally, or in time. Regs. §1.1235-2(b); and see Young v. Commissioner, 29 T.C. 850 (1958) (agreement terminable by holder on six months' notice not a transfer of "all substantial rights"); First National Tr. & Savings Bank v. United States, 200 F. Supp. 274 (S.D. Cal. 1961) (retention of right to terminate for nonpayment of royalties not inconsistent with §1235 transfer, but transfer of all rights *remaining* after an earlier non-exclusive license does not qualify); Ruge v. Commissioner, 26 T.C. 138 (1956) (transferor was entitled to use patented apparatus in his own work; transaction treated as a transfer of all substantial rights, with license back to transferor of minor rights).

For problems in determining whether an employee has been paid for services or for a patent, see Chilton v. Commissioner, 40 T.C. 552 (1963), and cases there cited.

If an inventor deducts depreciation after 1961 with respect to a patent and then disposes of it in a way that meets the standards of §1235, must part of his profit be reported as ordinary income under §1245?

The Regulations provide that a transfer of a patent that falls outside §1235 (e.g., transfers by a "holder" to a "related person" or by a person who is not a "holder") will be governed by the other provisions of the Code. Regs. §1.1235-1-(b). See also, to the same effect, Coplan v. Commissioner, 28 T.C. 1189 (1957) (patent transferred to a related corporation in a bona fide, arm's-length transaction); Holcomb v. Commissioner, 30 T.C. 354 (1958) (sale by wife, who had received an interest in a patent as a gift from inventor-husband). Note the importance in this connection of the cases (in which the government finally acquiesced) holding that the "sale or exchange" requirement of §1222 is satisfied even though the transferor of a patent receives royalties contingent on the transferee's use. Myers v. Commissioner, and Rev. Rul. 58-353, supra page 565.

What is the basis upon which gain or loss on the sale of a patent by its inventor is to be computed? See Regs. §1.167(a)-6(a). With respect to "developmental or experimental expenses, etc.," which the regulation treats as the cost of a patent, recall that the Service's policy has been to allow the "expensing" of these costs where the taxpayer has done so consistently. Supra page 316. After deducting such costs, could the taxpayer include them in the patent's basis on the theory that the Service should not have allowed the deductions? An amateur inventor would probably not be allowed to deduct his costs even under the Service's lenient policy.

Rev. 1419 (1957); Pilpel, Tax Law Affecting Copyrights: 1954-1956, 35 Taxes 76 (1957); Kragen and Barton, The Tax Dilemma of the Entertainer, 31 So. Calif. L. Rev. 390 (1958); Dunn, Tax Considerations in Patent Assignments and Licenses Between Related Corporations, 16 Tax L. Rev. 315 (1961); Duke, Foreign Authors, Inventors, and the Income Tax, 72 Yale L.J. 1093 (1963).

SECTION I. SALE OF A GOING BUSINESS

WILLIAMS v. McGOWAN

152 F.2d 570 (1945)

Before L. HAND, SWAN, and FRANK, Circuit Judges.

L. HAND, Circuit Judge.

This is an appeal from a judgment dismissing the complaint in an action by a taxpayer to recover income taxes paid for the year 1940. . . .

Williams, the taxpayer, and one, Reynolds, had for many years been engaged in the hardware business in the City of Corning, New York. On the 20th of January, 1926, they formed a partnership, of which Williams was entitled to two-thirds of the profits, and Reynolds, one-third. They agreed that on February 1, 1925, the capital invested in the business had been $118,082.05, of which Reynolds had a credit of $29,029.03, and Williams, the balance — $89,053.02. At the end of every business year, on February 1st, Reynolds was to pay to Williams, interest upon the amount of the difference between his share of the capital and one-third of the total as shown by the inventory; and upon withdrawal of one party the other was to have the privilege of buying the other's interest as it appeared on the books. The business was carried on through the firm's fiscal year, ending January 31, 1940, in accordance with this agreement, and thereafter until Reynolds' death on July 18th of that year. Williams settled with Reynolds' executrix on September 6th in an agreement by which he promised to pay her $12,187.90, and to assume all liabilities of the business; and he did pay her $2,187.98 in cash at once, and $10,000 on the 10th of the following October. On September 17th of the same year, Williams sold the business as a whole to the Corning Building Company for $63,926.28 — its agreed value as of February 1, 1940 — "plus an amount to be computed by multiplying the gross sales of the business from the first day of February, 1940 to the 28th day of September, 1940," by an agreed fraction. This value was made up of cash of about $8100, receivables of about $7000, fixtures of about $800, and a merchandise inventory of about $49,000, less some $1000 for bills payable. To this was added about $6000 credited to Williams for profits under the language just quoted, making a total of nearly $70,000. Upon this sale Williams suffered a loss upon his original two-thirds of the business, but he made a small gain upon the one-third which he had bought from Reynolds' executrix; and in his income tax return he entered both as items of "ordinary income," and not as transactions in "capital assets." This the Commissioner disallowed and recomputed the tax accordingly; Williams paid the deficiency and sued to recover it in this action. The only question is whether the business was "capital assets" under [§1221].

It has been held that a partner's interest in a going firm is for tax purposes to be regarded as a "capital asset." Stilgenbaur v. United States, 9 Cir., 115 F.2d 283; Commissioner v. Shapiro, 6 Cir., 125 F.2d 532, 144 A.L.R. 349. We too accepted the doctrine in McClellan v. Commissioner, 2 Cir., 117 F.2d 988, although we had held the opposite in Helvering v. Smith, 2 Cir., 90 F.2d 590, 591, where the partnership articles had provided that a retiring partner should receive as his share only his percentage of the sums "actually collected" and "of all earnings . . . for services performed." Such a payment, we thought, was income; and we expressly repudiated the notion that the Uniform Partnership Act had, generally speaking, changed the firm into a juristic entity. See also Doyle v. Commissioner,

4 Cir. 102 F.2d 86. If a partner's interest in a going firm is "capital assets" * perhaps a dead partner's interest is the same. New York Partnership Law §§61,62(4), Consol. Laws N.Y. c. 39. We need not say. When Williams bought out Reynolds' interest, he became the sole owner of the business, the firm had ended upon any theory, and the situation for tax purposes was no other than if Reynolds had never been a partner at all, except that to the extent of one-third of the "amount realized" on Williams' sale to the Corning Company, his "basis" was different. The judge thought that, because upon that sale both parties fixed the price at the liquidation value of the business while Reynolds was alive, "plus" its estimated earnings thereafter, it was as though Williams had sold his interest in the firm during its existence. But the method by which the parties agreed upon the price was irrelevant to the computation of Williams' income. The Treasury, if that served its interest, need not heed any fiction which the parties found it convenient to adopt; nor need Williams do the same in his dealings with the Treasury. We have to decide only whether upon the sale of a going business it is to be comminuted into its fragments, and these are to be separately matched against the definition in [§1221], or whether the whole business is to be treated as if it were a single piece of property.

Our law has been sparing in the creation of juristic entities; it has never, for example, taken over the Roman "universitas facti";[1] and indeed for many years it fumbled uncertainly with the concept of a corporation. One might have supposed that partnership would have been an especially promising field in which to raise up an entity, particularly since merchants have always kept their accounts upon that basis. Yet there too our law resisted at the price of great and continuing confusion; and, even when it might be thought that a statute admitted, if it did not demand, recognition of the firm as an entity, the old concepts prevailed. Francis v. McNeal, 228 U.S. 695. And so, even though we might agree that under the influence of the Uniform Partnership Act a partner's interest in the firm should be treated as indivisible, and for that reason a "capital asset" within [§1221], we should be chary about extending further so exotic a jural concept. Be that as it may, in this instance the section itself furnishes the answer. It starts in the broadest way by declaring that all "property" is "capital assets," and then makes three exceptions. The first is "stock in trade . . . or other property of a kind which would properly be included in the inventory"; next comes "property held . . . primarily for sale to customers"; and finally, property "used in the trade or business of a character which is subject to . . . allowance for depreciation." In the face of this language, although it may be true that a "stock in trade," taken by itself, should be treated as a "universitas facti," by no possibility can a whole business be so treated; and the same is true as to any property within the other exceptions. Congress plainly did mean to comminute the elements of a business; plainly it did not regard the whole as "capital assets."

As has already appeared, Williams transferred to the Corning Company "cash," "receivables," "fixtures" and a "merchandise inventory." "Fixtures" are not capital because they are subject to a depreciation allowance; the inventory, as we have just seen, is expressly excluded. So far as appears, no allowance was made for "good-will"; but, even if there had been, we held in Haberle Crystal Springs Brewing Company v. Clarke, Collector, 2 Cir., 30 F.2d 219, that "good-will" was a depreciable intangible. It is true that the Supreme Court reversed

* Although a partner's interest in a partnership is a capital asset, part of the consideration received on a sale of the interest may be taxable as ordinary income by virtue of statutory changes enacted in 1954, infra pages 760-761. — Ed.

[1] "By universitas facti is meant a number of things of the same kind which are regarded as a whole; e.g. a herd, a stock of wares." Mackeldey, Roman Law §162.

that judgment — 280 U.S. 284 — but it based its decision only upon the fact that there could be no allowance for the depreciation of "good-will" in a brewery, a business condemned by the Eighteenth Amendment. There can of course be no gain or loss in the transfer of cash; and, although Williams does appear to have made a gain of $1072.71 upon the "receivables," the point has not been argued that they are not subject to a depreciation allowance. That we leave open for decision by the district court,* if the parties cannot agree. The gain or loss upon every other item should be computed as an item in ordinary income.

Judgment reversed.

FRANK, Circuit Judge (dissenting in part).

I agree that it is irrelevant that the business was once owned by a partnership. For when the sale to the Corning Company occurred, the partnership was dead, had become merely a memory, a ghost. To say that the sale was of the partnership's assets would, then, be to indulge in animism.

But I do not agree that we should ignore what the parties to the sale, Williams and the Corning Company, actually did. They did not arrange for a transfer to the buyer, as if in separate bundles, of the several ingredients of the business. They contracted for the sale of the entire business as a going concern. Here is what they said in their agreement: "The party of the first part agrees to sell and the party of the second part agrees to buy, *all of the right, title and interest* of the said party of the first part *in and to the hardware business* now being conducted by the said party of the first part, *including* cash on hand and on deposit in the First National Bank & Trust Company of Corning in the A. F. Williams' Hardware Store account, in accounts receivable, bills receivable, notes receivable, merchandise and fixtures, including two G.M. trucks, good will and all other assets of every kind and description used in and about said business. . . . Said party of the first part agrees not to engage in the hardware business within a radius of twenty-five miles from the City of Corning, New York, for a period of ten years from the 1st day of October 1940."

To carve up this transaction into distinct sales — of cash, receivables, fixtures, trucks, merchandise, and good will — is to do violence to the realities. I do not think Congress intended any such artificial result. In the Senate Committee Report on the 1942 amendment to [§1221(2), supra p. 552], it was said: "It is believed that this Senate amendment will be of material benefit to businesses which, due to depressed conditions, have been compelled to dispose of their plant or equipment at a loss. The bill defines property used in a trade or business as property used in the trade or business of a character which is subject to the allowance for depreciation, and real property held for more than six months which is not properly includible in the inventory of the taxpayer if on hand at the close of the taxable year or property held by the taxpayer primarily for sale to customers in the ordinary course of his trade or business. If a newspaper purchased the plant and equipment of a rival newspaper and later sold such plant and equipment at a loss, such plant and equipment, being subject to depreciation, would constitute property used in the trade or business within the meaning of this section." These remarks show that what Congress contemplated was not the sale of a going business but of its dismembered parts. Where a business is sold as a unit, the whole is greater than its parts. Businessmen so recognize; so, too, I think, did Congress. Interpretation of our complicated tax statutes is seldom aided by saying that taxation is an eminently practical matter (or the like). But this is one instance where, it seems to me, the practical aspects of the matter should guide our guess as to what Congress meant. I believe Congress had those aspects in

* The decision on remand is reported at 70 F. Supp. 31 (W.D.N.Y. 1947). — ED.

mind and was not thinking of the nice distinctions between Roman and Anglo-American legal theories about legal entities.

NOTE

1. *Fragmentation of going business.* Although there is a suggestion in Hatch's Estate v. Commissioner, 198 F.2d 26 (9th Cir. 1952), of disagreement with Judge Hand's approach, Williams v. McGowan was cited with approval by the Supreme Court in Watson v. Commissioner, 345 U.S. 544 (1953). The same process of fragmentation would be required on the sale of a going business by a corporation.

In the case of a partnership, however, it is necessary to determine whether the partners sold their partnership interests or the firm sold the business. See Kaiser v. Glenn, 216 F.2d 551 (6th Cir. 1954). On a sale of a partnership interest, the 1954 Code requires a degree of fragmentation (primarily to insure that the seller's share of the firm's "unrealized receivables" and "substantially appreciated inventory" will be reported as ordinary income, infra p. 761), but the fragmentation is more complete on a sale by the firm of the going business.

2. *Accounts receivable.* Section 1221(4) was enacted in 1954 to provide that accounts receivable acquired on the sale of inventory property will be non-capital assets, thus rejecting the contrary rule of Graham Mill & Elevator Co. v. Thomas, 152 F.2d 564 (5th Cir. 1945) (accounts receivable held for collection, not for sale to customers in the ordinary course of business; hence, capital assets); see also City Stores Co. v. United States, 225 F. Supp. 867 (E.D. Pa. 1964) (refusing to apply *Corn Products* doctrine). Could the same result have been reached by applying the *Corn Products Refining Co.* rationale? By referring only to accounts receivable arising "from the sale of [inventory] property," does §1221(4) imply that accounts arising out of the rental of property (e.g., by an automobile rental agency) are capital assets? What is the status of accounts arising out of a sale of property described in §1221(2) (property used in the trade or business) or §1221(3) (copyrights held by creator)?

Note that taxpayers on the accrual basis will have reported their accounts receivable as income when the property was sold, so that the gain or loss to which §1221(4) applies may be minimal. For cash basis taxpayers, however, §1221(4) is more significant.

3. *Goodwill.* On the sale of a successful business, the purchase price ordinarily exceeds the aggregate market value of the plant, equipment, fixtures, inventory, accounts receivable, and similar assets. This additional value, known as goodwill, resides in such intangibles as the organization, trained staff, business reputation, established clientele, trade names, location and operational methods of the enterprise. Certain other assets, such as secret processes, lists of customers and other business records, long-term contracts, leases, licenses, and franchises, are sometimes also treated as part of goodwill, even though it may be possible to split them off from the going business for separate sale. Did the taxpayers in *Eidson* and *Nelson Weaver Realty*, supra page 518-519, sell goodwill?

The Internal Revenue Service has acknowledged that goodwill is a capital asset, presumably in reliance on a statement in the Regulations denying that goodwill is depreciable. Rev. Rul. 57-480, 1957-2 C.B. 47; Regs. §1.167(a)-3. If the contrary view (espoused by Judge L. Hand in Williams v. McGowan) were accepted, it would be a non-capital asset, and gain or loss on goodwill held for more than six months would go into the §1231 hotchpot.

If a business is sold for a lump sum, the amount attributable to goodwill is sometimes reached by assigning a market value to the plant, equipment, fixtures, inventory, etc., and attributing the residue of the sales price to goodwill. Since goodwill is often defined as the "excess earning power" of the business, resulting from the fact that its profits exceed the profits that would normally be expected of the plant, equipment, inventory, business capital, and other separate assets, should the price received for goodwill be treated as a substitute for ordinary income under the *Hort* and *Lake* rationale? Note that in determining how a recovery in an antitrust case is to be reported, the cases distinguish between a recovery for loss of goodwill and a recovery of "lost profits" (*Raytheon Production Corp.* case, supra p. 86).

As is seen infra, the Internal Revenue Service has sought to limit the concept of good-

will, and hence the possibility of realizing capital gain, when the business that is sold consists of a profesional practice or other personal service enterprise.

4. *Covenants not to compete.* Payments received under a covenant not to compete, unrelated to the sale of a going business or of goodwill, have long been taxed as ordinary income rather than capital gain. Why? See Salvage v. Commissioner, 76 F.2d 112 (2d Cir. 1935). Even if the covenant accompanies a sale of a going business with its goodwill, the parties will ordinarily be taken at their word if they negotiate for the covenant and assign part of the sales price to it. Rogers v. United States, 290 F.2d 501 (9th Cir. 1961); see also Wilson Athletic Goods Manufacturing Co., Inc. v. Commissioner, 222 F.2d 355 (7th Cir. 1955) (purchaser allowed to amortize cost of covenant not to compete, despite lack of an allocation in the agreement). But in Michaels v. Commissioner, 12 T.C. 17 (1949), the taxpayer was accorded capital gain on a lump sum received for the goodwill of a business that he conducted as an individual proprietorship and for his personal covenant not to compete, the court saying:

> If such an agreement [not to compete] can be segregated, not so much for purposes of valuation as in order to be assured that a separate item has actually been dealt with, the agreement is ordinary income and not the sale of a capital asset. . . . But where it accompanies the transfer of good will in the sale of a going business and it is apparent that the covenant not to compete has the function primarily of assuring to the purchaser the beneficial enjoyment of the good will which he has acquired, the covenant is regarded as nonseverable and as being in effect a contributing element to the assets transferred . . .
>
> We have accordingly found as a fact, though the matter is not free from doubt, that the agreement to refrain from competition should be treated as a capital asset ancillary to the transfer of good will and customers. [12 T.C. at 20.]

The sale of the stock of a corporation is also often accompanied by an agreement not to compete. Hamlin v. Commissioner, 209 F.2d 761 (10th Cir. 1954), involved a sale of stock with a covenant by the stockholders not to compete for a period of ten years. After a draft contract was prepared under which the seller was to pay $1,000,000 for the stock with no stated amount for the covenant, the buyer suggested a change by which $750,000 would be allocated to the stock and $250,000 to the covenant:

> He stated in substance that the purpose of the suggested provision was to make such provision for non-competition enforceable and to help him and his associates taxwise. With very little discussion, the stockholders present agreed to the suggested provision, because they thought it would make no difference to them. [209 F.2d at 763.]

The court held that the covenant was not ancillary to a sale of goodwill (as in the *Michaels* case, supra) because the sellers sold stock and not a going business; and it also held that the sellers were bound by the allocation in the contract despite the circumstances under which they agreed to it. Consequently the amount received for the covenant was ordinary income, and the amount received for the stock gave rise to capital gain or loss. In Gazette Telegraph Co. v. Commissioner, 19 T.C. 692, 696 (1953), the same allocation was accepted in computing the buyer's amortization of the covenant. There it was stated that the buyers

> insisted upon a fixed and separate consideration for the covenant not to compete in order to establish its value and also for the purpose of fixing liquidated damages to be paid in the event of its breach.

See also Paul, The Lawyer As a Tax Adviser, infra page 974, for an interesting anecdote regarding an ethical problem in this area.

5. *Allocation of price among various assets of going business.* To the extent that the buyer and seller of a going business have some honest leeway in determining how the price to be paid should be allocated among the inventory, land, buildings, machinery and vehicles, goodwill, covenants not to compete, and other assets, will their interests coincide or conflict? (Consider, as a new factor in this area, the impact of §1245 and §1250.) See Ullman v. Commissioner, 264 F.2d 305 (2d Cir. 1959) (parties' own allocation

as to covenants not to compete is prima facie binding on them, since their "tax avoidance desires . . . are ordinarily antithetical, forcing them, in most cases, to agree upon a treatment which reflects the parties' true intent with reference to the covenants [not to compete], and the true value of them in money"); Levine v. Commissioner, 324 F.2d 298 (3d Cir. 1963) (allocation between goodwill and covenant not to compete).

REV. RUL. 57-480

1957-2 C.B. 47

Advice has been requested as to the treatment, for Federal income tax purposes, of payments received from the sale of a business or profession, under the various situations described below, where the success of such business depends solely upon the professional skill, ability, integrity and other personal characteristics of the owner.

Transferable goodwill does not attach to the business of a professional man or firm, or to any other business, the success of which depends solely upon the professional skill, ability, integrity and any other personal characteristics of the owner. Neither does a following based on personal friendship or acquaintanceship constitute transferable goodwill. See Providence Mill Supply Company v. Commissioner, 2 B.T.A. 791 and MacDonald v. Commissioner, 3 T.C. 720, acquiescence, C.B. 1944-18. However, in Wyler v. Commissioner, 14 T.C. 1251, the court recognized that goodwill may be sold by professional men. Vendible goodwill may attach to a particular firm name, if the right to the exclusive use of such name may be assigned to and exercised by the assignee. Thus, if a sale of such a business or profession includes the right to the exclusive use of the firm name of the business or profession, the portion of the sales price attributable to the assignment of such right shall be treated as derived from the sale of goodwill. Since goodwill is a capital asset, any gain resulting from its sale constitutes capital gain. Revenue Ruling 55-79, C.B. 1955-1, 370.

However, each case must be decided upon the basis of its own facts to determine the extent to which the consideration received is from the sale of goodwill. For example, if the seller retains a right to fees collected after the sale for services performed before the sale, or receives payment for relinquishment of all or part of his right to such fees, the amount received by him under this arrangement is attributable to services performed before the sale rather than to the sale of goodwill and would thus constitute ordinary income. Also, if the seller retains a right to any fees or revenue collected for services performed at any time after the sale, or the purchaser agrees to pay an amount equal to any part of such fees or revenue, the nature of his interest in the business or profession and the earnings therefrom is such that the amounts received by him under this arrangement constitute ordinary income from the business rather than proceeds from the sale of goodwill. Further, where a member of a professional firm transfers to another person a part of his interest in the firm and purports to assign a right to use the firm name, no part of the consideration received by him for the transfer will be regarded as being received upon a sale of goodwill if his name is in the firm name and he continues to be a member of the firm.

Even in a case where a professional firm sells its entire business for a sum certain, only a proper part of the sales price may be allocated to the goodwill transferred by reason of an assignment of the right to use the firm name. If assets other than such right are sold, a reasonable part of the sales price shall be

allocated to such assets. Revenue Ruling, 55-79, supra. If the assignment of the exclusive right to use the firm name is accompanied by a covenant by the assignor not to compete under another name, no part of the sales price to such covenant shall be regarded as derived from the sale of goodwill.

In view of the above, where the business of a professional man or firm, or any other business, which is dependent solely upon the professional skill or other characteristics of the owner, is sold without a valid assignment of the right to the exclusive use of the firm name, no portion of the sales price may be treated as the proceeds from the sale of goodwill.

REV. RUL. 60-301

1960-2 C.B. 15

The Internal Revenue Service has been requested to state whether the decision of the Court of Appeals for the Fifth Circuit in the case of Estate of F. G. Masquelette et al., v. Commissioner, 239 Fed. (2d) 322, affects the position expressed in Revenue Ruling 57-480, C.B. 1957-2, 47.

Revenue Ruling 57-480 states, in part, that vendible goodwill may attach to a particular firm name, if the right to the exclusive use of such name may be assigned to and exercised by the assignee. It concludes that where the business of a professional man or firm, or any other business, which is dependent solely upon the professional skill or other characteristics of the owner, is sold without a valid assignment of the right to the exclusive use of the firm name, no portion of the sales price may be treated as the proceeds from the sale of goodwill.

In the *Masquelette* case, an accounting firm sold the "practice" of its El Paso office to the four local partners. The contract of sale stated that a certain amount was paid for the tangible assets of the firm and an additional amount was paid for such intangibles as the right to serve clients within a restricted area, vendors' interests in clients' files, library, office quarters, etc., and an agreement by the sellers not to compete, but excluding the right to use the firm name. The Court of Appeals, in reversing the Tax Court of the United States, concluded that the stipulations, written contract and undisputed evidence required a decision that the taxpayers sold their goodwill and that this was partially effectuated by their agreement not to compete. The fact that the contract of sale specifically provided that the purchasers should not use the name "Masquelette" in connection with their accounting practice was not regarded as controlling.

The Service will follow the decision in the *Masquelette* case only to the extent that it stands for the proposition that the existence of transferable goodwill may be recognized in connection with the sale of a business or profession, the success of which is *not* dependent solely upon the personal qualifications of the owner, even though such a sale does not involve the assignment of the right to the exclusive use of the firm name.

It is, therefore, the position of the Service that personal characteristics or qualifications do not constitute goodwill as an item of property and do not exist in such form that they can be the subject of transfer. Consequently, if a business is dependent *solely* upon the personal characteristics and competence of the owner, no element of goodwill exists with respect thereto and no portion of the sale price of the business may be treated as proceeds from the sale of goodwill, irrespective of whether or not such sale comprehends a valid assignment of the right to the exclusive use of the firm name.

However, the existence of transferable goodwill may be recognized in connection with the sale of a business, the success of which is *not* dependent solely upon

the personal characteristics of the owner, even though such sale does not comprehend a valid assignment of the exclusive use of the firm name. As indicated in Revenue Ruling 57-480, the question whether goodwill is involved in the sale of a business is essentially one of fact to be determined in each case in the light of all the surrounding circumstances.

It follows from the above that Revenue Ruling 57-480 was *not* intended to approve the concept that the professional skill, ability, integrity and other personal characteristics of the owner may qualify as that item of property called goodwill.

Accordingly, Revenue Ruling 57-480 is hereby clarified to reflect the view that where a business which is dependent *solely* upon the professional skill or other personal characteristics of the owner is sold, no portion of the sales price may be treated as proceeds from the sale of goodwill even though such sale involves a valid assignment of the right to the exclusive use of the firm name. That ruling is further clarified to reflect the view that the existence of transferable goodwill may be recognized in connection with the sale of a business, the success of which is not dependent solely upon the personal characteristics of the owner, even though such sale does not comprehend a valid assignment of the exclusive use of the firm name.

NOTE

1. *Other cases of professional goodwill.* The Internal Revenue Service seems to be fighting a losing battle in this area: see also Watson v. Commissioner, 35 T.C. 203 (1960) (capital gain on sale of accounting practice to two men with whom vendor formed a partnership); Brooks v. Commissioner, 36 T.C. 1128 (1961) (accord, sale of branch office of orthodontic practice); Rees v. United States, 187 F. Supp. 924 (D. Ore. 1960), aff'd per curiam, 295 F.2d 817 (9th Cir. 1961) (sale of part interest in orthodontic practice, seller becoming a partner of buyers; held, capital gain). The Service announced in Rev. Rul. 62-114, 1962-2 C.B. 15, that it would not follow the *Rees* case.

2. *Reference.* McDonald, Goodwill and the Federal Income Tax, 45 Va. L. Rev. 645 (1959).

Section J. Requirement of "Sale or Exchange"

HELVERING v. HAMMEL

311 U.S. 504 (1941)

Mr. Justice Stone delivered the opinion of the Court.

We are asked to say whether a loss sustained by an individual taxpayer upon the foreclosure sale of his interest in real estate, acquired for profit, is a loss which, under [§165(c)(2)], may be deducted in full from gross income for the purpose of arriving at taxable income, or is a capital loss deductible only to the limited extent provided in [§§165(f) and 1211 (b)]. . . .

Respondent taxpayers, with other members of a syndicate, purchased "on land contract" a plot of land in Oakland County, Michigan, for the sum of $96,000, upon a down payment of $20,000. The precise nature of the contract does not appear beyond the fact that payments for the land were to be made in installments, and the vendor retained an interest in the land as security for payment of the balance of the purchase price. Before the purchase price was paid in full the syndicate defaulted on its payments. The vendor instituted foreclosure proceedings by suit in equity in a state court which resulted in a judicial sale of the

property, the vendor becoming the purchaser, and in a deficiency judgment against the members of the syndicate. Respondents' contribution to the purchase money, some $4,000, was lost. . . .

It is not denied that it was the foreclosure sale of respondents' interest in the land purchased by the syndicate for profit, which finally liquidated the capital investment made by its members and fixed the precise amount of the loss which respondents seek to deduct as such from gross income. But they argue that the "losses from sales" which by [§165(f)] are made deductible only to the limited extent provided by [§1211(b)] are those losses resulting from sales voluntarily made by the taxpayer, and that losses resulting from forced sales like the present not being subject to the limitations of [§1211(b)] are deductible in full like other losses under [§165(c)(2)].

To read this qualification into the statute respondents rely on judicial decisions applying the familiar rule that a restrictive covenant against sale or assignment refers to the voluntary action of the covenantor and not to transfers by operation of law or judicial sales in invitum. See Guaranty Trust Co. v. Green Cove & M.R. Co., 139 U.S. 137; Gazlay v. Williams, 210 U.S. 41; Riggs v. Pursell, 66 N.Y. 193. But here we are not concerned with a restrictive covenant of the taxpayer, but with a sale as an effective means of establishing a deductible loss for the purpose of computing his income tax. The term sale may have many meanings, depending on the context, see Webster's New International Dictionary. The meaning here depends on the purpose with which it is used in the statute and the legislative history of that use. Hence the respondents argue that the purpose of providing in the 1934 Act for a special treatment of gains or losses from capital assets was to prevent tax avoidance by depriving the taxpayer of the option allowed to him by the earlier acts, to effect losses deductible in full by sales of property at any time within two years after it was acquired, which until held for that period was not defined as a capital asset.*

It is said that since losses from foreclosure sales not within the control of the taxpayer are not within the evil aimed at by the 1934 Act, they must be deemed to be excluded from the reach of its language. To support this contention respondents rely on the report of the Ways and Means Committee submitting to the House the bill which, with amendments not now material, became the Revenue Act of 1934. The Committee in pointing out a "defect" of the existing law said: "Taxpayers take their losses within the two year period and get full benefit therefrom and delay taking gains until the two-year period has expired, thereby reducing their taxes." H. Rept. 704, 73d Cong., 2d Sess., pp. 9 and 10.

But the treatment of gains and losses from sales of capital assets on a different basis from ordinary gains and losses was not introduced into the revenue laws by the 1934 Act. That had been a feature of every revenue law beginning with the Act of 1921, 42 Stat. 227, and each had defined as capital losses "losses from sales or exchanges of capital assets." The 1934 Act made no change in this respect but for the first time it provided that "capital assets" should include all property acquired by the taxpayer for profit regardless of the length of time held by him and that capital gains and losses from sales of capital assets should be recognized in the computation of taxable income according to the length of time the capital assets are held by the taxpayer, varying from 100% if the capital asset is held for not more than a year to 30% if it is held more than ten years. [§117(a), 1934 Act.] Finally, for the first time, the statute provided that capital losses in excess of capital gains should be deducted from ordinary income only to

* Under the Revenue Act of 1928, the holding period was part of the definition of "capital assets," which included only property held for more than two years. — Ed.

the extent of $2,000. Thus by treating all property acquired by the taxpayer for profit as capital assets and limiting the deduction of capital losses in the manner indicated, the Act materially curtailed the advantages which the taxpayer had previously been able to gain by choosing the time of selling his property.

The definition of capital losses as losses from "sales" of capital assets, as we have pointed out, was not new. As will presently appear, the legislative history of this definition shows that it was not chosen to exclude from the capital assets provisions losses resulting from forced sales of taxpayers' property. And, if so construed, substantial loss of revenue would result under the 1934 Act, whose purpose was to avoid loss of revenue by the application of the capital assets provisions. In drafting the 1934 Act the Committee had before it proposals for stabilizing the revenue by the adoption of the British system under which neither capital gains nor losses enter into the computation of the tax. In declining to follow this system in its entirety the Committee said: "It is deemed wiser to attempt a step in this direction without letting capital gains go entirely untaxed." It accordingly reduced the tax burden on capital gains progressively with the increase of the period up to ten years, during which the taxpayer holds the capital asset, and permitted the deduction, on the same scale, of capital losses, but only to the extent that there are taxable capital gains, plus $2,000. In thus relieving capital gains from the tax imposed on other types of income, it cannot be assumed, in the absence of some clear indication to the contrary, that Congress intended to permit deductions in full of losses resulting from forced sales of the taxpayers' property, from either capital gains or ordinary gross income, while taxing only a fraction of the gains resulting from the sales of such property. See White v. United States, 305 U.S. 281, 292; Helvering v. Inter-Mountain Life Ins. Co., 294 U.S. 686, 689, 690.

The taxation of capital gains after deduction of capital losses on a more favorable basis than other income, was provided for by §206 of the 1921 Revenue Act, as the means of encouraging profit-taking sales of capital investments, H. Rept. No. 350, 67th Cong., 2d Sess., p. 8. Burnet v. Harmel, 287 U.S. 103, 106. In this section, as in later Acts, capital net gain was defined as "the excess of the total capital gain over the sum of capital deductions and capital losses"; capital losses being defined as the loss resulting from the sale or exchange of capital assets. In submitting the proposed Revenue Act of 1924, the House committee pointed out that the 1921 Act contained no provision for limiting deduction of capital losses where they exceeded the amount of capital gains. H. Rept. No. 179, 68th Cong., 1st Sess., p. 14. This was remedied by providing in §208(c) that the amount by which the tax is reduced on account of a capital loss shall not exceed 12½% of the capital loss. In commenting on this provision the Committee said, p. 20: "If the amount by which the tax is to be increased on account of capital gains is limited to 12½% of the capital gain it follows logically that the amount by which the tax is reduced on account of capital losses shall be limited to the 12½% of the loss." This provision was continued without changes now material until the 1934 Act. §208(c) in the 1924 and 1926 Acts; §101 (b) in the 1928 and 1932 Acts, 47 Stat. 191.

Congress thus has given clear indication of a purpose to offset capital gains by losses from the sale of like property and upon the same percentage basis as that on which the gains are taxed. See United States v. Pleasants, 305 U.S. 357, 360. This purpose to treat gains and deductible losses on a parity but with a further specific provision provided by §117(d) of the 1934 Act, permitting specified percentages of capital losses to be deducted from ordinary income to the extent of $2,000, would be defeated in a most substantial way if only a percentage of the gains were taxed but losses on sales of like property could be deducted in

full from gross income. This treatment of losses from sales of capital assets in the 1924 and later Acts and the reason given for adopting it afford convincing evidence that the "sales" referred to in the statute include forced sales such as have sufficed, under long accepted income tax practice, to establish a deductible loss in the case of non-capital assets. Such sales can equally be taken to establish the loss in the case of capital assets without infringing the declared policy of the statute to treat capital gains and losses on a parity.

We can find no basis in the language of the Act, its purpose or its legislative history, for saying that losses from sales of capital assets under the 1934 Act, more than its predecessors, were to be treated any differently whether they resulted from forced sales or voluntary sales. True, courts in the interpretation of a statute have some scope for adopting a restricted rather than a literal or usual meaning of its words where acceptance of that meaning would lead to absurd results, United States v. Katz, 271 U.S. 354, 362, or would thwart the obvious purpose of the statute, Haggar Co. v. Helvering, 308 U.S. 389. But courts are not free to reject that meaning where no such consequences follow and where, as here, it appears to be consonant with the purposes of the Act as declared by Congress and plainly disclosed by its structure.

It is not without significance that Congress, in the 1934 Act, enlarged the scope of its provisions relating to losses from sales of capital assets by including within them losses upon the disposition of the taxpayer's property by methods other than sale and without reference to the voluntary action of the taxpayer. It thus treats as losses from sales or exchanges the loss sustained from redemption of stock, retirement of bonds, losses from short sales, and loss sustained by failure of the holder of an option to exercise it [§§331(a)(2), 1232, 1233, and 1234], although none of these transactions involves a loss from a sale.

The scope of the capital loss provisions was still further enlarged by §23(k)(2) of the Revenue Act of 1938 [§165 (g), 1954 Code], which provides that if securities, which are capital assets, are ascertained to be worthless and are charged off within the taxable year the loss, with an exception not now material, shall be considered as a loss arising from a sale or exchange. These provisions disclose a consistent legislative policy to enlarge the class of deductible losses made subject to the capital assets provisions without regard to the voluntary action of the taxpayer in producing them. We could hardly suppose that Congress would not have made provision for the like treatment of losses resulting from a forced sale of the taxpayer's property acquired for profit either in the 1934 or 1938 Act, if it had thought that the term "sales or exchanges" as used in both acts did not include such sales of the taxpayer's propery.

Respondents also advance the argument, sustained in Commissioner v. Freihofer, 102 F.2d 787, that the definitive event fixing respondents' loss was not the foreclosure sale but the decree of foreclosure which ordered the sale and preceded it. But since the foreclosure contemplated by the decree was foreclosure by sale and the foreclosed property had value which was conclusively established by the sale for the purposes of the foreclosure proceeding, the sale was the definitive event establishing the loss within the meaning and for the purpose of the revenue laws. They are designed for application to the practical affairs of men. The sale, which finally cuts off the interest of the mortgagor and is the means for determining the amount of the deficiency judgment against him, is a means adopted by the statute for determining the amount of his capital gain or loss from the sale of the mortgaged property.

The court below also thought that the loss suffered by respondents could not be treated as a loss from a sale since by the law of Michigan the vendor upon a land-contract containing the usual forfeiture clause had the right to deprive

respondents and their joint adventurers of all interest in the property by a declaration of forfeiture, and that the only additional advantage of foreclosure was to obtain a deficiency judgment. But there is nothing in this record to show that the land contract in this case contained a forfeiture clause. Even if it did, it does not appear that there was in fact a forfeiture apart from the sale on foreclosure. Cf. Davidson v. Commissioner, 305 U.S. 44, 46; Helvering v. Midland Insurance Co., 300 U.S. 216, 224; United States v. Phellis, 257 U.S. 156, 172.

Reversed.

MR. JUSTICE ROBERTS is of opinion that the judgment should be affirmed for the reasons stated in the opinion of the Circuit Court of Appeals, 108 F.2d 753.

NOTE

1. *Relation of "sale or exchange" to requirement of a "closed transaction."* Does the Court imply that every "closed transaction" involving a capital asset is a "sale or exchange" of the asset? If so, it soon repudiated the implication by holding in Helvering v. William Flaccus Oak Leather Co., 313 U.S. 247, 249 (1941), that the taxpayer had not engaged in a "sale or exchange" when its plant was destroyed by fire and it recovered compensation for the loss from its insurance company:

> Generally speaking, the language in the Revenue Act, just as in any statute, is to be given its ordinary meaning, and the words "sale" and "exchange" are not to be read any differently. Compare Helvering v. Hammel. . . . Neither term is appropriate to characterize the demolition of property and subsequent compensation for its loss by an insurance company. Plainly that pair of events was not a sale. Nor can they be regarded as an exchange, for "exchange" . . . implies reciprocal transfers of capital assets, not a single transfer to compensate for the destruction of the transferee's asset.

If the taxpayer has engaged in a closed transaction with a capital asset, so that gain or loss is to be recognized, is there any reason to apply the capital gain and loss provisions only if the transaction constitutes a "sale or exchange"? It has sometimes been suggested that the term "sale or exchange" was deliberately chosen by Congress to encompass a more limited range of transactions than the term "sale or other disposition" in §1001(a) (providing that gain or loss "from the sale or other disposition of property" is the difference between its adjusted basis and the amount realized), but one might infer, to the contrary, that the difference in language was accidental from the fact that the recognition provision — §1001(c) — also uses the phrase "sale or exchange" yet is usually said to embrace *all* closed transactions. As will be seen, at a number of points the Code explicitly provides that transactions shall be treated as sales or exchanges even though they clearly or arguably would not otherwise qualify, and in the *William Flaccus Oak Leather Co.* case, supra, the Court implied that Congress has thereby provided an exclusive list of the "ambiguous transactions" that are to be treated as sales or exchanges.

The possibility should be kept in mind that in deciding that a particular transaction with a capital asset is not a "sale or exchange," the courts may be focusing on the basic question of whether the transaction is "closed," rather than on the narrower issue of whether the taxpayer's gain or loss is capital or ordinary. In such a case, the capital gain and loss provisions are inapplicable not because there was no "sale or exchange" within the meaning of §1222, but because there was no "sale or other disposition" within the meaning of §1001(a), so that the transaction is not "closed" and the taxpayer may not offset his basis for the property against the amount received. Thus, if a purported "sale" is held to be a "lease," the taxpayer's receipts will be taxed in the same manner (ordinary income, offset by depreciation) whether the property in question is a capital asset or not. It would be more accurate in such a case to hold that there has been no "sale or other disposition"; to say that the transaction does not constitute a "sale or other exchange" may imply, erroneously, that the transaction constitutes a "sale or other disposition" and fails to qualify for capital gain (or loss) treatment only because it does not satisfy the more exacting standards implicit in the term "sale or exchange."

2. *Foreclosure vs. "abandonment."* In Helvering v. Nebraska Bridge Supply & Lumber Co., 312 U.S. 666 (1941), the Court cited the *Hammel* case in holding that a tax sale to foreclose the state's lien for unpaid property taxes was efficacious in bringing the capital loss provisions into play. Both cases have been distinguished, however, from a "voluntary" conveyance of property to the mortgagee by a taxpayer who was not personally liable on the debt, Stokes v. Commissioner, 124 F.2d 335 (3d Cir. 1941), and from an "abandonment" of land to a municipality by a taxpayer who did not wish to pay local taxes thereon, Jamison v. Commissioner, 8 T.C. 173 (1947). The taxpayer having no personal liability in either case, it was held that he received no consideration on the transfer and that this deprived it of the character of a "sale or exchange."

Should there be any tax difference between a foreclosure of a tax or mortgage lien and a "voluntary" abandonment or conveyance to the lienor? Can the taxpayer whose real estate has become worthless take a deduction under §165(a) without abandoning or transferring it so as to avoid even the semblance of a "sale or exchange"? In Helvering v. Gordon, 134 F.2d 685 (4th Cir. 1943), the Commissioner argued that real estate could not give rise to a loss until the taxpayer divests himself of title. Although admitting that in the case of other property, actual worthlessness permits a deduction even though the property is not definitely disposed of, he argued that "real estate always has potential value" so that no closed transaction is shown while the taxpayer continues to own the property. The court said:

> Assuming the truth of this assertion with respect to an unencumbered interest in land, it cannot stand the practical or realistic test which is met when the interest is subject to superior liens or encumbrances that exceed its real value. In such a case the value of the equity is extinguished as effectually as the interest which a stockholder retains who holds title to shares in an insolvent corporation that has no reasonable expectation of recovery. In one case, as in the other, the loss has taken place and the retention of the bare legal title becomes a circumstance without significance. [134 F.2d at 688.]

See also United California Bank v. Commissioner, 41 T.C. No. 44 (1964) (on the facts, no abandonment of vacant building); Hummel v. United States, 227 F. Supp. 30 (N.D. Calif. 1963);Regs. §1.167(a)-8 (recognition of gain or loss on retirement of depreciable property). Is it possible that the equity of the taxpayer in Helvering v. Hammel became worthless before the foreclosure proceedings were instituted?

3. *Worthless securities: §165(g).* Section 165(g) provides that if a "security" (defined to include stock, as well as bonds and other evidences of indebtedness) which is a capital asset becomes worthless during the taxable year, the loss shall be treated as though it has arisen on a sale or exchange. The reason, no doubt, is that a sale of the security just before it became worthless would have created a capital loss (unless the sale could be disregarded as a sham), and there is no good reason to treat the taxpayer differently if he holds the security a little longer. But the statutory parallelism is not perfect:

(a) Section 165(g) applies only to securities issued by corporations or political bodies. A loan to an individual or to a partnership will give rise to a bad debt deduction when it becomes worthless, although a sale before it became worthless would have produced capital loss. This disparity is reduced if the worthless obligation is a "non-business debt" within the meaning of §166(d) (supra p. 290), but even if it is, the taxpayer gets a short-term capital loss, whereas a sale would have produced either a long-term or a short-term capital loss, depending upon the holding period.

(b) Even if the borrower is a corporation or political body, §165(g) does not apply to loans if there is no "evidence of indebtedness" or if the evidence of indebtedness is not coupon-bearing or in registered form. For the meaning of these terms, see Gerard v. Helvering, 120 F.2d 235 (2d Cir. 1941); Lynn v. Commissioner, 15 T.C. 832 (1950) (dissenting opinion); Lurie v. Commissioner, 156 F.2d 436 (9th Cir. 1946) (on the possibility of registering or deregistering at will). When §165(g) is inapplicable, the taxpayer's deduction on worthlessness is governed by §166(a), subject to the restriction of §166(d) if the loan is a "non-business" debt.

(c) When §165(g)(1) applies, the worthless security is treated as though it had been sold

on the last day of the taxable year (presumably because it is difficult enough to determine the year of worthlessness, without endeavoring to pinpoint the day), but this may give the taxpayer a long-term capital loss, although a sale a few days earlier would have resulted in a short-term loss.

(d) Section 165(g) is ordinarily inapplicable if the taxpayer is a domestic corporation and the worthless securities were issued by an "affiliated" corporation. See §165(g)(3), whose purpose is to approximate roughly the treatment that would have been accorded to the loss if it had been incurred directly by the taxpayer. Thus, if a subsidiary was engaged in manufacturing or selling, the parent's loss on its failure will be an ordinary loss, in recognition of the fact that if the operations had been carried on by the parent without the intervention of the subsidiary, the parent would probably have deducted the expenses or losses of the operations from ordinary income. On the other hand, if the subsidiary was engaged in security speculations, the loss on its failure will be a capital loss, conforming to the tax effect that would have been felt if the parent had carried on such operations in its own right. Section 165(g)(3) applies only if the securities of the affiliated corporation become worthless, however, and not if they are sold.

Can §165(g) be avoided, and an ordinary loss obtained, by "abandoning" the securities, either before or when they become worthless?

Several exceptions to §165(g) were created in 1958 by the enactment of §1244 (ordinary loss deduction, up to $25,000 per taxpayer or $50,000 for husband and wife filing joint return, on certain stock of a "small business corporation") and §§1242-1243 (ordinary loss on stock and convertible debentures of company operating under Small Business Investment Act of 1958). All three provisions embrace losses when the securities are sold, as well as when they become worthless. Sections 1242-1243 apply to a very limited class of corporations, but §1244 is of rather general application. See Moore and Sorlien, Adventures in Subchapter S and Section 1244, 14 Tax L. Rev. 453 (1959); Groh, What to Do About Stock of the Small Business Corporation, 37 Taxes 225 (1959).

4. *Payment of a claim or debt by the obligor.* Although Herbert's Estate v. Commissioner, 139 F.2d 756 (3d Cir. 1943), held that a taxpayer who collected a debt from the obligor had engaged in a "sale or other disposition" of his claim within the meaning of §1001(a), it has been held that collection is not a "sale or exchange" so as to warrant capital gain or loss treatment. Hale v. Helvering, 85 F.2d 819 (D.C. Cir. 1936); Fairbanks v. United States, 306 U.S. 436 (1939); see also Fahey v. Commissioner, 16 T.C. 105 (1951) (compromise settlement of claim not a "sale or exchange"); Ogilvie v. Commissioner, 216 F.2d 748 (6th Cir. 1954) (settlement of judgment not a "sale or exchange").

By virtue of §1232(a), however, the retirement of bonds and other evidences of indebtedness (if they constitute capital assets) is treated as a sale or exchange, thus avoiding an unwarranted disparity between a bond that is sold by the holder just before retirement and one that is held until retirement. But the parallel between retirements and sales is not complete:

(a) Section 1232(a) applies only to evidences of indebtedness issued by corporations and political bodies, not to those issued by individuals and partnerships.

(b) Even in the case of corporate and political debtors, §1232(a) applies only to "evidences of indebtedness," not to open account loans and similar claims. Moreover, if the "evidence of indebtedness" was issued before January 1, 1955, §1232(a) applies only if it was issued with interest coupons or in registered form, or was in registered form on March 1, 1954.

(c) Section 1232(a) applies only to amounts received on the "retirement" of a bond or other evidence of indebtedness. If the creditor is paid in a transaction that does not constitute a "retirement," he may realize ordinary income or loss, although a sale of the claim would have produced capital gain or loss.

The general rule of §1232(a) is qualified if the taxpayer realizes gain on an instrument that was issued at a discount, §1232(b), or that was purchased after the detachment of interest coupons, §1232(c). Both provisions are designed to separate the interest component of the taxpayer's gain from the "true" capital gain component, and they are applicable to gain realized on a sale or exchange, as well as on retirement. Supra page 520.

5. *Other transactions between two parties to a contract.* When one of the parties to a contract (e.g., a lease, agency, or distributorship) is paid for relinquishing some or all of

his rights, the courts have often found it difficult to view the transaction as a "sale or exchange," and have sometimes preferred to describe the transactions as a "rescission," "modification," "extinction," etc. The principal cases are cited in Commissioner v. Pittston, supra page 513, and Commissioner v. Ferrer, supra page 519, see also Bisbee-Baldwin Corp. v. Tomlinson, 320 F.2d 929 (5th Cir. 1963); Paul Small Artists, Ltd. v. Commissioner, 37 T.C. 223 (1961); §1241.

6. *"Sale" vs. "license" or "lease."* A long controversy in which the government contended that a taxpayer who received royalties measured by the payor's use of his patent or copyright had "licensed" the patent or copyright rather than "sold or exchanged" it is described supra page 564; see also §1235. Although the government now concedes that many royalty arrangements qualify as sales or exchanges, some do not. See Rev. Rul. 58-353, 1958-2 C.B. 408; supra page 565: Duke, Foreign Authors, Inventors, and the Income Tax, 72 Yale L.J. 1093, 1110-1113 (1963).

Under what circumstances does the disclosure of information for compensation constitute a "sale"? See duPont & Co. v. United States, 288 F.2d 904 (Ct. Cl. 1961) (trade secret); Commercial Solvents Corp. v. Commissioner, 42 T.C. No. 30 (1964).

When an investor in mineral property enters into an arrangement for its exploitation by another person, under which the investor is to be paid on a royalty basis, there are difficult problems of determining whether he has "sold or exchanged" a capital asset, or merely leased it. This question has been previously encountered in connection with the deduction of depletion; in general, if the transaction is a "lease," the taxpayer will realize ordinary income subject to depletion, while if it is a "sale," his income will be taxed as capital gain and the right to a depletion allowance will pass to the purchaser.

See Commissioner v. Southwest Exploration Co., supra page 318; Sneed, The Economic Interest — An Expanding Concept, 35 Texas L. Rev. 307 (1957).

The lease/sale dichotomy has also been encountered in connection with leases with option to purchase (supra p. 249), sale-and-leaseback transactions (supra p. 466), and "bootstrap sales" to impecunious buyers (supra p. 512-513).

As suggested in paragraph 1 of this note, these sale/lease cases may involve the basic question of whether there has been a "sale or other disposition" of the property within the meaning of §1001(a), rather than the narrower issue of "sale or exchange" as used in §1222. If so, the same result (no "closed" transaction) would follow even if the property were not a capital asset.

7. *Liquidations, redemptions, and similar corporate transactions.* If a taxpayer's stock is redeemed by the issuing corporation, or surrendered in the course of a corporate liquidation, the transaction is sometimes treated as a sale or exchange of the stock. If a corporation makes a distribution of its capital, without liquidating, the distribution ordinarily gives rise to a capital gain to the extent that it exceeds the basis of the stock, even though the taxpayer has not engaged in a technical "sale or exchange." These transactions are considered in more detail in Chapter VII.

8. *Miscellaneous transactions.* The refusal of the court in *Hammel* to limit the term "sale or exchange" to voluntary transactions was cited in Hawaiian Gas Products Ltd. v. Commissioner, 126 F.2d 4 (9th Cir. 1942), in holding that there was a "sale or exchange" when the taxpayer's property was taken in condemnation proceedings. Note that §1033 and §1231(a) treat condemnations and sales under threat of condemnation in the same fashion, and that they extend the same treatment to theft and destruction, although the Supreme Court held in *William Flaccus Oak Leather Co.*, supra, that the term "sale or exchange" does not embrace the destruction of insured property by fire.

In Midsouth Gas Co. v. United States, 6 A.F.T.R.2d 5198 (E.D. Ark. 1960), the issue was whether a contract for furnishing and installing pipe was primarily a sale of pipe and only incidentally an agreement for its installation, or vice versa. The jury found that the transaction was a sale, and that the taxpayer's entire profit was attributable to the sale, producing long-term capital gain.

In addition to the statutory provisions already mentioned that dispense with the necessity of a "sale or exchange" or treat borderline transactions as qualifying, the following may be noted: §1234 (loss on the lapse of an unexercised option); §1240 (amounts received for release of rights under certain long-term employment contracts); §1233(a) (delivery of property to close a short sale); §631(a) (cutting of timber); and §631(c) (coal royalties).

Was there a "sale or exchange" of the gas cylinders in the *duPont* case, supra page 494? If not, were they "involuntarily converted" within the meaning of §1231(a)?

Note that a "sale or exchange" was not required in the *Arrowsmith* case, supra page 582; the transaction before the court was held to produce a capital loss because it was intimately related to an earlier transaction that was treated as a sale or exchange.

9. *Anticipatory sales on the eve of receiving ordinary income.* For the legal effect of anticipatory transactions, in which a capital asset is sold just before, and to avoid, an event that would not constitute a "sale or exchange," see page 527 supra; see also Jones v. Commissioner, 40 T.C. 249 (1963), and cases there cited.

10. *Reference.* Note, The Elements of a Section 117 "Sale or Exchange," 53 Colum. L. Rev. 976 (1953).

Section K. Holding Period

DYKE v. COMMISSIONER
6 T.C. 1134 (1946)

[The taxpayer purchased 625 shares of Campbell Transportation Company stock at a cost of $150,000 on March 6, 1940, and sold this stock in 1941 for $262,000, thus realizing a gain of $112,000. The Internal Revenue Code of 1939 contained a graduated "holding period" for capital assets, under which 100 per cent of the taxpayer's gain was "taken into account" if the property was held for more than 18 months, 66⅔ per cent if it was held for more than 18 months but not more than 24 months, and 50 per cent if it was held for more than 24 months.* The taxpayer included only 66⅔ per cent of his gain in gross income, and a deficiency was determined on the ground that 100 per cent of the gain should have been included. The stock was sold under an agreement dated March 10, 1941, between the shareholders of Campbell Transportation Company (represented by Charles T. Campbell), as sellers, Mississippi Valley Barge Line Company, the buyer, and Mercantile Bank & Trust Company of St. Louis (as escrow agent). The issue before the court was the date on which the taxpayer's "holding period" ceased under the agreement.]

Mississippi Co. and Campbell Transportation Co. were both subject to the jurisdiction of the Interstate Commerce Commission under the provisions of the Transportation Act of 1940.

The agreement provided in part as follows:

4. The consummation of the sale and purchase and the respective obligations of the parties hereunder shall be conditional upon the granting to Buyer of authority to make such purchase by the Interstate Commerce Commission, under the provisions of the Transportation Act of 1940, on or before September 22, 1941. . . . If the Sellers or the Buyer, as the case may be, shall fail promptly and diligently to perform their or its covenants herein set forth, then the other party or parties, as the case may be, shall have the right forthwith to cancel and terminate this Agreement in its entirety. . . .

5. When and if the Interstate Commerce Commission shall have entered an order authorizing the purchase by the Buyer of the shares of stock to be purchased under this Agreement, the Buyer shall forthwith give notice of the entry of such order to Charles T. Campbell, as representative of the Sellers. As used in this Agreement, the term "Closing Date" means the last day of the month during which Buyer shall have given such notice and the term "Delivery Date" means the date on which the sale is to be consummated and the purchase price is to be paid, viz., the 10th day of the month following the Closing Date.

. . .

* Since 1942, the Code has distinguished only between short-term and long-term transactions, the dividing line being 6 months. — Ed.

6. Buyer's obligations under this Agreement shall be conditioned upon
(a) The delivery to the Buyer on or before the Delivery Date of the following:
1. Evidence that Campbell Transportation Co.'s obligations do not exceed those shown on the balance sheet of November 30, 1940, with certain exceptions.
2. Evidence that the financial position of the Campbell Transportation Co., as of the closing date, is not materially adversely different from that shown by the balance sheet of November 30, 1940, provided, however, that the payments of dividends of $20 per share, the payment of dividends allowed by paragraph 5, nor obligations incurred under paragraph 6-1-a of the agreement shall not be deemed to adversely affect the financial position.

Then follow five other items, and then:

Sufficient evidence that Campbell Transportation Company has, on or before Closing Date, done any and all things necessary to prevent the waiver or lapse or loss of any rights which the Company may have had under the so-called Grandfather Clause of Part III of the Transportation Act of 1940.

In addition to these things, the buyer's obligation under the agreement was conditioned upon a favorable opinion of buyer's counsel as to the title of Campbell Transportation Co. to all property, real or personal, purported to be owned by it.

Paragraph 8 of the agreement provided:

In the event the Commission shall have entered an Order authorizing the purchase and on the Delivery Date such Order shall have been vacated, rescinded, annulled or set aside, temporarily or permanently, by action of the Commission or of a court of competent jurisdiction, then this Agreement shall in like manner terminate, all obligations hereunder shall cease and the Escrow Agent shall take the action hereinbefore set forth, unless the Buyer shall, on such Delivery Date, by written notice to Charles T. Campbell, as representative of the Sellers, and to the Escrow Agent, elect to complete the purchase on such Delivery Date without regard to the status of such Order on such date.

Paragraph 9 of the agreement specified the mechanics by which the sellers should deposit their stock with the escrow agent, and prescribed the form of receipt to be issued by such escrow agent.

Paragraph 9 (b) required the buyer to furnish the escrow agent on or prior to delivery date, the funds with which to make payment for the shares of the stock deposited, and then provided:

. . . and if all the conditions set forth in this Agreement shall have occurred on or prior to said Delivery Date, the Escrow Agent shall, at eleven o'clock in the forenoon, Central Standard Time, on the Delivery Date, forthwith distribute, to or upon the order of each Seller and against the surrender of the receipt theretofore issued by the Escrow Agent in respect of the certificate or certificates deposited by such Seller, the amount of the purchase price herein specified for such shares, and shall also deliver to the Buyer all of the deposited certificates, endorsed for transfer as hereinbefore provided. If said conditions shall not have occurred on or prior to said Delivery Date, the Escrow Agent shall forthwith return to or upon the order of each Seller and against the surrender of the receipt issued therefor, the certificate or certificates theretofore deposited by such Seller and shall release to the Buyer the funds deposited by it pursuant to this subparagraph (b).

Paragraph 11 authorized and empowered Charles T. Campbell, as the representative of the sellers:

. . . to enter into such agreements with Mississippi Valley Barge Line and the Escrow Agent as the said Charles T. Campbell shall consider to be for the best interests of the Sellers, for the purpose of supplementing, extending, modifying or amending this Agreement; provided, however, that the said Charles T. Campbell shall have no authority to

(a) extend the Delivery Date beyond December 10, 1941; (b) make any agreement which shall impose any additional obligations on the Sellers, or any of them; (c) diminish the purchase price specified in paragraph 3 hereof, except for minor adjustments for taxes, transfer stamps, etc., or (d) waive the right of the Sellers to cause the declaration and payment of dividends as provided in paragraph 5 hereof. . . .

The agreement dated March 10, 1941, was promptly executed by all parties concerned and the approval thereof by the stockholders of the buyer was had on March 26, 1941. Thereupon Campbell Transportation Co. gave notice to each of its stockholders that the Mississippi Co. stockholders had approved the contract and that it would be in order for the stockholders to deposit their respective shares of stock with the escrow agent. The petitioner deposited his stock on April 1, 1941, and received his receipt from the escrow agent dated April 4, 1941.

Application was promptly made by Mississippi Co. to the Interstate Commerce Commission for approval of the purchase by it of the Campbell Transportation Co. stock. Hearings were held and the case submitted to the Commission. The months of May and June, and more than 30 days of July, elapsed without any intimation being given by the Interstate Commerce Commission as to when the decision could be expected.

In the afternoon of July 31, 1941, an officer of Mississippi Co. appeared at Campbell's office and advised him that the Interstate Commerce Commission had rendered its decision authorizing the purchase by the Mississippi Co. of the shares of stock in question. July 31, 1941, fell on Thursday. The notice was received so late in the afternoon that nothing could be done on that day, and in the following ten days two Saturdays and two Sundays intervened.

Under the terms of the agreement the closing date was July 31, 1941, and the delivery date was August 10, 1941. During that ten days the books of Campbell Co. had to be closed for the month of July and a statement of its earnings up to July 31 made available to both Mississippi Co. and Campbell Transportation Co. Its business was scattered along the Ohio and tributary rivers, also the Mississippi River and some of its tributaries. It operated a large number of barges and carried freight in large and small quantities for whomsoever desired shipment on those waters. It was impracticable, if not impossible, for the Campbell Transportation Co. to close its books within ten days, and furnish other information required. In these circumstances Charles T. Campbell, representing the sellers, requested an extension of the delivery date from August 10 to September 10, 1941. In his letter he stated in part as follows:

In order to induce you to make this necessary extension, the undersigned, for himself and the other stockholders, herewith agrees with you as follows:

1. The extension will extend the Delivery Date only and will not extend the "Closing Date" specified in the aforesaid agreement or in any other manner affect or prejudice your rights thereunder.

2. The directors of Campbell Transportation Company will cause a dividend to be declared, in an amount equal to the net earnings of the company, as defined in Paragraph 5 of the aforesaid agreement, for the period beginning January 1, 1941, and ending July 31, 1941, to the extent that such net earnings exceed $30.00 a share (representing the $20.00 limitation set forth in said Paragraph 5, plus $10.00 a share already declared and paid out of such net earnings). Said dividend will be payable to present stockholders of the company and will be paid, if practicable, on or before September 10, 1941.

3. At your request, the present directors of the company, viz., Charles T. Campbell, A. E. Dyke, Harry J. Steele, Kenneth G. Jackson and John E. Laughlin, Jr., will tender their resignations and the directors or the present stockholders of the company will elect successor directors acceptable to you.

The buyer readily granted an extension of the delivery date as requested. . . . All of the conditions of the escrow agreement had been complied with to the satisfaction of the buyer on September 10, 1941, and on that date the buyer paid for and received the shares of stock held by the escrow agent. . . .

Opinion

Smith, Judge: The narrow question presented by this proceeding is the period of holding by the petitioner of his 625 shares of Campbell Transportation Co. stock. Both parties are in agreement that he purchased the shares on March 6, 1940. They are in disagreement as to the date of the sale of the stock, the petitioner contending that the sale was made on September 10, 1941, and the respondent that it was made on July 31, 1941, the date upon which the Interstate Commerce Commission approved the application of the Mississippi Co. to purchase all the shares of stock of Campbell Transportation Co. . . .

It is the position of the respondent that substantially all of the conditions of the escrow agreement, aside from the actual payment of the cash by the Mississippi Co., had been fulfilled or could have been fulfilled on or before August 10, 1941, and that the extension of the delivery date to September 10, 1941, was made for the purpose of making it possible for the petitioner and the other stockholders, who had purchased their stock at the same time that petitioner had purchased his, to claim that the gains made by them on the sales of their shares were long term capital gains rather than short term capital gains. We are convinced from a careful consideration of all of the evidence in this case that the request for the extension was not for the purpose of accommodating the petitioner and the other stockholders. In point of fact, petitioner had no voice whatever in obtaining an extension of the delivery date.

There can be no question that where a person agrees to sell property, subject to certain conditions, and the property is placed with an escrow agent who holds the property until the conditions have been fulfilled, no sale is effected unless and until those conditions have been fulfilled. In Texon Oil & Land Co. v. United States, 115 Fed. (2d) 647, and Big Lake Oil Co. v. Commissioner, 95 Fed. (2d) 573, both involving the transfer of corporate stock through an escrow agreement, it was held that the transferee did not receive the stock until the delivery out of escrow on the ground that the conditions upon which the escrow was premised were not completed until then. See also McLaughlin v. Commissioner, 113 Fed. (2d) 611; Howell v. Commissioner, 140 Fed. (2d) 765; certiorari denied, 322 U.S. 735. In the last named case an escrow agreement and capital gain tax were involved. The taxpayer contended a "long term," and the Commissioner a "short term," capital gain had been realized. The taxpayer and one Ferguson entered into an escrow agreement on October 6, 1937, whereby Ferguson agreed to lease certain land to the taxpayer, provided oil drilling was commenced on the land by November 21, 1937. The drilling of the well was begun on November 16 or 17, 1937, and on the same day the lease was delivered out of the escrow to the taxpayer. On April 10, 1939, the taxpayer sold his interest in the lease for a substantial profit. The court held that no interest in the lease was obtained by the taxpayer until the delivery out of the escrow on November 16 or 17, stating with respect to the interest he acquired on October 6, 1937, as follows:

> . . . But all that he had on that day was a contractual right to have a lease issued to him if and when he should comply with the terms and conditions of his contract. Taxpayer fails to recognize the difference between the absolute and the conditional. Prior to

the starting of the well the lease was purely conditional, and would become absolute upon the compliance with the conditions. The parties traded with this thought in view. Taxpayer, doubtless, had this thought in mind when he made a contract of sale of a portion of his interest in the contract to the Consolidated Oil Company before the lease was delivered and then, upon the delivery of the lease, made an absolute assignment of the interest he had theretofore contracted to sell. In Norman v. Wilson, 41 S.W. 2d 331, the Court of Civil Appeals of Texas, Austin Division, held that a grantee was not entitled to delivery until he had fulfilled the conditions imposed by the escrow agreement, and that the placing of a conveyance in escrow to be delivered upon the performance by the grantee of certain conditions passed no title to the property until delivery.

In Lucas v. North Texas Lumber Co., 281 U.S. 11, the lumber company had granted a ten-day option to purchase timber lands. The purchaser, on November 30, 1916, gave notice that it would exercise the option and pay the purchase price as soon as papers were prepared. The vendor did not prepare the necessary papers to effect the transfer or demand the purchase price in 1916, but delivered the necessary papers on January 5, 1917, when the transaction was finally closed. The lumber company claimed that the profit was realized in 1916 and represented taxable income of that year. The Supreme Court held otherwise, however, and stated:

An executory contract of sale was created by the option and notice, December 30, 1916. In the notice, the purchaser declared itself ready to close the transaction and pay the purchase price "as soon as the papers were prepared." Respondent did not prepare the papers necessary to effect the transfer or make tender of title or possession or demand the purchase price in 1916. The title and right of possession remained in it until the transaction was closed. Consequently unconditional liability of vendee for the purchase price was not created in that year. . . .

In the instant case it is clear that the Mississippi Co. had no legal obligation to pay the purchase price for shares of stock of the Campbell Transportation Co. until all of the conditions of the escrow agreement had been complied with. They were not complied with prior to September 10, 1941. One of the terms of the escrow agreement was that the shares of stock should be held by the escrow agent until it received payment for the shares. This is an ordinary condition of an escrow agreement. It was plainly the intention of the parties, as shown by the escrow agreement, that the sale was not to be consummated until the delivery date. Paragraph 5 of that agreement stated:

. . . As used in this Agreement, the term "Closing Date" means the last day of the month during which Buyer shall have given such notice and the term "Delivery Date" means the date on which the sale is to be consummated and the purchase price is to be paid, viz., the 10th day of the month following the Closing Date.

There is clearly no ground for the respondent's contending in this proceeding that the "Closing Date" or any other date prior to the "Delivery Date" was that on which the sale was consummated. The delivery date was postponed in accordance with the escrow agreement.

We hold that the petitioner held his 625 shares of Campbell Transportation Co. stock for a period of more than 18 months. . . .

NOTE

1. *Property "held" by the taxpayer.* Would the result have been different if the buyer had deposited the purchase price in cash with the escrow agent at the same time (April, 1941) that the sellers deposited their shares? If dividends paid between the date of the agreement and the "delivery date" were to be credited against the sales price? See Barton,

Taxation of Interim Income in Agreements of Sale, 1958 So. Calif. Tax Inst. 689. If in a desire to extend the holding period for their shares, the shareholders had in the original agreement specified September 10, 1941, as the delivery date?

In citing the *North Texas Lumber Co.* case, did the court assume that the holding period for a capital asset terminates at the same time that gain or loss is realized, and vice versa? Is the holding period affected by the taxpayer's accounting method, or by the doctrine of constructive receipt (infra p. 780)? See Kuehner v. Commissioner, 214 F.2d 437 (1st Cir. 1954). If the property transferred in the *Dyke* case had been depreciable, would the taxpayer's right to deduct depreciation terminate, and the buyer's right commence, on September 10, 1941, rather than earlier?

For tax-motivated escrow arrangements that successfully extended the taxpayer's holding period, see First American National Bank v. United States, 209 F. Supp. 902 (M.D. Tenn. 1962); Watson v. Commissioner, ¶49,089 P-H Memo T.C.; Note, The Effect of Escrow Arrangements on Federal Income Tax Liability, 59 Harv. L. Rev. 1292 (1946).

See generally Merrill v. Commissioner, 40 T.C. 66 (1963), and cases there cited; Swenson v. Commissioner, 309 F.2d 672 (8th Cir. 1962); Rev. Rul. 54-607, 1954-2 C.B. 177.

For problems in determining when a condemnation of the taxpayer's property occurs, see Wendell v. Commissioner, 326 F.2d 600 (2d Cir. 1963).

If stock is acquired at different dates and taxpayer sells some of the shares but cannot ascertain their holding period, the rules for determining basis (supra p. 451) also govern the holding period. Regs. §1.1223-1(i).

2. *"More than 6 months."* Long-term gain or loss is realized only if the asset is held for "more than 6 months," a requirement that taxpayers sometimes fail to satisfy because they erroneously think that precisely six months will do, or because they do not realize that the holding period begins the day *after* the day of acquisition. See Fogel v. Commissioner, 203 F.2d 347 (5th Cir. 1953) (property bought on June 19 and sold on December 19 was not held for "more than 6 months"); Rev. Rul. 54-607, 1954-2 C.B. 177; I.T. 3985, 1949-2 C.B. 51.

In the case of transactions in stock or securities effected through a broker on an organized securities exchange, the customer's order is executed on a "contract" or "trade" date, with delivery and payment postponed for several days to the "settlement date." It is the former date that controls for tax purposes; the customer's holding period begins the day after the purchase order is executed and ends on the day the sale order is executed. I.T. 3705, 1945 C.B. 174. In the case of year-end sales, the taxpayer's *holding period* may end on December 30 or 31, but if he is on the cash basis his gain will not be realized until January, when the cash is first available to him. If the taxpayer wants to recognize the transaction in December, he can instruct his broker to make a "cash" or "next day" sale, rather than a "regular way" sale.

3. *Short sales and the holding period.* Section 1233(b), derived from a provision added in 1950, was designed to take the profit out of several practices previously employed to outwit the holding period. Example (1) of Regs. §1.1233-1(c)(6) illustrates the problem. Note that on July 1 the taxpayer has an unrealized profit of $600, which would constitute a short-term gain if realized at that time. By selling short on July 1 (a so-called "sale against the box," i.e., a short sale of stock he already owns), he immunizes himself against any subsequent fluctuations of the market, since any increase in the market value of the stock bought in February will be counterbalanced by an equal unrealized loss on his "short" position. Conversely, a decline in the market value of the stock will improve his "short" position at the expense of his "long" position. Since the taxpayer is thus no longer at the risk of the market after July 1, §1233(b) treats his profit as short-term (February 1 to July 1), no matter when he closes out his positions by making delivery. Before §1233(b) was enacted, the taxpayer would have claimed a long-term capital gain of $600 on the theory that he sold his February stock on August 2, when he delivered it to satisfy his short position.

Other applications of §1233(b) may be studied in the examples given in the Regulations. Some of the transactions against which §1233(b) was aimed are comprehensible only if one recalls that before 1951 long-term capital gains and losses were "taken into account" only to the extent of 50 per cent, while short-term gains and losses were "taken into account" in full. This meant that a taxpayer with a long-term gain of $200 and

a short-term loss of $100 would break even for tax purposes. Some of the manipulations with short sales and similar devices were designed to produce this happy combination of long-term gains and short-term losses. See Brach, Investor Short Sales, 11 N.Y.U. Inst. on Fed. Taxation 1 (1953); Mim. 6243, 1948-1 C.B. 44; Mim. 6789, 1952-1 C.B. 38; Deal v. Morrow, 197 F.2d 821 (5th Cir. 1952).

4. *Inherited property.* Even though the distribution of property acquired by bequest from a decedent may be delayed until administration of the estate is completed or until a testamentary trust terminates, the heir's holding period begins on the date of death if the property was owned by the decedent, or on the date of purchase if it was purchased by the executor or testamentary trustee. Helvering v. Gambrill, 312 U.S. 11 (1941).

5. *"Tacked" holding period.* In computing his holding period for an asset, the taxpayer is often allowed by §1223 to add ("tack on") the time he held other property or the time another taxpayer held the same or other property, ordinarily because the property disposed of has a "substituted" basis. Thus, if the taxpayer receives a tax-free stock dividend, his holding period for the dividend shares is dated from his acquisition of the original shares; the donee's holding period for property received by gift and sold at a gain commences with the donor's acquisition of the property; and the holding period for securities whose acquisition required the taxpayer's loss on similar securities to be disallowed under §1091 ("wash" sales) includes his holding period for the similar securities. In a similar vein, §1223(1) provides in general terms that the holding period of property acquired in a tax-free exchange (e.g., a "like kind" exchange under §1031) includes the taxpayer's holding period for the property given up in the exchange, subject to a qualification — not applicable to other "tacked" holding periods under §1223 — that the original property must have been a capital asset or §1231 property at the time of the exchange.

Note that a taxpayer who acquires stock by exercising a stock right may not "tack" the holding period of the stock right to the holding period of the stock itself. §1223(6). The same principle is applicable to the acquisition of other types of property by the exercise of an option. See Helvering v. San Joaquin Fruit & Investment Co., 297 U.S. 496 (1936); Milliken v. Commissioner, 196 F.2d 135 (2d Cir. 1952), cert. denied, 344 U.S. 884 (1952). This means that the sale of property immediately after it has been acquired by the exercise of an option is a short-term transaction, although the same profit might have been realized as long-term gain by selling the option. See Chemetron v. Commissioner, 299 F.2d 644 (7th Cir. 1962) (transaction construed as sale of option, rather than as exercise of option followed by sale of assets).

6. *"Split" holding period.* If a number of assets are sold at the same time (e.g., as in Williams v. McGowan, supra p. 570), the holding period is computed separately for each asset. If the taxpayer sells property that has been recently constructed or that is still under construction, the holding period may be "split," i.e., computed separately for each of the major components of the property. Paul v. Commissioner, 206 F.2d 763 (3d Cir. 1953); Williams v. Commissioner, 285 F.2d 582 (5th Cir. 1961); Rev. Rul. 62-140, 1962-2 C.B. 181 (split holding period for stock acquired on surrender of debentures and payment of cash; part of gain or loss on each share of stock is allocated to a holding period beginning with acquisition of the debentures and balance is allocated to a period commencing with acquisition of the stock). Query: does goodwill have a split holding period if some of its value is attributable to the taxpayer's recent activities?

CHAPTER 7

The Corporation and Its Stockholders

SECTION A. INTRODUCTORY

GOODE,* THE POSTWAR CORPORATION TAX STRUCTURE †

In How Should Corporations Be Taxed?
46-58 (1947)

Criticisms of the present corporate income tax and suggestions for its revision center largely around the so-called "double taxation" of distributed corporate profits. Corporations now pay a tax on their profits, and stockholders pay a personal income tax on dividends received. Most plans for reform of the present method of taxing corporations are intended to reduce or eliminate this so-called "double taxation" of distributed profits.

NATURE OF THE PROBLEM OF "DOUBLE TAXATION" OF CORPORATE PROFITS

For a number of reasons I believe that the use of the term "double taxation" is unfortunate. In the first place, the emotional content of the words "double taxation" is enough to condemn the present system in the minds of most people without further hearing. It may be that the present method of taxing corporate profits should be fundamentally revised, but the issue should be argued out fully and carefully and not decided on the basis of colorful phrases. In the second place, the real problem seems to me not to be "double taxation" in the sense of simultaneous imposition of two taxes but how the taxation of corporate profits and stockholders compares with taxation of other kinds of income and other income recipients.

Under the present system, the corporate tax strikes profits distributed to stockholders not subject to individual income tax, either because of low-income or tax-exempt status, although other income going to the same income recipients is not taxed. In this case dividends are taxed more heavily than other kinds of income even though there is no double taxation in the literal sense. On the other hand, profits retained in corporations controlled by high-income stockholders may bear a smaller current tax than other income under the control of the same individuals.

It seems to me that discussion would be advanced by substituting for "double taxation" such colorless terms as "relative overtaxation" or "relative undertaxation." Instead of talking about removal of "double taxation," it seems better to speak of equalizing taxes on corporate profits and other kinds of income. Whether one finds a specific proposal acceptable may well depend on whether one is more

---

* Economist, Division of Tax Research, U.S. Treasury Department. Opinions expressed are personal views and do not necessarily reflect the official views of the Treasury Department. This paper is based largely on a study entitled The Postwar Corporation Tax Structure, released by the Treasury Department, Division of Tax Research, December 6, 1946.

† Published by the Tax Institute, Inc. Reprinted by permission.

concerned with eliminating "double taxation" in the literal sense or with equalizing taxes on different kinds of income.

Several charges have been brought against the present so-called "double taxation" of corporate profits or, as I should prefer to say, the present relative overtaxation of corporate profits. The first charge is that the present system is inequitable. The first principle of equity in taxation is often held to be to tax all natural persons with the same income at the same rate. By this standard it is indeed true that stockholders are often overtaxed. At other times, however, many stockholders are at least temporarily undertaxed. The rule of equal taxation of equal incomes is subject to modification in accordance with the principle of reasonable classification.

It may be argued in support of the present system that differences in taxation of stockholders and other income recipients are a reasonable reflection of genuine differences between stockholders and others. Within the limits of this paper, I cannot pretend to dispose of this issue. A complete discussion of it would, in my opinion, require a thoroughgoing analysis of the corporate income tax and its far-reaching effects on the distribution of income and wealth, on consumption and saving, on incentives and investment, and on employment and national income.

A second charge against the present corporate tax system is that it reduces the incentive to invest and thus reduces national income or slows its growth. In large part, I believe, this criticism is actually a complaint against income taxes in general rather than against the corporate income tax in particular. If, however, corporate profits are taxed more heavily than other kinds of income, the corporate tax may be especially harmful to investment.

In connection with investment incentives it should be noted that the present "double taxation" or "relative overtaxation" of distributed corporate profits is greatest in the case of low-income stockholders and least in the case of high-income stockholders. This is true because the progressive rates of the individual income tax partly offset the effect of the corporate tax on the distributed part of profits. In the case of profits distributed to high-income stockholders who are subject to high individual tax rates, the tax collector would get a much bigger cut at the individual level if he did not get so much at the corporate level. For example, only 30 cents out of each dollar of the corporate tax on profits distributed to a stockholder subject to a 70 per cent marginal individual rate is net revenue to the Treasury or net additional tax on the stockholder's equity. But, 81 cents out of each dollar of corporate tax is net additional tax in the case of profits distributed to a stockholder subject to only a 19 per cent individual rate.

Two other charges against the present method of taxing corporations, which seem to me somewhat less important than those already mentioned, also stem from the present so-called "double taxation" or "relative overtaxation" of distributed profits. The present tax system is held to favor debt financing as compared with equity financing and to discourage the corporate form of doing business.

I shall not atempt to evaluate these charges nor even to state the counterarguments in favor of the present corporate tax. I do want to say that I think that none of the arguments on either side can be accepted uncritically and that, in my opinion, a great deal more analysis needs to be done on the questions raised. For present purposes it is enough to point out that the validity of the case against the present corporate tax depends in large measure on the actual extent of "double taxation" or "relative overtaxation" of corporate profits as compared with other kinds of income.

The present relative overtaxation of corporate profits is neither so extensive nor so heavy as might be supposed on the basis of superficial examination. Unfortunately, however, it does not seem possible at the present stage of economic analysis

to set definite limits to the actual extent of existing relative overtaxation of corporate profits. This is true mainly because we do not know with any degree of certainty who actually pays the present corporate tax. If the tax is passed forward to consumers in the form of higher prices or backward to workers in the form of lower wages, as many believe, stockholders may not be taxed more heavily than other income recipients. To the extent that the corporate tax is shifted forward in higher prices, it is no more a "double tax" on stockholders than, say, the excises on alcoholic beverages are double taxes on stockholders in distilleries, breweries, and wineries. If, and to the extent that, the corporate tax is shifted, it becomes in effect a broad consumption tax and must be so appraised.

Economic and business opinion is divided on the critical issue of shifting.* In deed, the division of opinion goes so deep that sometimes the same individual or group advances arguments that seem conflicting because of inconsistent treatment of the subject of incidence. Without going fully into the subject, I wish only to raise the question of shifting of the corporate tax as a possible limitation on the validity of the criticisms against the tax and as a point that may be pertinent to the appraisal of the various proposals for modifying the present system.

Even if the corporate tax is not shifted to commodity prices or wages, present stockholders may in many cases largely escape the tax. The basis for this assertion is the familiar theory of tax capitalization and amortization. If present stockholders bought their shares with the expectation that the corporate tax would continue, they probably took the tax into account in deciding how much to pay for stocks. Probably stock prices decreased or did not rise as much as they otherwise would have. Present stockholders in many cases may have bought their shares at prices and yields that at least in part discounted the tax. To the extent that they did so, the corporate tax was transformed into a one-time levy on the previous owners of stock, and its unexpected repeal or reduction would give present stockholders windfall gains. It is, of course, impossible to appraise this possibility in quantitative terms.

Furthermore, the effect of the corporate tax has probably not been confined to stock prices but probably has spread to all kinds of earning assets. As stocks became a less attractive investment after imposition or increase of the corporate tax, some potential investors probably attempted to shift to bonds and other assets. The result was doubtless that the prices of bonds and other assets were bid up to some extent, while the fall of the price of stocks was somewhat cushioned. If this happened, the corporate tax was the cause of a general decrease in yields of all kinds of earning assets rather than merely a tax on the yield of stocks.

Problems in Shifting to a New Method of Taxing Corporate Profits

One important problem in shifting to a new method of taxing corporate profits would be to prevent or to minimize tax postponement and avoidance on the part of stockholders. Few critics would suggest outright repeal of the corporate tax without any other change. Such action would open the way for stockholders to escape or postpone personal taxes on their part of undistributed corporate profits. With present low tax rates on long-term capital gains, the opportunities for tax avoidance would be especially tempting. If corporate savings were exempt from taxation, other savings could not in fairness be taxed. But exemption of savings would transform the income tax into a spendings tax, which would be a drastic remedy for any existing "double taxation" or relative overtaxation of dis-

* For a review of the theories, see Ratchford and Han, The Burden of the Corporate Income Tax, 10 Nat. Tax J. 310 (1957). — Ed.

tributed corporate profits. Consequently, most suggestions for revision of the corporate tax contemplate keeping a tax on retained corporate profits while decreasing present taxes on distributed profits.

Another transitional problem in adoption of a new method of taxing corporate profits would be to minimize possible windfall gains to present stockholders. If a new tax system resulted in lower taxes on corporate profits than the securities markets had generally anticipated, windfall gains could not be wholly avoided. If it is true that the effect of the corporate tax has spread to the prices and yields of all kinds of assets, windfall gains for stockholders would be accompanied by windfall losses for owners of bonds, real estate, and perhaps other earning assets. While such windfall gains and losses could not be wholly avoided, their impact might be softened and their secondary effects lessened by spreading the tax adjustment over a period of years.

Approaches to Equalization of Taxes on Corporate Profits and Other Kinds of Income

Partnership Approach. The partnership approach carries to its logical conclusion the view that there is no genuine distinction between corporations and their stockholders, which is implicit in many criticisms of the present corporate tax. The partnership approach would eliminate the corporate income tax and would tax stockholders on their proportionate part of corporate profits when earned whether the profits were distributed or retained by the corporation. Presumably, stockholders would also be allowed to take account of their proportionate part of corporate losses. The partnership approach would completely eliminate any "double taxation" of corporate profits and would completely equalize taxation of corporate profits and other kinds of income. No stockholder's personal tax liabilities would ever be affected by the dividend policy of the corporation. In this respect, the partnership approach is an ideal system against which other proposals for equalizing taxes on corporate profits and other income must be measured.

But from a practical point of view it seems very doubtful that the partnership approach would be an "ideal" system. It seems extremely doubtful that the partnership technique could be successfully applied to big corporations with many stockholders and complicated capital structures. Aside from the work required to allocate earnings among thousands or hundreds of thousands of stockholders, the partnership method would involve the almost insoluble problem of distributing profits according to the different kinds of claims represented by a hierarchy of securities.

I am not prepared to say whether the partnership method would be feasible and appropriate for small corporations.* It does seem to me, however, that as a general method the partnership approach must be regarded as an ideal to be approximated rather than a goal to be reached. I hasten to say that it is an "ideal" only in the sense of equalizing taxes on corporate profits and other kinds of income. Saying that a corporation is nothing more than a sophisticated partnership does not make it so. Personally, I want to leave open the question whether elimination of special taxes on corporate profits is desirable in the light of all relevant equity and economic considerations.

Adjustment at the Corporate Level. Another approach that has been suggested to the equalization of taxes on corporate profits and other kinds of incomes is to grant corporations a tax credit when they pay dividends or to exclude all or

* Subchapter S, enacted in 1958 to permit such an election, is discussed in Section M of this chapter, infra pages 740 et seq. — Ed.

part of dividends paid from taxable corporate income. Stockholders would pay the usual personal taxes on dividends when received. This approach would continue a corporate tax on retained profits but would reduce or eliminate the corporate tax on distributed profits. The corporate tax on retained profits would be intended to minimize possibilities for stockholder tax postponement or avoidance, but it would relatively overtax the part of retained profits allocable to low-income stockholders. If a full tax credit or exclusion were allowed corporations for dividends paid, this system would approach the partnership ideal as closely as any other leading proposal.

The dividends-paid-credit approach could practically eliminate the present premium on debt financing and the present tax discrimination against the corporate form of doing business. The approach would also lower any tax barriers that may now exist to corporate investment. It would be well calculated to counteract any tendency of corporations to shift their taxes to consumers and wage earners.

Another characteristic of the dividends-paid-credit approach may be considered either an advantage or a disadvantage depending on one's point of view. This approach would probably stimulate corporations to pay larger dividends. Management and stockholders would see that taxes could be lowered by increasing dividends. Some observers fear that a tax inducement to distribution of profits might lead corporations to deprive themselves of needed funds and so reduce investment. Others believe that investment is better allocated if submitted to the test of the capital market than if financed by retained earnings. This is another issue that is too broad to be disposed of within the limits of this paper. Perhaps I should emphasize, however, that, while a tax credit for dividends paid might *induce* some corporate managements to be imprudent, it would never *force* them to be so. A corporation could retain as much profits under a dividends-paid-credit plan as under any other plan that imposed a similar tax rate on retained profits. Moreover, it would be possible under the dividends-paid-credit approach to recognize the special capital-raising problems of small corporations by treating a limited amount of profits as if distributed even though retained.

Administration of the dividends-paid-credit approach would be rather simple, since all adjustments would be made at the corporate level.

Adjustment at the Individual Level: Withholding approach. The withholding approach would consider all or part of the corporate tax as a withholding tax or an advance payment on the liabilities of stockholders. Corporations would continue to pay a tax on both distributed and undistributed profits, but dividend recipients would be allowed to take credit for the tax paid by the corporation on their share of distributed profits. Dividends recipients would include in their taxable income cash received plus withholding tax but would get credit for the withholding tax. If the amount withheld by the corporation exceeded the stockholder's personal tax liability, he would get a refund from the Treasury. This system, which is used in Great Britain, would be somewhat similar to the present method of withholding on salaries and wages.

The withholding approach would be closely similar to the dividends-paid-credit approach except for making the tax adjustment at the individual rather than the corporate level. Both approaches could completely equalize taxes on distributed corporate profits and other forms of income. Taxes could be entirely eliminated on dividends going to nontaxable stockholders and the same tax imposed on other dividends as on interest and other kinds of income. Both approaches would continue a tax on retained corporate profits in order to reduce individual tax postponement or avoidance.

The withholding approach could reduce or practically eliminate the tax discrimination against equity financing and against the corporate form of organiza-

tion. In the long run it might counteract any tendency for the corporate tax to raise prices and lower wages, but in the short run the withholding approach would be less likely to eliminate the tax as a factor in price and wage decisions than would a tax adjustment at the corporate level.

If corporate officials and stockholders acted quite rationally, the withholding approach should have the same effect on dividend policy as the dividends-paid-credit approach. In both cases stockholders could gain the advantages of the plan only if profits were distributed. Perfectly rational stockholders would bring as much pressure on management to distribute profits under one plan as under the other. It must be admitted, however, that, given present management and stockholder psychology, the withholding approach would probably be a less powerful stimulus to increased dividends than a dividends-paid-credit plan.

A withholding system would raise some rather troublesome administrative problems, but probably no insuperable ones. For example, it would be necessary to trace dividends back to the corporate income from which paid in order to determine how much tax credit for withholding to allow stockholders. It would also be necessary to grant every dividend recipient a proper tax credit and in many cases to make refunds for overwithholding.

Dividends-received-credit approach. Another possible approach at the individual level would be to exempt dividends from a part of the individual income tax. Usually this approach contemplates exemption of dividends from the first bracket of the individual income tax, which would be equal to the corporate tax rate. But equality of the corporate rate and the individual first-bracket rate is not a necessary feature of the approach.

The dividends-received-credit aproach could eliminate "double taxation" in the literal sense by making sure that dividends never bore two taxes. But this approach could not eliminate relative overtaxation of distributed corporate profits. It could not approximate the partnership ideal so closely as the dividends-paid-credit approach or the withholding approach. The dividends-received-credit approach would grant no relief to stockholders not subject to the individual income tax. While these stockholders are not doubly taxed in the literal sense, they are overtaxed on dividends as compared with other kinds of income.

Nor would the dividends-received-credit approach equalize taxation of corporate profits and other kinds of income going to high-income stockholders. This approach would, in effect, consider the tax paid by the corporation as a payment on the tax liability of stockholders. But unlike the withholding approach, it would not require stockholders to include in their taxable income the tax paid on their behalf by the corporation. This would benefit high-income stockholders subject to high surtax rates more than low-income stockholders subject to low surtax rates. Although the dividends-received-credit approach could eliminate "double taxation" in the narrow sense and reduce the tax load on corporate profits, it could not so nearly equalize taxation of corporate profits and other kinds of income as could the dividends-paid-credit approach and the withholding approach.

It ought to be recognized that the dividends-received-credit approach would in effect introduce a new scale of graduated tax rates for distributed corporate profits. This new scale would start higher than the rate on other income but would end lower than the rate on other income. This may be a defensible rate scale, but its merits are not obvious; they would have to be established explicitly, in fair competition with the claims of other possible schedules.[1]

[1] If, as is usually suggested, the corporate tax rate and the individual first-bracket rate were equal, the *combined* corporate and individual taxes on distributed profits would be lower than the rate on other kinds of income for all stockholders subject to more than the first-bracket individual rate. In such cases, the combined taxes would be less than the individual tax alone that would

The dividends-received-credit approach could reduce, but not wholly eliminate, tax discrimination against equity financing and against the corporate form of doing business. This approach would be simple to administer.

Dividend-exclusion approach. Another approach would be to allow stockholders to exclude a part of dividends received from their taxable incomes. This approach would reduce taxes on corporate profits, but it could not equalize the taxation of corporate profits and other kinds of income. The tax value of the exclusion of dividends would equal the present relative overtaxation of dividend income only by coincidence and then only for one taxable income bracket. All other stockholders would get either a smaller or a larger benefit. Nontaxable stockholders would get no benefit at all.

It is clear that the tax value of the dividend exclusion would vary directly with the surtax rate applicable to the stockholder's dividend income. Thus, high-income stockholders would benefit substantially from the dividend-exclusion approach while low-income stockholders would benefit much less, or not at all. The allocation of tax reductions among different stockholders under the dividend-exclusion approach would not approximate the present overtaxation of distributed corporate profits as measured against the "ideal" standard of the partnership approach. Like the dividends-received-credit approach, the dividend-exclusion approach would in effect provide a new scale of graduated rates for distributed profits — a scale beginning relatively high and ending relatively low.

Conclusions

The problem of corporate tax reform is complicated by uncertainty as to the real effects of the present system, but the discussion has been enriched by the number of different plans suggested. Among the main approaches, only the partnership approach could completely equalize taxation of corporate profits and other kinds of income. But both the dividends-paid-credit approach and the withholding approach could equalize taxes on distributed profits and other income, while continuing a corporate tax on retained profits. The dividends-received-credit approach and the dividend-exclusion approach could reduce taxes on distributed profits but could not equalize taxes on this and other kinds of income.

While the problem of relative overtaxation of corporate profits is at the root of most criticisms against the corporate tax, the objective of equalizing taxes on corporate profits and other kinds of income is not the only factor to be considered in designing the postwar corporation tax structure. One controlling condition is revenue adequacy. Moreover, possible economic gains from remodeling the present structure can be appraised only by comparing the effects of the present corporate tax on consumption, investment, and national income with the effects of other taxes, which would have to be higher than would otherwise be necessary if the tax on corporate profits were lower.

---

apply if there were no corporate tax and dividends were subject only to regular individual rates. Suppose, for example, the corporate tax and the first-bracket individual rate were both 20 per cent and that Stockholder A were subject to a 50 per cent individual rate, made up of the 20 per cent first-bracket rate and 30 per cent higher bracket rates. On $1.00 of profits a corporation would pay 20 cents in tax; on the remaining 80 cents of cash dividends, A would pay 24 cents in tax; the combined corporate and individual taxes would be 44 cents. Yet, if there had been no corporate tax, A would have paid 50 cents in the individual tax on $1.00 of dividend income.

LOWNDES, TAXING THE INCOME OF THE CLOSE CORPORATION *

18 Law and Contemporary Problems 558-565 (1953)

Although there is no substantial agreement about how the income from close corporations should be taxed, there appears to be virtual unanimity with respect to the defects of the present system.

The basic weakness of the method adopted by the federal income tax for taxing corporate income is that it is predicated upon a legal fiction which ignores economic realities. In the case of a partnership, the partnership is disregarded and the partners are taxed directly upon their distributive shares of the partnership income.[1] In the case of a corporation, however, the law gives full credence to the corporate fiction. Although in substance a close corporation represents an incorporated partnership, or perhaps an incorporated sole proprietorship, the corporate entity is treated as an independent taxable entity, and the income of the undertaking is taxed to the legal convention, rather than to the real owners of the enterprise.

The recognition of the corporation as a distinct taxable entity has several unhappy corollaries. Even in the case of the publicly owned corporation, it results in a complete disregard of the ability to pay principle, which is supposed to be one of the cardinal desiderata of an income tax. Although there is considerable speculation about the actual incidence of the corporate income tax, and whether the burden of the tax is shifted to the consumer in the form of higher prices, or to the corporate employees in the form of lower wages, or to the stockholders in the form of diminished dividends, it is clear that the actual burden of the tax is not imposed upon the corporation, which is a legal fiction. The corporate tax, which in recent years has been graduated according to the size of the corporate income, obviously bears no relation to the wealth or the ability to pay of the person who actually pays the tax, whoever he may be.

In the case of close corporations there are more fundamental objections to the current system of taxing corporate income. Some taxes are unjust because they bear too heavily upon a particular class of taxpayers. Others lack equity because they are susceptible to manipulation which makes it possible for the sophisticated taxpayer to shift his legitimate share of the tax burden to some more ingenuous citizen. The corporate tax enjoys the dubious distinction of erring in both directions. Since corporate income is taxed in the first instance to the corporate entity, when it is earned, and again to the stockholders, when it is distributed to them in the form of dividends, while the income of a partnership or a sole proprietorship is taxed but once to the partners or the sole proprietor, the corporate tax discriminates against incorporated partnerships and incorporated sole proprietorships. On the other hand, the recognition of an artificial legal convention as an independent taxable entity is a constant stimulus to tax manipulation and tax avoidance.

The theoretical objections to the present system of taxing the income of close

* Reprinted by permission of Law and Contemporary Problems.

[1] The first federal income taxes, passed during the Civil War, taxed the income of corporations in the same way, that is, they ignored the corporate entity and taxed the shareholders directly upon their distributive shares of the corporate income. This system was sustained in Collector v. Hubbard, 12 Wall. 1 (1870), although the Supreme Court later repudiated the *Hubbard* case in Eisner v. Macomber, 252 U.S. 189, at 217-219 (1920), declaring that "the stockholder's share in the accumulated profits of the company is capital, not income" (p. 219), and that he realizes no income upon which he may be taxed under the Sixteenth Amendment until the corporate profits are distributed to him in the form of dividends.

corporations are that it makes the conduct of a business subordinate to tax considerations and interposes an unwarranted impediment to freedom of choice of the form of business organization, because of the double tax on corporate income, as contrasted with the single tax upon the income of a partnership or a sole proprietorship. Moreover, by treating the corporate personality as a distinct taxable entity, the corporate tax serves as a shield behind which the tax dodger may conduct his maneuvers with impunity.

The ultimate test of a tax, however, lies in the practical operation of the tax in a concrete context, rather than its theoretical imperfections. The present system of taxing the income of close corporations must be judged by whether it really does create a genuine obstacle to conducting a business as a corporation rather than a partnership or sole proprietorship, and whether it actually encourages tax manipulation and tax avoidance.

Choice of Form of Business Organization: The Close Corporation Versus the Partnership or Sole Proprietorship

It is difficult to determine the precise extent to which the present system of taxing the income of close corporations constitutes a genuine impediment to the selection of the corporate form to conduct a business, which could be carried on as a partnership or sole proprietorship, because the relative tax advantages and disadvantages of various forms of business organization are linked so intimately with the concrete facts of a particular situation. In some cases it may actually be more economical to do business as a corporation. In others, a partnership or a sole proprietorship is preferable from a tax point of view. Unquestionably, the fact that the income of a close corporation is taxed differently than that of a partnership or a sole proprietorship is a predominating factor in the selection of the form of business organization. It is not, however, a consideration which inclines constantly in the same direction, since the tax advantages of one form of organization over another shift continually with changes in the underlying factual situation.

Because the tax advantages of a particular form of business organization are tied so closely to the unique facts of the particular situation, it is impossible to lay down any rigid rule which can be applied indiscriminately in every case to determine the most economical form of doing business from a tax point of view. It is feasible, however, to point out some of the major tax factors which must be weighed in choosing a form of business organization to illustrate the unwarranted predominance which tax considerations have achieved in this area, because of the identification of the corporation as an independent taxable entity.

A. Rates

A basic consideration in the choice of a corporation or a partnership or sole proprietorship as a form of business organization is the matter of rates, since corporate income is taxed under a different rate schedule than that applied to individual income, and corporate income is subject to the excess profits tax, which does not apply to other types of income.* There is, however, no constant ratio between the corporate tax and the individual tax, since this depends upon such variant factors as the size of the income, the application of the excess profits tax, and the personal status of the individual taxpayer. The recent revenue acts, which have reimposed the excess profits tax and permitted married taxpayers to

* An excess profits tax was in effect during World War II and during the period 1950-1953. — Ed.

split their incomes, have tended to favor partnerships and sole proprietorships, rather than corporations, as a form of business organization. However, the actual rate, at which the income from an enterprise is taxed, depends to such an extent upon the unique facts of the particular situation that it is impossible to generalize about which rates are more favorable.

B. Double Taxation

An important factor in determining the actual *effective* rate of tax upon the income of a close corporation is the possibility of avoiding a double tax. If corporate income is taxed first to the corporation, when it is earned, and again to the stockholders, when it is distributed to them in the form of dividends, it is obvious that the aggregate tax upon corporate income will be heavier than that which would be incurred by a partnership or a sole proprietorship.* In many cases, however, it is possible to eliminate the double tax. In a given situation it may even be possible to divide the income from an incorporated enterprise between the corporation and the individual entrepreneurs, so that part of the income is taxed to the corporation and part to the individual shareholders, with a lower aggregate tax than if it were all taxed directly to the individual owners of the business.

As a general rule, if the corporate profits can be distributed to the stockholders in a form which is deductible from the corporate income, a business may be conducted as a corporation about as economically from a tax point of view as a partnership, because of the elimination of any additional corporate tax. Thus, many small enterprises, whose earnings are derived chiefly from the efforts of the owners of the business, are able to operate as corporations without any undue tax penalty, because they can distribute their profits in the form of salaries, which are deductible from the corporate income. In fact, if part of the corporate earnings are plowed back into the business for expansion, it may be more economical to operate as a corporation than a partnership. In the case of a partnership, all of the partnership income is taxed to the partners, regardless of whether it is distributed to them or retained in the business. There is, therefore, no opportunity to divide the income from the business between the partners and the firm. In the case of a corporation, however, if part of the corporate income can be distributed to the shareholders in the form of salaries, or other items deductible from the corporate income, and part can be retained in the corporation, it is possible to divide the income from the enterprise between the corporation and the stockholders, so as to take advantage of the lower brackets under both the corporate and individual taxes.

Of course, matters may not work out so neatly. The deduction for salaries is limited to reasonable salaries, or in the words of the statute to "a reasonable allowance for salaries or other compensation for personal services actually rendered." Moreover, there are restrictions upon the earnings which a corporation may retain without encountering the surtax under [§531, infra p. 615], which is imposed as a penalty upon a corporation "formed or availed of for the purpose of preventing the imposition of the surtax upon its shareholders or the shareholders of any other corporation, through the medium of permitting earnings or profits to accumulate instead of being divided or distributed." The limitation upon the deduction for salaries to reasonable salaries may create an awkward situation, if the particular stockholder needs a greater portion of the earnings of the business

* In 1954, Congress enacted a dividends-received exclusion and a credit to moderate the effect of the separate corporate tax; the exclusion was broadened, and the credit eliminated for future years, by the Revenue Act of 1964. See infra pages 604-606. — Ed.

than can properly be regarded as reasonable compensation for the services which he renders to the corporation. Furthermore, in order to accumulate earnings in the corporation without incurring the [§531] surtax, there must be some showing that they are needed for expansion or some independent business purpose of the corporation.

Salaries or compensation for personal services are not the only items which may be deducted from corporate income. Although dividends distributed by a corporation are not deductible in computing the corporate tax, the interest which a corporation pays on its debts is. Consequently, it has become customary to finance a corporation largely with borrowed capital in order to distribute the corporate earnings in the form of interest upon its obligations, which is deductible from the corporate income. . . . In addition to deducting the interest paid on the obligations of the corporation, it is possible to retain substantial amounts of the corporate earnings in the corporate treasury to fund its indebtedness without incurring the [§531] surtax. Moreover, the corporation can distribute its earnings by redeeming its bonds, or paying off its debts, without subjecting such payments to an additional tax in the hands of the stockholder-creditors, where a similar distribution in redemption of part of its stock would run the risk of being taxed as an ordinary dividend under [§302].

While thin incorporation has its advantages, there is a still unsettled problem as to just how thin incorporation can get before the Commissioner can see through it. It has been held that if the borrowed capital is substantially disproportionate to the equity capital, the borrowed capital will be treated as equity capital and a deduction for interest paid on the borrowed capital will be disallowed. Moreover there appears to be no manifest reason why the redemption of bonds in such a case could not be taxed under [§302] as an ordinary dividend. It is obvious that while it may be possible to eliminate a corporate tax by paying out corporate earnings in the form of interest rather than dividends, the restrictions on thin incorporations, like the limitation upon the deduction of salaries, make this a matter calling for skillful and sophisticated tax management.

In addition to the distribution of corporate earnings in the form of salaries and interest to minimize or eliminate the corporate income tax, part of the corporate profits are frequently paid out in the form of rent, which the corporation can deduct from its income as a business expense. Under this scheme, the stockholders will retain title to the property which the corporation needs to operate its business and lease it to the corporation, so that the rent paid by the corporation can be deducted from its income. Here again, however, caution must be exercised. If the rent paid by the corporation is in excess of the fair figure which would have been fixed in an arm's length transaction, the excess above the fair rental value of the property will be disallowed as a deduction. It seems possible, moreover, that if the lease simply represents a scheme for diverting income from the corporation and serves no independent business purpose of the corporation, any deduction for rent may be disallowed while the rent itself may be taxed to the stockholder who receives it as a dividend.*

C. Tax-Exempt Income; Capital Gains

In addition to the effective rates of tax upon the income of an enterprise conducted as a corporation and as a partnership, there are other differences between the ways in which corporations and partnerships are taxed, which follow as more or less logical corollaries from the recognition of the corporation as a distinct

* See White v. Fitzpatrick, supra page 406. — Ed.

taxable entity, and which must be taken into account in the choice of a form of business organization. One of these differences, for example, is the way in which tax-exempt income of a corporation and of a partnership is treated.

Tax-exempt income of a partnership does not lose its tax-exempt status when it is taxed to the partners, since the partnership is merely a conduit for allocating the partnership income to the partners. Tax-exempt income of a corporation, however, is transmuted into taxable income when it passes through the hands of the corporation and is distributed in the form of dividends, since the exemption is lost by the interposition of an independent taxable entity between the income and the stockholders. The moral, of course, is plain. Tax-exempt or partially tax-exempt income should not be given to a corporation, but should, as far as practicable, be retained by the individual stockholders.

The fact that income may change its character between the time it is earned by a corporation and distributed to the stockholders does not, however, always work to the disadvantage of the stockholders. It is sometimes possible to convert ordinary income of a corporation into a long-term capital gain in the hands of a stockholder by liquidating the corporation. Incidentally, however, there is no profit in transferring capital assets, which have increased in value, to a corporation with the idea of having the corporation sell the assets and realize the gain, since the minimum tax which a corporation must pay upon such a gain is [25] per cent, which is the maximum tax which an individual may pay, and he may pay less. Moreover, if the gain realized by the corporation is ultimately distributed to the stockholder it will be taxed to him again, and, unless the distribution occurs in connection with a liquidation of the corporation, taxed as ordinary income.

D. Deferring Gains and Losses

One of the advantages of conducting an expanding business as a corporation, which was noted earlier, is that the earnings which are retained by the corporation may be kept out of the incomes of the stockholders and taxed to the corporation in a lower bracket than they would be taxed to the stockholders. In other words, this is a possible way of dividing the income of a business between the corporation and the proprietors of the business and taking advantage of the lower brackets of both the corporate and individual taxes. On the other hand, if a business is conducted as a partnership or a sole proprietorship, all of the income of the business will be taxed to the partners or to the sole proprietor, regardless of whether it is actually distributed to them or plowed back into the business.

Conversely, however, it may be advantageous to organize a new business, in which losses are anticipated in the early years, as a partnership or sole proprietorship, rather than a corporation, since the losses incurred in starting the business can be utilized directly by the partners or the sole proprietor to offset their gains from other sources, and if they arise from the operation of the business, as distinguished from the sale or exchange of capital assets, they will be fully deductible as ordinary business losses. If, on the other hand, the business is conducted as a corporation, any losses incurred in the operation of the business will be the losses of the corporation and cannot be availed of by the stockholders. Although such losses may give rise to a net operating loss which can be carried over and offset against the profits of later years, if the corporation continues to be unsuccessful and realizes no gains the carry-over cannot be utilized either by the corporation or the stockholders. Moreover, although the stockholders will realize a loss when the corporation is finally liquidated, the loss will ordinarily take the form of a long-term capital loss subject to the restrictions on such losses.

E. Organization and Liquidation

Although theoretically a corporation should pay a heavier tax than a partnership or a sole proprietorship, because corporate income is exposed to the hazard of a double tax, actually the tax burden of a close corporation depends upon a number of adventitious circumstances. Moreover, the circumstances which determine the relative tax advantages of doing business under the corporate form are not static but are subject to constant fluctuation. At one stage in the existence of a business, it may be profitable to operate as a corporation, and at another, as a partnership or sole proprietorship. Not only changes in the fortunes of the business, but changes in the law, such as the enactment or repeal of an excess profits tax, permission for married taxpayers to split their incomes, and upward and downward revisions in the corporate and individual rate schedules, may make a change in the form of business organization imperative. In this connection it is important to bear in mind that it is much easier to shift into a corporation than it is to shift out of one.

A partnership can be organized or liquidated without realizing taxable gain or loss. Moreover, a partnership can be converted into a corporation without incurring any gain or loss, if the partners are in control of the corporation after the transfer of the partnership assets to the corporation, and they retain the same proportionate interests in the corporation, which they had in the partnership property.

The recognition of the corporation as a distinct taxable entity, however, usually makes it impossible to liquidate a corporation and shift to a partnership without serious tax consequences.

NOTE

1. *Dividends received exclusion and credit.* The most controversial part of the 1954 Code was its approach to the "double taxation" of corporate earnings: §116 and §34 permitted the individual taxpayer to exclude from gross income $50 of dividends per year and to take a credit against his tax liability equal to 4 per cent of the balance of his dividends. Thus, a taxpayer receiving $550 of dividends was required to include $500 in gross income, and he was allowed a credit of $20 against his tax liability.

President Kennedy's Tax Message of April 20, 1961, recommended repeal of both the exclusion and the credit. In support of this proposal, Secretary Dillon said in his statement to the House Ways and Means Committee:

> Whether there is, in fact, double taxation of dividends has been the subject of much controversy. However, even assuming the existence of such double taxation the fact remains that the dividend credit and exclusion give a considerably larger relative reduction in the burden of double taxation to the dividend recipient with high income than to the dividend recipient with low income.
>
> This point may be made clear by considering the average stockholder in a particular income class. The corporate tax [at the pre-1964 rate] imposes an extra tax burden, over and above the personal tax on dividends, of 52 cents per dollar of corporate profit before tax for shareholders not liable to income tax, 42 cents per dollar of corporate profits before tax for stockholders in the 20-percent tax bracket (for example, married couples with less than $5,000 income), and of but 5 cents per dollar of corporate profits on those with incomes of over $1 million. On the average, the credit and exclusion combined reduce this extra burden by 3 cents per dollar of corporate profit before tax for married couples with income of $5,000, and by 2 cents for those with income over $1 million. The percentage reduction of the so-called double tax is thus only 8 percent for low income stockholders, while it is 41 percent

for high income stockholders. This deficiency of the credit and exclusion has been noted widely. Surely a technique as discriminatory as this has little to recommend it.

The dividend credit represents a dead-end approach toward the equitable taxation of dividends. In 1954 the provisions were represented as only a first step toward full relief, which was eventually to be achieved by raising the credit to 15 percent of dividends. However, it is not possible to increase the credit to such a level without giving those in the high tax brackets reductions exceeding the extra burdens they are presumed to bear as a result of the corporate income tax. For example, the tax relief granted by a 15-percent credit would amount to 7.2 cents per dollar of corporate earnings before tax — or about 25 percent more than the extra burden presumed to fall on those with incomes of $250,000 because of the corporate tax. With a 20-percent credit, which has been recommended by some, the tax relief at high income brackets could be twice as large as the presumed extra burden of the corporate tax.

Looked at as straight tax reduction, the benefits provided by these provisions are highly concentrated in the upper income groups. In recent years less than 9 percent of the total combined tax reductions from the dividend credit and exclusion have gone to returns with less than $5,000 of income. In contrast, more than 75 percent of the total tax reductions accrue to returns with incomes of $10,000 and over and more than 54 percent to taxpayers with incomes over $20,000. In view of the fact that the dividend exclusion is frequently represented as being helpful to low-income groups, it is noteworthy that only about 15 percent of the total tax reduction due to such exclusions go to returns with incomes under $5,000. About 55 percent of its tax benefits go to individuals with over $10,000 of income.

Benefits from the 1954 dividend provisions accrue more broadly at the higher income levels because shareholding is more usual at those levels. Only 6 per cent of taxable returns with income under $5,000 have any dividends at all, while over 90 percent of returns with incomes of over $50,000 have dividends. Dividend income for returns under $5,000 constitutes but 1 percent of total income of this group as against 29 percent for the higher group. Putting it differently, returns with incomes under $5,000, or 40 percent of the total number of taxable returns, report only about 8 percent of the dividends included in tax returns. On the other hand, returns with incomes over $50,000, or two-tenths of 1 percent of all returns, account for 33 percent of all dividends. Any way one looks at it, the overall benefit of the dividend credit is much larger for the upper income groups.

Secretary Dillon also argued that the credit and exclusion had not significantly contributed to a dispersion of stock ownership in the years since 1954.

In his 1963 Tax Message, President Kennedy repeated this recommendation for repeal of the credit and exclusion, adding that its enactment was essential to his support for a reduction of the top individual tax rate to 65 per cent.

As enacted, the 1964 Revenue Act increased the exclusion from $50 to $100, reduced the credit to 2 per cent for 1964, and eliminated the credit for dividends received in 1965 and later years. If they file a joint return, a married couple may exclude $200 of dividends, provided each of them receives $100 or more of dividend income. In keeping with the "double taxation" rationale for the exclusion and credit, they do not apply to dividends paid by foreign corporations or by certain other corporations whose earnings are not subject to the corporate income tax.

The Republican members of the House Ways and Means Committee criticized the 1964 amendments as follows:

In 1954 Congress recognized the tax incident in regard to the three methods of corporate financing which was unequal with regard to new equity financing and resulted in a penalty exacted of corporate stockholders by taxing their corporate earnings at the rate of 52 percent and then taxing again the same income when distributed as dividends to individuals. As a partial alleviation of this inequity the Congress exempted the first $50 of dividends received by an individual and allowed a tax credit of 4 percent for any dividend income in excess of the $50 exclusion.

Initially, the Kennedy administration recommended that the $50 exclusion and the 4-percent credit for dividends be repealed. It was claimed that the reduction of cor-

porate taxes would alleviate the problem of double taxation. The committee rejected this proposal by a substantial majority. Subsequently, a "compromise" was offered whereby the 4-percent credit would be repealed, but the $50 exclusion would be raised to $100. After several efforts failed, the administration exerted sufficient pressure on the committee to bring about the approval of this "compromise" by a slim margin of one vote. How was this justified?

An unidentified labor economist put his finger on the crux of the matter. The 4-percent dividend credit was termed "class legislation." As this economist said, the repeal of this provision would affect less than 6 percent of American families. Even if this is correct, it does not make double taxation of investment earnings any more equitable. The repeal of this provision epitomizes the demagogic approach which has been resorted to time and time again by the majority.

The repeal of the tax credit on dividends is not only inequitable, but shortsighted. The Kennedy administration has constantly bemoaned the rate of economic growth, and exaggerated the unemployment problem. Tax proposals, trade bills, and other gimmicks have been foisted upon the Congress as economic stimulants to produce full employment. On the other hand, this bill sets about to take away one of the most justifiable stimulants to business investment. Equity capital is needed to create jobs. Yet, by the repeal of the 4-percent credit the tax on equity capital is made more burdensome.

The effect of making equity financing more burdensome will be to force the more heavy reliance on borrowing and retained earnings. The tax laws already impose a much lesser burden on the fruits of borrowed capital and retained earnings than on the fruits of equity capital. This has created a narrow equity base, which is more vulnerable to economic fluctuations. Stock prices are inflated because of imbalance between supply and demand. Industry is burdened with fixed interest charges on borrowed capital, rather than with the flexible dividend cost of maintaining high equity capital. A tax bill which is designed to expand the economy should provide greater, not lesser, incentives for equity capital. [H.R. Rept. No. 749, 88th Cong., 1st Sess. c25-c26.]

The 1954-1964 battles, it should be noted, were concerned with dividends received by individuals, not with those received by corporations. For many years, the Code has made special allowance for intra-corporate dividends; since 1954, the allowance has taken the form of a special deduction equal to 85 per cent of dividends received, so that in effect only 15 per cent of a corporation's dividend income is subjected to tax. See §243. In addition, an affiliated group of corporations (supra p. 417) can eliminate intra-group dividends from gross income entirely by electing to file consolidated returns. Moreover, under a 1964 amendment, members of an affiliated group may deduct 100 per cent (rather than 85 per cent) of intra-group dividends — without filing consolidated returns — if they make an election under §214. As a condition of this election, however, only one $25,000 surtax exemption and one $100,000 minimum accumulated earnings credit is allowed to the group as a whole, rather than one to each corporation.

2. *Corporate elections under Subchapter S.* Subchapter S (§§1371-1377), enacted in 1958, permits an election by certain closely held corporations, provided all of the shareholders consent, under which the corporation will not be subject to the corporate income tax and its income will be taxed directly to the shareholders, whether distributed to them or accumulated by the corporation. The availability of this election alters, in certain respects, some of the comparisons and strategies suggested in the foregoing materials. Subchapter S is examined infra pages 740 et seq.

3. *Unincorporated enterprises electing to be taxed as corporations.* Sometimes a business enterprise is carried on in partnership form or as a proprietorship for local law reasons, but the investors would like it to be taxed as a corporation. For this possibility, see page 612 infra.

4. *References.* The double taxation of corporate dividends is discussed by various authorities in 1959 Tax Revision Compendium 1537-1609 (House Ways and Means Committee); see also Goode, The Corporation Income Tax (1951); Somers, The Place of the Corporation Income Tax in the Tax Structure, 5 Nat. Tax J. 279 (1952); Slitor, The

Corporation Income Tax: A Re-Evaluation, id. at 289; Groves, Postwar Taxation and Economic Progress 20-73 (1946); Holland, Dividends Under the Income Tax (1962).

For a comparison of the various forms of business enterprise, from the point of view of the practicing lawyer, see Knapp, Forms of Business Organization and the Federal Income Tax Laws (P.L.I. 1957).

SECTION B. THE CORPORATION AS A TAXABLE ENTITY

Section 7701(a)(3) of the 1954 Code, defining the term "corporation" to include "associations," is identical with §3797(a)(3) of the 1939 Code.

MORRISSEY v. COMMISSIONER

296 U.S. 344 (1935)

MR. CHIEF JUSTICE HUGHES delivered the opinion of the Court.

Petitioners, the trustees of an express trust, contest income taxes for the years 1924 to 1926, inclusive, upon the ground that the trust has been illegally treated as an "association." . . . We granted certiorari because of a conflict of decisions as to the distinction between an "association" and a "pure trust," the decisions being described in one of the cases as "seemingly in a hopeless state of confusion." Coleman-Gilbert Associates v. Commissioner, 76 F.(2d) 191, 193.

The facts were stipulated. In the year 1921 petitioners made a declaration of trust of real estate in Los Angeles. They were to be designated in "their collective capacity" as "Western Avenue Golf Club." The trustees were authorized to add to their number and to choose their successors; to purchase, encumber, sell, lease and operate the "described or other lands"; to construct and operate golf courses, club houses, etc.; to receive the rents, profits and income; to make loans and investments; to make regulations; and generally to manage the trust estate as if the trustees were its absolute owners. The trustees were declared to be without power to bind the beneficiaries personally by "any act, neglect or default," and the beneficiaries and all persons dealing with the trustees were required to look for payment or indemnity to the trust property. The beneficial interests were to be evidenced solely by transferable certificates for shares which were divided into 2,000 preferred shares of the par value of $100 each, and 2,000 common shares of no par value, and the rights of the respective shareholders in the surplus, profits, and capital assets were defined. "Share ledgers" showing the names and addresses of shareholders were to be kept.

The trustees might convene the shareholders in meeting for the purpose of making reports or considering recommendations, but the votes of the shareholders were to be advisory only. The death of a trustee or of a beneficiary was not to end the trust, which was to continue for twenty-five years unless sooner terminated by the trustees.

During the years 1921 and 1922, the trustees sold beneficial interests and paid commissions on the sales. About 42 acres (of the 155 acres described by the declaration of trust) were plotted into lots which were sold during the years 1921 to 1923, most of the sales being on the installment basis. On the remaining property a golf course and club house were constructed, and in 1923 this property with the improvements was conveyed to Western Avenue Golf Club, Inc., a California corporation, in exchange for its stock. Under a lease from the corporation, petitioners continued the operation of the golf course until January 12, 1924. After that date petitioners' activities were confined to collections of installments of principal and interest on contracts of purchase, the receipt of interest on bank

balances and of fees on assignments by holders of purchase contracts, the execution of conveyances to purchasers, the receipt of dividends from the incorporated club, and the distribution of moneys to the holders of beneficial interests. On December 31, 1923, the total number of outstanding beneficial interests was 3016, held by 920 persons; by December 31, 1926, the number of interests had been gradually decreased to 2172, held by 275 persons. The holdings by the trustees ranged approximately from 16 to 29 per cent.

Petitioners contend that they are trustees "of property held in trust," within [§641(a)], and are taxable accordingly and not as an "association." They urge that, to constitute an association, the applicable test requires "a quasi-corporate organization in which the beneficiaries, whether or not certificate holders, have some voice in the management and some control over the trustees and have an opportunity to exercise such control through the right to vote at meetings"; and that, in any event, the activities in which petitioners were engaged, during the tax years under consideration, did not constitute "a carrying on of business" within the rule applied by this Court.

The Government insists that the distinction between associations and the trusts taxed under [§641(a)] is between "business trusts on the one side" and other trusts "which are engaged merely in collecting the income and conserving the property against the day when it is to be distributed to the beneficiaries"; that Congress intended that all "business trusts" should be taxed as associations.

[Section 7701(a)(3) provides:]

"The term 'corporation' includes associations, joint-stock companies, and insurance companies." . . .

"Association" implies associates. It implies the entering into a joint enterprise, and, as the applicable regulation imports, an enterprise for the transaction of business. This is not the characteristic of an ordinary trust — whether created by will, deed, or declaration — by which particular property is conveyed to a trustee or is to be held by the settlor, on specified trusts, for the benefit of named or described persons. Such beneficiaries do not ordinarily, and as mere cestuis que trust, plan a common effort or enter into a combination for the conduct of a business enterprise. Undoubtedly the terms of an association may make the taking or acquiring of shares of interests sufficient to constitute participation, and may leave the management, or even control of the enterprise, to designated persons. But the nature and purpose of the cooperative undertaking will differentiate it from an ordinary trust. In what are called "business trusts" the object is not to hold and conserve particular property, with incidental powers, as in the traditional type of trusts, but to provide a medium for the conduct of a business and sharing its gains. Thus a trust may be created as a convenient method by which persons become associated for dealings in real estate, the development of tracts of land, the construction of improvements, and the purchase, management and sale of properties; or for dealings in securities or other personal property; or for the production, or manufacture, and sale of commodities; or for commerce, or other sorts of business; where those who become beneficially interested, either by joining in the plan at the outset, or by later participation according to the terms of the arrangement, seek to share the advantages of a union of their interests in the common enterprise.

The Government contends that such an organized community of effort for the doing of business presents the essential features of an association. Petitioners stress the significance of, and the limitations said to be implied in, the provision classifying associations with corporations.

The inclusion of associations with corporations implies resemblance; but it is resemblance and not identity. The resemblance points to features distinguishing

associations from partnerships as well as from ordinary trusts. As we have seen, the classification cannot be said to require organization under a statute, or with statutory privileges. The term embraces associations as they may exist at common law. Hecht v. Malley, 265 U.S. 144 (1924). We have already referred to the definitions, quoted in that case, showing the ordinary meaning of the term as applicable to a body of persons united without a charter "but upon the methods and forms used by incorporated bodies for the prosecution of some common enterprise." These definitions, while helpful, are not to be pressed so far as to make mere formal procedure a controlling test. The provision itself negatives such a construction. Thus unincorporated joint-stock companies have generally been regarded as bearing the closest resemblance to corporations. But, in the revenue acts, associations are mentioned separately and are not to be treated as limited to "joint-stock companies," although belonging to the same group. While the use of corporate forms may furnish persuasive evidence of the existence of an association, the absence of particular forms, or of the usual terminology of corporations, cannot be regarded as decisive. Thus an association may not have "directors" or "officers," but the "trustees" may function "in much the same manner as the directors in a corporation" for the purpose of carrying on the enterprise. The regulatory provisions of the trust instrument may take the place of "by-laws." And as there may be, under the reasoning in the *Hecht* case, an absence of control by beneficiaries such as is commonly exercised by stockholders in a business corporation, it cannot be considered to be essential to the existence of an association that those beneficially interested should hold meetings or elect their representatives. Again, while the faculty of transferring the interests of members without affecting the continuity of the enterprise may be deemed to be characteristic, the test of an association is not to be found in the mere formal evidence of interests or in a particular method of transfer.

What, then, are the salient features of a trust — when created and maintained as a medium for the carrying on of a business enterprise and sharing its gains — which may be regarded as making it analogous to a corporate organization? A corporation, as an entity, holds the title to the property embarked in the corporate undertaking. Trustees, as a continuing body with provision for succession, may afford a corresponding advantage during the existence of the trust. Corporate organization furnishes the opportunity for a centralized management through representatives of the members of the corporation. The designation of trustees, who are charged with the conduct of an enterprise — who act "in much the same manner as directors" — may provide a similar scheme, with corresponding effectiveness. Whether the trustees are named in the trust instrument with power to select successors, so as to constitute a self-perpetuating body, or are selected by, or with the advice of, those beneficially interested in the undertaking, centralization of management analogous to that of corporate activities may be achieved. An enterprise carried on by means of a trust may be secure from termination or interruption by the death of owners of beneficial interests and in this respect their interests are distinguished from those of partners and are akin to the interests of members of a corporation. And the trust type of organization facilitates, as does corporate organization, the transfer of beneficial interests without affecting the continuity of the enterprise, and also the introduction of large numbers of participants. The trust method also permits the limitation of the personal liability of participants to the property embarked in the undertaking.

It is no answer to say that these advantages flow from the very nature of trusts. For the question has arisen because of the use and adaptation of the trust mechanism. The suggestion ignores the postulate that we are considering those trusts which have the distinctive feature of being created to enable the participants to

carry on a business and divide the gains which accrue from their common undertaking, — trusts that thus satisfy the primary conception of association and have the attributes to which we have referred, distinguishing them from partnerships. In such a case, we think that these attributes make the trust sufficiently analogous to corporate organization to justify the conclusion that Congress intended that the income of the enterprise should be taxed in the same manner as that of corporations.

Applying these principles to the instant case, we are of the opinion that the trust constituted an association. The trust was created for the development of a tract of land through the construction and operation of golf courses, club houses, *etc.* and the conduct of incidental businesses, with broad powers for the purchase, operation and sale of properties. Provision was made for the issue of shares of beneficial interests, with described rights and priorities. There were to be preferred shares of the value of $100 each and common shares of no par value. Thus those who took beneficial interests became shareholders in the common undertaking to be conducted for their profit according to the terms of the arrangement. They were not the less associated in that undertaking because the arrangement vested the management and control in the trustees. And the contemplated development of the tract of land held at the outset, even if other properties were not acquired, involved what was essentially a business enterprise. The arrangement provided for centralized control, continuity, and limited liability, and the analogy to corporate organization was carried still further by the provision for the issue of transferable certificates.

Under the trust, a considerable portion of the property was surveyed and subdivided into lots, which were sold and, to facilitate the sales, the subdivided property was improved by the construction of streets, sidewalks, and curbs. The fact that these sales were made before the beginning of the tax years here in question, and that the remaining property was conveyed to a corporation in exchange for its stock, did not alter the character of the organization. Its character was determined by the terms of the trust instrument. It was not a liquidating trust; it was still an organization for profit, and the profits were still coming in. The powers conferred on the trustees continued and could be exercised for such activities as the instrument authorized. . . .

The judgment is affirmed.

NOTE

1. *The 1954 "association" Regulations.* The "association" Regulations under the 1954 Code, Regs. §301.7701-2, are much more detailed than their pre-1954 counterpart, although there was no change in the applicable statute. The 1954 Regulations provide that the major characteristics of a "pure corporation" are (a) associates, (b) an objective to carry on business and divide the gains therefrom, (c) continuity of life, (d) centralization of management, (e) limited liability, and (f) free transferability of interests. They then go on to provide:

> (2) Since associates and an objective to carry on business for joint profit are essential characteristics of all organizations engaged in business for profit (other than the so-called one-man corporation and the sole proprietorship), the absence of either of these essential characteristics will cause an arrangement among co-owners of property for the development of such property for the separate profit of each not to be classified as an association. Some of the major characteristics of a corporation are common to trusts and corporations, and others are common to partnerships and corporations. Characteristics common to trusts and corporations are not material in attempting to distinguish between a trust and an association, and characteristics common to partnerships and corporations are not material in attempting to distinguish between an

association and a partnership. For example, since centralization of management, continuity of life, free transferability of interests, and limited liability are generally common to trusts and corporations, the determination of whether a trust which has such characteristics is to be treated for tax purposes as a trust or as an association depends on whether there are associates and an objective to carry on business and divide the gains therefrom. On the other hand, since associates and an objective to carry on business and divide the gains therefrom are generally common to both corporations and partnerships, the determination of whether an organization which has such characteristics is to be treated for tax purposes as a partnership or as an association depends on whether there exists centralization of management, continuity of life, free transferability of interests, and limited liability.

(3) An unincorporated organization shall not be classified as an association unless such organization has more corporate characteristics than noncorporate characteristics. In determining whether an organization has more corporate characteristics than noncorporate characteristics, all characteristics common to both types of organizations shall not be considered. For example, if a limited partnership has centralized management and free transferability of interests but lacks continuity of life and limited liability, and if the limited partnership has no other characteristics which are significant in determining its classification, such limited partnership is not classified as an association. Although the limited partnership also has associates and an objective to carry on business and divide the gains thereform, these characteristics are not considered because they are common to both corporations and partnerships. [Regs. §301.7701-2(a).]

See Zarky, Unincorporated Organizations Taxable as Corporations, 1961 So. Calif. Tax Inst. 277; Lyons, Comments on the New Regulations on Associations, 16 Tax L. Rev. 441 (1961); Sarner, Associations Taxable as Corporations: A Review and a Look Ahead, 20 N.Y.U. Inst. on Fed. Taxation 609 (1962).

2. *Professional associations and corporate status.* Although most of the "association" litigation concerns unincorporated entities that wish to avoid corporate status under the Internal Revenue Code, occasionally the shoe is on the other foot. See United States v. Kintner, 216 F.2d 418 (9th Cir. 1954), involving a group of physicians who wished to participate in a qualified pension plan; they could not do so if they practiced as partners, since §401 requires the plan to be "for the exclusive benefit of . . . employees," and they could not become employees of a corporation because the state law does not permit a corporation to practice medicine. An "association" gave them the status of a corporation for federal income tax purposes, without running afoul of state restrictions on the practice of medicine. In addition to pensions, the employees of an "association" may qualify for excludable sick pay under §105(d), employees' death benefits under §101(b), and other tax advantages that are denied to self-employed persons and partners.

There may be more than one way to skin a cat. A number of states have recently enacted legislation to permit attorneys, physicians, and other professionals to organize groups — sometimes called "corporations," sometimes "associations" — for the practice of their profession. The Connecticut statute (P.A. 158, §44), which is a rider to the Uniform Partnership Act rather than part of the corporation laws, provides in part:

> Notwithstanding the foregoing provisions of this Act, any three or more persons, licensed or authorized to practice a profession by the State of Connecticut, may associate to practice such profession for profit, if the articles of association of the members provide that the association thereby formed and hereby authorized shall have at least three of the following four attributes: (a) Continuity of life so that the death, insanity, bankruptcy, retirement, resignation, or expulsion of any member will not cause a dissolution of the association; (b) centralized management so that any one or more but less than all of the members has continuing exclusive authority to make management decisions necessary to the conduct of the professional business for which the association was formed, and so that no member of the association, acting without the authority of the managing member or members, shall have the power to bind the association by his act; (c) limited liability so that the individual members of the asso-

ciation shall not be individually or severally liable for its debts; provided, however, the members shall in no way limit their individual or several liability in the articles of association, or otherwise, for any acts of reckless or wanton misconduct, negligence, malpractice, professional misconduct, or tort; and (d) free transferability of interests so that each of its members or those members owing substantially all of the interests in the association have the power, without the consent of other members, to substitute for themselves in the same association a person duly licensed or authorized to practice the profession for which the association was formed who is not a member of the association, or, a modified form of free transferability of interests so that each member of the association can transfer his interests to a person so licensed or authorized who is not a member of the association only after having offered such interest to the association or to the other members of the association at its fair market value as established in the articles of association, or otherwise.

At the end of 1963, the Internal Revenue Service issued proposed Regulations under which these new-style professional groups would find it almost impossible to qualify as "associations" and hence as corporations. 28 Fed. Reg. 13,750 (Dec. 17, 1963). As proposed, the new Regulations eliminate an example in the 1954 Regulations which endorsed the result in the *Kintner* case, supra.

See Bittker, Professional Associations and Federal Income Taxation: Some Questions and Comments, 17 Tax L. Rev. 1 (1961); Ohl, Corporate Practice of Law in New York, 40 Taxes 263 (1962); Note, Professional Corporations and Associations, 75 Harv. L. Rev. 776 (1962); Snyder and Weckstein, Quasi-Corporations, Quasi-Employees, and Quasi-Tax Relief for Professional Persons, 48 Cornell L.Q. 613, 634-709 (1963); Grayck, Professional Associations and the Kintner Regulations: Some Answers, More Questions, and Further Comments, 17 Tax L. Rev. 469 (1962); Anderson, Tax Aspects of Professional Corporations, 1963 So. Calif. Tax Inst. 309.

Since the major reason for "professional corporation" laws is to enable self-employed attorneys, physicians, etc. to establish qualified pension and profit-sharing plans for themselves, pressure for the enactment and use of this type of legislation may be somewhat reduced by the enactment in 1962 of the Self-Employed Individuals Tax Retirement Act, which grants various tax concessions to such plans even though the beneficiaries are not "employees" of another person or entity. Despite the new legislation, however, there are advantages in participating as an "employee" in an old-style pension or profit-sharing plan. See Whiteside, Self-Employed Individuals Retirement Act of 1962, 51 Ky. L.J. 325 (1962); Snyder and Weckstein, supra.

3. *Unincorporated enterprises electing to be taxed as corporations.* In 1954, Congress enacted §1361, permitting certain unincorporated business enterprises (both partnerships and individual proprietorships) to elect to be taxed as corporations. An enterprise will not qualify if it is owned by more than fifty persons, and it is necessary that capital be a "material income producing factor" or that 50 per cent or more of gross income be derived from trading as a principal or acting as a broker in sales of real property, commodities, or securities. Ordinarily, of course, any enterprise that wishes to be taxed as a corporation can achieve its aim easily enough, by organizing in corporate form. Lawyers, doctors, and other professionals who are not permitted to practice in corporate form will not be able to take advantage of §1361, however, because they will be unable to meet the capital or gross income requirements. But individuals and partnerships that do not wish to limit their personal liability and can meet the requirements of §1361 may now continue to do business in unincorporated form while being taxed as corporations.

The provision "apparently received its main impetus and perhaps the only reason for its existence from the situation of a particular Georgia partnership," according to Surrey, The Congress and the Tax Lobbyist — How Special Tax Provisions Get Enacted, 70 Harv. L. Rev. 1145, 1149n (1957). It raises many technical problems, see Brown, Unincorporated Business Enterprises Electing to Be Taxed as Domestic Corporations — Section 1361, 1955 So. Calif. Tax Inst. 281; Wein's Estate v. Commissioner, 40 T.C. 454 (1963), aff'd per curiam, 330 F.2d 957 (3d Cir. 1964) (on incorporation of proprietorship that had elected under §1361, election is terminated; and under §1361(1), transaction must be treated as a complete liquidation requiring recognition of gain or loss); Borin v. United States, 322 F.2d 685 (5th Cir. 1963) (§1361 election valid though made after death of

proprietor); Sperapani v. Commissioner, 42 T.C. No. 18 (1964) (capital as a material income-producing factor).

Regulations under §1361 were not issued until 1960. As of 1959-1960, only 445 enterprises had elected to be taxed under §1361. Statistics of Income, Corporation Income Tax Returns, 1959-1960, pp. 7-8.

PAYMER v. COMMISSIONER

150 F.2d 334 (2d Cir. 1945)

Before L. HAND, SWAN, and CHASE, Circuit Judges.

CHASE, Circuit Judge.

These four petitions, which were consolidated for hearing, require us to decide whether the 1938 net income of certain real estate was taxable to the petitioning corporations each of whom held the title to a part of it, or to the petitioning individuals who owned all the stock of the two corporations. And, if the corporations are taxable on the income, whether their failure to file income and excess profits returns made them liable for a penalty. The Commissioner determined that the corporations were taxable and also that the individuals, to whom the income was paid directly by the lessees of the property, were taxable on the amounts each received on the theory that what was done was the equivalent of dividend distributions by the corporations. He also assessed a penalty against each corporation. The Tax Court affirmed.

The individual petitioners are two brothers, who have been in partnership for many years under the name of Paymer Bros., owning partnership property which has in part been real estate that they improved and managed. Because Samuel had become the co-signer on a note and the guarantor of an account both of which were overdue in 1932, it was then thought that he might be sued by creditors and the partnership property attached. To avoid that, if possible, the partners in that year organized Raymep Realty Corp., Inc. and Westrich Realty Corp., two New York corporations which were given broad powers to own, manage and dispose of real estate and conveyed to each of them a parcel of income-producing real estate in New York City. The conveyance to Raymep was in 1932 and was made directly by the partners. That to Westrich was conveyed first by the partners to Paymer Bros. Realty Corp. Inc., a corporation wholly owned by them, and was then by it deeded to Westrich. In each instance, each of the two partners received half of the stock of the grantee in exchange for the property. The minutes of a meeting of directors and stockholders of each grantee held about the time the property was deeded to it contain the following statement:

> The said conveyance was and is made with the express understanding that the corporation is only to hold title to the property, the beneficial interest and profits to be in the individual stockholders and the management and control of the property to be exclusively theirs. It is understood and agreed that this corporation was only organized for the convenience of the shareholders in the management thereof.

After these meetings neither corporate petitioner held any others. Neither ever elected any officers or directors after Samuel was elected president and Joseph treasurer at the organization meeting, ever had any office or bank account, or collected any income. The two partners managed the real estate conveyed as above and collected the income, paid the expenses, deposited the money received in the bank account of Paymer Bros., and used the net profits of the real estate as they pleased, treating that property as the partnership property it had formerly been. The leases existing on the real estate when the conveyances were made were not assigned to the corporations and nothing was done by Westrich in respect to the property held in its name. That is not true, however, as to Raymep for a loan

of $50,000 was obtained by it in 1938 and as part security for the loan it assigned to the lender all the lessor's rights, profits and interest in two leases on the property and covenanted that they were in full force and effect and that it was the sole lessor. Capital stock tax returns were filed by both Raymep and Westrich for the fiscal year ended June 30, 1938. During 1938 the two partners received gross rentals amounting to $18,999.86 from the property to which Raymep held the title and $3300 from that whose title was held by Westrich.

The petitioners, acting on the advice of their accountant, included the 1938 income from the property held by these corporations in their own partnership information return for that year, in which they also included the incomes and expenses of two other corporations wholly owned by them. The net income so reported was treated as the net income of the partners in their returns.

The petitioners now contend that Raymep and Westrich were mere "dummies" which held the legal title to property owned by the two individual petitioners and that both corporations are to be disregarded for income tax purposes. As a general rule a corporation is a taxpayer separate and distinct from its stockholders. New Colonial Ice Co. v. Helvering, 292 U.S. 435, 442. And this applies to a corporation wholly owned by one stockholder. Burnet v. Commonwealth Improvement Co., 287 U.S. 415. But there are exceptions and the corporate form will be disregarded where it serves no business purpose and is but a sham. Gregory v. Helvering, 293 U.S. 465. So, too, a taxpayer may gain the advantage of doing his own business through a wholly owned corporation if he pleases, but the treasury may disregard the separate corporate entity where it serves but as a shield against taxation and treat the one who actually may take the benefit of the income as the owner of the property which produces it and tax him accordingly. Higgins v. Smith, 308 U.S. 473. Yet the treasury may treat a corporation as a separate taxable entity when its organization "is followed by the carrying on of business by the corporation." Moline Properties v. Commissioner, 319 U.S. 436, 439.

We think that Raymep was active enough to justify holding that it did engage in business in 1938. The absence of books, records and offices and the failure to hold corporate meetings are not decisive on that question. Though Raymep was organized solely to deter creditors of one of the partners, it apparently was impossible or impracticable to use it solely for that purpose when it became necessary or desirable to secure the above mentioned loan in a substantial amount. There was, to be sure, less business activity than was shown in Sheldon Building Corporation v. Commissioner, 7 Cir., 118 F.2d 835, but we think enough did appear to make the principles applied in that case applicable to Raymep and that the decision of the Tax Court should be affirmed as to the taxability of that corporation. . . .

Westrich, however, was at all times but a passive dummy which did nothing but take and hold the title to the real estate conveyed to it. It served no business purpose in connection with the property and was intended to serve only as a blind to deter the creditors of one of the partners. It was but a sham to be disregarded for tax purposes. . . .

NOTE

1. *Once a dummy, always a dummy?* Can a corporation shift back and forth, depending on its business activities in the taxable year in question, from one status to another?

2. *Other cases.* Three wholly owned subsidiaries of the Air Reduction Corporation entered into contracts with their parent employing the subsidiaries as agents to manage and operate designated manufacturing plants and to sell the output of these plants. The

parent was to furnish working capital, executive management, and office facilities. The subsidiaries agreed to pay all profits to the parent except for 6 per cent on their outstanding capital stock, which was in each case nominal in amount. Title to the plants and related equipment was in the subsidiaries, but these assets were offset by loans payable to the parent. In National Carbide Corp. v. Commissioner, 336 U.S. 422 (1949), the Supreme Court held that the entire operating profit, not merely the retained 6 per cent, was taxable to the subsidiaries, citing Lucas v. Earl and related cases. The Court went on:

> What we have said does not foreclose a true corporate agent or trustee from handling the property and income of its owner-principal without being taxable therefor. Whether the corporation operates in the name and for the account of the principal, binds the principal by its actions, transmits money received to the principal, and whether receipt of income is attributable to the services of employees of the principal and to assets belonging to the principal are some of the relevant considerations in determining whether a true agency exists. If the corporation is a true agent, its relations with its principal must not be dependent upon the fact that it is owned by the principal, if such is the case. Its business purpose must be the carrying on of the normal duties of an agent. [336 U.S. at 437.]

In Interstate Transit Lines v. Commissioner, 319 U.S. 590 (1943), a parent corporation was denied a deduction under §162(a) for a payment to its wholly owned subsidiary to defray the subsidiary's operating deficit for the taxable year, despite the fact that by contract it was entitled to the subsidiary's profits and was to reimburse the subsidiary for its losses. The Court held that the subsidiary's operating deficit was not an expense of the parent's business. The case was complicated by the fact that the subsidiary was organized to engage in operations (intrastate transportation in California) that were forbidden to the parent because it was a foreign corporation. The Court was not called upon to decide whether the parent's payments could be treated as an additional investment in the subsidiary to be offset against the money or property received by the parent if and when it sells or liquidates the subsidiary.

See Fishing Tackle Products Co. v. Commissioner, 27 T.C. 638 (1957), permitting a parent corporation to deduct under §162(a) amounts paid to a subsidiary to reimburse it for net operating losses sustained in manufacturing a product for sale to the parent, which distributed the product in question. The *National Carbide* and *Interstate Transit* cases were distinguished on tenuous grounds.

Section C. Undistributed Corporate Earnings

1. *Unreasonable Accumulations of Surplus*

Sections 531-537 of the 1954 Code, imposing an "accumulated earnings tax," are derived, with substantial modifications, from §102 of the 1939 Code.

WORLD PUBLISHING CO. v. UNITED STATES

169 F.2d 186 (10th Cir. 1948), cert. denied, 335 U.S. 911, rehearing denied, 336 U.S. 915 (1949)

Before Phillips, Bratton and Huxman, Circuit Judges.

Huxman, Circuit Judge.

Section [531] of the Internal Revenue Code imposes an additional tax upon a corporation formed or availed of for the purpose of preventing the imposition of the surtax upon its shareholders or the shareholders of any other corporation through the medium of permitting earnings or profits to accumulate instead of being divided or distributed; and [the statute] provides that the fact that earn-

ings or profits of a corporation are permitted to accumulate beyond the reasonable needs of the business shall be determinative of the purpose to avoid surtax on shareholders unless the corporation shall prove to the contrary by a clear preponderance of the evidence.*

The Commissioner of Internal Revenue assessed additional taxes against the World Publishing Company, herein called the taxpayer, under the above Section for the years 1942 and 1943. The tax was paid, and a timely claim for a refund thereof was denied. A suit for its recovery was thereupon filed in the United States District Court for the Northern District of Oklahoma. The taxpayer has appealed from an adverse judgment.

The taxpayer, a corporation, publishing the Tulsa World, a daily newspaper in Tulsa, Oklahoma, was organized in 1906 with an original capital of $25,000.00. Through subsequent increases, its capital stock, as of December 31, 1943, stood at $1,000,000.00, consisting of 10,000 shares. Eugene Lorton, the president, owns 9,997 of these shares; his wife, Maud Lorton, owns one share; F. O. Larson, an employee, owns one share; and N. G. Henthorne, an employee, owns the remaining share. These parties have been the directors of the taxpayer since 1917. . . .

The taxpayer occupies an enviable financial status.[1] Thus it will be seen that in 1941, the net earnings and profits were $12,636.93, and the earned surplus was $562,521.98. In 1942, the net earnings had risen to $80,540.28, and the surplus was $643,062.26. In 1943, the net earnings increased to $96,564.21, and the earned surplus to $739,626.47. The total assets had increased from $1,570,166.29 in 1941, to $1,595,883.13 in 1942.

The taxpayer's paper grew from a small paper with a circulation of 7,000 to a present daily circulation of 70,000 and a Sunday circulation of 110,000. In 1917, it constructed a five-story building and installed large presses. In 1927, it added four stories to its building. The presses installed in 1917 were used presses and were reconditioned in 1927. On December 12, 1939, the directors set up a reserve of $250,000.00 for the purchase of new printing presses and the acquisition of a lot and building suitable for installing such presses. In 1940, the taxpayer purchased land adjacent to its building for $60,000.00, and announced that a new building would be erected. In July, 1941, a corporation under the name of the Newspaper Printing Corporation was formed. One-half of its stock was issued to the taxpayer and the other half to the Tulsa Tribune Company, publisher of the Tulsa Tribune, a competing paper in the City of Tulsa. From that time on, the Printing Corporation printed both papers, using taxpayer's mechanical plant, and the Tribune moved its office into the taxpayer's building.

It had been the settled practice of taxpayer throughout its history to finance its expansion and its mechanical equipment from earnings. The only loan ever executed by it was one of $50,000.00, in 1927, made to complete the additional four stories to its building.

At the meeting of the Board of Directors on December 21, 1942, a resolution was adopted setting aside an additional $150,000.00 for presses and accessory equipment, and $100,000.00 for the construction of the new building, and author-

* Section 533 (a) of the 1954 Code requires only a "preponderance," instead of a "clear preponderance," of the evidence. — Ed.

1

Year	Net Earnings and Profits	Earned Surplus	Year	Net Earnings and Profits	Earned Surplus
1934	$49,154.16	$488,176.20	1939	$18,826.42	$556,368.20
1935	19,871.07	488,047.27	1940	35,916.85	574,285.05
1936	34,238.10	502,285.37	1941	12,636.93	562,521.98
1937	18,250.89	520,536.26	1942	80,540.28	643,062.26
1938	37,005.52	557,541.78	1943	96,564.21	739,626.47

izing the President to proceed with plans for the purchase of new equipment. The war ensued and the purchase of the presses and the construction of the building were temporarily rendered impossible.

Under the arrangement with the Tribune, it was agreed that the Tribune was to pay one-half of the cost of the presses and accessory equipment, but there was some doubt about its ability to meet this commitment and it was perhaps necessary that taxpayer be prepared to advance the full cost of the presses and accessory equipment. At the end of 1942, the estimated cost of the building was $150,000.00, and the anticipated minimum cost of new presses and accessory equipment was $350,000.00.

The trial court's findings that the accumulation of the 1942 and 1943 surplus profits was in excess of the reasonable needs of the business, and that the taxpayer had failed to overcome the statutory presumption arising therefrom, are binding upon us if they find support in the record. Whether the accumulated reserves exceeded the reasonable needs of the business cannot be determined from a consideration of a single factor. It is necessary to consider and view all of the facts and circumstances in the light of the setting of the taxpayer in question. The factors which the court considered in reaching its conclusion are set out concisely and clearly in its detailed findings of fact as reported in 72 F. Supp. 886, and we concur therein. No useful purpose would be served by repeating in detail what is so clearly stated in the court's findings. It is significant that the accumulated earned surplus upon the taxpayer's books as of December, 1941, was greater than the estimated minimum cost of the new presses, accessory equipment and of the building, as also is the fact that the Tulsa Tribune Company was chargeable with one-half of the cost of the presses and accessory equipment. While there was evidence that the Tulsa Tribune Company was not presently able to meet its one-half of this obligation and that the taxpayer would perhaps be required to advance such share of the cost, the Tulsa Tribune Company's liability for its share of such cost is nevertheless pertinent in considering whether the reserves accumulated by the taxpayer were beyond the reasonable needs of its business. It is agreed that at the time these reserves were set up, the contemplated improvements could not be made on account of the war. No one knew when they would be made. It was reasonable to assume that a number of years would ensue. During this time the financial status of the Tulsa Tribune might well be expected to improve and the prosperous condition of the taxpayer to continue; and further earnings could, no doubt, be expected.

The minutes of the Directors' meeting of December 21, 1942, and other testimony upon the possibility of a diminution of profits was offered to establish the reasonableness of the reserves in question. But, if, as pointed out by the court, no further profits would be required because the reserves already exceeded the estimated cost of the contemplated improvements, such testimony has very little probative value. At most, it is but one of the factors to be considered. The court also pointed out that since the arrangement between the two publishing companies, taxpayer's profits had greatly increased notwithstanding high war time taxes. While it is not required that the reserves be spent in the year in which they are created, so long as there is a present need for the expenditure, the fact that they could not be spent for a number of years during which additional earnings might be expected, in the light of taxpayer's financial history, is a relevant factor to be considered. All this, as well as the other factors which are set out in the trial court's findings, reasonably tend to support the court's finding that the accumulation of the profits of 1942 and 1943 was in excess of the reasonable needs of the business.

The only remaining question is whether the taxpayer met the burden which the

statute places upon it to overcome the presumption that it was availed of for the prohibited purposes. Such presumption arises by virtue of a finding that it accumulated profits beyond the reasonable needs of its business. Taxpayer must then negative such purpose by a clear preponderance of the evidence. Such purpose need not be the sole purpose behind the accumulation. It is sufficient if it is one of the determining purposes. We think that the trial court's finding that it did not meet the requirement of the statute finds support in the record and is, therefore, binding on us. In all such cases as this, no single factor can be pointed to as controlling. A correct answer can be reached only in considering all of the facts and circumstances of the particular business under consideration and of the owner or owners of such business. When we consider the setting of taxpayer in its particular field of endeavor, it presents a bright picture. It had grown from an original investment of $25,000.00 to a corporation having assets of $1,595,883.13. Even during the depression years, it had enjoyed substantial profits. There was nothing in the picture to indicate that these profits would not continue or even increase. In addition to this, we have, for all practical purposes, a one-man corporation. Eugene Lorton owned all but three of the 10,000 shares of stock. He receives 99.97 per cent of all earnings distributed as dividends. If the earnings for 1942 and 1943 had been distributed to the stockholders, his surtaxes would have been increased in the amount of $69,520.35. All of these facts and circumstances tend to support the conclusions of the court that the corporation was availed of for the purpose of preventing the imposition of surtax upon its shareholders.

Affirmed.

PHILLIPS, Circuit Judge (dissenting).

. . . At a meeting of the Board of Directors of the World on December 21, 1942, Lorton, President of the World, reported that the Printing Corporation had been formed as a part of a long-range program of improvement and expansion; that the "through-put" of newspapers through the presses had more than doubled and had resulted in an "unsound functional operating position"; that it was imperative that a new press be purchased and installed and that a new building be constructed to house it "at the earliest practicable date," and that he estimated the minimum cost of the new press at $350,000, and the new building at $150,000. Those estimates in the light of future increase in costs were not merely conservative. They were too low. Thereupon, a resolution was adopted setting aside an additional $150,000 for a press and accessory equipment and $100,000 for the construction of the new building, and authorizing the President of the World to proceed with the plans to purchase a new press and accessory equipment and to construct the new building at the earliest practical date. However, the War ensued and the purchase of the press and accessory equipment and the construction of the building were temporarily rendered impossible.

It should be noted that, while the Tribune Publishing Company was to advance one-half of the cost of the press and accessory equipment, there was much doubt that it would be financially able to meet its commitment, and it was necessary for the World to be prepared to advance full cost of the press and accessory equipment.

In 1944, the World entered into a contract for the acquisition of a new press and accessory equipment. That contract was canceled. On May 25, 1945, the World entered nito a contract with Hoe & Company for the new press and accessory equipment, and made a down payment of $10,000. The World obligated itself to pay the full cost of such press and accessory equipment. The estimated cost of the new press and accessory equipment in May, 1945, was $636,489.38. The contract, however, contained an escalator clause, under which actual cost was to be computed on cost at time of delivery. The cost will be substantially in excess of the above figure.

An estimate furnished the World on August 18, 1945, by H. R. Lohman Company, of Tulsa, fixed the cost of the building at $300,000 and dismantling a building on the lot at $1600. Thereafter, a contract for the construction of the building was let on a cost plus basis. The cost will be greatly in excess of $300,000. Thus, it will be seen that the estimated cost of the press and accessory equipment and the new building in 1945 had increased to an aggregate of $938,089.38.

At the end of 1942, the World had quick assets, consisting of cash, stocks, and bonds, of $631,252.57, and current liabilities of $67,600.78, leaving an excess of $563,651.79 of quick assets over current liabilities. At the end of 1943, the World had quick assets of $859,099.53, and current liabilities of $187,837.93, leaving an excess of $671,261.60 of quick assets over current liabilities.

The World [paid] dividends in the years 1934 to 1941, inclusive, and in 1944 and 1945.

In the years 1942 and 1943, the World set aside its net earnings, after taxes, for the expansion program and did not pay any dividends. . . .

Mr. Lorton and Mr. Henthorne testified that the World withheld distribution of dividends in 1942 and 1943, in order to have funds available to finance the expansion program and not to avoid the imposition of a surtax upon its shareholders.

Had the World distributed as dividends in 1942 the $80,430.59, held by the Commissioner to be taxable under [§531], its quick assets at the end of 1942 would have been $483,221.20, or less than the then grossly inadequate estimate of the cost of the new building and the new press and accessory equipment, leaving no liquid funds for working capital. It is obvious that the reserve set aside at the end of 1942 was not in excess of the reasonable needs of the business of the World.

The excess of quick assets over current liabilities at the end of 1943 was $671,261.60. Viewed in the light of the earlier estimate of the cost of the new press, accessory equipment, and building, it was not necessary to withhold the distribution of dividends in the amount of $70,997.44. But, we know that by the end of 1943, costs had greatly increased and it is obvious from what it did, that the World revised upward its estimate of the cost of the press, accessory equipment, and building at the end of 1943. By May, 1945, the estimated cost of the press and accessory equipment was $636,489.38, and by August, 1945, the estimated cost of the building was $301,600. Clearly, the addition of $70,997.44 to the reserve at the end of 1943 was needed to meet justly anticipated increases in costs. In fact, it now appears that the reserves were substantially below the cost of the new press, accessory equipment, and the building, even if the Tribune Publishing Company should pay half of the cost of the press and accessory equipment, which is unlikely.

When the arrangement entered into with the Tribune Publishing Company was negotiated, $60,000 was advanced to the Printing Corporation by the World and the Tribune Publishing Company. No further advances were required. After the first six months, the Printing Corporation operated at substantial profits which were distributed monthly to the World and the Tribune Publishing Company, the Printing Corporation being a mere printing agency of the World and the Tribune Publishing Company.

The question is whether or not the World was availed of for the purpose of preventing the imposition of surtax upon its shareholders through the medium of the permitted earnings or profits, instead of being distributed as dividends. Section [533(a)] provides that the fact that earnings and profits of a corporation are permitted to accumulate beyond the reasonable needs of the business shall be determinative of the purpose to avoid surtax upon shareholders, unless the corporation by the clear preponderance* of the evidence shall prove to the contrary. The trial court found that the World has not met that burden. The findings of the

* See editor's note, supra page 616. — Ed.

trial court indicated that it placed strong reliance on the fact that the earned surplus of the World in 1941, 1942, and 1943 was in excess of the December, 1942, estimate of the cost of the new press and accessory equipment, and the building, even if the obligation of the Tribune Publishing Company to bear one-half of the cost of the press and accessory equipment should not be met. The trial court also stressed heavily the fact that the expansion program lay in the indefinite post-war future.

I cannot agree with the fact that the press and accessory equipment could not be immediately purchased and the fact that the building could not be constructed until the cessation of the War were pertinent considerations. The presses were old and could only be operated at 50 per cent of capacity. The load of the presses was increased when the arrangement was made to print both newspapers in the World plant. The fact that is was necessary for the World to acquire a new press and accessory equipment and to construct a new building in which to house them at the earliest possible date cannot be doubted. It was imperative that the World be in a position to act quickly when it became possible to purchase a new press and accessory equipment and construct the building. Surely, a business enterprise, with obsolete and badly worn equipment, might, during the War period, legitimately set aside a reserve fund to replace that equipment when available, and to construct the building necessary to house such equipment. To do so would be ordinary business prudence.

Undoubtedly, the World could have paid its earnings out in dividends and later borrowed, from Mr. Lorton, the money needed to purchase the press and accessory equipment and construct the building, but it was under no legal obligation to follow that course. It had the legal right to pursue the policy it had followed consistently throughout its history.

Moreover, I think the trial court erred in giving consideration to earned surplus. The cost of the new press and accessory equipment and the building would have had to be paid out of quick assets, not out of earned surplus, and as I have shown above, the quick assets in 1942 and 1943 were not in excess of a reasonable estimate of the cost of the new press and accessory equipment and the building when the reserves were increased in 1942 and 1943.

The argument is made that dividends of $47,000 and $45,000 were distributed in 1945 and 1946, respectively. The World could not determine, with certainty, that it would be able to make large earnings in 1945 and 1946. Newsprint was scarce. It was rationed severely. Advertising space had to be greatly curtailed. There was a short period when the World was unable to print any advertising whatever. It seems to me it was altogether reasonable for the World to set aside funds on hand to meet its imperative expansion program and it was not required to run the hazard of obtaining that necessary reserve from uncertain future earnings.

Aside from the fact that had dividends been declared in 1942 and 1943, the income tax liability of Mr. Lorton would have been greatly increased, it seems to me there is nothing in this record to justify the conclusion of the trial court. It is my opinion that, under the undisputed facts, the dividends accumulated were not beyond the reasonable needs of the business of the World, and that the World was not availed of for the purpose of preventing the imposition of surtax upon its shareholders. . . .

For the reasons indicated, I would reverse and remand, with instructions to enter judgment for the refunds claimed.

NOTE

1. *"Reasonably anticipated needs."* Section 537, providing that the term "reasonable needs of the business" includes the "reasonably anticipated" needs of the business, was enacted in 1954. Would it have aided the taxpayer in World Publishing Co.?

The Senate Report on the 1954 Code (p. 318) says of §537:

> It is intended that this provision will make clear that there is no requirement that the accumulated earnings and profits be invested immediately in the business so long as there is an indication that future needs of the business require such accumulation. In any case where there exists a definite plan for the investment of earnings and profits, such corporation need not necessarily consummate these plans in a relatively short period after the close of the taxable year. However, where the future needs of the business are uncertain or vague, or the plans for the future use of the accumulations are indefinite, the amendment does not prevent application of the accumulated earnings tax.

The Senate Report also states (pp. 69-70):

> If the retention of earnings is justified as of the close of the taxable year, subsequent events should not be used for the purpose of showing that the retention was unreasonable in such year. However, subsequent events may be considered to determine whether the corporation actually intended to consummate the plans for which the earnings were accumulated.

For cases in which §537 has been construed, see Sterling Distributors, Inc. v. United States, 313 F.2d 803 (5th Cir. 1963) (plans sufficiently definite, even though later abandoned); Motor Fuel Carriers, Inc. v. United States, 322 F.2d 576 (5th Cir. 1963) (plans too indefinite, even though later consummated).

2. *Presumptions, burden of proof, burden of going forward, etc.* Under §532, a corporation is subject to the accumulated earnings tax if it is "formed or availed of for the purpose of avoiding the income tax with respect to its shareholders . . . by permitting earnings and profits to accumulate instead of being divided or distributed." What is the relationship between this provision and the statutory presumptions — if that is what they are — of §533(a) (unreasonable accumulation shall be "determinative of the purpose to avoid the income tax with respect to shareholders" unless corporation proves to contrary by preponderance of evidence) and §533(b) (if corporation is a mere holding or investment company, this fact shall be "prima facie evidence of the purpose to avoid the income tax")? Before coming to a firm conclusion, note these 1954 innovations in the accumulated earnings tax:

(a) Section 534, relating to the burden of proof on the issue of unreasonable accumulations, in Tax Court proceedings. Query: is a notice of deficiency "based in whole or in part on the allegation" that there has been an accumulation beyond the reasonable needs of the business only if there is an explicit allegation to that effect in the notice itself? Whenever the revenue agent who proposed the notice of deficiency based his recommendation on such an allegation? Whenever the government relies on such an allegation in the Tax Court proceeding? Why is the new procedure confined to Tax Court proceedings?

(b) Section 535(c)(1)(A), providing, in effect, that even if the accumulated earnings tax is applicable, it shall not be imposed on any part of the taxable year's earnings and profits that is "retained for the reasonable needs of the business." Does this provision come into play if the corporation had reasonable needs, but in fact retained the earnings primarily to avoid income tax on its shareholders?

For some of the procedural difficulties introduced by the 1954 reforms, see Young Motor Co. v. Commissioner, 316 F.2d 267 (1st Cir. 1963); R. Gsell & Co. v. Commissioner, 294 F.2d 321 (2d Cir. 1961); Wagman, Taxation of Accumulated Earnings and Profits: A Procedural Wrangle, 37 Taxes 573 (1959).

Procedural problems aside, if the accumulation is undeniably beyond the reasonable

needs of the business, what kind of evidence might be introduced by the taxpayer to satisfy the requirement of §533(a)?

LION CLOTHING CO. v. COMMISSIONER
8 T.C. 1181 (1947)

BLACK, Judge: The principal question in this proceeding is whether petitioner is subject to the surtax on corporations imposed by [§531] for the calendar years 1940, 1941, and 1942. . . .

The respondent did not determine, and he does not contend that petitioner was "formed" for the prohibited purpose. He did determine and he does contend that petitioner was "availed of" for that purpose. It may also be noted at the start that the respondent did not determine, nor does he contend, that petitioner was "a mere holding or investment company" as that term is used in section [533(b)]. It is clear, of course, that petitioner is not a mere holding or investment company, but is a very active business enterprise, with a large volume of business, a considerable number of employees, and, evidently, a very large number of customers. Petitioner was formed for the purpose of engaging in the retail sale of clothing, and during the taxable years here involved it was engaged in that business and was quite successful in its operations.

The respondent did determine and he contends that during the taxable years here in question petitioner permitted its earnings or profits "to accumulate beyond the reasonable needs of the business," as that phrase is used in [§533(a)] of the code. By virtue of [§533(a)] the accumulation of earnings or profits beyond reasonable needs is determinative of a purpose to prevent the imposition of the surtax upon the shareholders, unless the corporation by a clear preponderance* of evidence proves to the contrary. See Whitney Chain & Mfg. Co., 3 T.C. 1109; affd., 149 Fed. (2d) 936. . . .

We think petitioner has met its burden of proof. Upon the evidence received at the hearing, we have found as ultimate facts that during the taxable years in question petitioner did not permit its earnings or profits to accumulate beyond the reasonable needs of its business and that it was not availed of for the prohibited purpose. The reason we think that earnings and profits of petitioner were not accumulated beyond the reasonable needs of its business is because petitioner has proved by evidence which seems convincing to us that in the year 1938 it adopted by appropriate corporate action a policy of accumulating a part of its net profits each year to be added to surplus "so that the company have funds for expansion or any unforeseen depression that might occur," and that this policy under all the circumstances of the case was a reasonable one and has been carried out, including the taxable years which we have before us. We do not think it can be said that a taxpayer's earnings were accumulated beyond the reasonable needs of the business where it is shown that the purpose of their accumulation is to retire mortgage indebtedness, to make improvements which will add to the convenience and efficiency of operation of the business, to expand operations by purchasing the interests of concessionaires, to accumulate some cash reserves as a bulwark against future depressions, and to meet unknown risks of the war and post-war period. All these things we think petitioner has proved with reasonable clarity. The facts with respect thereto are set forth in our findings of fact and need not be repeated in detail here. The following table taken from petitioner's balance sheets will show what might be termed its net quick assets and current liabilities in each of the taxable years:

* Since 1954, the statutory term has been "preponderance" rather than "clear preponderance" — ED.

Quick net asset resources	Dec. 31, 1940	Dec. 31, 1941	Dec. 31, 1942
Quick gross asset resources:			
Cash	$188,974.03	$218,143.98	$429,300.29
United States bonds	12,185.00	34,545.00	35,000.00
Union Trust Co. account:			
Cash	8,215.60	13,073.62	22,846.02
Notes receivable	8,932.09	12,231.15	13,438.06
Total	$218,306.72	$277,993.75	$500,584.37
Deduct current liabilities:			
Due concessionaires	$ 59,974.20	$ 67,252.02	$103,267.07
Accrued taxes	17,048.79	44,106.40	132,673.69
Mortgage payment	20,000.00	20,000.00	20,000.00
Due stockholders on demand	53,509.01	55,051.04	55,857.99
Total	$150,532.00	$186,409.46	$311,798.75
Quick net asset resources	$ 67,774.72	$ 91,584.29	$188,785.62

We think petitioner has established by satisfactory evidence that in each of the taxable years it was reasonable to add accumulations to its surplus so that it would have ample funds on hand without borrowing from banks to finance the following reasonable business requirements:

	Dec. 31, 1940	Dec. 31, 1941	Dec. 31, 1942
Installation of new elevator	$ 40,000.00	$ 40,000.00	$ 40,000.00
Installation of new fixtures	50,000.00	50,000.00	50,000.00
Purchase of Hafter interest	100,000.00	100,000.00	100,000.00
	$190,000.00	$190,000.00	$190,000.00

In addition to the above, we think petitioner has established that if and when, after the taxable years in question, clothing becomes more plentiful in supply it will be necessary to increase the size of its inventories. Petitioner estimates that $100,000 will be needed for this purpose. We have no reason to doubt the bona fides of the estimate, considering the very large annual volume of petitioner's business. Also, when [wartime government restrictions] on credit are removed it will be necessary to increase the size of its accounts receivable. Petitioner estimates that $50,000 will be required for this purpose. Thus it will be seen that substantial amounts of cash will be necessary for these purposes, even though it may turn out that petitioner has overestimated them. When all these facts are taken into consideration, we think they are sufficient to show that in none of the taxable years did petitioner accumulate its earnings beyond the reasonable needs of the business. In 1940, the first taxable year which we have before us, petitioner's net profits before taxes were $59,353.69. Of this amount, it paid $12,742.88 to the Federal Government in income and excess profits taxes, distributed $11,000 to its stockholders as dividends, and added $35,610.81 to earned surplus. In 1941 petitioner's net profits before taxes were $104,716.15. Of this amount, $37,248.19 was paid to the Federal Government in income and excess profits taxes, $15,000 was distributed to stockholders as dividends, and $52,467.96 was added to earned surplus. In 1942, the last of the taxable years which we have before us, petitioner's net profits were $182,725.74. Of this amount, petitioner paid $116,733.44 to the Federal Government in income and excess profits taxes, disbursed $20,000 to stockholders in dividends, and added $45,992.30 to earned surplus.

Thus we see from the foregoing facts that, while petitioner in the taxable years before us had large earnings, it paid large taxes to the Federal Government, disbursed substantial cash dividends to its stockholders, and added substantial

amounts to its earned surplus. In the light of the facts recited in our findings of fact, we think the additions which petitioner made in each of the taxable years to its earned surplus were reasonable in amount and were accumulated to meet the legitimate needs of the business and not to prevent the imposition of the surtax on its stockholders.

One of the cases which respondent cites and relies upon is Whitney Chain & Mfg. Co., supra. We think the facts of that case are very unlike those present in the instant case, and, therefore, it is clearly distinguishable. In the *Whitney Chain & Mfg. Co.* case the taxpayer had loans outstanding to its stockholders in the amount of $347,800 and an investment in an unrelated corporation in the amount of $382,800. Largely because of these facts, we held that the taxpayer corporation was availed of in the taxable year for the purpose of preventing imposition of the surtax upon its stockholders through the medium of permitting its earnings or profits to accumulate instead of being distributed.

In the instant case petitioner had no outstanding loans to stockholders. On the contrary, petitioner was indebted to its stockholders in the respective taxable years in the following sums: 1940, $53,509.01; 1941, $55,051.04; and 1942, $55,857.99. These amounts were payable to stockholders on demand. Also petitioner, unlike Whitney Chain & Mfg. Co., supra, had no investments in unrelated corporations. It is true that in the taxable years it owned some stock in the Hafter Co. which operated in petitioner's place of business a women's ready-to-wear department, but this was a closely related business. Petitioner had $7,763.38 invested in this Hafter Co. stock which it had acquired in 1934. The evidence shows that this women's ready-to-wear department operated by the Hafter Co. had grown to be quite profitable and the acquirement of the remainder of this Hafter Co. stock was one of the expansion plans which petitioner had in view in accumulating some of its profits each year and adding them to surplus. Petitioner estimated at the end of 1942 that $100,000 would be required to buy out the stock interest of the Hafter brothers in the Hafter Co. It turned out that more than this amount was required, for in 1946 petitioner bought the 75 shares of Hafter Co. stock from the Hafter brothers for $127,000.

More like the instant case than Whitney Chain & Mfg. Co., supra, is General Smelting Co., 4 T.C. 313, in which we held in favor of the taxpayer on an issue similar to the one we have here, on the ground that the taxpayer's business was highly competitive and that in 1938 it decided upon a plan of modernization of its plant which was to and did extend over a period of several years. See also Dill Manufacturing Co., 39 B.T.A. 1023.

We hold that respondent erred in determining that the surtax under the provisions of [§531] of the code should be imposed upon petitioner's net income for each of the taxable years 1940, 1941, and 1942. Needless to say, our decision in petitioner's favor covering the taxable years before us is based upon the evidence as to those years and is no indication as to what might be the decision covering future years. Any decision for a future year would, of course, depend upon its own facts. . . .

Decision will be entered under Rule 50.

NOTE

1. *May mighty oaks from little acorns grow?* What is "the" business, as this term is used in §533(a)? The Regulations state that a corporation's business "is not merely that which it has previously carried on but includes, in general, any line of business which it may undertake." Regs. §1.537-3(a). Does this mean that a small grocery store may aspire to become a department store or a nationwide chain of stores — or to monopolize the

manufacture and sale of widgets? The Regulations under the 1939 Code, Regs. 118, §39.102-3(b), included the sentence just quoted, but went on to warn that "a radical change of business when a considerable surplus has been accumulated may afford evidence of a purpose to avoid the surtax." This sentence was dropped in 1959. In defining "reasonable needs," the Regulations speak favorably of an accumulation "to acquire a business enterprise through purchasing stock or assets," but disapprove of "investments in properties or securities which are unrelated to the activities of the business of the taxpayer corporation." Regs. §1.537-2(b)(2) and §1.537-2(c)(4). In which of these categories should we place the acquisition of the Hafter stock by the Lion Clothing Company?

2. *The business needs of subsidiaries and other affiliated corporations.* The *World Publishing Co.* opinion states that the taxpayer owned 50 per cent of a second corporation (Newspaper Printing Corporation). If the expansion plans had been sufficiently definite to justify an accumulation by the taxpayer itself, would its position have been weakened by an arrangement providing that Newspaper Publishing Company would purchase the building and equipment with funds made available by the taxpayer, either in the form of loans to Newspaper Publishing Company or by the purchase of additional stock? See Regs. §1.537-3(b). The use of an 80 per cent benchmark in this provision of the Regulations stems from the Senate Report on the 1954 Code (p. 70), unaided by any explicit statutory authority.

If the business needs of another corporation can be taken into account, must the relationship between the corporations be that of parent-subsidiary, or will a brother-sister affiliation be sufficient? See Regs. §1.537-2(c)(3); Latchis Theatres v. Commissioner, 214 F.2d 834 (1st Cir. 1954); Factories Investment Corp. v. Commissioner, 39 T.C. 908 (1963).

In Fine Realty, Inc. v. United States, 209 F. Supp. 286 (D. Minn. 1962), involving the same enterprise that was before the court in *James Realty* (supra page 422), the court looked to the business needs of the enterprise as an entity in determining the reasonableness of one corporation's accumulations, but only after it had held that §269 was applicable to the organization of the other corporations so that only one $25,000 surtax exemption was permissible.

3. *Accumulations to pay corporate debts and to redeem stock.* In Helvering v. Chicago Stock Yards Co., 318 U.S. 693 (1943), involving a one-man corporation that was accumulating earnings for the purpose, among others, of paying off certain obligations of its subsidiaries, the Court suggested that the taxpayer's stockholder, had the taxpayer's surplus been distributed to him, could have equally well paid off the obligations in question. Does this suggest that despite a corporation's capital requirements, the §531 tax may be imposed if the earnings could have been distributed to the stockholders and reinvested by them in the corporation? In Smoot Sand & Gravel Corp. v. Commissioner, 241 F.2d 197 (4th Cir. 1957), this suggestion was rejected on a showing that a distribution would have been subject to a tax rate of 89 per cent in the shareholder's hands.

If at the time of organization the corporation issues both common stock and notes or bonds to its organizers, is retirement of the debt at or before maturity a reasonable need of the business? Note the reference in Regs. §1.537-2(b)(3) to a "sinking fund for the purpose of retiring bonds issued by the corporation." In the *Chicago Stock Yards Co.* case, supra, there is a suggestion that the payment of long-term obligations might not be a satisfactory excuse for the accumulation of surplus if the obligations might be readily refinanced at the due date. Despite this suggestion, the payment of corporate debts is often regarded as a reasonable need of the business without regard to the possibility of refinancing the obligations. See, for example, Gazette Telegraph Co. v. Commissioner, 19 T.C. 692 (1953), involving a corporation that on organization (a) issued common stock of a par value of $250,000 and ten-year promissory notes of a face amount of $250,000 to its organizers, and (b) borrowed $400,000 from a bank, to acquire assets of a net value of about $900,000. Within about four years, both the notes and the bank loan were paid off. The court found that the notes were bona fide, that the capitalization was not too "thin," and that payment of the obligations was a reasonable need of the business that justified the accumulation of earnings.

It seems less likely that the redemption of common or preferred stock will be regarded as a proper reason for accumulating surplus, though special circumstances might justify an accumulation for this purpose. See Gazette Publishing Co. v. Self, 103 F. Supp. 779,

784 (E.D. Ark. 1952) (elimination of potentially disruptive minority stock interest); Mountain State Steel Foundries, Inc. v. Commissioner, 284 F.2d 737 (4th Cir. 1960) (accumulation to redeem stock may be a reasonable business need; United Steelworkers Union, collective bargaining agent of taxpayer's employees, filed supporting brief as amicus curiae).

See Herwitz, Stock Redemptions and the Accumulated Earnings Tax, 74 Harv. L. Rev. 866 (1961).

4. *The $100,000 minimum accumulated earnings credit.* By virtue of §535(c), a corporation may accumulate up to $100,000 of earnings and profits (over-all, not annually) without being subject to the accumulated earnings tax. This credit was first granted by the 1954 Code in the amount of $60,000; it was increased to $100,000 in 1958. To discourage the multiplication of corporate entities as a means of multiplying the allowable credit, §1551 was amended to apply to the accumulated earnings credit as well as the $25,000 corporate surtax exemption. Moreover, if an affiliated group of corporations claims the 100 per cent deduction for intra-corporate dividends authorized by the Revenue Act of 1964 (supra page 606), the group is entitled to only one $100,000 minimum accumulated earnings credit.

The $100,000 minimum credit is not allowed to a corporation that is a "mere holding or investment company."

5. *Publicly held corporations and the accumulated earnings tax.* How likely is it that §531 will be applied to a publicly held corporation? The only reported cases involving a corporation with a substantial number of stockholders are Trico Products Corp. v. Commissioner, 137 F.2d 424 (2d Cir. 1943), cert. denied, 320 U.S. 799, and Trico Products Corp. v. McGowan, 169 F.2d 343 (2d Cir. 1948), cert. denied, 335 U.S. 899, rehearing denied, 335 U.S. 913 (1949), where, although there were more than 2000 stockholders, six stockholders owned about two thirds of the total shares. After the corporation paid a total of about $3.2 million in §531 surtaxes and interest, a minority stockholder brought a stockholder's derivative action against the directors for subjecting the corporation to the §531 penalty. This action was settled by a payment of about $2.5 million by the defendants to the corporation. See Mahler v. Trico Products Corp., 296 N.Y. 902, 72 N.E.2d 622 (1947); Note, Derivative Actions Arising from Payment of Penalty Taxes Under §102, 49 Colum. L. Rev. 394 (1949). What conditions would have to be present for a successful stockholder's action of this type? What would have to be alleged and proved in such an action?

The House version of the 1954 Code specifically exempted corporations with more than 1500 shareholders if no more than 10 per cent was held by any one family. The proposal was rejected by the Senate, partly because publicly held corporations would often be unable to prove their right to the exception because their records would not disclose how much stock was owned by any one family, and partly because "this tax is not now in practice applied to publicly held corporations. . . ." (S. Rept., p. 69.)

See also Hedberg-Freidheim Contracting Co. v. Commissioner, 251 F.2d 839 (8th Cir. 1958), imposing the accumulated earnings tax on a corporation whose stockholders were equally divided on dividend policy. In the tax case, it was shown that one of the stockholders had urged at a directors' meeting that a substantial distribution be made because the reasons for accumulating earnings and profits in past years no longer existed. He then read into the minutes a statement to the effect that he had been advised by the company's accountants and counsel that "if the company does not pay out in dividends as much cash as can reasonably be spared at this time, it will lay itself open to liability for [the accumulated earnings tax]," that "the withholding of further reserves cannot be justified," and that "in case this motion is not carried, each dissenting director will be held personally responsible for any [accumulated earning tax] levied against the company."

6. *References.* The 1954 changes in the accumulated earnings tax are discussed in Cohen, Phillips, Surrey, Tarleau, and Warren, The Internal Revenue Code of 1954: Carry-overs and the Accumulated Earnings Tax, 10 Tax L. Rev. 277, 299-306 (1955).

HALL, THE TAXATION OF CORPORATE SURPLUS ACCUMULATIONS

Joint Committee on the Economic Report, 82d Cong., 2d Sess. 11-13 (1952)

In the absence of a comprehensive integration of the corporate and personal income taxes, Congress has endeavored to meet the undistributed profits tax problem in two ways: First, enactment of [§531] and its predecessor sections. In substance, this approach has been to declare that corporate earnings may not remain idle — there must be either corporate use of such earnings if retained, or they must be distributed to stockholders for their employment. Personal surtax avoidance through the corporate device is recognized and countenanced so long as undistributed corporate earnings are put to a productive use. Section [531] is not an undistributed profits tax; it may, however, create the appearance of being an undistributed profits tax because of its application to undistributed income (tax base) when idle or unemployed surplus accumulations become unreasonable in amount. Because it is a penalty tax it necessarily operates negatively rather than positively. It is erratic and imprecise in its treatment of the prohibited surplus accumulations. Its erratic and imprecise character is a compound of the administrative discretion which determines its activation with reference to particular taxpayer corporations and the difficulties of applying any reasonable accurate standard of measurement to the liquid assets (resulting from surplus accumulation) for which alleged corporate use may or may not find justification. As a *penalty* tax, its purpose is not directly and of itself to produce revenue, but instead to "force" either corporate use of earnings, if retained, or their distribution in dividends. The personal and corporate income taxes are the taxing instruments the revenue yield of which will reflect the capabilities of [§531]. As with any penalty device direct revenue yield is inverse to its effectiveness, assuming adequate administration.

The second method of meeting the undistributed profits problem was through a general positive levy on all retained corporate earnings at rates (1936) ranging from 7 per cent to 27 per cent (undistributed profits tax of 1936-39). This surtax on undistributed profits was automatic in its application. It was intended to encourage the distribution of corporate earnings without reference to the business use to which such earnings could be put if retained by the corporation. In other words, there was no exemption from tax, even though the corporate profits were needed in the business, which profits, if retained and invested, would presumably give rise to increased profit flow and dividend distributions in the future. The only method of avoidance of this tax was by distributing the whole of the corporate net earnings. The progressive character of the tax rates operated to increase tax pressure cumulatively for distribution as the corporate earnings became larger. The undistributed profits tax was a step in the direction of integrating the corporate and personal taxes, and, to that extent, in the words of the committee of the National Tax Association on Federal Taxation of Corporations, "was of real significance in that it marked a recognition of the importance of the inequity involved in the failure to bring corporate savings fully and promptly

to account for personal income tax purposes." This tax experiment came to an end in 1939. Since then (as well as before), the only barrier to tax avoidance through corporate surplus accumulations is [§531].

Certain of the more important differences between [§531] and the undistributed profits tax of 1936 may be summarized as follows:

1. Section [531] is a penalty tax and thus negative in character; the undistributed profits tax was a general levy on all retained corporate earnings and thus was positive and automatic in its application.

2. Section [531] is directed only to the idle or unjustified surplus accumulations; the undistributed profits tax applied to the total of the undistributed earnings.

3. Existing corporate liquidity is a factor of *large* importance in the determination as to whether or not [§531] is applicable; existing corporate liquidity was of no importance under the undistributed profits tax, because the tax applied to the annual corporate earnings remaining undistributed.

4. Section [531] is designed to "force" out as dividends only those corporate earnings which are not of active legitimate employment within the corporation; the undistributed profits tax was intended to apply tax compulsion toward the distribution of all profits.

5. Section [531] favors corporate savings if actively employed — the investment function; the undistributed profits tax penalized all corporate saving and favored the consumption function.

6. Section [531] should not be considered as performing an integrating function as to the corporate and personal taxes; the undistributed profits tax did provide a partial integration of the corporate and personal taxes.

7. Section [531] does not discriminate in general against the small and growing enterprise where growth is conditioned upon retaining and investing earnings; the undistributed profits tax did discriminate against small and growing enterprises by taxing the retained, reinvested earnings.

8. Section [531], in comparison with the undistributed profits tax, favors — if not forces — secular growth of productive capacity, and accentuates, in some measure, the amplitude of the business cycle; while the undistributed profits tax tended to retard secular growth of productive capacity, and to reduce probably the amplitude of the cycle.[1]

9. Section [531] does not apply to a corporation unless the Bureau of Internal Revenue initiates and makes a deficiency assessment under the section; the undistributed profits tax was self-assessed by the corporation. . . .

NOTE

Why tax undistributed profits? Taxes on undistributed corporate earnings, like those imposed by §531 and by the now extinct undistributed profits tax, have usually been proposed primarily because of the possibility that undistributed corporate earnings may permanently escape the individual income tax. Two other arguments in favor of such levies have been advanced from time to time. If corporate earnings are paid out as dividends, it is argued that the shareholders will compare all competing investment opportunities before deciding whether it is desirable to reinvest in the corporation that paid the dividends. If the corporation retains the earnings instead of declaring dividends, however, the directors may decide to expand the corporation for prestige or for other irrational motives. Moreover, it is argued that retained earnings are likely to be channeled by the corporation into investment, whereas dividends may be used by the stockholders for the purchase of consumption goods. If the national economic policy at any particular time is to foster consumption rather than investment, it may be desirable to encourage higher dividends rather than corporate reinvestment.

[1] It has been argued that large and active corporate surpluses will lead to overexpansion of productive capacity and initiate a recession; it is also contended that corporate surpluses serve to cushion the shock of a depression and to assist in recovery. For a brief discussion of the undistributed profits tax in relation to the corporate surplus and cyclical aspects, see M. S. Kendrick, The Undistributed Profits Tax (Washington, D.C.: The Brookings Institution, 1937), pp. 41-64 and 86-91.

How effectively would these objectives be served by §531 or by the undistributed profits tax? Section 531 clearly has its principal effect on closely held corporations, and apparently the undistributed profits tax also had more of an impact on small than on publicly held corporations. Lent, The Impact of the Undistributed Profits Tax, 1936-1937 (1948). Is it likely that the stockholders of such corporations would use the dividends differently than the directors would have used retained earnings?

See Rudick, Effect of the Corporate Income Tax on Management Policies, 2 Howard L. Rev. 232, 233-249 (1956).

2. *Personal Holding Companies*

Sections 541-547 of the 1954 Code, imposing a personal holding company tax, are derived, with minor modifications, from §§500-508 of the 1939 Code.

O'SULLIVAN RUBBER CO. v. COMMISSIONER
120 F.2d 845 (2d Cir. 1941)

Before L. HAND, CHASE and FRANK, Circuit Judges.

FRANK, Circuit Judge.

This is a petition for review of a decision of the Board of Tax Appeals, reported at 42 B.T.A. 721, which found a deficiency for 1935 in personal holding company tax of $4,198.37 and a penalty of $1,049.59.

In the disputed year petitioner was a dissolved corporation in process of liquidation. It sold its business of selling rubber heels and dissolved in 1932; since then it has not engaged in business, but has endeavored to liquidate as rapidly as possible. The original sales price, after defaults in payments, was reduced in 1935, and notes, bearing interest payable semi-annually and with serial maturities beginning in 1936, were taken for the unpaid balance of $340,000 due on the adjusted price. Prior to 1935 it had distributed in liquidation about $7 per share, but in that year, the amount available being small, it made no distribution. At least 80 per cent of its income in 1935 was derived from interest, and at least 50 per cent of its outstanding stock was owned by not more than five individuals. It came, therefore, directly within the definition of "personal holding company" in [§542(a)(1) and §542(a)(2)], unless it was not then a "corporation."

[The court held that the taxpayer, although in the process of winding up its affairs, was still a "corporation."]

But, urges the petitioner, the personal holding surtax was enacted to remedy the evil of the "incorporated pocket book," deliberately created to reduce the personal taxes of those who created them, and, therefore, to impose the tax upon a corporation in petitioner's position is a perversion of the Congressional purpose. We may assume that the taxpayer here was not deliberately aiming to relieve its stockholders from personal taxation. It is, however, abundantly clear that Congress, in correcting an evil, is not narrowly confined to the specific instances which suggested the remedy. "Of course, all personal holding companies were not conceived in sin — many were organized for legitimate personal or business reasons; but Congress has made little distinction between the goats and the sheep." [1] In enacting the very section being applied here, Congress was attempting to foreclose the defense, available under [§531] that the accumulation of profits was responsive to a legitimate business need. See Committee on Ways and Means, 73d Cong., 2d Sess., House Report No. 704, p. 12:

[1] Rudick, Section 102 and Personal Holding Company Provisions of the Internal Revenue Code 49 Yale L.J. (1939), 171, 203.

The effect of this system . . . is to provide for a tax which will be automatically levied upon the holding company without any necessity for proving a purpose of avoiding surtaxes.

Cf. Committee on Finance, 73d Cong. 2d Sess., Senate Report No. 558, p. 15. It is suggestive that an earlier revenue bill, that of 1928, proposed by the House Committee on Ways and Means, contained in section 104, a definition substantially identical with [§531], but that it was stricken by the Senate because:

As in the case of all arbitrary definitions, the effect was to penalize corporations which were properly building up a surplus and to fail to recognize business necessities and sound practices. Committee on Finance, 70th Cong., 1st Sess., Senate Report No. 960, p. 12; cf. Committee on Ways and Means, 70th Cong., 1st Sess., House Report No. 2, p. 17.

Having before us indisputable proof from the exactitude of [§542(a)] itself, reinforced by the Committee reports, that Congress wished to establish objective criteria for imposition of the tax, we cannot, by probing into corporate motives, undertake to relieve from the alleged harshness of a particular application of the statute. The Board of Tax Appeals, therefore, was correct in sustaining the deficiency asserted in personal holding company surtax. . . .

The decision of the Board of Tax Appeals is affirmed.

WILSON BROS. & CO. v. COMMISSIONER

170 F.2d 423, cert. denied, 336 U.S. 909 (9th Cir. 1948)

Before Denman, Chief Judge, and Stephens and Orr, Circuit Judges.

Orr, Circuit Judge.

This cause is before us on a petition for a review of a decision of the Tax Court making a redetermination of deficiencies determined by the commissioner of personal holding company surtax for the calendar years 1938 to 1942. It is conceded that petitioner is a personal holding company as defined by [§542(a)] of the Internal Revenue Code.

The Tax Court affirmed a determination of the Commissioner of Internal Revenue that for the purpose of computing the personal holding company surtax the petitioner was not entitled to deduct, under the provisions of [§545(b)(8)] of the Internal Revenue Code, amounts claimed for depreciation and expenses of two boats for the years 1938 to 1942, inclusive. Deficiencies determined by the Commissioner were substantially reduced by the Tax Court.

The corporation was organized in 1928, and was engaged in lumber mill operations until 1938, after which time its only business was the care of securities held by it and the collection of dividends and rent. The two boats in question were transferred to the petitioner corporation shortly after its inception, but were "laid up" in 1929 after serving for several months as transporters of lumber to various ports on the West Coast. Thereafter the corporation sought purchasers or lessees for the boats. Although several offers were received, no disposition of the vessels was effected. They have been kept moored and have remained under the care of a watchman who has been responsible for their maintenance. No rent or other compensation for the use of the boats has been received since they were withdrawn from use in 1929.

Petitioner was unable to establish to the satisfaction of the Commissioner that it came within either or all of the three conditions contained in [§545(b)(8)]. In fact, petitioner admits that the decision of the Tax Court, based on a literal reading of the applicable provisions of the Internal Revenue Code is correct, but insists that [§545(b)(8)] should be construed and applied in accord with its spirit rather than its letter. His argument is that a construction of [§545(b)(8)] in ac-

cord with its purpose rather than its letter would require a deduction in computing the income tax of a personal holding company wherever a deduction is allowed for an individual. The legislative history of the act is set out at length in petitioner's brief and it is argued that a business such as conducted by petitioner was intended by Congress not to lie within the application of [§545(b) (8)].

The premise to this argument is that the adoption of [§545(b)(8)] in 1937 envisaged no more than a means of preventing individuals from escaping the full amount of their income tax liability through the device of transferring property [the expenses and depreciation of which could not be deducted by the individual] to wholly owned corporations and taking depreciation and expense deductions from the corporate income tax liability. In the instant case it is urged that an individual owner of the two boats would have been entitled to deductions for maintenance expenses and depreciation under [§212 and §167(a)(2)] of the Internal Revenue Code.

Arguments of a similar nature have been made in other cases. We think a clear, satisfactory and complete answer to the contention was made in the case of O'Sullivan Rubber Co. v. Commissioner, 2 Cir., 120 F.2d 845, 847. We concur in the statement of that court "that Congress, in correcting an evil, is not narrowly confined to the specific instances which suggested the remedy."

Prior to 1942 an individual owner of boats held as were the boats in this case would have been unable to take depreciation and expense deductions because the vessels were not used in a trade or business. In that year [§212 and §167(a)(2)] of the code, were [enacted], to allow such deductions for property held for the production of income; however, the amending statute referred expressly to individuals. No change was made in the case of personal holding companies.

The failure to alter the provisions of [§545(b)(8)] in 1942 is significant of a Congressional intent contrary to that suggested by petitioner. . . .

Petitioner cites cases in support of the thesis that statutes should be construed to incorporate the intent of Congress and to avoid absurd results. The cases so cited deal with broad statutory language as applied to situations that were patently not within a reasonable interpretation of the apparent statutory policy. Section [545(b)(8)], however, is explicit in terms, and evinces a reasonable intent on the part of Congress to distinguish between personal holding companies and other taxpayers. That the particular instance which gave rise to [§545(b)(8)] is not presented by these facts does not militate against its application to them. O'Sullivan Rubber Co. v. Commissioner, supra.

The decision of the Tax Court is affirmed.

NOTE

1. *Disallowance of some expenses of personal holding companies.* Section 545(b)(8) was aimed primarily at incorporated yachts, country estates, etc. Since the rent received from a 25 per cent stockholder for the use of corporate property is "personal holding company income" under §543(a)(6), why was §543(b)(8) necessary? Section 543(a)(6), it might be noted, has been applied in the same mechanical fashion as other personal holding company provisions. In Hatfried, Inc. v. Commissioner, 162 F.2d 628 (3d Cir. 1947), §543(a)(6) was held to embrace the rent received by a corporation from a hotel leased by it to its sole stockholder and operated by him as an ordinary business enterprise. Section 223 of the Revenue Act of 1950 provided that for taxable years ending in 1946-1949 *only,* §543(a)(6) shall not apply to rents received for property used by the lessee in a bona fide commercial, industrial, or mining enterprise.

A different, and permanent, corrective is adopted by the second sentence of §543(a)(6), adopted in 1954 and amended in 1964.

2. *Personal service income.* Section 543(a)(7) throws into the category of personal

holding company income amounts received under certain personal service contracts. For another line of attack upon such arrangements, see Commissioner v. Laughton, supra page 401.

3. *The personal holding company provisions in practice.* The personal holding company provisions are studded with traps for the unwary. "Incorporated pocket books" of the kind which the sections were intended to deflate are ordinarily operated today only under the surveillance of attorneys and accountants who see to it that income is either sufficiently diversified or promptly distributed so that no personal holding company tax is paid. For the year 1958-1959, personal holding company schedules were filed by about 6300 corporations with aggregate corporate income of $320 million; only 400 of these corporations paid personal holding company taxes, and the aggregate tax paid was about $0.56 million on undistributed income of about $0.84 million. No doubt some of this liability was incurred by corporations that stumbled into the trap in ignorance; but even with the best of supervision, the personal holding company is a dangerous instrument. See Saxon Trading Corp. v. Commissioner, 45 B.T.A. 16 (1941); Morris Investment Corp. v. Commissioner, 156 F.2d 748 (3d Cir. 1946); Safety Tube Corp. v. Commissioner, 168 F.2d 787 (6th Cir. 1948).

In some circumstances, a corporation that becomes entangled in the meshes of §541 may be able to escape its full rigors by a distribution at a later date of "deficiency dividends" under §547.

4. *Foreign personal holding companies.* Foreign personal holding companies are dealt with by §§551-557. Because the corporation itself may be beyond American jurisdiction, each United States stockholder is taxed directly on his proportionate share of the corporation's undistributed income. Taxing the stockholder on undistributed income was held constitutional in Eder v. Commissioner, 138 F.2d 27 (2d Cir. 1943), despite the fact that the undistributed income was "blocked" and could not have been transferred to the United States.

In 1962, this technique was adopted so as to tax some United States shareholders of so-called "controlled foreign corporations" on some of the corporation's undistributed income. For a summary of the complex provisions which achieve this result, see Slowinski, Foreign Income Provisions of H.R. 10650, 1963 So. Calif. Tax Inst. 109.

5. *Regulated investment companies, mutual funds, and real estate investment trusts.* Certain regulated investment companies (including mutual funds) may elect under Subchapter M (§§851-855) to be subject to corporate taxation on their undistributed income only. These corporations, which must distribute currently at least 90 per cent of their income, are treated as conduits through which the income from investments passes to their stockholders, and their long-term capital gains retain that character on distribution to the stockholders. The Revenue Act of 1951 added §851(e), extending Subchapter M treatment to investment companies making "venture capital" available to other corporations engaged in technological research and development, even though the investment company controls the corporations in which its funds are invested, a previously disqualifying condition.

Sections 856-858, enacted in 1960, provide that certain real estate investment trusts distributing at least 90 per cent of current income shall be treated as corporations, with the important exception that distributed income is to be taxed to the beneficiaries rather than to the trust. The "conduit" concept is patterned on the treatment of regulated investment companies.

Section D. Creating the Corporation

Section 351 of the 1954 Code, governing transfers to controlled corporations, carries forward the basic principle of §112(b)(5) of the 1939 Code.

Section 368(c) of the 1954 Code, defining "control," is identical with §112(h) of the 1939 Code.

Sections 358 and 362, governing the basis of property acquired on an exchange, are based on §§113(a)(6) and 113(a)(8) of the 1939 Code.

If Jones organizes a new corporation, Jones, Inc., paying cash for its shares, neither he nor the corporation realizes income on the transaction. Jones has done no more than to buy property, and the corporation on original issue of its stock is not regarded as selling or exchanging property or as otherwise realizing income. The par value, if any, of the shares is irrelevant. See Regs. §1.1032-1 (a).* The tax consequences would be no different if Jones, Inc., were being organized not by a single individual but by the Jones Holding Co., Inc., or by Thomas, Richard, and Harold.

But suppose that Jones owns a business, now operated as an individual proprietorship, and that he proposes to transfer it to a newly organized corporation, Jones, Inc., in return for all of the stock of the new entity. The regulation just cited will prevent the corporation from realizing gain or loss. What of Jones? He has transferred property — his business or its constituent assets — for other property, viz., the stock of Jones, Inc. We have noted before that on a sale or exchange, the transferor realizes gain or loss if the value of the property received either exceeds or is less than the adjusted basis of the property given up, §1001, and that the entire amount of the realized gain or loss must be recognized unless some statutory exception is applicable, §1002. Since 1921, a statutory exception — now §351 of the 1954 Code — has provided for the non-recognition of gain or loss on most incorporations. Where this non-recognition provision is inapplicable, any gain or loss must be recognized, just as under the pre-1921 statute gain or loss realized on the creation of *any* corporation had to be recognized. Livingston v. Commissioner, 18 B.T.A. 1184 (1930).

In the simple, but common, situation just suggested, §351 will apply and Jones will report neither gain nor loss on the exchange. In accordance with the usual rule, however, non-recognition of gain or loss requires the old basis (of the property given up) to be carried over and applied to the stock received on the exchange. See §358(a). In the interest of simplicity, it is assumed that Jones got nothing but stock and that the corporation did not assume, or take property subject to, any liabilities.

If Jones sells the stock at a later date, he will (assuming no change in values) recognize his postponed gain or loss then.† The stock will ordinarily be a capital

* Until 1954, if the corporation at a later date bought back some of its own stock and then reissued it, it might realize profit or loss if the reissue price was more or less than the price it paid on reacquiring the stock. See Murphy, How to Handle Treasury Stock; Distinction Between Treasury Stock and Unissued Stock: Is There Any Justification for This? 10 N.Y.U. Inst. on Fed. Taxation 1161 (1952); Anderson, Gain or Loss to a Corporation Dealing in Its Own Shares, 1953 So. Calif. Tax Inst. 121.

Section 1032 of the 1954 Code provides that no gain or loss shall be recognized by the corporation in these circumstances.

† If the stock is held until death, however, Jones' heirs will get a basis equal to its value at the date of death, by reason of §1014.

asset, however, whereas the unincorporated business was not a united item of property but a conglomeration of assets, some capital (e.g., goodwill), some non-capital (e.g., inventory), some quasi-capital (i.e., subject to §1231, like real estate, machinery, and fixtures). Williams v. McGowan, supra page 570.

If the incorporation of a business does not comply with §351, gain or loss will be recognized on the exchange, and the basis of the stock will be its fair market value at the time of the exchange. Since the basis of stock received when a business or other appreciated or depreciated assets are transferred to a corporation depends upon whether the exchange was taxable when made, the applicability of §351 may come into question not only when the corporation is organized but also many years later, when the stock is sold.

Our man Jones is not the only one who must worry about a preservation of the old basis. Section 362(a) provides that if the transfer to the corporation was a tax-free exchange, the *corporation's* basis for the assets transferred to it shall be the basis they had in the hands of Jones. It has been held that the transferee corporation steps into the shoes of the transferor so that the total old basis is allocated among the various assets in the same way as when they were held by the transferor, rather than being re-allocated in proportion to market values at the time of the transfer. Birren v. Commissioner, 116 F.2d 718 (7th Cir. 1940).

Why this dual preservation of the old basis? Could tax avoidance result if only one of the parties retained the old basis, the other getting a basis equal to market value? Can inequity be produced by the existing statutory scheme?

See generally Hellerstein, Planning the Corporation, 7 Tulane Tax Inst. 416 (1958); Webster, A Check List on Incorporation, 35 Taxes 586 (1957).

FAHS v. FLORIDA MACHINE & FOUNDRY CO.

168 F.2d 957 (5th Cir. 1948)

Before HUTCHENSON, HOLMES, and MCCORD, Circuit Judges.

MCCORD, Circuit Judge.

Appellee, Florida Machine and Foundry Company, filed suit to recover additional income and excess profits taxes, aggregating $19,089.44, paid for the years 1941 and 1942 under protest. From a judgment for appellee taxpayer, the Collector takes this appeal.

The only question presented is the proper cost basis to be used by taxpayer in computing gain or loss on the sale of certain land it owned in 1941 . . .

. . . The basis to be used for property acquired by a corporation after December 31, 1920, through the issuance of its stock for property in accordance with [§351] is the same as it would be in the hands of the transferor. [§362(a)(1).] If, however, the issuance of the stock for property is not governed by [§351], the taxpayer's basis is the cost to it of such property, or the fair market value of the property on the date of acquisition. [§1012.]

The evidence reveals that for some years prior to 1912, Franklin G. Russell, Senior, as sole owner, operated a business known as Florida Machine Works on Riverside Avenue in Jacksonville, Florida. On May 31, 1912, he purchased a tract of land bordering on West Church Street in Jacksonville, to which location the plant was later moved.

About the year 1920, it was shown that the Senior Mr. Russell, who had little technical education for foundry and machine shop work, discussed with his son, Franklin G. Russell, Junior, the possibility of the son eventually succeeding him in the business. The son had graduated from college in 1916 with a degree in mechanical engineering and, with the exception of about two years spent as a soldier in World War I, had served since that time as an apprentice in the various

departments of his father's plant, later becoming assistant manager. When the location of the business was changed from Riverside Avenue to West Church Street, the son himself had planned and laid out the new plant installations. In 1921 the father and son entered into an agreement whereby the son would eventually receive a one-half interest in the business, if he remained with it and continued to operate the plant. In pursuance of this agreement, the Florida Machine and Foundry Company, taxpayer, was organized and incorporated on July 16, 1924. At the organization meeting on that date, the Senior Russell conveyed to the corporation all of the assets of the business which he then owned individually, including the tract of land in question, for stock in the corporation, with the shares thereof to be issued directly to himself, his son, and one share each to three other persons. The father received 1181 shares and his son 1176 shares, the father thereby retaining only a bare majority of the stock issued.

In 1941, the corporation sold a parcel of the land on West Church Street for $15,000. The March 1, 1913, value of this tract was [$7800]. On July 16, 1924, the date taxpayer corporation was organized, the fair market value of the tract sold was [$13,000].

In its 1941 return, the taxpayer claimed a loss on the above sale in the sum of [$11,000], using as its basis of value for the land sold, the amount of [$26,000], which was [claimed to be] the proportionate fair market value of the land sold as compared with the fair market value of the entire tract as of July 16, 1924, the date of organization of the corporation and acquisition of the land by taxpayer.* The Commissioner denied the validity of the basis used, on the ground that the transfer to the corporation on July 16, 1924, was really a non-taxable exchange of property for stock, as described in [§351] of the Code, and ruled that, for the purpose of computing taxpayer's gain or loss under [§362(a)(1)], the proper basis of value was the March 1, 1913 value in the hands of the transferor, Franklin G. Russell, Senior, or [$7800], so that instead of a loss of [$11,000] as claimed by taxpayer, there was a taxable gain of [$7200]. . . .

We are of opinion the district court's finding that Franklin Russell, Senior, was not in "control" of taxpayer corporation "immediately after the transfer" on July 16, 1924, and therefore, that [§351] did not apply, is abundantly supported by the evidence.[1] . . .

Appellant's contention that the son, Franklin Russell, Junior, by virtue of the agreement with his father in 1921, acquired an equitable one-half interest in the land involved, which thereafter placed him and his father, as joint transferors, in "control" of taxpayer immediately after the transfer, is not borne out by the evidence. We further find no merit in the argument that taxpayer should be

---

* The District Court accepted the taxpayer's contention that the 1924 value (rather than the 1913 value) was controlling, but found that the property sold was worth $13,000 in 1924, rather than $26,000, as claimed by the taxpayer. All figures have been rounded off. — Ed.

1 The district court found:

". . . Obviously, Mr. Russell, Senior, owned far less than 80% of taxpayer's capital stock according to the stock register. There is no basis in the evidence to find that the issue of stock on July 16, 1924, and the interests in the corporation thereby represented, were other than bona fide. There is no evidence of subterfuge or evasion, — no evidence that Mr. Russell sought to conceal a personal control of the corporation by formally placing one half of the capital stock in his son's name. To the contrary, it appears that the entire transaction was regular and in good faith, for the declared purpose of bringing his son into the business as a one-half owner, so that the son could and would carry on this long-standing family business after the retirement of his father, who was then getting along in years. At the time of this transaction, the son was a mature and experienced man, 31 years old, fully competent by education and experience to take over and manage the responsibilities of the business, which he did. The uncontradicted evidence is that the son was the absolute owner of the stock issued to him; that he exercised all the privileges of ownership thereof, and paid income tax on the dividends therefrom. . . ."

required to use the basis of its transferor, Franklin G. Russell, Senior, because of the latter's failure to report the transfer in 1924. There can be no estoppel against taxpayer for the act of its transferor, who was not in control of taxpayer corporation immediately after the transfer, and who was shown to have acted in good faith. Cf. Portland Oil Co. v. Commissioner, 1 Cir., 109 F.2d 479; Orange Securities Corporation v. Commissioner, 5 Cir., 131 F.2d 662.

It follows that the proper basis for the land in question is its fair market value when acquired by taxpayer corporation on July 16, 1924.

We find no reversible error in the record, and the judgment is therefore affirmed.

NOTE

1. *Control "immediately after the exchange."* Wilgard Realty Co. v. Commissioner, 127 F.2d 514 (2d Cir. 1942), cert. denied, 317 U.S. 655, involved a transfer of appreciated property by an individual to a corporation in exchange for all its stock. Immediately after the stock was issued to him, he transferred more than 20 per cent of it by gift to members of his family. On a later sale of the transferred property, the corporation claimed a stepped-up basis on the ground that the incorporation fell outside of §351. The court held that the transfer was non-taxable:

> Though it was plainly enough [the transferor's] intention to create the petitioner [corporation] . . . in order to provide him with stock to give as he did to his relatives, he was under no obligation to make the gift. There is neither claim nor proof that he was bound to carry out his intention to give any of it away when he received the stock or that he was not free at any time up to the very moment he gave it away to change his mind and use it for any lawful purpose. . . .
>
> In the absence of any restriction upon his freedom of action after he acquired the stock, he had "immediately after the exchange" as much control of the petitioner as if he had not before made up his mind to give away most of his stock and with it consequently his control. [127 F.2d at 516.]

See also O'Connor v. Commissioner, ¶57,050 P-H Memo T.C., where the court found the requisite control to exist, although more than 20 per cent of the stock of a newly organized corporation was issued directly to creditors of the transferor of property. Referring to the *Florida Machine* case and others like it, the court said:

> Prior to the exchanges involved in those cases the transferors had entered into agreements under which others, to whom stock was issued subsequently to the exchange, had acquired an interest in the subject matter of the transfers or had acquired an interest in the stock to be issued therefor. On the basis of such factual situations, it was held that immediately after the exchanges the transferors were not the owners of the stock issued to others and therefore did not own the amount of stock required by the statute to constitute them in control of the corporations.

For the effect of an underwriting arrangement by which part or all of the stock received by the transferor is to be sold after the incorporation, see American Bantam Car Co. v. Commissioner, 11 T.C. 397 (1948), aff'd per curiam, 177 F.2d 513 (3d Cir. 1949); see also May Broadcasting v. United States, 200 F.2d 852 (8th Cir. 1953); National Bellas Hess, Inc. v. Commissioner, 220 F.2d 415, 225 F.2d 340 (8th Cir. 1955).

Does the "special rule" of §351(c), which is new in the 1954 Code, suggest that fleeting control is insufficient in those instances where the special rule is inapplicable?

See Mintz and Plumb, Step Transactions in Corporate Reorganizations, 12 N.Y.U. Inst. on Fed. Taxation 247 (1954).

2. *Estoppel and mitigation of statute of limitations.* For the issue of estoppel, and the related question of mitigating the effect of the statute of limitations under §1311, see pages 869-879 infra.

3. *Services.* What is the effect of the second sentence of §351(a), if there are two or more transferors, one of whom receives stock in exchange for his promise to perform serv-

ices for the corporation? What is the status of stock that is received in payment for services rendered in the past? See Regs. §1.351-1(a)(1)(i); Herwitz, Allocation of Stock Between Services and Capital in the Organization of a Close Corporation, 75 Harv. L. Rev. 1098 (1962).

On the problem of distinguishing between a transfer of industrial "know-how," secret processes and formulas, etc. and the performance of services, see Rev. Rul. 64-56, 1964-1 C.B. 133.

4. *Receipt of "boot."* Section 351(a) provides for non-recognition of gain or loss if property is transferred to a corporation "*solely* in exchange for stock or securities in such corporation." What if all other requirements are met, but the transferor receives some cash or other property "to boot"? This could occur, for example, if the transferee, either an existing corporation with cash on hand or a newly organized corporation which received property from one stockholder and cash from another, gave a transferor of property some cash as well as securities. Section 351(b) provides that the receipt of other property or money ("boot") results in the pro tanto recognition by the transferor of whatever gain is realized on the transfer. The reason is that to the extent of the "boot," the transferor has changed his investment in substance as well as in form; the "boot" does not represent a continuing interest in the transferred property, as do stocks or other securities of the transferee corporation.

It should be noted that where depreciated, rather than appreciated, property is transferred to a corporation, the receipt of "boot" does not take the transaction out of §351 so as to permit the recognition of loss. See §351(b). Of course, if the transaction is outside of §351 for some reason other than the receipt of "boot," loss can be recognized under the general rule of §1002. But recall that a loss cannot be taken on sales or exchanges between certain related persons. §267; Commissioner v. Whitney, 169 F.2d 562 (2d Cir. 1948).

5. *Receipt of "securities."* The term "securities" as used in §351 is not defined. In view of the tax treatment of "boot," it is reasonable to assume that short-term notes and similar instruments will be treated as the equivalent of cash or other property rather than as "securities." This possibility is not examined further here, since the term "securities" has been the subject of important judicial explanation under the tax-free reorganization sections, but it should be borne in mind. See pages 722 et seq. infra.

If non-recognition is granted on the theory that the taxpayer has changed his investment in form only, should all debt be treated as "boot," leaving only common and preferred stock for tax-free receipt?

6. *Assumption of indebtedness by transferee corporation.* If the corporation at the time of the exchange assumes an indebtedness of the transferor, he receives a benefit that may be the equivalent of "boot." The parallel is particularly pronounced if the transferor mortgages the property just before the exchange, keeps the cash thus raised, and then transfers the property for stock plus an assumption of the mortgage. In these circumstances he may be as well off as though he had received cash as "boot" from the corporation itself. In United States v. Hendler, 303 U.S. 564 (1938), it was held (under the somewhat parallel reorganization sections) that an assumption of the transferor's indebtedness constituted "boot." Besides promising future inconvenience, since virtually all incorporations of existing businesses and reorganizations include an assumption of liabilities, the decision threatened to confer stepped-up bases on both transferor and transferee in countless past transactions assumed to be tax-free when consummated. The Treasury, not sure whether the defense of estoppel would prevent the claims of stepped-up basis, hastened to relinquish its victory. Section 357(a) and §357(b), substantially the same as §112(k) of the 1939 Code, are the result. See Surrey, Assumption of Indebtedness in Tax-Free Exchanges, 50 Yale L.J. 1 (1940).

Assuming or taking subject to debt is treated as "boot" only in limited instances. Why then does such a transaction always require a downward adjustment of basis under §358(a) and §358(d)?

Section 357(c) is new in the 1954 Code. What is its purpose? See Bryan v. Commissioner, 281 F.2d 238 (4th Cir. 1960); Easson v. Commissioner, 294 F.2d 653 (9th Cir. 1961); page 441 supra.

7. *Recapture of investment credit and depreciation.* If depreciable property is trans-

ferred to a corporation under §351, the carryover of basis protects the transferor against a recapture of excess depreciation except to the extent of the gain recognized, if any; see §1245(b)(3) and §1250(b)(3).

As to a recapture of the investment credit of §38, see §47(b) (second sentence). Does it apply to transfer of property to a controlled corporation under §351?

8. *Unbalanced exchanges by two or more transferors.* Section 351 has dropped a requirement contained in its predecessor, §112(b)(5) of the 1939 Code, that "in the case of an exchange by two or more persons this paragraph shall apply only if the amount of the stock and securities received by each is substantially in proportion to his interest in the property prior to the exchange." The clause gave rise to difficult questions of valuation, as well as to conflicting opinions on how the proportion of change was to be calculated and on what constituted a "substantial" change. Moreover, the purpose of the requirement was quite obscure. See Hoffman, The Substantial Proportionment Requirement of Section 112(b)(5), 5 Tax L. Rev. 235 (1950).

Though abandoning the "substantially in proportion" requirement, the 1954 Code points out that an exchange may have the effect of a gift or of the payment of compensation. §351(d)(3) and §351(d)(4). The Senate Report states (pp. 264-265):

> To the extent . . . that the existing disproportion between the value of the property transferred and the amount of stock or securities received by each of the transferors results in an event taxable under other provisions of this code, your committee intends that such distribution will be taxed in accordance with its true nature. . . . In any case in which the stock and securities received are not in proportion, the transaction will be treated as if the stock and securities had first been received in proportion and then some of such stock and securities had been used to make gifts, to pay compensation, or to satisfy obligations of any kind.

What is the relation of the second sentence of §351(a) to the foregoing? Suppose one person transfers property and another does not, but each gets 50 per cent of the stock. Has the control requirement, see §368(c), been met?

9. *The theory of economic continuity.* Is §351 applicable so long as the exchange satisfies its literal terms, or must there also be a showing that the transferors have not drastically altered their economic status? If a dozen independent businessmen transfer their separate businesses to a newly organized corporation, each receiving stock equal to the value of the assets he gives up, are their gains and losses to go unrecognized under §351? What if one of the transferors gets all of the common stock of the transferee corporation and the others get only preferred stock or bonds? See Holstein v. Commissioner, 23 T.C. 923 (1955).

In Rev. Proc. 62-32, 1962-2 C.B. 527, 530, the Internal Revenue Service announced that it would not issue advance rulings on whether "the transfer of appreciated stocks or securities to a newly organized investment company, as a result of solicitation by promoters, brokers or investment houses, will constitute nontaxable exchanges within the meaning of this section [§351]."

10. *Accounting matters.* For accounting problems arising on the transfer of an unincorporated business to a corporation, see Rooney v. United States, 305 F.2d 681 (9th Cir. 1962) (requiring taxpayers who transferred an agricultural crop to a newly organized corporation to allocate their expenses in raising the crop to the corporation rather than to their individual tax returns, under §482); Rev. Rul. 62-128, 1962-2 C.B. 139 (bad debt reserve must be taken into income on transferring unincorporated business to a corporation, despite §351). Must a cash basis taxpayer recognize income on transferring accounts receivable to a corporation? If not, is the income arising on collection of the receivables taxable to the transferor or to the corporation?

AQUALANE SHORES, INC. v. COMMISSIONER
269 F.2d 116 (5th Cir. 1959)

Before Rives, Chief Judge, and Cameron and Jones, Circuit Judges.

Jones, Circuit Judge.

The Messrs. Walker, father and two sons, were landscaping and grading con-

tractors as a partnership in the name of Walker Construction Company. In May of 1949 the partners acquired approximately 175 acres of land at Naples, Florida, at a price of something more than $69,000. Purchase money mortgages were given for a substantial portion of the price. In December of 1949 the Walkers caused the taxpayer, Aqualane Shores, Inc., to be incorporated under the laws of Florida. On January 10, 1950, the organization meeting of the incorporators was held. Ten shares of stock were issued to each of the three Walkers for $320 per share. Simultaneously the Walkers conveyed the land, except a few lots sold by the partnership, to the corporation. An agreement was executed at the same time between the Walkers and the corporation in which it was stated that the consideration for the transfer was $250,000, of which $9,000 was cash paid, an unpaid amount of $49,128.88 on the mortgages was assumed, leaving a balance of $191,871.12. The agreement then provided:

3. The unpaid balance of $191,871.12 shall be paid by the Purchaser to the Sellers in five equal annual installments, the first installment becoming due January 10th, 1951. Unpaid balances of principal shall bear interest from January 10th, 1950, at the rate of 4% per annum, payable annually on the anniversary of principal installments.

4. The Purchaser will (a) make all payments of principal and interest on said five mortgages promptly when the same shall become due; (b) pay all taxes and assessments levied against the land for the year 1950 and subsequent years before the same shall become delinquent; and (c) as to the balance of the sales price — $191,871.12 —, pay all principal installments, with interest, promptly when the same shall be due. And should the Purchaser in anywise fail in any of these respects for a period of 60 days, the Sellers may, at their option, declare any sums of money owing to them hereunder to be forthwith due and payable.

The land was, for the most part, mangrove swamp. It was the plan of the Walkers to develop the property as a residential subdivision by dredging canals and using the spoil to increase the elevation of the remaining property, thus converting the unusable swamp into desirable waterfront property. The Walkers originally contemplated doing the development work as a partnership and the work was underway before the conveyance to the corporation was made. The income tax return of the partnership reported the transfer to the corporation as an installment sale which resulted in a long-term capital gain. The corporation borrowed money and gave mortgages as security. Forrest Walker, the father, made two unsecured loans, each in the amount of $10,000, to the corporation.

During the years 1950, 1951, and 1952, the taxpayer's income tax returns computed gains from the sales of lots on the basis of an overall land cost of $250,000. The Commissioner of Internal Revenue determined that the basis of the property to the corporation taxpayer was $69,291, the same as the basis of the Walkers. Deficiencies resulting from the Commissioner's determination of the taxes were assessed. The Tax Court sustained the Commissioner. Aqualane Shores, Inc. v. Commissioner, 30 T.C. 519. The Tax Court found that, aside from the tax advantages to be gained, the principal purposes for incorporation were to facilitate the raising of capital and to expedite and simplify the processes incident to sales. It assumed, from the evidence, that the property when acquired by the corporation had a fair market value of approximately $250,000. After finding that the exchange of checks between the partnership and the corporation was a wash-out transaction,* the Tax Court concluded that the January 10th, 1950,

* The three partners paid for their stock in the taxpayer corporation with checks on their partnership bank account aggregating $9,600 on January 10, 1950, and on the same day the taxpayer issued a check on its bank account in the amount of $9,000 as the down payment on the land. The Tax Court concluded that these transactions "washed out" because neither the partnership nor the corporation had $9,000 on deposit, so that neither could have paid that amount to the other except by the exchange of checks. — Ed.

transaction did not create a bona fide debtor-creditor relationship between the corporation and the Walkers, and that the transfer was, in substance, a transfer of land solely in exchange for stock of the taxpayer and is governed by the provisions of [§351]. From this it followed, and the Tax Court so held, that the basis to the corporation is the same as the basis to the Walker partnership prior to the exchange pursuant to [§358]. From the decision of the Tax Court, entered in accordance with its opinion, the taxpayer corporation has appealed.

The corporation started in business with the land acquired from the stockholders and six hundred dollars in money, or such part of that sum as may have remained after the payment of its organization expense. The agreement between stockholders and corporation showed a corporate indebtedness for purchase money of $241,000 which was more than 96% of the recited purchase price of the land. Its equity was narrowly margined and its working capital was practically nil. Its only asset was an area of mangrove swamp. The only source from which the corporation could expect revenues was from the sale of lands. Only a very small part of the land had been cleared and filled. It was of a kind and character that required the expenditure of substantial amounts of money in order to put it in marketable condition. Funds for this purpose were borrowed. No payments of principal or interest were made by the corporation to the Walkers during the years 1951 through 1954, except a payment or credit of $8,000 made in 1950 upon the 1951 installment.

The taxpayer corporation relies heavily upon the opinion in Sun Properties, Inc. v. United States, 5 Cir., 1955, 220 F.2d 171, as being "on all fours" with its case. In the *Sun Properties* case the taxpayer was incorporated by the owner of property to whom three shares of one dollar par value stock were issued. The transferor then transferred to the corporation a warehouse building for a recited consideration of $125,000 payable in semi-annual installments of $4,000. At the time the sale was made the operation of the warehouse was very profitable. During the year in which the sale was made the net profits from operation of the warehouse were in excess of $21,000. The district court sustained the Commissioner's determination that the transfer of the property was not a sale but a contribution to capital. This Court concluded that there was no evidence that the transfer of property was a contribution to capital or intended as such. In the opinion which is here under review the Tax Court noted:

> We are not unmindful of the fact that some parts of the reasoning and language in Sun Properties, Inc. v. United States, supra, appear to be inconsistent with the result which we have reached here. However, it is axiomatic that each case of the type considered here must be decided on its peculiar facts. In our opinion the facts of the instant case, considered in their entirety distinguish it from the case of Sun Properties, Inc., and bring it within the ambit of the opinions of this Court and of the various Courts of Appeals which we have heretofore noted.

As this Court noted in its opinion in the *Sun Properties* case [220 F.2d at 175], "Evidence which may tend to prove that a transaction was a contribution to capital may be of many sorts." Cf. Rowan v. United States, 5 Cir., 1955, 219 F.2d 51. The taxpayer corporation, Aqualane Shores, Inc., after its exchange of checks with its incorporating stockholders had $600 of operating funds. Payment of what it had agreed to pay for the undeveloped land which the corporation had acquired could be made only if and when sales of the land were made and proceeds of such sales were received. The controlling consideration in determining whether the obligations of a corporation given by it as the recited consideration for the transfer of property are to be regarded as representing purchase money or as a security received in a [§351] exchange "is an overall evaluation of

the nature of the debt, degree of participation and continuing interest in the business, the extent of proprietary interest compared with the similarity of the note to a cash payment, the purpose of the advances, etc." Camp Wolters Enterprises, Inc. v. Commissioner, 22 T.C. 737, affirmed 5 Cir., 1956, 230 F.2d 555, certiorari denied 352 U.S. 826. The payment of obligations of the corporation to its transferors, the stockholders of the corporation, was dependent upon at the risk of the success of the venture. The obligations were a participation in the pot luck of the enterprise. Camp Wolters Enterprises, Inc. v. Commissioner, supra. The contract and the obligations of it are, we think, "securities" of the corporation within the meaning of the statute, 3 Mertens Law of Federal Income Taxation, Ch. 20, p. 119, §20.47. The Tax Court, after considering all of the factors, reached the conclusion that "there was in substance an exchange by the partners of property in return for a proprietary equity in the corporation equivalent for tax purposes (which are concerned with economic realities) to a transaction covered by the provisions of [§351]."

In the *Sun Properties* case the income from the property transferred was such as to require the conclusion that the obligation could be paid from it leaving the capital assets unimpaired. Here the property was not income producing and required expenditure of development costs to make it subject to profitable sale. The contract obligations clearly represented risk capital. The applicable precedent is to be found in *Camp Wolters Enterprises* rather than in *Sun Properties.* The decision of the Tax Court is correct. Its judgment is affirmed.

NOTE

"Sale" vs. §351 exchange. What tax advantage would be obtained from establishing that the 1950 transaction was a "sale" rather than an exchange under §351? Is a clue provided by the fact (30 T.C. at 523) that the 1950 partnership return of Walker Construction Company reported that it had sold the property on the installment basis and had realized a long-term capital gain?

Note how §1239 restricts the taxpayer's chance to get a "cheap" stepped-up basis for depreciable property by selling it to a controlled corporation.

SECTION E. THE CORPORATION'S CAPITAL STRUCTURE

Since interest is deductible while dividends are not, there is an obvious tax incentive to the use of debt as well as equity instruments as evidences of payment for the cash or property transferred to a corporation by its stockholders. Moreover, certain personal tax advantages will accrue to the organizers of the corporation, if they become creditors as well as stockholders of the corporation. If the corporation prospers, it may pay off its debt and the creditor-stockholders will realize income only to the extent that the payment exceeds the "adjusted basis" of the instruments paid off.* The income, if any, will be capital gain under §1232.

If the organizers hold only stock, however, amounts paid to them by the corporation (including a pro rata reacquisition of stock) are usually taxed as dividends, i.e., as ordinary income. See page 652 infra.

If the corporation fails, worthless stock, bonds, and other "securities" ordinarily give rise to long- or short-term capital loss under §165(g). For the scope of §165(g), and its exceptions, see supra pages 582-583.

* In this connection, §358 should be re-examined. Suppose assets with an adjusted basis of $60,000 and a market value of $150,000 are transferred to a newly organized corporation for 1000 shares of common stock without par value plus bonds of a total face amount of $50,000. What is the basis of the bonds? Would the result be different if the stock had a par value?

Some of the other ways in which corporate debt is encouraged by the Internal Revenue Code are encountered later in this book. For a study of the economic effect of these tax incentives, see Lent, Bond Interest Deduction and the Federal Corporation Income Tax, 2 Nat. Tax J. 131 (1949).

In an effort to exploit the tax advantages enjoyed by debt, taxpayers have on occasion gone too far and thereby lost out:

1. *Hybrid securities.* Where the corporation is not able to issue ordinary evidences of indebtedness, usually because of a fear of clogging its credit position, there have been attempts to get the same tax effect by issuing "hybrid" securities. These instruments look like preferred stock to creditors, but it is hoped that they will pass muster as bonds, debentures, or notes before the tax collector. Among the characteristics of such "hybrid" securities are the following: (a) they are held by the same persons and in the same proportions as the stock; (b) they are transferable only with stock; (c) they have far-off maturities, or no maturity dates; (d) the "interest" is geared to income or is discretionary with the directors; (e) payment of the "interest" or "principal" (or both) is subordinated to general creditors; and (f) they are issued only to stockholders and not for new consideration.

If too many of these features are found, the instruments will be treated as preferred stock rather than as evidences of indebtedness.* The leading case on the subject is John Kelley Co. v. Commissioner, 326 U.S. 521 (1946).

Suppose an instrument is labeled preferred stock, but has all the other indicia of a bond. Can the issuing corporation deduct the "dividends" on the ground that they constitute "interest" on indebtedness? The deduction has occasionally been permitted. United States v. Title Guarantee & Trust Co., 133 F.2d 990 (6th Cir. 1943); Choctaw, Inc. v. Commissioner, ¶53,397 P-H Memo T.C. In the former case the misleading label was employed to avoid recognition of debt on the issuer's balance sheet; in the latter case, it was apparently intended to give the investor an opportunity to claim the dividends received credit granted to corporate stockholders by §26(b)(1) of the 1939 Code. (This allowance, which is now a deduction, is carried over by §243 of the 1954 Code.)

2. *Thin capitalization.* At the opposite extreme are the corporations that are so unconcerned about their credit standing that they can issue seemingly orthodox debt securities in an amount that overwhelms the common stock investment, e.g., bonds in the amount of $99,000 plus common stock against assets valued at $100,000. Here the problem is that the bonds, although containing ironclad indicia of debt, may be treated as the equivalent of stock for tax purposes because anyone buying such instruments would regard himself, in the light of the corporation's trivial equity, as a stockholder or potential stockholder and not as a bondholder. An obvious parallel is the bankruptcy treatment of stockholder advances as capital contributions rather than as loans where the corporation was inadequately capitalized. See Dobkin v. Commissioner, 15 T.C. 31 (1950), aff'd per curiam, 192 F.2d 392 (2d Cir. 1951).

* The House version of the 1954 Code contained definitions designed to indicate precisely what instruments would qualify for the interest deduction and for other tax privileges. But the Senate dropped these definitions, stating (S. Rept., p. 42): "Your committee believes that any attempt to write into the statute precise definitions which will classify for tax purposes the many types of corporate stocks and securities will be frustrated by the numerous characteristics of an interchangeable nature which can be given to these instruments."

AMERICAN-LA FRANCE-FOAMITE CORP. v. COMMISSIONER

284 F.2d 723 (2d Cir. 1960)

Before LUMBARD, Chief Judge, and WATERMAN and MOORE, Circuit Judges.

MOORE, Circuit Judge.

By petition for review, petitioner, American-La France-Foamite Corporation, seeks to reverse so much of a decision of the Tax Court as denied petitioner a deduction of $506,887.06 in its 1951 income tax included in its return as a worthless debt. As a result of this disallowance, a deficiency in income tax of $266,558.13 was assessed.

The sole question presented is whether advances made during the years 1947 to 1951 by petitioner to International Meters, Inc. (IMI) represented capital contributions or loans. If they were loans, they were deductible in 1951, the year of the liquidation of IMI [§166]; if capital contributions, their deduction was limited by [§165(f) and §1211(a)].

The necessity for resolving this question (namely, loans or capital contributions) has arisen many times and doubtless will arise many times in the future. The solution of the problem which the courts face in the cases usually is difficult. The situations in which the facts are clear as to whether the advances should fall into one category or the other will rarely reach the courts; only the borderline cases will be litigated. As the Tax Court here quite accurately said, "the matter may not be completely free from doubt" but, since decision is necessary, it must be based upon "our best judgment on the entire record . . ."

The courts have sought to set up several guideposts along the path towards a correct and just decision. Thus, it is said that *"the intention of the parties* is a major factor in determining the true nature of the relationship" (Jennings v. United States, 7 Cir., 1959, 272 F.2d 842, 843). However, "intention" is often a highly artificial and hypothetical concept because most frequently business ventures originate and are carried on without any clear intent as to tax consequences. If the venture is directed from the start by tax counsel and accountants, it is likely that the advances will be definitely recognizable as loans or capital contributions. Absent, however, any such direction, the ultimate outcome, the success or failure of the venture, may well dictate a preferred tax treatment which was not intended or even foreseen at the inception of the venture.

The "substance" rather than the "form" of the transaction has frequently been stressed. . . . Gilbert v. Commissioner, 2 Cir., 1959, 262 F.2d 512, certiorari denied, 1959, 359 U.S. 1002. In final analysis, it is from that composite of all the facts that an attempt must be made to create a probably non-existent intent and to decide in relation to accepted business practices whether the "loan" pan of the scale is heavier than the "capital contribution" pan.

The venture giving rise to this controversy (except for some preliminaries in 1946) commenced in 1947 when petitioner purchased for $50,000 fifty-one per cent (51%) of IMI's common stock, 400 shares of preferred stock and a $9,000 note. IMI had been in existence for some six years primarily to exploit a parking meter which by means of two meters on one head could control two parking spaces. The general plan was to have petitioner manufacture the meters and IMI to act as the selling agent. For various reasons the operation did not proceed as rapidly or as successfully as contemplated. IMI had virtually no money during its corporate existence so that all financing had to come from petitioner during the five years of their joint enterprise. Substantial advances were made during these years by petitioner and certain repayments largely from the assignments of meter purchase contracts were received. Nevertheless, the balance against IMI contin-

ued to increase.[1] Finally in 1951 the contract between petitioner and IMI was terminated and IMI was liquidated, its assets sold and the proceeds applied against petitioner's account, reducing the balance to the $506,887.13 here involved.

Although IMI existed as a separate corporation, it was petitioner which made its operations possible. For all practical purposes, the parking meter was just another item petitioner was manufacturing and marketing through a selling agent. Petitioner's stockholders were told that "During the past two years, approximately, we [petitioner] have been developing and testing a new type of parking meter . . ." and "We recently acquired that company [IMI] and will have complete control of its operations." A year later after "We spent $148,700 on the Tavin Parking Meter project in 1947," stockholders were notified that "parking meters are coming off the production line for sales representative purposes and deliveries to customers should start in April." Towards the end, the report advised that "Losses were reduced from $122,535 in 1949 to $42,819 in 1950 and our advances to International Meters, Inc. in 1950 were relatively immaterial."

Petitioner to support a debtor-creditor relationship points to the fact that both petitioner and IMI on their books and financial statements treated the advances as loans; that the advances were not in proportion to the stockholdings and that the advances were partially repaid.

The Commissioner buttresses his stand by asserting that the "loans" were not made to a "going business" but were for the purpose of getting the business going; that no notes were given to evidence the so-called indebtedness; that no time was fixed for repayment; that no interest was charged; and that IMI's financial condition was so weak that repayment was entirely contingent upon the success of the venture.

Petitioner, in turn, cites cases showing that notes, maturity date and certainty of payment are not necessarily determinative. Rowan v. United States, 5 Cir., 1955, 219 F.2d 51, 55. . . . On their own particular facts, the courts in these cases have found that the weight of evidence justified the conclusion of a debtor-creditor relationship. These cases, however, only serve to create the doubt which the Tax Court said this case is not "completely free from." Yet, viewing in proper perspective the venture from beginning to end, it is difficult to reconcile these large advances, made to a company with no assets of any substance and no prospects other than the success of the venture, as "loans." See John Kelley Co. v. Commissioner, 1946, 326 U.S. 521; see also Gilbert v. Commissioner, 2 Cir., 1957, 248 F.2d 399, 407; Note, Thin Capitalization and Tax Avoidance, 55 Colum. L. Rev. 1054 (1955). The Tax Court has fairly analyzed the evidence and properly concluded that "the deduction for worthlessness of petitioner's investment must be governed by the provisions relating to capital assets rather than by the bad debt provisions."

The decision of the Tax Court was affirmed.

NOTE

1. *Income on collecting a "loan"?* If the corporation had prospered, would a repayment of the "loans" have constituted a disguised dividend to the creditor-shareholder? Given the business circumstances, is the court correct in suggesting that tax counsel and account-

[1]

Year	Balance	Year	Balance
1946	$ 53,983.80	1949	534,748.24
1947	98,717.20	1950	535,580.10
1948	364,998.57	1951	575,987.08

ants can assure that the advances will be recognized as loans or as capital contributions if they "direct" the venture from the start?

With the cases cited by the court, see Gooding Amusement Co. v. Commissioner, 236 F.2d 159 (6th Cir. 1956); Kraft Foods Co. v. Commissioner, 232 F.2d 118 (2d Cir. 1956); Gilbert v. Commissioner, 262 F.2d 512 (2d Cir. 1959) (a later installment in the litigation cited by the court).

How would the result in the *Whipple* case, supra page 285, have been altered if the corporation to which the taxpayer made the disputed advances had been too "thin"?

Inst. on Fed. Taxation 771 (1959); Bittker, Thin Capitalization: Some Current Questions, 34 Taxes 830 (1956), reprinted with minor revisions in 10 U. of Fla. L. Rev. 25 (1957).

SECTION F. DISTRIBUTIONS OF CASH AND PROPERTY — TAX STATUS OF THE SHAREHOLDER

1. *Distributions of Earnings by the Going Concern*

Section 316(a) of the 1954 Code, defining the term "dividend," is substantially the same as §§115(a) and 115(b) of the 1939 Code.

Section 301(c), prescribing how corporate distributions shall be taxed, is substantially the same as §§22(e), 115(b), and 115(d) of the 1939 Code.

a. "EARNINGS AND PROFITS"

Section 316(a) provides that any distribution either from earnings and profits accumulated after February 28, 1913, or from earnings and profits of the current year is a "dividend." Sections 61(a)(7) and 301(c)(1) provide that "dividends" shall be included in gross income. Any corporate distribution that is not a "dividend" — as that term is defined by §316 — is received tax-free but must be applied in reduction of the basis of the stock on which it is distributed. §301(c)(2). Once the stockholder has recovered his basis, non-dividend distributions are ordinarily taxed as capital gains, with an exception of minor importance for distributions out of increase in the value of corporate property accrued before March 1, 1913. §301(c)(3)(A) and (B); see Higginson v. United States, 81 F. Supp. 254 (Ct. Cl. 1948); Blauvelt v. Commissioner, 4 T.C. 10 (1944).

If we assume a corporation newly organized for cash, the reason for gearing the taxability of its distributions to its record of earnings and profits is clear enough. Until the corporation has engaged in profitable operations, any distribution to its original stockholders is a return of their investment rather than income. Once the corporation has realized profits, on the other hand, its distributions may pro tanto be fairly regarded as income to the stockholders.

The equity of §§316 and 301(c) is far less clear if we assume that after a period of corporate profits the stock changes hands and that before additional earnings arise (the next day, if you will) there is a distribution to the new stockholder. Has not *he* received a return of *his* capital? Sections 316 and 301(c) are inescapable, however, and to the extent of his share of the earnings and profits the surprised stockholder has realized income. This "miracle of income without gain" — the phrase is from Powell, Income from Corporate Dividends, 35 Harv. L. Rev. 363 (1922) — long ago was attested by the Supreme Court in United States v. Phellis, 257 U.S. 156, 171-172 (1921):

Where, as in this case, the dividend constitutes a distribution of profits accumulated during an extended period and bears a large proportion to the par value of the stock, if an investor happened to buy stock shortly before the dividend, paying a price enhanced by an estimate of the capital plus the surplus of the company, and after distribution of the surplus, with corresponding reduction in the intrinsic and market value of the shares, he was called upon to pay a tax upon the dividend received, it might look in his case like a tax upon his capital. But it is only apparently so. In buying at a price that reflected the accumulated profits, he of course acquired as a part of the valuable rights purchased the prospect of a dividend from the accumulations — bought "dividend on," as the phrase goes — and necessarily took subject to the burden of the income tax proper to be assessed against him by reason of the dividend if and when made. He simply stepped into the shoes, in this as in other respects, of the stockholder whose shares he acquired, and presumably the prospect of a dividend influenced the price paid, and was discounted by the prospect of an income tax to be paid thereon.

How accurately can the purchaser tailor the price he offers for a share of stock to fit the income tax liability he will incur if a dividend is declared?

Whatever argument of equity may be urged against United States v. Phellis, it would no doubt be administratively unfeasible to tax each individual stockholder on dividends only to the extent that his corporation had had earnings after he purchased his shares. This suggests the question: if we can stomach the inequity arising in thousands of *Phellis* transactions, is there any reason for tying the taxation of corporate distributions to earnings and profits at all?

It is a curious fact that the Code, ordinarily so prodigal in the use of words, nowhere defines the term "earnings and profits," although the term has no counterpart in the field of corporation law. The term is partly explained by Regs. §1.312-6, and the effect of a few transactions on earnings and profits is prescribed by the Code. See §312 and §381(c)(2). See also the exhaustive discussion by Rudick, "Dividends" and "Earnings or Profits" Under the Income Tax Law: Corporate Non-Liquidating Distributions, 89 U. of Pa. L. Rev. 865 (1941). Mr. Rudick's article is brought up to date by Albrecht, "Dividends" and "Earnings or Profits," 7 Tax L. Rev. 157 (1952); and see Andrews, "Out of Its Earnings and Profits": Some Reflections on the Taxation of Dividends, 69 Harv. L. Rev. 1403 (1956); Alexander, Some Earnings and Profits Aspects of the Internal Revenue Code of 1954, 7 Hastings L.J. 285 (1956); Mahon, New Rules as to Earnings and Profits, 13 N.Y.U. Inst. on Fed. Taxation 583 (1955); Katcher, What is Meant by Earnings and Profits, 18 id. 235 (1960); Bangor & Aroostook R. Co. v. Commissioner, 193 F.2d 827 (1st Cir. 1951), cert. denied, 343 U.S. 934.

The determination of earnings and profits is often no simple feat, especially when they must be traced through a series of corporate reorganizations or similar transactions. It may be necessary to go back many years to decide how a transaction should have been taxed under a now interred statute because of its effect upon earnings and profits.

Three more aspects of earnings and profits should be noted:

1. *Earnings and profits of the current year.* If a corporation has earnings and profits *in the taxable year,* any distribution will be taxable pro tanto, even though the corporation has a deficit. §316(a)(2). This provision has a curious ancestry. It was enacted in 1936 as a relief measure when the undistributed profits tax was in effect. That tax was imposed on the undistributed part of corporate income, computed by deducting "dividends" from total income. Unless a deficit corporation could treat distributions out of current earnings as "dividends" for this purpose, it would be unable to avoid the undistributed profits tax no matter how large its distributions to stockholders were. To enable such corporations to obtain a credit for "dividends" paid out of current earnings, §316(a)(2) was enacted. Apparently no thought was given to the effect of the new subsection

apart from the undistributed profits tax. Its impact can sometimes be avoided by postponing the distribution until the next year. If the corporation has no earnings in that year and still has a deficit, the distribution will be receivable tax-free since it will fall under neither §316(a)(1) nor §316(a)(2).

2. *Pre-1913 earnings and profits.* Note the importance in this area of March 1, 1913, the date on which the Revenue Act of 1913 (the first federal income tax imposed after the Sixteenth Amendment was adopted) became effective. A distribution of earnings and profits accumulated before this date is not taxed as a dividend, but is applied to reduce the basis of the taxpayer's stock, with any excess being taxed as a capital gain unless it comes out of a pre-1913 increase in the value of corporate property, as indicated above. By virtue of the second sentence of §316(a), however, pre-1913 earnings and profits may not be distributed until post-1913 earnings and profits have been exhausted; "earmarking" a distribution is not permissible.

These pre-1913 sources do not enjoy constitutional immunity from tax, Lynch v. Hornby, 247 U.S. 339 (1918), but Treasury attempts to obtain a repeal of the privilege have been defeated. See House Ways and Means Committee, 77th Cong., 2d Sess., Hearings on Revenue Revision of 1942, pp. 1692 et seq.; H.R. Rept. No. 2319, 81st Cong., 2d Sess., reprinted in 1950-2 C.B. 380, 418-419.

3. *"Dividend": state law vs. tax law definition.* The term "dividend" as defined for income tax purposes by §316(a) may not correspond with the term "dividend" under state law, with the result that a distribution may be a "dividend" under §316(a), although it impairs capital or is otherwise unlawful under state law. Conversely, it is possible for a distribution to constitute a lawful "dividend" under state law without qualifying as a "dividend" under §316(a). In the former instance, the "dividend" will ordinarily be taxable to the stockholder under the "claim of right" doctrine, notwithstanding a potential liability to creditors under state law. United States v. Lesoine, 203 F.2d 123 (9th Cir. 1953); but see Knight Newspapers, Inc. v. Commissioner, 143 F.2d 1007 (6th Cir. 1944).

b. DISGUISED DIVIDENDS

Just as the Code does not define "earnings and profits," so also it fails to define "distribution." We have already encountered two examples of disguised corporate distributions that will be taxed as "dividends" if the corporation has post-1913 earnings and profits:

1. Purported "salary" that is not compensation for services but rather a distribution to a stockholder-employee or to a donee of a stockholder. Supra page 270. A dividend may also be disguised as rent, royalties, or as the purchase price for property transferred to the corporation by the stockholders. If such payments are excessive, the excess will be taxed as a dividend. Cf. Staab v. Commissioner, 20 T.C. 834 (1953); Crabtree v. Commissioner, 22 T.C. 61 (1954).

2. "Interest" on hybrid securities or on evidences of indebtedness issued by an undercapitalized corporation that are the equivalent of stock. Supra page 642.

To these should be added:

3. Sales of corporate property to stockholders for less than fair market value, and rent-free use of corporate property. Timberlake v. Commissioner, 132 F.2d 259 (4th Cir. 1942); Regs. §1.301-1(j).

4. "Loans" by a corporation to its stockholders that are not intended to be repaid. See Regensburg v. Commissioner, 144 F.2d 41 (2d Cir. 1944); Werner, Stockholder Withdrawals — Loans or Dividends? 10 Tax L. Rev. 569 (1955).

5. Corporate "expenses" that are incurred to benefit stockholders, rather than to further the corporation's trade or business. In American Properties, Inc. v.

Commissioner, 262 F.2d 150 (9th Cir. 1958), it was held that the expenses of designing, constructing, and racing speed boats, paid by a one-man corporation, were not deductible under §162(a) by the corporation and constituted disguised dividends to the sole shareholder, who "had an insatiable desire for speed." See also Greenspon v. Commissioner, 229 F.2d 947 (8th Cir. 1956) (corporation's payments for creating and maintaining "a unique horticultural show place" at sole shareholder's farm disallowed under §162(a) and taxed as constructive dividends). But see Casale v. Commissioner, 247 F.2d 440 (2d Cir. 1957), holding that premiums on a policy insuring the life of the corporation's sole stockholder were not constructive dividends to him, reversing a Tax Court judgment based on the theory that the corporation "was no more than a conduit running from the insurer to [the stockholder], or his beneficiaries, with respect to any payments which might come due under the insurance contract." *Accord:* Prunier v. Commissioner, 248 F.2d 818 (1st Cir. 1957). But see Sneed, A Defense of the Tax Court's Result in Prunier and Casale, 43 Cornell L.Q. 339 (1958).

While a constructive dividend is more likely to be found if the stockholders share its benefits pro rata, it has been held that equal treatment is not indispensable. In Lengsfield v. Commissioner, 241 F.2d 508 (5th Cir. 1957), for example, distributions to several shareholders were taxed as dividends; the others, who did not participate, were related to the recipients and consented to the distributions. See also Paramount-Richards Theatres, Inc. v. Commissioner, 153 F.2d 602 (5th Cir. 1946).

The foregoing outline assumes that a purported "salary," payment of "interest," etc., is a constructive corporate distribution, to be taxed as a "dividend" under §316(a) to the extent of earnings and profits. The corollary of this theory is that an absence of earnings and profits will cause the payment to be applied in reduction of the basis of the stock under §301(c)(2). Is the "unreasonable" portion of a salary, however, necessarily a corporate distribution, with taxability dependent upon the existence of earnings and profits? Or is it simply a salary payment that is fully taxable under §61(a) to the recipient, regardless of earnings and profits, even though the corporation cannot deduct it? In Simon v. Commissioner, 248 F.2d 869 (8th Cir. 1957), the court held that corporate funds that had been diverted by stockholders to their own use were to be treated as "distributions," taxable only to the extent provided by §301(c). For a holding to the contrary, see Davis v. United States, 226 F.2d 331 (6th Cir. 1955), cert. denied, 350 U.S. 965.

See generally Comment, Disguised Dividends: A Comprehensive Survey, 3 U.C.L.A.L. Rev. 207 (1956); Toll, Constructive Dividends, 1951 So. Calif. Tax Inst. 211.

2. *Distributions in Complete Liquidation*

Section 331(a)(1) of the 1954 Code, relating to complete liquidations, is substantially the same as §115(c) of the 1939 Code.

Section 332 of the 1954 Code, relating to complete liquidations of subsidiary corporations, is substantially the same as §112(b)(6) of the 1939 Code.

Section 333 of the 1954 Code, permitting an election as to recognition of gain in certain complete liquidations, is substantially the same as §112(b)(7) of the 1939 Code.

Section 331(a)(1) provides that on a complete liquidation of a corporation the stock shall be treated as though it had been sold, so that the stockholder realizes

gain or loss on the difference between the adjusted basis of the stock he surrenders and the value of what he receives. Thus the earnings and profits account, so critical to the tax status of the distributions of a going concern, becomes irrelevant when the distribution is in complete liquidation. In analogizing a complete liquidation to a sale rather than to a dividend, §331(a)(1) carries forward a policy established in 1924, though for a period (1934-1936) liquidations were short-term capital transactions whereas a sale could give rise to either short- or long-term gain or loss. Is the analogy to a sale valid?

The fact that the corporate earnings and profits account is obliterated by a complete liquidation is of central importance to the progressive rate structure of the federal income tax. We have already noted that the earnings of a corporation, unlike those of a partnership or individual proprietorship, do not run the gauntlet of the individual tax rates when earned. Now we find that on a complete liquidation, the earnings may be received by the stockholder as capital gain. To be sure, they could be converted into capital gain by an alternate route: sale of the stock. But unless the *buyer* was assured of a painless way of extracting the earnings in the future, he might follow the *Phellis* suggestion (supra page 645) of discounting the amount he would pay for the stock by the tax he would have to pay in the future. Thus §331(a)(1) makes it possible to realize on corporate earnings at the capital gains rate, either by liquidating the corporation or by selling the stock to someone who contemplates a liquidation.

COMMISSIONER v. CARTER

170 F.2d 911 (2d Cir. 1948)

Before L. HAND, SWAN and CHASE, Circuit Judges.

SWAN, Circuit Judge:

This appeal presents the question whether income received by the taxpayer in 1943 is taxable as long-term capital gain, as the Tax Court ruled, or as ordinary income as the Commissioner contends. The facts are not in dispute. The taxpayer, Mrs. Carter, had owned for ten years all the stock of a corporation which was dissolved on December 31, 1942. Upon its dissolution all of its assets were distributed to her in kind, subject to all its liabilities which she assumed. In the distribution she received property having a fair market value exceeding by about $20,000 the cost basis of her stock, and she reported such excess as a capital gain in her 1942 return and paid the tax thereon. In the corporate liquidation she also received 32 oil brokerage contracts which the parties stipulated had no ascertainable fair market value when distributed. Each contract provided for payment to the corporation of commissions on future deliveries of oil by a named seller to a named buyer. The contracts required no additional services to be performed by the corporation or its distributee, and the future commissions were conditioned on contingencies which made uncertain the amount and time of payment. In 1943 the taxpayer collected commissions of $34,992.20 under these contracts. She reported this sum as a long-term capital gain; the Commissioner determined it to be ordinary income. The Tax Court held it taxable as capital gain. The correctness of this decision is the sole question presented by the Commissioner's appeal.

Mrs. Carter's stock was a "capital asset" as defined by [§1221] of the Internal Revenue Code. In exchange for her stock, she received the assets of the corporation upon its dissolution. The tax consequences of such a transaction are controlled by [§331(a)(1), providing that the liquidation distribution shall be treated as a payment in exchange for the stock; §1001, providing that the gain or loss shall be the difference between the adjusted basis of the stock and the "amount realized" therefor and that the "amount realized" is the sum of the money received

and the fair market value of any property received; and §1002, providing that the entire amount of the gain or loss shall be recognized unless otherwise provided] . . . From the foregoing statutory provisions, it is obvious that if the oil brokerage contracts distributed to the taxpayer had then had a "fair market value," such value would have increased correspondingly the "amount realized" by her in exchange for her stock and would have been taxable as long-term capital gain, not as ordinary income. Boudreau v. Commissioner, 5 Cir., 134 F.2d 360; Fleming v. Commissioner, 5 Cir., 153 F.2d 361. The question presented by the present appeal is whether a different result is required when contract obligations having no ascertainable fair market value are distributed in liquidation of a corporation and collections thereunder are made by the distributee in later years.

In answering this question in the negative, the Tax Court relied primarily upon Burnet v. Logan [supra p. 457]. . . .

The Commissioner argues that the *Logan* case is inapplicable because there the taxpayer had not recovered the cost basis of her stock while here she had. The Tax Court thought the distinction immaterial. We agree. The Supreme Court spoke of the annual payments as constituting "profit" after the seller's capital investment should be returned. Until such return it cannot be known whether gain or loss will result from a sale; thereafter it becomes certain that future payments will result in gain. No reason is apparent for taxing them as ordinary income. As this court said in Commissioner v. Hopkinson, 126 F.2d 406, 410, "payments received by the seller after his basis had been extinguished would have been taxable to him as capital gains from the sale of the property," citing Burnet v. Logan as authority.

The Commissioner also urges that the *Logan* case is distinguishable because it dealt with a sale of stock rather than exchange of stock for assets distributed in a corporate liquidation. This contention is answered by White v. United States, 305 U.S. 281, 288, and Helvering v. Chester N. Weaver Co., 305 U.S. 293, 295, where the court held that the recognition . . . of gains and losses on liquidations must for purposes of computation of the tax, be taken to be the same as that accorded to gains and losses on sales of property.* Consequently we agree with the Tax Court's ruling that the principle of the *Logan* case is applicable to a corporate liquidation where stock is exchanged in part for contracts having no ascertainable market value, and that future collections under such contracts are taxable as capital gain in the year when received if the distributee has previously recovered the cost basis for the stock.

The Commissioner's argument that such collections are analogous to the receipt of interest or rent upon bonds or real estate distributed in a corporate liquidation overlooks a significant distinction. Payment of interest or rent does not impair the value of the bond or real estate since each remains as a capital asset regardless of the number of payments. See Helvering v. Manhattan Life Ins. Co., 2 Cir., 71 F.2d 292, 293. But with respect to the oil brokerage contracts, under which no additional services were to be rendered by the payee, each payment decreases their value until, with the final payment it will be completely exhausted; and, if the payments be treated as income, the distributee has no way to recoup his capital investment, since concededly he has no economic interest in the oil producing properties and therefore no right to depletion deductions. Hence to consider the brokerage payments as ordinary income would produce a most unjust result and one quite unlike the result which follows the distribution of bonds or real estate in a corporate liquidation.

---

* Section 115(c) of the 1939 Code was explicit on this point; the same rule is applicable under the 1954 Code by virtue of the cross reference in §331(c)(2). — Ed.

For the foregoing reasons we think the decision of the Tax Court correct. It is affirmed.

NOTE

1. *"Open" and "closed" liquidations.* Pursuant to Regs. §1.1001-1(a) ("only in rare and extraordinary cases will property be considered to have no fair market value"), the Internal Revenue Service has announced that it "will continue to require valuation of contracts and claims to receive indefinite amounts of income, such as those acquired with respect to stock in liquidation of a corporation, except in rare and extraordinary cases." Rev. Rul. 58-402, 1958-2 C.B. 15. The ruling cites a number of cases in which unusual claims and rights have been valued; see also Grill v. United States, 303 F.2d 922 (Ct. Cl. 1962) (right to receive part of royalties from release of movie "Gone With The Wind" held susceptible to valuation); Campagna v. United States, 290 F.2d 682 (2d Cir. 1961) (second mortgages on real estate); but see Nakatani v. Cullen, 5 A.F.T.R.2d 519 (N.D. Calif. 1959) (value of chose in action, in litigation, not determinable).

If a liquidation is treated as a "closed" transaction, but the amount ultimately realized exceeds or falls short of the value placed on the property at the time of the liquidation, is the taxpayer's gain (or loss) ordinary gain or loss, or capital gain or loss? Does this depend upon whether the contract or other asset received in the liquidation qualifies as a "capital asset" under §1221 and is the subject of a "sale or exchange," or can the post-liquidation receipts be related back to the liquidation and taxed as belated capital gain? If the shareholder receives a contract in a "closed" liquidation, how is his basis in the contract to be reflected in the post-liquidation years in which royalties or other payments under the contract are received? If the post-liquidation transactions produce a loss, is the *Arrowsmith* case (supra p. 532) applicable? See Grill v. United States, 303 F.2d 922 (Ct. Cl. 1962); Ayrton Metal Co. v. Commissioner, 299 F.2d 741 (2d Cir. 1962) (payments after liquidation of joint venture).

2. *"One-month liquidations" under §333.* Section 333 provides that the shareholders of a liquidating corporation may elect not to recognize their gain on the liquidation, if the transfer of all of the corporation's property occurs within one calendar month. The principal function of this provision is to permit a corporation holding appreciated assets but having no earnings and profits or cash (e.g., a real estate holding corporation that has regularly distributed its earnings to its shareholders) to be liquidated without the recognition of any gain. The stockholders, however, hold the distributed assets with a basis equal to the basis of the surrendered stock. §334(c). If the liquidated corporation had either earnings and profits or cash, gain is recognized pro tanto, and is taxed as ordinary income to the extent of the earnings and profits. Stock or securities acquired by the corporation after December 31, 1953, are treated as the equivalent of cash. Use of §333 is optional with the stockholders. Moreover, it provides for the non-recognition of gain only. If the liquidation produces loss rather than gain, the loss would be recognized under §331. See Eaton, Liquidation Under Section 112(b)(7), 38 Va. L. Rev. 1 (1952); Osenbach v. Commissioner, 198 F.2d 235 (4th Cir. 1952); Meyer's Estate v. Commissioner, 200 F.2d 592 (5th Cir. 1952).

3. *Tax-free liquidations of subsidiary corporations under §332.* Section 332 provides in substance that no gain or loss shall be recognized on the liquidation of a subsidiary corporation. The provision, which was enacted in an earlier form in 1935, was proposed by the Treasury as a measure to encourage the simplification of elaborate corporate structures. In the absence of such a non-recognition provision, unnecessary subsidiary corporations could be eliminated (if they were successful enterprises) only by paying a capital gains tax under the general rule, §331, applicable to complete liquidations. Unlike §333, §332 is not optional; moreover, it provides for the non-recognition of both gain and loss.

Section 332's basis provision, §334(b)(1), does not follow the usual practice of giving the property received on a tax-free exchange the same basis as the property given up, as does §358, for example. Instead, §334(b)(1) provides that, as a general rule, the transferee (the parent corporation) takes over the basis of the transferor — its subsidiary. This will be advantageous if the subsidiary has a high basis for its assets, but disadvantageous when its basis is low. If the parent corporation acquired the subsidiary for the sole purpose of

acquiring its assets though a liquidation, however, it seems more appropriate to treat the transaction as an acquisition of the assets, and to give the parent a basis for the assets equal to its cost for the stock, rather than the substituted basis provided by §334(b)(1). The so-called "Kimbell-Diamond" rule had this result under the 1939 Code, based on the theory that the acquisition of the subsidiary for the purpose of liquidation was in substance a single transaction, to be treated as though the assets had been acquired directly. Kimbell-Diamond Milling Co. v. Commissioner, 14 T.C. 74 (1950), aff'd per curiam, 187 F.2d 718 (5th Cir. 1951), cert. denied, 342 U.S. 827; see also Commissioner v. Ashland Oil & Refining Co., 99 F.2d 588 (6th Cir. 1938), cert. denied, 306 U.S. 661. The uncertainties of the "Kimbell-Diamond" rule led to the codification of §334(b)(2), which provides in substance that if the parent purchases 80 per cent of the stock of the subsidiary within a period of not more than twelve months, and liquidates it within two years thereafter, the basis of the property thus acquired shall be the same as the basis of the stock.

If a corporation wishes to avoid §332 in order to recognize loss on the liquidation of a subsidiary, can it accomplish its aim by selling some of the stock so that it owns less than 80 per cent? Before 1954, §112(b)(6) (the predecessor of §332) provided that a disposition of any stock by the parent between the time the plan of liquidation was adopted and the time it was consummated would take the transaction out of the tax-free category. This restriction was removed by the 1954 Code "with the view to limiting the elective features of the section." S. Rept., p. 255. Does this mean, by negative inference, that a sale to reduce ownership below 80 per cent will be effective? It was so held in Granite Trust Co. v. United States, 238 F.2d 670 (1st Cir. 1956). See Colgan and Molloy, Tax-Free Liquidations of Corporate Subsidiaries Under Section 112(b)(6) of the Internal Revenue Code, 4 Tax L. Rev. 305, 333-334 (1949); Busterud, The Liquidation of Subsidiaries Under Section 112(b)(6), 58 Yale L.J. 1050 (1949).

4. *The liquidating corporation's income.* On the possibility that amounts received by the shareholders after a corporate liquidation (e.g., the payments on the contracts in the *Carter* case) may be taxed to the corporation, see pages 665-674 infra.

3. *Stock Redemptions and Partial Liquidations*

Section 331(a)(2) of the 1954 Code, relating to partial liquidations, states the same rule as §115(c) of the 1939 Code.

Section 346 of the 1954 Code, defining partial liquidation, is substantially expanded from §115(i) of the 1939 Code.

Section 302 of the 1954 Code, relating to the redemption of stock, is derived from §115(g) of the 1939 Code, but with substantial modifications.

Section 317 of the 1954 Code, defining redemption, is new.

BALLENGER v. UNITED STATES

301 F.2d 192 (4th Cir. 1962)

Before SOBELOFF, Chief Judge, and SOPER and BELL, Circuit Judges.

J. SPENCER BELL, Circuit Judge.

This is an appeal from a judgment of the District Court denying a refund of income taxes in the amount of $14,655.03 plus interest for the year 1954. The explanation given for the deficiency assessment was that the redemption of all of the outstanding preferred stock of the corporation, which was owned by the taxpayers, who are husband and wife, was essentially equivalent to a dividend and, was not, therefore, entitled to capital gains treatment under the provisions of §302 (b)(1) of the Internal Revenue Code of 1954.

A chronological statement of the pertinent facts is as follows: In 1949 the Ballenger Paving Company, a corporation, was organized to succeed a partnership of the same name and engage in the same business because one of the partners had died intestate leaving a widow and minor child. The court having jurisdiction

of the estate agreed to incorporation of the business as an alternative to liquidation. It was represented to the court that preferred stock would be issued to the estate and the widow and common stock to the remaining participants, but these plans were not carried out and the estate and the widow received both common and preferred stock, as did all parties concerned.

In the resulting corporate setup, taxpayers received 260 shares each of common and preferred, representing approximately 20% of the outstanding stock. The remaining 80% of the stock went to unrelated parties, including the estate and widow of the deceased partner.

On January 29, 1953, a resolution was adopted by the corporation calling for the liquidation of all of the stock both common and preferred held by parties other than taxpayers. These resolutions referred to the transaction as a partial liquidation. They made no reference to retirement of taxpayers' stock, either preferred or common.

By March 13, 1953, the retirement of all of the stock other than that held by taxpayers was accomplished by exchanging machinery and equipment owned by the corporation for the stock. Minutes of a meeting held on March 30, 1953, referred to the partial liquidation of the company as having been completed.

On August 20, 1954, taxpayers, being all of the stockholders and directors of the corporation, caused resolutions to be passed calling for the retirement of all of the outstanding preferred stock in accordance with the terms of the certificates. The only reason for this action expressed in the minutes was the desire to eliminate the 5% annual dividend called for by the terms of the preferred stock.

On September 11, 1954, the taxpayers received $27,300.00 from the corporation, that being the call price of 260 shares of preferred in accordance with the terms of the stock certificates.

There is no contention that taxpayers intended to liquidate the corporation or even contract the company's operations; on the contrary, the operations were steadily expanding. Corporate earned surplus on the date of redemption was far in excess of $27,300.00. Proportion of stock ownership and voting control of the corporation were not changed by the retirement. Dividends had never been declared or paid on the common stock during the history of the corporation.

Upon the foregoing facts the District Court found that the stock redemption was essentially equivalent to the distribution of a taxable dividend under §301 of the 1954 Act and, therefore, treated same as gross income to the taxpayers.

The taxpayers argue that the preferred stock which was being retired was originally issued for a valid business purpose: to prevent the liquidation of the business upon the death of one of its partners. They contend that when the stock of all the other stockholders was redeemed in 1953 the reasons for issuing preferred stock ceased to exist and this in itself constituted a valid business reason for redeeming their preferred stock. Indeed they say that the 1954 redemption of their stock was but the final step of a plan to liquidate all the preferred stock begun with the corporate resolutions of January 1953.

The Government denies that a valid corporate business purpose existed for redemption of taxpayers' stock at the time in question, but insists that even had a valid business purpose existed it would not in and of itself be sufficient to remove the transaction from the category of a dividend. It contends that the statute defines a dividend as any distribution by a corporation to stockholders paid out of accumulated or current earnings regardless of whether or not it was designated as such. The only exceptions recognized (with which we are here concerned) and thus given preferential treatment as capital gains under §302(b) of the 1954 Code are: (1) redemptions not essentially equivalent to a dividend, (2) redemptions that are substantially disproportionate, and (3) a complete redemption of all of a shareholder's stock. . . .

The 1954 Code substantially recast the law in this field. The distribution and reorganization provisions of the 1939 Code were sorted out and then rearranged into separate parts of subchapter C of Chapter 1 of subtitle A of the 1954 Code. Part I of subchapter C (§§301-318) contains rules for testing distributions by corporations other than liquidating distributions. Part II of subchapter C (§§331-346) covers liquidating distributions. Part III of subchapter C (§§351-367) covers corporate organizations and reorganizations with which we are not concerned in this case. In making the breakdown between Parts I and II of subchapter C an attempt was made to separate into their significant elements two general categories of cases dealing with corporate distributions which had been previously lumped together and treated as partial liquidations under §115(a) and §115(g)(1) of the 1939 Code. Thus under the 1954 Code, the category of cases wherein a distinction was drawn between stock redemptions which were to be given capital gains treatment rather than dividend treatment because they met certain tests when viewed from the standpoint of the stockholder's actions or motives are treated in Part I (§§301-318). On the other hand, the category of cases wherein a distinction was drawn between stock redemptions which were to be given capital gains treatment rather than dividend treatment because they met certain tests when viewed from the standpoint of the corporation's actions or motives are treated under Part II (§§331-346). In each category specific tests are provided which if met would entitle the distribution to capital gains treatment, but in each category there is also included a general negative test, e.g., that the distribution be "not essentially equivalent to a dividend" which if not met will deny the distribution capital gains treatment. See §302(b)(1) and §346(a)(2). The success of the effort to clarify the law in this area would have been unquestioned had not this vague negative test been included in the 1954 Code, thus re-injecting the confusion theretofore developed by the case law which has attempted to interpret the phrase "not essentially equivalent to a dividend."

When we attempt to apply the 1954 Code to a particular case, we must first determine whether or not the transaction meets the tests laid down in Part II, i.e., does it constitute a "partial liquidation" as therein defined? If not, we then turn to the specific tests set forth in subsections (b)(2), (b)(3) and (b)(4) of §302. If none of these specific tests apply then we must determine whether the distribution is "not essentially equivalent to a dividend" under subsection (b)(1) of §302. If it is not essentially equivalent to a dividend, it is entitled to capital gains treatment, no matter that it fails all of the more specific tests set forth in the Code.

Turning now to the instant case, the facts do not bring it within the provisions of Part II of the 1954 Act, §§331-346, nor indeed does the taxpayer so contend. By §331, capital gains treatment is accorded to property received by the taxpayer from a corporation in partial liquidation. The definition of a partial liquidation is found in §346. Subsection (a)(2), the only part of §346 relevant here, provides that a distribution of corporate property is treated as a partial liquidation if "the distribution is not essentially equivalent to a dividend, is in redemption of a part of the stock of the corporation pursuant to a plan, and occurs within the taxable year in which the plan is adopted or within the succeeding taxable year." The legislative history, the Treasury Regulations, and the applicable cases indicate that a primary factor to be considered in the definition of a partial liquidation, although not the sole factor, is whether there has been a contraction in the business of the corporation.[1] This test is not met in the present case, for there is no

[1] See Chommie, §346(a)(2): The Contraction Theory, 11 Tax L. Rev. 407 (1956); Murphy, Dividend Equivalence — The End of the Beginning, 10 Tax L. Rev. 213, 217-18 (1954). For a sharp criticism of reliance on corporate contraction as a factor in characterizing a redemption as a partial liquidation, see Bittker, The Taxation of Stock Redemptions and Partial Liquidations, 44 Cornell L.Q. 299, 307 n.22 (1959).

evidence of any lessening in the business being carried on by Ballenger Paving Company as a result of the redemption of the taxpayer's preferred stock. Indeed, the business was expanding. However, we need not pursue this issue further because neither does the taxpayer claim that his case falls within the partial liquidation provisions, nor was the case tried before the District Court on that theory.

If a redemption is not classified as a partial liquidation so as to be entitled to capital gains treatment via that route, then the provisions of §302 must be examined to see if relief for the taxpayer can be found there. Clearly, none of the "safe harbor" provisions of §302(b) apply. The facts of this case do not meet the precise, mathematical test for a substantially disproportionate redemption, which is applicable in any event only to voting stock, §302(b)(2); neither has there been a complete termination of the taxpayer's interest in the corporation, §302(b)(3); nor does this case involve the reorganization of a railroad corporation, §302(b)(4). Therefore, the taxpayer must, and does, rely upon §302(b)(1), providing for capital gains treatment "if the redemption is not essentially equivalent to a dividend." Since the statute gives no further aid in determining whether cash or other property distributed by a corporation in redemption of its stock is equivalent to a dividend, recourse must be had to the judicially developed rules. . . .

We now turn to the decisions setting forth the criteria which the Tax Court and the District Courts must apply to determine the applicability of §302(b)(1). When the cases are viewed solely from the shareholder's perspective, two lines of decisions appear. The first applies a strict "net effect" test.[2] Under this test, the court must hypothesize a situation where the corporation did not redeem any stock, but instead declared a dividend for the same amount. The court then must examine the situation after the dividend and compare it with the actual facts of the case when stock was redeemed, viewed always from the shareholders' vantage point. The redemption is equivalent to a dividend if the results from the hypothetical dividend and the actual stock redemption are essentially the same. As stated by Judge Medina, "We must ask whether, viewing the transaction as a whole, different results were produced by what was in form a partial liquidation from the results that would have been produced, under the circumstances, by a dividend." Northup v. United States, 240 F.2d 304, 306 (2d Cir. 1957). Under this approach, factors to be considered are whether the same shareholders would have received the identical payments had the redemption been a dividend, and whether the redemption altered the shareholders' control over the corporation and their respective rights to its future earnings. In evaluating the effect of the redemption on the future relationship between the parties, it also seems appropriate to consider whether the redemption is a part of a broader plan. Considering all these factors, it becomes apparent that every pro rata redemption will be equivalent to a dividend, for in no way can it result in any alteration in the relationship of the shareholders, both with respect to their share of the distribution in question and in respect to future control and profits.[3] However, the converse is not true, that every non pro rata redemption qualifies for §301(b)(1).

The second line of cases is not the direct antithesis of the first. All these cases adopt the "net effect" test, but add a further consideration — whether or not

[2] Kessner v. Commissioner, 248 F.2d 943 (3d Cir. 1957); Northup v. United States, 240 F.2d 304 (2d Cir. 1957); Kirschenbaum v. Commissioner, 155 F.2d 23 (2d Cir. 1946). The prior decisions in the Fourth Circuit appear to belong to this line of cases, although these opinions mention some factors which are more appropriate for consideration in the second line of cases. Commissioner v. Roberts, 203 F.2d 304 (4th Cir. 1953); Wall v. United States, 164 F.2d 462 (4th Cir. 1947).

[3] Treasury Regulation §1.302-2(b) provides: "All distributions in pro rata redemptions of a part of the stock of a corporation generally will be treated as distributions under §301 if the corporation has only one class of stock outstanding." Professor Bittker takes the position that §302(b)(1) can apply only to non pro rata redemptions. Bittker, The Taxation of Stock Redemptions and Partial Liquidations, 44 Cornell L.Q. 299, 322-25 (1959).

there are legitimate business purposes for the redemption.[4] An example of a redemption for a legitimate business purpose is the redemption of preferred stock to improve the corporation's credit position. To be suitable for consideration, a business purpose is not to be confined to one which furthers the successful conduct of the corporation; purposes stemming from the personal business affairs of the shareholders also warrant attention. An example of the latter is the redemption of stock as a part of a shareholder's complete withdrawal from the business. Of course, an acceptable business purpose can never be reducing income taxes, for the purpose of the statute is to prevent distribution of the earnings of the corporation to the shareholders at the lower, capital gains rates. Further not only is the legitimacy of the business objective to be achieved a factor to be considered, but also the purity of the motive for the redemption. Thus, it becomes relevant to consider whether the redemption plan initiated with the stockholders involved or with the corporate officers, whether in the preceding years the corporation had declared adequate dividends, and whether there were, in fact, corporate "earnings and profits," as defined by §316, to be distributed. These factors are relevant only to establish a tax avoidance motive. Under this approach, a pro rata redemption of stock can have a business justification sufficient to overcome its resemblance to a dividend under the "net effect" test. The result in any case would depend to a large extent on the weight to be given the business purposes, a matter on which those courts which have adopted this approach are far from agreement.

Although the cases following the strict "net effect" test do not permit proof as to business purpose, underlying the approach is the assumption that tax avoidance will always be one of the purposes of a redemption which places the parties in a position identical to that in which they would have been placed had a dividend been declared. And conversely, whenever the results of the redemption are significantly different, there must have been a legitimate business purpose, for otherwise there would be no reason for the stockholders to consent to unequal treatment. On the other hand, since it often happens that the corporation is closely held and the stockholders and corporate officers are the same people, courts following the second approach find it almost impossible to untangle the various purposes to say with any assurance that the redemption was justified by a legitimate business purpose. Recourse in such circumstances should be to the factors emphasizing the net effect of the transaction if the statute is to be reasonably applied. Viewed in this way, the only difference between the two lines of cases is that courts following the first will tax as a dividend any redemption for which tax avoidance is likely to be a motivating factor, while courts adhering to the second line of cases adopt a more flexible approach, by sometimes permitting a legitimate business purpose to prevail despite a concurrent tax avoidance motive.

Returning to the present case, an examination of the District Court's findings of fact indicates that, in concluding that the redemption was equivalent to a dividend, the District Court followed the approach adopted by the second line of decisions. However, it is not necessary for us to choose between the two lines of cases because, with either approach, the District Court must be upheld.

---

[4] Heman v. Commissioner, 283 F.2d 227 (8th Cir. 1960); Earle v. Woodlaw, 245 F.2d 119 (9th Cir. 1957); United States v. Fewell, 255 F.2d 496 (5th Cir. 1958); Keefe v. Cote, 213 F.2d 651 (1st Cir. 1954); Jones v. Griffin, 216 F.2d 885 (10th Cir. 1954). The opinions in the Sixth Circuit do not disclose which line of decisions the court follows, but the results under the facts of their cases would no doubt be the same under either test. Bell v. Commissioner, 248 F.2d 947 (6th Cir. 1957); Woodworth v. Commissioner, 218 F.2d 719 (6th Cir. 1955). Flanagan v. Helvering, 73 App. D.C. 46, 116 F.2d 937 (1940), often cited as the progenitor of the strict "net effect" test, actually mentions factors more appropriate to the second approach. The Tax Court also appears to follow the second line of decisions. Decker, 32 T.C. 326 (1959); Stolz, 30 T.C. 530 (1958), aff'd Stolz v. Commissioner, 267 F.2d 482 (5th Cir. 1959).

We are dealing here with a sole stockholder who has caused the corporation to pay him $27,300.00 out of its earned surplus* in redemption of all of his preferred stock. The redemption is pro rata. It is true that the taxpayer's wife holds one share in the corporation. This is too small to upset the pro rata characterization of the distribution, and secondly, under the attribution of ownership rules of §318, made applicable to §302, the wife's ownership is constructively her husband's. If we apply a strict "net effect" test to these facts, the redemption must not be given capital gains treatment because a pro rata redemption, at least when not a partial liquidation as defined by §346, will always be essentially equivalent to a dividend.

The result is the same if we follow the second line of cases and inquire whether there is a legitimate business purpose which can outweigh the factors indicating dividend treatment. The taxpayer claims that the preferred stock was originally issued for a valid business purpose, to protect the interests of the widow and child of the deceased former partner according to the directions of the North Carolina state court having supervisory jurisdiction over the estate. The taxpayer further claims that it was a part of the original plan to redeem the preferred stock as soon as its usefulness ceased, as was the case once the interests in the corporation held by the widow and child and other outside stockholders had been terminated. However, we cannot understand how a valid reason for the issuance of preferred stock can, once its purposes have been served, be converted into a reason for its redemption. Even if it had been originally understood that the preferred stock would eventually be redeemed, such a fact is not, without more, a legitimate business justification.

The taxpayer, however, assigns additional reasons for the redemption. It was thought undesirable from a corporate planning standpoint to burden the corporation with the obligation to pay dividends on the preferred stock which, if not paid, were cumulative. In addition, it is contended, the bonding company considers cumulative preferred stock objectionable. Finally, the taxpayer argues, financing by means of preferred stock is not as satisfactory from a business standpoint as financing by loans, both because interest payments are made a deductible expense by §163 while dividend payments are not, and because the prevailing interest rate was lower than the 5% dividend on the preferred stock. Nevertheless, these objections could be remedied without at the same time effecting a distribution of corporate earnings at capital gains rates. The taxpayer could as readily have caused the preferred stock to be exchanged for common stock or have amended the corporate charter or by-laws to delete the objectionable features of the preferred stock. In the case of a pro rata redemption of stock especially, any business justification must be indeed compelling to overcome the "net effect" test which points to a tax avoidance scheme.

For these reasons, the judgment below is affirmed.

NOTE

1. *"Not essentially equivalent to a dividend."* The "two lines of cases" which the court summarizes derive from §115(g) of the 1939 Code, providing that a distribution in redemption or cancellation of stock (to the extent covered by earnings and profits) was to be treated as a taxable dividend if it occurred "at such time and in such manner as to make the distribution and cancellation in whole or in part essentially equivalent to the distri-

* Although the corporation's earned surplus is often used as a loose measure of its earnings and profits, the amounts may be very different (e.g., a non-taxable stock dividend reduces earned surplus, but leaves earnings and profits intact). In referring to the corporation's earned surplus, the court implicitly assumed that the earnings and profits were likewise in excess of $27,300. — Ed.

bution of a taxable dividend." In separating partial liquidations under §346 from other stock redemptions under §302, the 1954 Code was described by the Senate Finance Committee Report (p. 49) as having this effect:

> Those distributions which may have capital-gain characteristics because they are not made pro rata among the various shareholders would be subjected, at the shareholder level, to the separate tests described in [§302, §303, and §304]. On the other hand, those distributions characterized by what happens solely at the corporate level by reason of the assets distributed would be included as within the concept of a partial liquidation.

With the implication that a redemption can satisfy §302(b) *only* if it is non pro rata, compare Sorem v. Commissioner, 40 T.C. 25 (1963):

> The evidentiary criteria useful in determining under [§302(b)(1)] the dividend or nondividend character of a particular distribution which fails to qualify as a sale or exchange of stock under one of the three "automatic" tests contained in §302(b)(2), (3), or (4), remain substantially the same as those which were found helpful by the courts in determining dividend equivalence under [1939 Code, §115(g)].

2. *Constructive ownership of stock under §302(b).* Since both §302(b)(2) and §302(b)(3) explicitly refer to the amount of stock "owned" by the shareholder, the constructive ownership rules of §302(c) are applicable, with the result that many redemptions by closely held corporations will have more trouble in meeting the standards of "substantially disproportionate" under §302(b)(2) or "complete" under §302(b)(3) than one might think at first glance. If a redemption fails to qualify under these subsections because it is neither "complete" nor "substantially disproportionate" when stock owned constructively by the taxpayer is taken into account, can §302(b)(1) be used as an alternative route to capital gain treatment? Note that §318 states that the constructive ownership rules are to be employed only when "expressly made applicable," that §302(c)(1) states that they shall be applied "in determining the ownership of stock" under §302, but that §302(b)(1) does not explicitly refer to ownership of stock, as do §§302(b)(2) and 302(b)(3). Despite this, there is authority for taking the constructive ownership rules into account in applying §302(b)(1). Lewis v. Commissioner, 35 T.C. 71 (1960); see also the *Ballenger* case, supra. Would it also be proper, in applying §302(b)(1), to take into account evidence of a shareholder's estrangement from, or independence of, the persons whose shares would be imputed to him by §302(c)? See Squier's Estate v. Commissioner, 35 T.C. 950 (1961) ("sharp cleavage" and other facts outweigh attribution rules).

Another escape from the constructive ownership rules is provided by §302(c)(2). If a redemption would otherwise qualify under §302(b)(3) as a complete redemption of all of the shareholder's stock, he can avoid an attribution of stock from other members of his family (but not attribution from partnerships, trusts, corporations, etc., in which he has an interest), provided (a) for ten years after the redemption he does not acquire any "interest" in the corporation (as defined), and (b) for ten years before the redemption he did not engage in certain tax avoidance transactions (primarily transfers of stock to or from related persons). Because the taxpayer who relies on this waiver of the family attribution rules is put on good behavior for a ten-year period, he must agree to notify the Treasury if he acquires a forbidden interest in the corporation, and the statute of limitations on the year of the redemption is appropriately suspended. See Van Keppel v. United States, 321 F.2d 717 (9th Cir. 1963).

3. *The meaning of "redemption."* Section 317(b) defines "redemption." By specifically including a transaction in which reacquired stock is held in the corporate treasury, it clears up a problem under §115(g) of the 1939 Code, which spoke of a "cancellation" or "redemption" of stock. The Court of Appeals for the Second Circuit expressed the view that treasury shares have not been canceled or redeemed. Kirschenbaum v. Commissioner, 155 F.2d 23 (2d Cir. 1946) cert. denied, 329 U.S. 726. The Court of Appeals for the Seventh Circuit agreed, Commissioner v. Snite, 177 F.2d 819 (7th Cir. 1949), but the Fourth Circuit was contra:

> If it should be held that taxpayers can avoid the terms of the statute by the simple device of selling their stock to the corporation and having it held as treasury stock, the purpose of the statute to prevent the evasion of taxes upon corporate dividends would be completely frustrated. [Wall v. United States, 164 F.2d 462, 465 (4th Cir. 1947).]

An intermediate position, treating treasury shares as canceled or redeemed where there was no intention to reissue them, was apparently approved in Boyle v. Commissioner, 187 F.2d 557 (3d Cir. 1951).

Section 317(b)'s definition of redemption is clearly applicable to that term as used in §302. But does it also apply to "redemption" as used in §346?

4. *Redemptions to pay death taxes.* Section 303, relating to distributions in redemption of stock to pay death taxes and funeral and administration expenses, is a liberalized version of a provision that first entered the Code in 1950, as §115(g)(3) of the 1939 Code. If the stock of a single corporation constitutes more than 35 per cent of the value of a decedent's gross estate or more than 50 per cent of his taxable estate, a redemption of the stock up to the amount of the death taxes and funeral and administration expenses will be a capital gain or loss transaction. The stock of two or more corporations can also qualify under certain circumstances. Of course, not every redemption of an estate's stock would be a taxable dividend under §302 even in the absence of §303; recourse to the latter section will be necessary only if without it the distribution would be a dividend. For an estimate of the need for a provision of this type, see Harriss, Estate Taxes and the Family Owned Business, 38 Calif. L. Rev. 117 (1950). See also Lanahan, Redemptions to Pay Death Taxes: Redemptions Through the Use of Related Corporations (Sections 303, 304), 15 N.Y.U. Inst. on Fed. Taxation 493 (1957).

5. *Redemptions by affiliated corporations.* Section 304 is derived from §115(g)(2) of the 1939 Code, enacted in 1950 to overrule Wanamaker Trust v. Commissioner, 11 T.C. 365 (1948), aff'd per curiam, 178 F.2d 10 (3d Cir. 1949), which held that §115(g) did not apply to an acquisition by a wholly owned subsidiary of stock in the parent corporation; see also Commissioner v. Pope, 239 F.2d 881 (1st Cir. 1957). By virtue of changes in 1954, this section now covers redemptions by a corporation of the stock of a wide range of related corporations, as well as parent-subsidiary redemptions. Transactions of this type must now be tested by the rules of §302; they can no longer claim the automatic immunity conferred by the *Wanamaker Trust* and *Pope* cases. See Lanahan, Redemptions Through Use of Related Corporations, 18 N.Y.U. Inst. on Fed. Taxation 741 (1960); Diamond, Brother-Sister Corporations — Sale of Stock or Other Assets, and Other Problems, 1959 So. Calif. Tax Inst. 109.

6. *The case of the disappearing basis.* When a taxpayer receives an ordinary dividend, the basis of his shares is unaffected by the receipt, and gain or loss on a subsequent disposition of the shares is calculated accordingly. But if he gets a §302(d) dividend, he no longer has the shares for a later sale or other disposition. What happens to his basis? If it is lost, a §302(d) distribution is not the equivalent of an ordinary dividend; it is worse than one. See Regs. §1.302-2(c), stating that when a redemption of stock is treated as a dividend, "proper adjustment of the basis of the remaining stock will be made with respect to the stock redeemed," and note Examples (1)-(3). Before the promulgation of these regulations, the fate of the redeemed stock's basis was veiled in mystery. See Brodsky and Pincus, The Case of the Reappearing Basis, 34 Taxes 675 (1956).

7. *Redemption of stock vs. retirement of bonds.* Sections 302 and 346 both speak of a redemption of "stock." The retirement of bonds and other evidences of indebtedness is ordinarily a capital gain or loss transaction by virtue of §1232, and there is no counterpart of §302 to treat the retirement of such creditor instruments as a distribution of earnings and profits. Once more (see p. 641 supra) we find the Internal Revenue Code smiling on the issue of debt instruments instead of stock by the newly organized corporation; §1232 is a channel through which corporate profits may be withdrawn without being classified and taxed as dividends. But the same criteria that turn ostensible bonds or debentures into stock so as to deny the deduction for so-called interest may also require the "bonds" to be treated as "stock" under §302. Supra page 642; Schlesinger, "Thin" Incorporations: Income Tax Advantages and Pitfalls, 61 Harv. L. Rev. 50, 78-86 (1947).

8. *Redemption of §306 stock.* Section 306, dealing with the redemption or sale of certain classes of stock (primarily preferred stock issued as a stock dividend), is examined infra page 697.

9. *References.* Cohen, Redemptions of Stock Under the Internal Revenue Code of 1954, 103 U. of Pa. L. Rev. 739 (1955); Bittker, Stock Redemptions and Partial Liquidations Under the Internal Revenue Code of 1954, 9 Stan. L. Rev. 13 (1956); Winton and Hoffman, A Case Study of Stock Redemptions Under Sections 302 and 318 of the New Code, 10 Tax L. Rev. 363 (1955).

TELEVISION INDUSTRIES, INC. v. COMMISSIONER

284 F.2d 322 (2d Cir. 1960)

Before CLARK, MAGRUDER and FRIENDLY, Circuit Judges.

FRIENDLY, Circuit Judge.

This is a petition by a taxpayer to review a decision of the Tax Court, 32 T.C. 1297, finding petitioner liable as transferee for a deficiency of $77,199.53, together with interest, in the income tax of National Phoenix Industries, Inc., hereafter "Phoenix." This finding stems from a conclusion that $1,026,285 received by Phoenix from Nedick's, Inc. on November 15, 1951, and not reported as income, was taxable to Phoenix as a dividend under §115(g) of the Internal Revenue Code of 1939. The facts, which are not disputed, are set forth at length in the opinion of the Tax Court. We shall state only such as we deem essential for understanding the problem presented.

In May, 1951, 900 shares of the stock of Nedick's, Inc. were owned by the Estate of Maurice Wertheim and his associates, hereafter "the Wertheim interests." These shares constituted 90% of the outstanding stock; the other 100 shares were owned by employees from whom Nedick's was entitled to purchase. At a meeting of the board of directors of Phoenix on May 14, 1951, the chairman narrated negotiations he had been conducting for the purchase of the stock of the Wertheim interests for $3,600,000, payable $200,000 on signing the contract, $500,000 60 days thereafter, and $2,900,000 six months later. In discussing the financing of the proposed purchase, he stated his opinion "that at least $1,000,000 would be available in Nedick's, Inc. itself to be applied toward the purchase price." He also expressed the view that "Nedick's, Inc., had great opportunity for improvement and expansion. . . ."

Pursuant to authority given by its directors, Phoenix entered into a purchase agreement with the Wertheim interests on May 21, 1951, substantially as indicated by the chairman at the directors' meeting. The first two installments of the purchase price were paid. On August 2, 1951, Nedick's purchased 50 shares of stock owned by its then president, pursuant to its option; the remaining 50 shares were purchased, also pursuant to option, on December 14, 1951.

On November 7, the chairman of Phoenix was authorized by its directors to obtain a clearance loan of $1,000,000 from a bank for use in making the final payment. The minutes recite that the chairman "pointed out that Nedick's, Inc. had cash available which, if used by it to purchase a portion of the shares so acquired by the Corporation, would thereby be made available to the Corporation to repay such loan." On November 15, Phoenix borrowed $1,000,000. It paid the final installment of the purchase price, which had been reduced to $2,845,000, with these funds and its own, received delivery of the 900 shares from the escrow agent, and immediately offered to sell Nedick's, Inc. 260 shares for $1,026,285, this being the purchase price of these shares plus an appropriate proportion of the expenses of the entire purchase. Nedick's forthwith accepted Phoenix's offer and paid for the 260 shares. Phoenix used $1,000,000 of the proceeds to pay off the clearance loan.

In its 1951 Federal income tax return, Phoenix reported the sale of the 260 shares to Nedick's as having been without gain or loss. The Commissioner asserted that the payment by Nedick's was a dividend to Phoenix under §115(g) of the Internal Revenue Code of 1939, which provides that

> If a corporation cancels or redeems its stock (whether or not such stock was issued as a stock dividend) at such time and in such manner as to make the distribution and cancellation or redemption in whole or in part essentially equivalent to the distribution of a taxable dividend, the amount so distributed in redemption or cancellation of the stock, to the extent that it represents a distribution of earnings or profits accumulated after February 28, 1913, shall be treated as a taxable dividend.*

The Tax Court has upheld the Commissioner's determination.

If attention may properly be limited to the transaction between Phoenix and Nedick's on November 15, 1951, the Commissioner was quite clearly warranted in concluding that the payment was within the statute, even without the gloss provided by Treasury Regulations 118, §39.115(g)-1(a)(2):

> . . . A cancellation or redemption by a corporation of a portion of its stock pro rata among all the shareholders will generally be considered as effecting a distribution essentially equivalent to a dividend distribution to the extent of the earnings and profits accumulated after February 28, 1913.

Phoenix was the owner of all the outstanding stock of Nedick's, save for the 50 shares which Nedick's had under option and acquired only a month thereafter; hence the payment was in effect pro rata. It had "the same effect" as a dividend of the same amount, see Northup v. United States, 2 Cir., 1957, 240 F.2d 304, 306 . . . There was no evidence that the payment was incident to a contraction of Nedick's business. It is immaterial that the 260 shares were held for some time in Nedick's treasury. Wilson v. United States, 2 Cir., 1958, 257 F.2d 534, certiorari denied 358 U.S. 893.

Petitioner contends that this is too much a key-hole view. It says that the transaction had precisely the same effect as if the Wertheim interests had sold 260 shares to Nedick's for $1,026,285 and had sold petitioner 640 shares for $2,518,715, and that if the transaction had been cast in that form, the payment to the Wertheim interests would not have been taxable under §115(g), Zenz v. Quinlivan, 6 Cir., 1954, 213 F.2d 914, now followed by the Commissioner, Rev. Ruling 54-458, 1954-2 C.B. 167, and there would have been no payment to Phoenix to be taxed. We find little persuasiveness in the argument stated in that form. The Commissioner is justified in determining the tax effect of transactions on the basis in which taxpayers have molded them, Gray v. Powell, 1941, 314 U.S. 402, 414; Interlochen Co. v. C.I.R., 4 Cir., 1956, 232 F.2d 873, 877, although he may not always be required to do so, Higgins v. Smith, 1940, 308 U.S. 473, 477. It would be quite intolerable to pyramid the existing complexities of tax law by a rule that the tax shall be that resulting from the form of transaction taxpayers have chosen or from any other form they might have chosen, whichever is less.

Petitioner is on stronger ground, although not strong enough, when it urges that, taking the transaction as it was, the Commissioner was still not warranted in finding that the distribution was "essentially equivalent to the distribution of a taxable dividend." Petitioner says that Phoenix started on November 15, 1951 owning no stock in Nedick's and ended owning 640 shares which had cost it $2,518,715 plus expenses, and that to seize on Phoenix's momentary ownership of 260 shares is to atomize the transaction and to put form above substance. The

---

* Section 115(g), 1939 Code, was the predecessor of §302 (redemptions) and §331(a)(2) (partial liquidations) of the 1954 Code, both discussed in the *Ballenger* case, supra page 652. — Ed.

Commissioner responds that it is the taxpayer that is atomizing the transaction by seeking to obliterate the significant step wherein a corporation's earnings and profits passed into its stockholders' hands. The Government relies heavily upon the opinion of Judge Stewart, as he then was, in Woodworth v. C.I.R., 6 Cir., 1955, 218 F.2d 719, 724; taxpayer would distinguish that decision on the basis that two years intervened between the acquisition of the stock by the purchasers and its sale to the company and there was no evidence of an antecedent plan. We agree that the present case differs in this respect from Woodworth and also from Wall v. United States, 4 Cir., 1947, 164 F.2d 462, and Lowenthal v. C.I.R., 7 Cir., 1948, 169 F.2d 694, on which the Commissioner relies and which taxpayer seeks to distinguish on like grounds. However, it is not enough that there be a difference; the difference must be a significant one, and here is where taxpayer's argument fails. For we are unable to see why the Commissioner may not lawfully determine that a sole stockholder's removal of earnings and profits from a corporation, which it intends to improve and expand, was "essentially equivalent to the distribution of a taxable dividend" under §115(g), rather than a "partial liquidation" taxable on a capital gain basis under §115(c), even though the stockholder had just acquired the stock and had planned from the outset to do precisely what it did. See Ferro v. C.I.R., 3 Cir., 1957, 242 F.2d 838; and the full discussion of the history and the authorities in 1 Mertens, Law of Federal Income Taxation, §9.100. Taxpayer relies on Fox v. Harrison, 7 Cir., 1944, 145 F.2d 521; Holsey v. C.I.R., 3 Cir., 1958, 258 F.2d 865, acquiesced in Rev. Ruling 58-614, 1958-2 C.B. 920; and Niederkrome v. C.I.R., 9 Cir., 1958, 266 F.2d 238, certiorari denied sub nom. Royce v. C.I.R., 1959, 359 U.S. 945. Fox v. Harrison is distinguishable as resting on a finding by the trial court that the purchaser of the stock "was acquiring said stock on behalf of the corporation and as a temporary expedient" [145 F.2d 522]; here there was no finding that Phoenix was acquiring the stock on Nedick's behalf. The two later decisions, Holsey v. C.I.R. being that of a divided court, relate to payments to stockholders other than the taxpayer sought to be taxed. Cases such as C.I.R. v. Ashland Oil and Refining Co., 6 Cir., 1938, 99 F.2d 588, certiorari denied, 1939, 306 U.S. 661, and Georgia-Pacific Corp. v. United States, 5 Cir., 1959, 264 F.2d 161, also relied on by taxpayer, are not controlling as to problems under §115(g).

Judgment affirmed.

NOTE

1. *Bootstrap purchases — on a shoestring.* Redemptions are often utilized to effect "shoestring" purchases of closely held corporations. Thus: A owns all the stock of a corporation; he wishes to sell out to B, but B cannot finance the entire purchase with his own funds. The corporation's assets include a substantial amount of cash and marketable securities. A sells part of the stock to B, and then the corporation redeems the rest of A's stock. Note that if part of A's stock had been redeemed while he was the sole stockholder, the redemption would probably have been essentially quivalent to a dividend, under either the 1939 or the 1954 Code. Despite this fact, it was held under the 1939 Code that a redemption following a sale, as described above, is a sale by A of his stock, not a dividend. Zenz v. Quinlivan, 213 F.2d 914 (6th Cir. 1954); Edenfield v. Commissioner 19 T.C. 13 (1952). After losing these cases, the Internal Revenue Service acquiesced, though announcing that such transactions "will be closely scrutinized to determine whether the selling stockholder 'ceases to be interested in the affairs of the corporation' immediately after redemption." Rev. Rul. 54-458, 1954-2 C.B. 167. The following year, the Service announced that it would apply the *Zenz* case to transactions governed by the 1954 Code, so that the redemption of A's stock will qualify under §302(b)(3) as a sale. Rev. Rul. 55 745, 1955-2 C.B. 223. What if A remains interested in the corporation (e.g., performs serv-

ices under a profit-sharing agreement: or is to receive a percentage of future profits for his shares)?

What about B? When the Service announced in Rev. Rul. 54-450, supra, that it would follow the *Zenz* case as to A, it went on to say that such redemptions "will . . . be examined to determine whether any payment by the corporation for stock has the effect of a dividend to the stockholders who remain interested in the corporation," citing Wall v. United States, 164 F.2d 462 (4th Cir. 1947). In the *Wall* case, however, B agreed to buy all of the stock, and then caused the corporation to pay for some of it. When the buyer commits himself to purchase only part of the stock, the corporation being obligated to buy the rest, he has been successful in avoiding a taxable dividend. See the *Fox*, *Neiderkrome*, and *Holsey* cases, cited by the court. The Internal Revenue Service, after losing a series of such cases, announced in 1958:

> In the future, the Service will not treat the purchase by a corporation of one shareholder's stock as a dividend to the remaining shareholders merely because their percentage interests in the corporation are increased. On the other hand, if the stock is in reality purchased by a remaining shareholder and paid for by the corporation, then, regardless of the form of the transaction, the payment will be considered a dividend to the shareholder who made the purchase. [Rev. Rul. 58-614, 1958-2 C.B. 920.]

Do these developments leave the possibility of a dividend tax in situations like that in *Television Industries* as no more than a trap for the unwary? Note that the purchase by Nedick of the 50 shares owned by its president was apparently not claimed by the United States to constitute a dividend to Television Industries, Inc.

2. *Impact of dividends received deduction.* When a redemption of stock owned by a corporation is taxed as a dividend, the blow is softened by the 85 per cent dividends received deduction of §243. Even so, in *Television Industries*, the taxpayer argued that the transaction was a sale of the stock, because the amount realized did not exceed the basis of the stock, so that there was no gain. If there had been a substantial gain (e.g., if the shares had been acquired many years earlier at a low cost), however, a tax at the capital gain rate on the difference between cost and amount received might exceed the tax burden of having the redemption treated as a dividend. This explains why the taxpayer in Pacific Vegetable Oil Corp. v. Commissioner, 251 F.2d 682 (9th Cir. 1957), argued that a redemption was substantially equivalent to a dividend, while the government asserted that it was a bona fide sale of the stock.

REV. RUL. 60-322

1960-2 C.B. 118

Advice has been requested relative to the tax consequences of a proposed distribution by a corporation of cash, realized from the sale of United States Government bonds and excess inventories, to its stockholders under the circumstances described below.

M corporation has 3,800 shares of common stock, par value of 10x dollars per share, of which 200 shares are held in the treasury. The balance sheet indicates accumulated earnings of 1,500x dollars.

The corporation was engaged in the business of buying raw skins and tanning and selling the leather to a certain segment of the leather trade. It showed consistent profits until two years ago when the demand therefor suffered a serious, if not a permanent, decline. In an effort to revitalize the business, the corporation changed over to buying raw skins of another kind and tanning and selling the leather to another segment of the leather trade. However, the situation did not improve, with the result that continuing losses were incurred and a large inventory of 5,000x dollars was accumulated.

Early in the year under consideration, M corporation determined that further purchases should be curtailed and inventories liquidated. Pursuant to this policy, the inventory was reduced to 3,000x dollars. In doing so, the corporation had sustained substantial operating losses. However, in view of the depressed state of the market and the grim future prospects, the process of liquidating its inventory is expected to be continued and the operations will be carried on at a modified basis with purchases kept at a minimum. In this manner, it is felt that the operating losses can be minimized and if the business decline continues, then a complete liquidation will eventually be voted by the stockholders. Accordingly, the M corporation proposes to redeem a portion of its stock with cash from the sale of United States Series G bonds and from the proceeds of the inventories being liquidated in the ordinary course of business.

[Text of §331(a)(2) and §346(a)(2), relating to partial liquidations, is omitted.]

Where a corporation has earnings available, in order for the distribution of assets by it to its shareholders to be treated as a partial liquidation, the distribution must result from a genuine contraction of the business of the corporation. See Imler v. Commissioner, 11 T.C. 836, acquiescence, C.B. 1949-1, 1. See also Rev. Rul. 59-240, C.B. 1959-2, 112, and Rev. Rul. 60-232, 1960-2 C.B. 115. In the instant case, the earnings and profits of prior years were retained in the corporation and resulted in building up a large inventory and investment of funds in Government bonds.

Under the foregoing set of facts, it is held that neither the sale of investments nor the sale of a large part of the inventory in the ordinary course of business constitutes a genuine contraction of the business of the corporation. Accordingly, the proposed distribution of cash for the portion of the stock of M corporation to be redeemed will not constitute a distribution in partial liquidation within the purview of section 346 of the code. The provisions of section 301 will apply to this distribution and, accordingly, the distribution will be taxed as a dividend to the extent provided in section 316.

NOTE

1. *Contraction by fire.* When tax lawyers get together to discuss the most "genuine contraction of the business" they have ever encountered, they always come back to *Imler*, cited in the foregoing ruling:

> The principal building owned by the company had been damaged by fire in 1941. When the company undertook to repair the building it was found that, because of war conditions, the shortage of building materials, and high costs, it was advisable to abandon 2 damaged floors and reduce the 7-story building to one of 5 stories. The consequence was that the company found its facilities inadequate to carry on the retinning and soldering operations formerly engaged in. Moreover, these operations had proven unprofitable in recent experience because of war conditions and shortage of necessary materials. For these reasons the company discontinued the retinning and soldering operations. This reduction in operations likewise reduced the amount of capital necessary for carrying on the business activities of the company. This was a bona fide contraction of business operations and consequent reduction in capital used. The company thus had a real and legitimate purpose for reducing its outstanding capital stock.
>
> The motives of the corporation were all related to the above business purpose and were, therefore, legitimate and properly conceived. If the excess of insurance proceeds be set to one side, the surplus of the company had remained almost constant for 10 years. The company had followed a conservative dividend policy throughout its history and had not paid a dividend since 1934. The original issuance of the stock had occurred many years before and there was no connection between the issuance and the redemption of the same. There was no special circumstance or condition re-

lating to the distribution excepting the fact that the company had in its hands the excess insurance proceeds which formed the basis of the distribution. We are convinced that, except for the fire and the excess insurance proceeds, there would have been no distribution. [11 T.C. 836.]

2. *Distribution of working capital.* The Service has ruled that on a genuine corporate contraction, a distribution in partial liquidation may include not only the net proceeds from a sale of the operating assets but also an amount equal to the working capital attributable to the terminated business activity. Rev. Rul. 60-232, 1960-2 C.B. 115. The ruling continued:

> In determining the amount of working capital reasonably attributable to the operation of the business activity terminated, the Service will take into consideration all pertinent factors. The amount of working capital actually used in the business activity just prior to its termination will be the primary consideration. However, an unusual or abnormal increase just prior to the distribution in the size of inventories, work in process, accounts receivable, cash accounts, or other items, may indicate an attempt to secure partial liquidation treatment of a distribution involving an amount of working capital in excess of that normally required in the operation of the business terminated. The amount of cash and other liquid assets is never in itself an indication of the amount of working capital attributable to a business activity since a corporation may retain liquid assets in excess of the needs of its business. Because the determination of the amount of working capital attributable to any business activity is a factual matter, a specific determination on this point will be made by the Service only after an examination of the income tax return of the corporation making the distribution in partial liquidation.

3. *Termination of a business.* In an effort to lend a degree of certainty to the concept of "corporate contraction," in 1954 Congress enacted §346(b), describing a special type of contraction that qualifies as a partial liquidation. To meet the requirements of §346(b), the corporation must distribute the assets, or the proceeds, of a business which was actively conducted for the five-year period immediately preceding the distribution, and immediately after the distribution it must continue to be engaged in a second trade or business with a similar five-year history. The concepts used by §346(b), and some of its problems, overlap those of §355 (relating to so-called divisive reorganizations) and are better examined in conjunction with §355, infra pages 713 et seq.

Rev. 407 (1956); Brodsky, Partial Liquidation: Definition of Partial Liquidation and Rules for Determining Termination of a Business, 15 N.Y.U. Inst. on Fed. Taxation 539 (1957); Schoettle, Section 346 of the Internal Revenue Code: A Legislative Enigma, 109 U. of Pa. L. Rev. 944 (1961).

SECTION G. DISTRIBUTIONS OF CASH AND PROPERTY — IMPACT ON THE CORPORATION

1. *Tax Effect of the Distribution Itself: The General Utilities Doctrine, §311, and §336*

Section 311 of the 1954 Code, relating to the effect of a distribution of property on the income of the distributing corporation, has no counterpart in the 1939 Code.

Section 336 of the 1954 Code, relating to the effect of a distribution in partial or complete liquidation on the distributing corporation, is also new, but it is derived from Regs. 118, §39.22(a)-20.

In General Utilities & Operating Co. v. Helvering, 296 F.2d 200, the government argued that a distribution by the taxpayer corporation of stock of another

corporation, having a cost basis of about $2000 and a fair market value of about $1 million, generated taxable income at the corporate level. To support this contention before the Board of Tax Appeals, the government relied on the theory that the corporation had in effect declared a dividend of $1 million and satisfied the indebtedness thus created by distributing the securities. There is authority for treating appreciation or depreciation as realized by a corporation on a distribution if the dividend resolution creates a debt to the shareholders. Bacon-McMillan Veneer Co. v. Commissioner, 20 B.T.A. 556 (1930) (gain); Callanan Road Improvement Co. v. Commissioner, 12 B.T.A. 1109 (1928) (loss). But these cases were held by the Board of Tax Appeals to be inapplicable to the General Utilities & Operating Company distribution because the dividend resolution was interpreted as declaring a dividend of property only, rather than a dividend of a specified amount of money. Before the Court of Appeals, the government added a second argument: that a sale of the stock that occurred immediately after the distribution should be attributed to the corporation, although made in form by the shareholders, under principles that are examined infra pages 675 et seq. On this point, the Court of Appeals agreed with the Treasury. The Supreme Court granted certiorari. In its Supreme Court brief, the Treasury added a third argument:

> It is not open to doubt that the phrase "sale or other disposition" connotes a transfer by which a gain is realized or a loss is sustained, and one of the principal reasons for rejecting the suggestion that a dividend distribution is a "disposition" has been the circumstance that the stockholders pay no consideration to the corporation, and hence there is no actual receipt of gain in a tangible form. We think that this reasoning misses the point, for in making it available to its own stockholders the corporation is realizing the appreciation, and nothing more is necessary. It is our view that the addition to surplus on account of the increased value and the distribution of this increased value in satisfaction of the company's general liability to its stockholders, are the evidence that the gain has been realized, for it is incomprehensible how a corporation can distribute to its stockholders something which it has not itself received. Petitioner had an earned surplus equivalent to the value of the stock distributed. . . . It is clear that petitioner used the increased value for a corporate purpose, and was thereby enabled to pay its stockholders $1,071,426.25. Thus was petitioner serving the principal end for which it was organized — to earn profits which it could distribute to its stockholders — and we submit that in so justifying the hopes of its organizers this economic entity, called a corporation, truly derived an economic gain. [Respondent's brief 17-19, 25.]

It should be noted that if this third argument were accepted, the appreciation in the value of the distributed property would be taxed to the corporation even if it were conceded that the sale of the property was made by the stockholders and not by the corporation. Indeed, a sale of the distributed property would not be necessary; the distribution itself, it was contended by the government, was a realization of income by the corporation.

The Supreme Court reversed, with a brief opinion agreeing with the Board of Tax Appeals that the distributed assets were not used to discharge a corporate debt. As to the second point, the Court held that it should have been raised in the Board of Tax Appeals and could not be belatedly argued in the appellate court; the government's third argument was not mentioned. Although the commentators could not agree on whether the theory of realization-by-distribution was rejected on the merits by implication or passed over because advanced too late in the proceeding, the former explanation of its fate became popular with the courts. See, however, R. D. Merrill Co. v. Commissioner, 4 T.C. 955, 961 (1945). Even if the issue was left open by the *General Utilities* case, however, its scope was limited to distributions of property by the going concern; the Regulations

had long provided that a corporation does not realize gain or loss on distributing property in partial or complete liquidation. Regs. 118, §39.22(a)-20 (1939 Code).

With the enactment of the 1954 Code, statutory guidance was provided in this area for the first time:

1. *Non-liquidating distributions: §311.* Section 311 provides that no gain or loss shall be recognized by a corporation on a distribution of property, except for a distribution of "LIFO inventory" (see §472), or of property whose adjusted basis is less than the liability (if any) to which it is subject or which is assumed by the shareholder in connection with the distribution. Why is income to be recognized on these distributions? Do these exceptions to §311(a) require the corporation to recognize income on unrealized appreciation in the value of property, see Eisner v. Macomber, supra page 56?

What is the effect of §311(a) on the cases, supra page 666, holding that when a dividend resolution creates a debt to the stockholders, the satisfaction of the debt with appreciated property produces income?

2. *Distributions in partial or complete liquidation: §336.* Section 336 provides that no gain or loss shall be recognized by a corporation on a distribution of property in partial or complete liquidation. This statutory rule confirms the position taken in the pre-1954 Regulations, supra, but provides that the gain is not to be recognized rather than that it is not "realized" by the corporation. Why is §336 not subject to the exceptions for LIFO inventory and excessively mortgaged property that are found in §311?

3. *Exceptions for installment obligations, §1245, and §1250.* Both §311 and §336 are explicitly subordinated to the rules requiring gain to be recognized on a disposition of installment obligations and, although one must look outside of §§311 and 336 to discover the fact, they are also subordinate to the recapture of depreciation provided by §1245 and §1250.

4. *Earnings and profits.* The tax effect at the shareholder level of a distribution of appreciated property may depend on the amount of corporate earnings and profits. If the distribution itself produces taxable income (because it comes within one of the exceptions to §311 or §336), it will also generate earnings and profits; conversely, if the distribution does not produce income, it will ordinarily not create earnings and profits. See §312(f) (second sentence). In two special cases, however, a distribution increases earnings and profits even though it does not produce taxable income: §312(b) (distributions of appreciated "inventory assets," as defined); and §312(j) (distributions when corporate property is mortgaged in excess of its basis under a loan made, guaranteed, or insured by United States, infra p. 688).

If the earnings and profits of the corporation (after taking into account the adjustments of the preceding paragraph) are less than the fair market value of the distributed property, the individual shareholders treat the fair market value (a) as a dividend to the extent that it is covered by earnings and profits and (b) as a non-dividend distribution, applicable in reduction of basis under §301(c)(2) and taxable thereafter under §301(c)(3), to the extent that it exceeds the earnings and profits. Regs. §1.316-1(a)(3), Example. (Corporate shareholders of the distributing corporation are governed by the special rule of §301(b)(1)(B).) Under the 1939 Code, it was held that the fair market value of the distributed property was taxable as a dividend in full if the corporation's earnings and profits exceeded its basis for the property. Commissioner v. Godley's Estate, 213 F.2d 529 (3d Cir. 1954); Commissioner v. Hirshon Trust, 213 F.2d 523 (2d Cir. 1954). The Treasury's proposed Regulations under the 1954 Code adhered to the position upheld by the courts in these cases, but the final Regulations accept the view that these cases were overruled by the 1954 Code.

COMMISSIONER v. FIRST STATE BANK OF STRATFORD

168 F.2d 1004 (5th Cir. 1948), cert. denied, 335 U.S. 867 (1948)

Before SIBLEY, HUTCHESON, HOLMES, MCCORD, WALLER, and LEE, Circuit Judges.

HOLMES, Circuit Judge:

The Commissioner is seeking the correction of errors alleged to have been made by the Tax Court in its decision in this case. The question for decision is whether certain recoveries on notes in 1942 were income to the taxpayer, the respondent on review.

On October 17, 1942, the First State Bank of Stratford declared a dividend in kind, which consisted of certain notes that had been charged off as wholly worthless, and deducted as bad debts in its income-tax returns for years previous to 1942. These notes did not appear on the bank's books. They had been kept in a case by themselves, but were brought to the directors' meeting on the above date, when the possibility of their collection was discussed. It then appeared that collections on the notes were currently being made, about $25,000 already having been collected. The payment of a dividend by the bank was next considered. Attention was called to the matter of increased taxes and the advisability of deferring a cash dividend until more would be known about the new income-tax law soon to be enacted. It was pointed out that the bank had a number of charged-off accounts of doubtful value, also real estate carried on the books at the nominal sum of one dollar. The advisability of paying a dividend in these properties was fully considered, and the following resolution adopted:

> Whereas, This bank is the owner of several thousand dollars of charged off notes, some of which may be collected in future, and the balance of which are of doubtful value.
>
> Now, Therefore, Be it resolved that the following charged off notes be assigned to the stockholders of this bank without recourse on it, said notes being paid as a dividend in kind and without any value being placed thereon by this bank. (A list and description of the notes followed.)

After the meeting the directors, as stockholders, further discussed the matter. It was suggested, with approval, that W. N. Price take charge of the notes for the stockholders. Within the next few days, the notes included in the dividend were endorsed to W. N. Price without recourse on the bank. Amounts thereafter collected in 1942 on the dividend notes were deposited in the bank in an account designated "W. N. Price, Special." In attempting collection of these notes, Price, who worked in the bank, did nothing that he did not do in collecting notes owed to the bank, except at various times he worked after banking hours. No system of bookkeeping for the notes was set up by the stockholders in 1942. The debtors were not notified of the assignment of their debts to the stockholders. The notes when paid were marked paid with a stamp on which appeared the bank's name, but not the stockholders'.

After October 17, 1942, and prior to January 1, 1943, collections amounting to $11,662.71 were made on these dividend notes, of which the sum of $10,548.20 was determined by the Commissioner to be taxable income of the respondent on the theory that to this extent the distribution of the dividend in kind merely represented an assignment of anticipated income, because a tax benefit had been

received for it in prior years. The Tax Court reversed the Commissioner's determination, and held that the amounts so collected were not taxable to the respondent as income. . . .

A dividend to a shareholder by a corporation in any medium other than money is a dividend in kind, and in a formal sense the notes here represented such a dividend. Ordinarily no gain or loss is realized by a corporation from the mere distribution of its assets in kind in partial or complete liquidation, however they may have appreciated or depreciated in value since their acquisition but the rule is deemed to be otherwise where the dividend in kind is not in liquidation and consists of bad debts on account of the worthlessness of which a deduction was allowed for a prior taxable year. Whether or not the respondent corporation made an assignment of anticipatory income upon the distribution of its dividend in kind depends upon the nature of the property distributed in relation to the capital structure of the corporation. In this case, the charged-off debts no longer represented an asset except in the sense that any vested right to receive income is an asset; the notes had a basis of zero, and were no longer reflected in the capital structure of the corporation. They merely represented potential income to the extent of the tax deduction previously allowed.

The Tax Court distinguished [Helvering v. Horst, 311 U.S. 112, and Helvering v. Eubank, 311 U.S. 122] because in them the anticipatory assignments were without consideration, which is not true as to a dividend in kind. We think the question of consideration is not controlling or even important here. The question is one of the realization of income. Property may be disposed of by gift, sale, exchange, or abandonment, among which only abandonment could involve no taxable gain. The distribution of a dividend in kind is none of these. It is a delivery or assignment of property to its equitable owners. In this case, a sale or exchange of the notes would doubtless have resulted in the realization of a taxable gain, but no such disposition was required to realize income. The notes as collected would have been income to the corporation, and they were nonetheless the fruition of economic gain when collected by the assignees. It is the realization of income, rather than the acquisition of the right to receive it, that is the taxable event, and there is no reason why the rule that income tax is not to be avoided by an anticipatory assignment of income shall not apply to dividends. When not received in money or property, realization may occur when the last step is taken by which one obtains the fruition of the economic gain. . . .

The notes were assets of the bank, and subject to transfer as other property, but they were not capital assets for income-tax purposes. The amount determined by the Commissioner to be income to the bank consisted of collections on the principal of the debts represented by the notes and perhaps of some interest that had accrued prior to the assignments. The principal was overdue and payable to the bank prior to the dividend declaration. Therefore, in declaring a dividend of the notes and assigning them without recourse, the bank assigned its vested right to receive the income that the notes represented. As the Supreme Court said in Harrison v. Schaffner, 312 U.S. 579, 581-582:

> In construing these and like provisions in other revenue acts we have uniformly held that they are not so much concerned with the refinements of title as with the actual command over the income which is taxed and the actual benefit for which the tax is paid. See Corliss v. Bowers, 281 U.S. 376; Lucas v. Earl [281 U.S. 111]; Helvering v. Horst, supra; Helvering v. Eubank, supra; Helvering v. Clifford [309 U.S. 331]. It was for that reason that in each of those cases it was held that one vested with the right to receive income did not escape the tax by any kind of anticipatory arrangement, however skillfully devised, by which he procures payment of it to another, since, by the exercise of his power to command the income, he enjoys the benefit of the income on which the tax is laid.

Therefore, as a matter of law, under the anticipatory assignment-of-income rule, the respondent's declaration of a dividend, its assignment of the notes, and their subsequent collection, must be treated as if the bank had thereby realized income. The facts indisputably show that the bank was making collections on these notes and declared a dividend only of the notes on which it was expected collections would be made. Over $11,000 was collected in the two-and-a-half months of the taxable year remaining after the dividend declaration. The collections were made at the bank by an officer of the bank. No pro rata distribution to stockholders was effected prior to collections, and the notes were not in any manner apportioned among the stockholders. The dividend in kind was declared and the notes assigned by the respondent with tax consequences in mind and, so far as the record shows, for no other purpose. . . . The respondent is a banking corporation, organized and operated for profit. The acquisition of profits for its shareholders was the purpose of its creation. The collection of interest on loans was a principal source of its income. The payment of dividends to its shareholders was the enjoyment of its income. A body corporate can be said to enjoy its income in no other way. Like the "life-rendering pelican," it feeds its shareholders upon dividends. Whether they are in the form of notes or money is immaterial if the dividend is out of earnings, or consists of property purchased from earnings or which is regarded as earnings for accounting purposes. The respondent exercised its power to procure payment of its income to another, which was "the enjoyment, and hence the realization," of its income.

The distinction between General Utilities v. Helvering [296 U.S. 200], and this case lies in the difference in the character of the respective properties distributed as dividends in kind; one represented a capital asset, the other represents income. In the former, the fruit was on the tree; in the latter, the tree itself represents fruit of prior years that was not taxed. The distinction is the same as would have existed in the *Horst* case if the father had given his son the bond with the unearned-interest coupon attached. . . .

Reversed.

SIBLEY, Circuit Judge, concurring:

I concur in the judgment of reversal and the reasoning of the majority opinion, but I wish to express an additional view which seems to me simpler and more fundamental. . . .

[T]he present case . . . involves the proper tax treatment of a large aggregate of debts due to the corporation which in past years the corporation, on its representation that they were bad debts and a loss, had been permitted to deduct as such with a full resulting tax benefit. This deduction was not of constitutional right, but of legislative grace, and was allowed on terms stated in applicable Regulations. Beginning in 1918 Article 52 of Regulation 45 said:

> Bad debts or accounts charged off because of the fact that they were determined to be worthless, which are subsequently recovered, whether or not by suit, constitute income for the year in which recovered, regardless of the date when the amounts were charged off.

This language was continued down through Regulation 103, Sect. 19.42-1, under the [1939] Revenue Code, when the deductions were made and allowed which are now in controversy.* The restoration to income of all subsequent recoveries was a condition of the deductions. The making of this adjustment in its tax accounts with the Government became the legal and the moral duty of this corporation. When in the tax year it found it was making collections on these charged-off debts, and would likely collect considerable sums, it was not free in law or morals to evade its tax duty by turning the bad debts over to its stock-

* The corresponding provision of the Regulations under the 1954 Code is Regs. §1.166-1(f). — ED

holders for them to collect. The directors picked out only debts that were regarded as likely to yield collections, keeping those that were wholly bad. They did not divide them among the stockholders, but the five directors turned the hopeful debts over to one of themselves, he being vice-president and cashier of the bank, and he collected in the name of the bank, deposited the collections in the bank, and then later distributed the money to the stockholders. The stockholders returned nothing for taxation till each got his money in later years. I think there was in reality nothing divided as a dividend to the stockholders till the money was paid them, and in reality the bank made the recoveries on the charged-off debts, and the Tax Court ought to have so held. But if this were a real distribution of undivided property to the stockholders, the bank could not thus free itself of the accounting obligation which it assumed in taking the bad debt deductions. For this purpose the receipt of payments by the stockholders is receipt by their corporation. All that was said in United States v. Joliet & Chicago R. Co., 315 U.S. 44, as to the force of Regulations and the ineffectualness of anticipating arrangements to evade taxes made between stockholders and their corporation, may be applied to this case. Another instance in which Regulations were held to inhere in deductions so as to require a restoration to income accordingly, though nothing was received in the tax year, is Sneed v. Commissioner, 119 F.2d 767. (Cert. denied.) This bank had no option to avoid incurring a tax by a lawful course. The course it took was not lawful because of the obligation assumed in taking the deductions with full tax benefits at the time.

JUDGE MCCORD and LEE also concur in the additional views expressed in the above opinion.

HUTCHESON, Circuit Judge, dissenting:

I agree with the conclusion of the Tax Court that the distribution to its stockholders of the notes in question was not a realization of income by it. I agree too with the reasons it gave for so concluding. I, therefore, dissent from the opinion of the majority.

WALLER, Circuit Judge, dissenting:

I think, as did the Tax Court, that this case is controlled by General Utilities Company v. Helvering, 296 U.S. 200. I think further that even if there were some sort of tax liability to the Bank, it should be measured by the reasonable, or market, value, at the time of the making of the dividend-in-kind, of the charged-off securities, rather than by the collections thereafter made by the stockholders when improved financial conditions, increase in values, enlargement of opportunities, greater availability for refinancing of loans, such as the Court of its own knowledge knows has attended the lush period since the assignments were made, aided the makers in paying obligations which they could not have paid theretofore.

Moreover, I do not think that the doctrine in Helvering v. Horst, 311 U.S. 112, can rightly be stretched to cover this case for the chief reason that the action of the stockholders in agreeing to accept a dividend-in-kind in lieu of a dividend in a fixed percentage cannot truly be said to be without consideration. True it is that the stockholders owned the Bank, but the law does not contemplate that banks shall be one with their stockholders.

The ascertainment of the correct amount of taxes due on income actually received is already difficult and onerous enough without, through judicial processes, adding to the taxpayer's perplexity and burden by requiring him to compute and pay taxes on income merely anticipated but never received, but which has theretofore been assigned in due and lawful course of business.

I do not consider these assignments as gratuitous transfers of income already earned and readily collectible, such as characterized the interest coupons in the

Horst case, supra. I, therefore, must dissent to the learned and persuasive opinion of the majority in this case.

NOTE

Effect of §311. In recommending the enactment of §311 in 1954, the Senate Finance Committee Report stated:

> [Y]our committee does not intend to change existing law with respect to attribution of income of shareholders to their corporation as exemplified for example in the case of Commissioner v. First State Bank of Stratford.

Does the court hold in the *Stratford Bank* case that the bank must report as income the difference between the basis of the notes (zero) and their fair market value at the time of distribution, or is the bank taxable only when, as, and if the notes are paid by the obligors?

Many assets have a zero basis because their cost was deducted in prior years: fully depreciated equipment and buildings, goodwill, industrial know-how and patents if the taxpayer amortized its research and experimental expenditures under §174, trademarks and trade names if expenditures were amortized under §177, etc. Does the *Straford Bank* case imply that income is recognized on a distribution of such assets?

Section 311 speaks of a distribution of "property." Recall the cases (supra pages 527 et seq.) holding that some assets are not "property" as that term is used in §1221 and that others do not qualify as capital assets because they represent future income. Do assets of this type fall outside of §311? If so, does it necessarily follow that their distribution generates income?

IDAHO FIRST NATIONAL BANK v. UNITED STATES

265 F.2d 6 (9th Cir. 1959)

Before POPE, HAMLEY and HAMLIN, Circuit Judges.

POPE, Circuit Judge.

This was an action brought to recover a sum paid under protest as an assessed deficiency in income taxes. The deficiency was assessed against the plaintiff bank, appellant here, as transferee of the assets of the Wendell National Bank of Wendell, Idaho; that is to say, the taxable income here in question was that of Wendell National Bank.

Wendell National Bank had operated for many years when, on May 10, 1952, appellant bank purchased from Wendell's stockholders all of that bank's stock for the purpose of acquiring its assets. The same day, Wendell was dissolved and all its assets and liabilities distributed to appellant.

Included in these assets were notes evidencing outstanding loans of the Wendell bank on which neither principal nor interest was then due or payable. At the time of liquidation the accrued interest earned but not then payable on these notes receivable was computed. It totaled some $13,191.19.[1]

The Wendell bank had always reported its income for tax purposes on the cash basis method of accounting. After the liquidation, and on June 20, 1952, a corporation income tax return for the period January 1, 1952 through May 10, 1952, was filed on its behalf.

After several false starts appellant took the position that this interest, accrued but not yet due or payable, could not be included as taxable income to the Wendell bank. Its position then and now, was and is that since the Wendell bank

---

1 Expenses attributable to this accrued interest on notes receivable had been deducted for income tax purposes when paid by the Wendell National Bank prior to its liquidation. Unpaid accrued expenses of the Wendell National Bank had not been deducted for income tax purposes at the date of liquidation.

had consistently reported its income and deductions for income tax purposes on a cash receipts and disbursements method of accounting, the Commissioner was without power to include in its income interest that was neither due nor payable on unmatured notes. The Commissioner, however, ruling that the accrued interest on notes receivable should be included as taxable income of the Wendell bank, assessed as a deficiency the additional tax called for by that ruling. Plaintiff, liable as assignee of assets, paid the amount assessed under protest, filed claim for refund, and on its rejection brought this suit.

When interest on the notes here described was ultimately collected by appellant, it reported it as income but offset the collections against the allocated cost of the accrued interest on notes receivable, so that all of the amount collected was recovery of cost and not subject to income tax.

In making his ruling the Commissioner relied upon [§446(b)], providing that if the taxpayer's method of accounting "does not clearly reflect the income, the computation shall be made in accordance with such method as in the opinion of the Commissioner does clearly reflect the income."

As the stipulation of facts recognizes, this interest was "accrued" in that it was an asset, so treated for bookkeeping purposes. All services or extensions of credit necessary to establish the right to this interest and income had been executed. In substance and effect, though the disposition of the assets was accomplished through the device of selling and buying the stock of the shareholders, the Wendell bank realized income in the amount of the interest accrued just as if it had sold its assets under an arrangement whereby the value of the accrued interest was calculated as a part of the purchase price. Thus it may be suggested that the amount here involved was collected as part of the purchase price. Floyd v. Scofield, 5 Cir., 193 F.2d 594, 595. The application in that case of the principles expressed in Helvering v. Horst, 311 U.S. 112, and in Hort v. Commissioner, 313 U.S. 28, was expressly approved by this court in United States v. Snow, 9 Cir., 223 F.2d 103, 109.

We think it plain that the action of the Commissioner in invoking his power under [§446(b)], to impose a method of accounting calculated to reflect the realities of the situation was clearly proper. For, as indicated above, when this interest was ultimately collected by appellant it was not income to it; — as the parties have stipulated, "all the amount collected was recovery of cost and not subject to income tax."

In this holding that the action of the Commissioner was authorized by [§446(b)], we are supported by authority. In Jud Plumbing and Heating Company v. Commissioner, 5 Cir., 153 F.2d 681, a corporation reporting on the completed contract method was held properly placed on the accrual method for the tax period terminating with the corporate liquidation in order more clearly to reflect its income for the final period of its existence. The *Jud Plumbing* case was cited and approved by this court in a case where we likewise upheld a similar application of [§446(b)]. United States v. Lynch, 9 Cir., 192 F.2d 718, 721.

Standard Paving Co. v. Commissioner, 10 Cir., 190 F.2d 330, 332, was another case, like *Jud Plumbing*, supra, where a corporation had previously reported income on a completed contract basis. When certain construction contracts undertaken by the corporation were still uncompleted, its stock, all owned by a parent company, was surrendered and canceled and the corporation dissolved. For the final period of its existence the corporation reported no income from these contracts. The Commissioner allocated a percentage of the total profit, computed to the date of dissolution, to the corporation's income. The Commissioner's position was that the strict application of the completed contract method did not clearly reflect the income. He thereupon exercised the authority granted by

[§446(b)]. Said the Court: "[§446(b)] of the Internal Revenue Code . . . provides that if the method of accounting regularly employed by the taxpayer does not clearly reflect the income, the computation shall be made in accordance with such method as, in the opinion of the Commissioner, does clearly reflect the income. The statute gives the Commissioner broad discretion in adopting a method which he believes properly reflects the income of the taxpayer. . . . His selection of such a method may be challenged only upon a clear showing that he had abused his discretion."

For the reasons there expressed we think the action of the Commissioner here was proper, and the assessment correct.

Appellant claims that the Wendell bank had expenses attributable to this accrued interest, and that the Commissioner failed to accrue those to the date of liquidation. As to those expenses, the parties stipulated that the facts were as stated in footnote 1, supra, which suggests that expenses had been deducted currently prior to the liquidation. If any were not so deducted, it was up to the taxpayer to prove their amount in the court below. In not doing so, it lost the right to argue about them now.

The judgment is affirmed.

NOTE

1. *Life-after-death?* If the notes had been delinquent, as in the *Stratford Bank* case, would the accrued income have been taxable when the notes were distributed? If the prospect of collecting past-due interest is not susceptible to valuation, should the dissolved bank be taxed when, as, and if collections are made by its successor? Although Judge L. Hand evidently believed in life-after-death for the dissolved corporation, he acknowledged that other courts were shocked by the idea and made no effort to proselyte for it. J. Ungar, Inc. v. Commissioner, 244 F.2d 90 (2d Cir. 1957); Telephone Directory Adv. Co. v. United States, 142 F. Supp. 884 (Ct. Cl. 1956) (nothing in tax law "requires a corporation, which has employed an accrual method of accounting that properly reflected its income over a period of years, to remain in existence for the sole purpose of paying taxes after it is forced to discontinue business").

2. *Effect of §334(b)(2).* In the *Idaho Bank* case, the court noted that the successor bank treated its collection of interest accrued before the distribution as a recovery of its cost, presumably under the "Kimbell-Diamond" doctrine, supra page 652, now embodied in §334(b)(2). For a dramatic illustration of the effect of §334(b)(2), see South Lake Farms, Inc. v. Commissioner, 324 F.2d 837 (9th Cir. 1963). The taxpayer in this case, a corporation, purchased all of the stock of a second corporation which had incurred and deducted about $700,000 as expenses in raising an agricultural crop and preparing land for planting another crop. Before the crops were ready for harvesting, the taxpayer liquidated the old corporation; under §334(b)(2), its basis for the property thus received was equal to the amount it had paid for the stock, and there was little additional income to be realized when the crops were sold. The Commissioner's attempt to disallow the expenses incurred by the old corporation (which had created an operating loss, carried back to profitable earlier years to obtain a tax refund) was unsuccessful. Cf. Rooney v. United States, supra page 638.

3. *The contracts in the Carter case.* Does the *Carter* case, supra page 649, imply that the corporation realized no income on distributing these contracts? The Tax Court held that corporate income was realized on another contract, not involved in the appellate proceeding in *Carter* because payments under it were not contingent on any post-distribution events, 9 T.C. 373 (1947).

2. *Shareholder Transactions Imputed to the Corporation: The Court Holding Co. Case and §337*

Section 337 of the 1954 Code, providing for the non-recognition of gain or loss by a liquidating corporation on certain sales and exchanges, has no counterpart in the 1939 Code.

Section 336 is also new in the 1954 Code, but it is based on a provision in Regs. 118, §39.22(a)-20.

COMMISSIONER v. COURT HOLDING CO.

324 U.S. 331 (1945)

MR. JUSTICE BLACK delivered the opinion of the Court.

An apartment house, which was the sole asset of the respondent corporation, was transferred in the form of a liquidating dividend to the corporation's two shareholders. They in turn formally conveyed it to a purchaser who had originally negotiated for the purchase from the corporation. The question is whether the Circuit Court of Appeals properly reversed the Tax Court's conclusion that the corporation was taxable under [1939 Code, §22(a)] [1] for the gain which accrued from the sale. The answer depends upon whether the findings of the Tax Court that the whole transaction showed a sale by the corporation rather than by the stockholders were final and binding upon the Circuit Court of Appeals.

It is unnecessary to set out in detail the evidence introduced before the Tax Court or its findings. Despite conflicting evidence, the following findings of the Tax Court are supported by the record:

The respondent corporation was organized in 1934 solely to buy and hold the apartment building which was the only property ever owned by it. All of its outstanding stock was owned by Minnie Miller and her husband. Between October 1, 1939 and February, 1940, while the corporation still had legal title to the property, negotiations for its sale took place. These negotiations were between the corporation and the lessees of the property, together with a sister and brother-in-law. An oral agreement was reached as to the terms and conditions of sale, and on February 22, 1940, the parties met to reduce the agreement to writing. The purchaser was then advised by the corporation's attorney that the sale could not be consummated because it would result in the imposition of a large income tax on the corporation. The next day, the corporation declared a "liquidating dividend," which involved complete liquidation of its assets, and surrender of all outstanding stock. Mrs. Miller and her husband surrendered their stock, and the building was deeded to them. A sale contract was then drawn, naming the Millers individually as vendors, and the lessees' sister as vendee, which embodied substantially the same terms and conditions previously agreed upon. One thousand dollars, which a month and a half earlier had been paid to the corporation by the lessees, was applied in part payment of the purchase price. Three days later, the property was conveyed to the lessees' sister.

The Tax Court concluded from these facts that, despite the declaration of a "liquidating dividend" followed by the transfers of legal title, the corporation had not abandoned the sales negotiations; that these were mere formalities de-

[1] Profits from the sale of property are taxable as income under [1939 Code, §22(a)]. The Treasury Regulations have long provided that gains accruing from the sale of a corporation's assets, in whole or in part, constitute income to it, but that a corporation realizes no taxable gain by a mere distribution of its assets in kind, in partial or in complete liquidation, however much they may have appreciated in value since acquisition. Regs. 118, Sec. 39.22(a)-20. [This rule is now embodied in 1954 Code, §336, supra page 666.]

signed "to make the transaction appear to be other than what it was," in order to avoid tax liability. The Circuit Court of Appeals drawing different inferences from the record, held that the corporation had "called off" the sale, and treated the stockholders' sale as unrelated to the prior negotiations.

There was evidence to support the findings of the Tax Court, and its findings must therefore be accepted by the courts. Dobson v. Comm'r, 320 U.S. 489. . . . On the basis of these findings, the Tax Court was justified in attributing the gain from the sale to respondent corporation. The incidence of taxation depends upon the substance of a transaction. The tax consequences which arise from gains from a sale of property are not finally to be determined solely by the means employed to transfer legal title. Rather, the transaction must be viewed as a whole, and each step, from the commencement of negotiations to the consummation of the sale, is relevant. A sale by one person cannot be transformed for tax purposes into a sale by another by using the latter as a conduit through which to pass title. To permit the true nature of a transaction to be disguised by mere formalisms, which exist solely to alter tax liabilities, would seriously impair the effective administration of the tax policies of Congress.

It is urged that respondent corporation never executed a written agreement, and that an oral agreement to sell land cannot be enforced in Florida because of the Statute of Frauds, Comp. Gen. Laws of Florida, 1927, vol. 3, Sec. 5779, F.S.A. §725.01. But the fact that respondent corporation itself never executed a written contract is unimportant, since the Tax Court found from the facts of the entire transaction that the executed sale was in substance the sale of the corporation. The decision of the Circuit Court of Appeals is reversed, and that of the Tax Court affirmed.

It is so ordered.

Reversed.

NOTE

1. *Adjustment for transferee liability.* Note that the Court Holding Company is without assets to pay the tax that the Court finds to be due. The tax must therefore be paid by those who rendered the corporation insolvent, namely, the stockholders. In effect, they overpaid their personal taxes in the year the assets were distributed, since they calculated their capital gain or loss on the liquidation without allowing for the corporation's tax liability. For the proper adjustment at the shareholder level, see Arrowsmith v. Commissioner, supra page 532; §1341.

2. *Life-after-death again?* In view of the judicial reluctance to impute income to a dissolved corporation (supra p. 674), what would have been the result if the sale in *Court Holding Co.* had been on credit, with payment to be made in installments (with interest) over a period of many years?

UNITED STATES v. CUMBERLAND PUBLIC SERVICE CO.

338 U.S. 451 (1950)

MR. JUSTICE BLACK delivered the opinion of the Court.

A corporation selling its physical properties is taxed on capital gains resulting from the sale. There is no corporate tax, however, on distribution of assets in kind to shareholders as part of a genuine liquidation. The respondent corporation transferred property to its shareholders as a liquidating dividend in kind. The shareholders transferred it to a purchaser. The question is whether, despite contrary findings by the Court of Claims, this record requires a holding that the transaction was in fact a sale by the corporation subjecting the corporation to a capital gains tax.

Details of the transaction are as follows. The respondent, a closely held corporation, was long engaged in the business of generating and distributing electric power in three Kentucky counties. In 1936 a local cooperative began to distribute Tennessee Valley Authority power in the area served by respondent. It soon became obvious that respondent's Diesel-generated power could not compete with TVA power, which respondent had been unable to obtain. Respondent's shareholders, realizing that the corporation must get out of the power business unless it obtained TVA power, accordingly offered to sell all the corporate stock to the cooperative, which was receiving such power. The cooperative refused to buy the stock, but countered with an offer to buy from the corporation its transmission and distribution equipment. The corporation rejected the offer because it would have been compelled to pay a heavy capital gains tax. At the same time the shareholders, desiring to save payment of the corporate capital gains tax, offered to acquire the transmission and distribution equipment and then sell to the cooperative. The cooperative accepted. The corporation transferred the transmission and distribution systems to its shareholders in partial liquidation. The remaining assets were sold and the corporation dissolved. The shareholders then executed the previously contemplated sale to the cooperative.

Upon this sale by the shareholders, the Commissioner assessed and collected a $17,000 tax from the corporation on the theory that the shareholders had been used as a mere conduit for effectuating what was really a corporate sale. Respondent corporation brought this action to recover the amount of the tax. The Court of Claims found that the method by which the stockholders disposed of the properties was avowedly chosen in order to reduce taxes, but that the liquidation and dissolution genuinely ended the corporation's activities and existence. The court also found that at no time did the corporation plan to make the sale itself. Accordingly it found as a fact that the sale was made by the shareholders rather than the corporation, and entered judgment for respondent. One judge dissented, believing that our opinion in Court Holding Co. v. Com'r, 324 U.S. 331, required a finding that the sale had been made by the corporation. Certiorari was granted to clear up doubts arising out of the *Court Holding Co.* case.

Our *Court Holding Co.* decision rested on findings of fact by the Tax Court that a sale had been made and gains realized by the taxpayer corporation. There the corporation had negotiated for sale of its assets and had reached an oral agreement of sale. When the tax consequences of the corporate sale were belatedly recognized, the corporation purported to "call off" the sale at the last minute and distributed the physical properties in kind to the stockholders. They promptly conveyed these properties to the same persons who had negotiated with the corporation. The terms of purchase were substantially those of the previous oral agreement. One thousand dollars already paid to the corporation was applied as part payment of the purchase price. The Tax Court found that the corporation never really abandoned its sales negotiations, that it never did dissolve, and that the sole purpose of the so-called liquidation was to disguise a corporate sale through use of mere formalisms in order to avoid tax liability. The Circuit Court of Appeals took a different view of the evidence. In this Court the Government contended that whether a liquidation distribution was genuine or merely a sham was traditionally a question of fact. We agreed with this contention, and reinstated the Tax Court's findings and judgment. Discussing the evidence which supported the findings of fact, we went on to say that "the incidence of taxation depends upon the substance of a transaction" regardless of "mere formalisms," and that taxes on a corporate sale cannot be avoided by using the shareholders as a "conduit through which to pass title."

This language does not mean that a corporation can be taxed even when the

sale has been made by its stockholders following a genuine liquidation and dissolution.[1] While the distinction between sales by a corporation as compared with distribution in kind followed by shareholder sales may be particularly shadowy and artificial when the corporation is closely held, Congress has chosen to recognize such a distinction for tax purposes. The corporate tax is thus aimed primarily at the profits of a going concern. This is true despite the fact that gains realized from corporate sales are taxed, perhaps to prevent tax evasions, even where the cash proceeds are at once distributed in liquidation. But Congress has imposed no tax on liquidating distributions in kind or on dissolution, whatever may be the motive for such liquidation. Consequently, a corporation may liquidate or dissolve without subjecting itself to the corporate gains tax, even though a primary motive is to avoid the burden of corporate taxation.

Here, on the basis of adequate subsidiary findings, the Court of Claims has found that the sale in question was made by the stockholders rather than the corporation. The Government's argument that the shareholders acted as a mere "conduit" for a sale by respondent corporation must fall before this finding. The subsidiary finding that a major motive of the shareholders was to reduce taxes does not bar this conclusion. Whatever the motive and however relevant it may be in determining whether the transaction was real or a sham, sales of physical properties by shareholders following a genuine liquidation distribution cannot be attributed to the corporation for tax purposes.

The oddities in tax consequences that emerge from the tax provisions here controlling appear to be inherent in the present tax pattern. For a corporation is taxed if it sells all its physical properties and distributes the cash proceeds as liquidating dividends, yet is not taxed if that property is distributed in kind and is then sold by the shareholders. In both instances the interest of the shareholders in the business has been transferred to the purchaser. Again, if these stockholders had succeeded in their original effort to sell all their stock, their interest would have been transferred to the purchasers just as effectively. Yet on such a transaction the corporation would have realized no taxable gain.

Congress having determined that different tax consequences shall flow from different methods by which the shareholders of a closely held corporation may dispose of corporate property, we accept its mandate. It is for the trial court, upon consideration of an entire transaction, to determine the factual category in which a particular transaction belongs. Here as in the *Court Holding Co.* case we accept the ultimate findings of fact of the trial tribunal. Accordingly the judgment of the Court of Claims is affirmed.

Affirmed.

MR. JUSTICE DOUGLAS took no part in the consideration or decision of this case.

NOTE

1. *Status of buyer of stock if corporation is liquidated.* Note that the *Cumberland* shareholders offered to sell their stock to the potential vendee. What tax and non-tax reasons might cause the vendee to refuse to buy stock and to insist instead upon purchasing the assets? If the vendee had bought the stock for the announced purpose of obtaining the assets by liquidating the corporation, would the sellers have been protected against

[1] What we said in the *Court Holding Co.* case was an approval of the action of the Tax Court in looking beyond the papers executed by the corporation and shareholders in order to determinate whether the sale there had actually been made by the corporation. We were but emphasizing the established principle that in resolving such questions as who made a sale, fact finding tribunals in tax cases can consider motives, intent, and conduct in addition to what appears in written instruments used by parties to control rights as among themselves. See, e.g., Helvering v. Clifford, 309 U.S. 331, 335-337; Commissioner v. Tower, 327 U.S. 280.

the possibility of a second tax? Note that the buyer might have relied on the "Kimbell-Diamond" principle, supra page 652, to establish that the transaction was "really" a purchase of assets rather than a purchase of stock. If this assertion was accepted, would it follow that the liquidated corporation had sold its assets? If so, who must pay the tax that the liquidated corporation is unable to pay? See Magill, Sales of Corporate Stock or Assets, 47 Colum. L. Rev. 707 (1947).

2. *Strategy to avoid Court Holding Co. doctrine.* Did the procedure followed by the shareholders in the *Cumberland Public Service Co.* case differ from that followed in *Court Holding Co.* only because the former shareholders consulted their lawyer early enough so that they were not forced to "call off" an agreed-upon sale? Did the *Cumberland Public Service Co.* case provide a safe pattern to emulate, or would cautious lawyers advise their clients to liquidate the corporation before even talking with prospective buyers of the assets? If so, what practical difficulties would there be in a liquidate-first-talk-later procedure?

3. *The statutory remedy of §337.* Section 337 was enacted in 1954 to provide a statutory rule to govern this much-litigated area. It is examined in the ruling and editor's note following.

REV. RUL. 61-214

1961-2 C.B. 60

Advice has been requested whether, in connection with a sale of corporate assets, certain recoveries of items which previously had been deducted for Federal income tax purposes are to be treated as proceeds of a nontaxable sale under the provisions of section 337(a) of the Internal Revenue Code of 1954.

An office building corporation, availing itself of the benefits of section 337 of the Code, adopted a plan of complete liquidation and within the 12-month period sold its entire assets to a single buyer. Included in the sale were a stock-pile of coal, plumbing supplies, and small tools. The costs of such items had been deducted in full in taxable years prior to the year of the sale.

Section 337(a) of the Code, pertaining to gain or loss on sales or exchanges in connection with certain liquidations, sets forth the general rule that, if a corporation adopts a plan of complete liquidation on or after June 22, 1954, and, within the 12-month period beginning on the date of the adoption of such plan, all of the assets of the corporation are distributed in complete liquidation, less assets retained to meet claims, then no gain or loss shall be recognized to such corporation from the sale or exchange by it of property within such 12-month period.

The provisions of section 337(a) apply only to gain or loss from the "sale or exchange" of property. In the instant case, part of the proceeds from the sale is, in reality, a recovery of amounts previously deducted for Federal income tax purposes. Thus, that part is not to be treated as gain from the sale of assets, but, rather, is subject to the rule that a recovery of an amount previously deducted constitutes ordinary income to the extent of a prior tax benefit. See Rev. Rul. 60-49, C.B. 1960-1, 148; Central Building and Loan Association v. Commissioner, 34 T.C. 447 (1960); First State Bank of Stratford v. Commissioner, 168 Fed. (2d) 1004 (1948), certiorari denied, 335 U.S. 867 (1948).

In view of the foregoing, it is held that in the instant case the portion of the proceeds representing a recovery of the amounts of such items which previously had been deducted for Federal income tax purposes is to be treated as ordinary income to the corporation under section 61 of the Code and not as nonrecognized gain under the provisions of section 337(a) of the Code.

NOTE

1. *Types of gain not embraced by §337.* Section 337 grants immunity only to gain (or loss) "from the sale or exchange by [the liquidating corporation] of property." Does the term "sale or exchange" as used in §337 have the same meaning as in §1222 (defining capital gain, capital loss, etc.)? In Towanda Textiles, Inc. v. United States, 180 F. Supp. 373 (Ct. Cl. 1960), it was held that an involuntary conversion (destruction by fire and recovery of insurance proceeds) constitutes a "sale or exchange" under §337, because §1231 provides that it shall be so considered, although it is not a "sale or exchange" under §1222; it is not clear whether court would rule the same way if the property that was destroyed was not §1231 property. See also Rev. Rul. 64-100, 1964-13 I.R.B. 8 (conversions are within §337, whether property is described in §1231 or not and regardless of holding period).

Does Rev. Rul. 61-214 deny that the materials and supplies were "sold"? Does the ruling suggest that the Internal Revenue Service is embarked on a "recapture" program modeled on §1245 but broader in scope? Or is the ruling merely an application of Perry v. United States, supra page 75? The ruling cites the *Stratford Bank* case, supra page 668, Central Building & Loan Assn. v. Commissioner (interest accrued to the date of liquidation on notes sold by the taxpayer is recognized despite §337; Tax Court's decision affirmed, 288 F.2d 47 (9th Cir. 1961)), and Rev. Rul. 60-49 (on a tax-free one-month liquidation under §333, the distributee must report as income amounts that represent refunds of amounts previously deducted). Would Rev. Rul. 61-214 also require the items mentioned in the editor's note following the *Stratford Bank* case to be recognized on a §337 liquidation? See also, for cases requiring the liquidating corporation to recognize income despite §337, West Seattle Nat. Bank v. Commissioner, 33 T.C. 341 (1959) (bad debt reserve when assets were sold for full book value); Commissioner v. Kuckenberg, 309 F.2d 202 (9th Cir. 1962) (gain on sale of construction contracts); Family Record Plan v. Commissioner, 309 F.2d 208 (9th Cir. 1962) (accounts receivable sold by cash basis taxpayer). In addition to such items, §337 itself denies non-recognition to sales of inventory and installment obligations arising from the sale of inventory, unless they are sold in bulk to a single buyer.

Do these limitations suggest that a corporate liquidation on the *Cumberland Public Service Co.* pattern, followed by a sale of the assets by the shareholders, may be preferable in some circumstances to a §337 sale-and-liquidation?

2. *Critical dates under §337.* The date the plan of liquidation is adopted is critical to the application of §337, since (a) sales and exchanges *after* that date are the only ones to which non-recognition of gain or loss applies, and (b) the liquidating distribution or distributions must be complete within twelve months after the plan is adopted. For problems in determining when the plan is "adopted," see Regs. §1.337-2(b); Mountain Water Co. v. Commissioner, 35 T.C. 418 (1960), and cases there cited. If a corporation "straddles" §337 by carefully selling its depreciated assets before adopting a formal plan of liquidation, and then proceeding to adopt a formal plan and to sell its appreciated assets, can its decision to split the sales in this manner be regarded as the informal adoption of a plan of liquidation? See City Bank of Washington v. Commissioner, 38 T.C. 713 (1962) ("straddle" not objectionable).

Sometimes the date of a sale or exchange, rather than the date the plan was adopted, is in dispute. See 44 West 3d St. Corp. v. Commissioner, 39 T.C. 809 (1963) (condemnation by municipal government qualifies as a "sale" under §337, but it occurred before the plan was adopted).

A final crucial date under §337 is the date the liquidating distribution is complete. See *Mountain Water Co.*, supra; Milwaukee Sanitarium v. United States, 193 F. Supp. 299 (E.D. Wis. 1961).

Note that timing is also critical in a one-month liquidation under §333, supra page 651.

3. *Limited jurisdiction of §337.* Section 337 applies only if the corporation is completely liquidated. If the corporation sells part of its assets and then distributes the proceeds in partial liquidation under §331(a)(2) or in a disproportionate or complete redemption under §302(b), there will be a tax at the corporate level and a second tax to the

shareholders (assuming that the sales price exceeds the corporation's basis for the property and that the distribution exceeds the shareholders' basis for their stock). Moreover, even if there is a complete liquidation, §337 is not applicable to one-month liquidations under §333, supra page 651, to some liquidations of subsidiary corporations under §332, supra page 651, or to liquidations of "collapsible" corporations, infra page 687.

Does the pre-1954 dichotomy between selling-before-distributing and distributing-before-selling still hold sway in these areas?

UNITED STATES v. LYNCH

192 F.2d 718 (9th Cir. 1951), cert. denied, 343 U.S. 934 (1952)

Before MATHEWS, ORR and POPE, Circuit Judges.

ORR, Circuit Judge.

We have for determination two appeals. In the first the United States of America, hereinafter referred to as the Government, is appellant, and P. J. Lynch is appellee. In the second P. J. Lynch is appellant, and the United States of America is appellee.

We first consider the appeal of the Government. It concerns the correctness of a determination made by the Commissioner of Internal Revenue, that the net proceeds of profits from the sale of apples, which the Washington Fruit and Produce Company, a corporation, had attempted to distribute to its stockholders as a dividend in kind, was taxable to the corporation.

Lynch is one of several stockholders to whom a dividend in kind was issued by the Washington Fruit and Produce Company, a corporation, to which we hereinafter refer as the corporation. This dividend consisted of 21,977 boxes of apples. The corporation at that time had three stockholders and was engaged in the business of growing, handling, warehousing and marketing of fresh fruits and vegetables. The dividend in kind was declared February 28, 1944. The apples distributed as a dividend were on that date owned and held by the corporation in its warehouse. At the same meeting at which the dividend was declared, the shareholders agreed among themselves to pool the apples and entered into an agreement with the corporation to dispose of the apples and account to the shareholders for the net proceeds after deducting the costs of washing, packing and storing. During April 1944 the apples were sold and the proceeds distributed. Possession of the apples was retained by the corporation and the sale thereof accomplished without difficulty, the state of the market being such that solicitation by the corporation for buyers was unnecessary. On April 29, 1944 the corporation was liquidated. The Commissioner held that the excess of the sale price of the apples above cost to the corporation was corporate income. The trial court found otherwise. We think its finding was clearly erroneous for the following reasons: The dividend was not, nor was it intended to be, a liquidating dividend made in the process of winding up corporate affairs. The trial court found the dividend to be an ordinary one, reported as ordinary income by the recipients. The corporation continued to engage in its normal business for a period of two months after the dividend declaration. We are, therefore, required to regard the dividend under consideration here as one declared by a going concern and, inasmuch as the corporation, among other things, was engaged in the business of selling apples the property distributed represented its inventory or stock in trade.

It is clear that the shareholders caused the dividend to be declared with the knowledge and expectation that the property distributed would be sold imme-

diately. Furthermore, the simultaneously executed agreement with the corporation to do the selling manifested a purpose on the part of the shareholders to use the corporate agency as the vehicle to effectuate the sale of apples. The corporation was to sell the apples in the normal course of its business, in essentially the same manner, and it is fair to assume to the same persons to whom it would have sold had there been no dividend declared. Under these circumstances we fail to see a motive for the dividend other than to escape taxation. It is fundamental that,

> . . . in construing words of a tax statute which describe commercial or industrial transactions we are to understand them to refer to transactions entered upon for commercial or industrial purposes and not to include transactions entered upon for no other motive but to escape taxation.[1]

The dividend in question was not the kind of a distribution contemplated by [§301], and must be ignored for tax purposes. Distribution of corporate inventory with the expectation of immediate sale by the shareholders pointedly suggests a transaction outside the range of normal commercially-motivated and justifiable corporate activity, yet we have here a stronger case, because the sale was to be made by utilizing the corporation's facilities in the ordinary course of its business; the shareholders did not engage in a separate and independent business in which the apples were to be used. The shareholders, under the circumstances of this case, cannot avoid payment of the price Congress has decreed must be paid for use of the corporate entity.

In its opinion the trial court used language indicating its belief that the doctrine announced in Court Holding Co. v. C.I.R., 324 U.S. 331, required a finding in the instant case that the sale was made by the shareholders. The *Court Holding Company* case, as well as the case of Cumberland Public Service Co. v. U.S., 338 U.S. 451, dealt with liquidating dividends and not, as here, with a dividend in kind by a going concern. In the *Cumberland* case the Supreme Court points out that "The corporate tax is thus aimed primarily at the profits of a going concern." Hence, in determining the "factual category" in which the present transaction belongs the factor of the going concern is most important. In the instant case, at the time the transaction was planned and executed all concerned knew that no necessity existed for the corporation to engage in prior negotiations and solicitations for sale of the apples because of available ready market. The record discloses that the corporation gave the shareholders most favored customer treatment by not charging a selling commission and, in addition, certain customary handling charges were not imposed. These circumstances constitute grounds for attributing the sale to the corporation. . . .

NOTE

1. *Implications of the Lynch case.* Does this decision imply that a sale of inventory property is always to be imputed to the distributing corporation? If not, what criteria determine when imputation is proper? If the corporation had been liquidated in February (when the apples were distributed), rather than two months later, would the tax result have been different?

2. *Relation of Lynch case to §337.* If §337 had been in force for the taxable year in *Lynch,* gain on corporate sales of the apples in the ordinary course of business would not have qualified for non-recognition because of §337(b)(1)(A). If the corporation had sold the entire crop to the partnership in one transaction after adopting a plan of complete

liquidation, would §337(b)(1)(B) confer immunity on the corporation's gain? On attempts to employ §337 for sales to insiders, see Rev. Rul. 61-156, page 717 infra.

Section H. The "Collapsible" Corporation

Section 341, relating to collapsible corporations, was based on §117(m) of the 1939 Code. The principal changes are the definition of "§341 assets" and the presumption of §341(c) — both enacted in 1954 — and the escape hatch of §341(e), enacted in 1958.

BRAUNSTEIN v. COMMISSIONER

374 U.S. 65 (1963)

Mr. Justice Harlan delivered the opinion of the Court.

This case involves the applicability of the "collapsible corporation" provisions of the federal income tax laws which, during the period relevant here, were set forth in [§341(a)-(d)]. These provisions require that under certain circumstances, gain from the sale of stock which would otherwise be considered as long-term capital gain, and accordingly taxed at a maximum rate of 25%, must be reported as ordinary income.

The three taxpayers who are petitioners here became associated in 1938 and have since participated in a number of construction projects, usually through corporations in which the stock was equally divided. In 1948 the petitioners received a commitment from the Federal Housing Administration to insure loans for the construction of a multiple-dwelling apartment project in Queens County, New York. Two corporations were formed to carry out this project, and each petitioner was issued one-third of the stock in each corporation. After the costs of construction had been paid, the corporations each had an unused amount of mortgage loan funds remaining, and in 1950 the petitioners sold their stock at a profit, receiving as part of the sale transaction distributions from the corporations which included the unused funds. The petitioners reported the excess of the amounts received over their bases in the stock as long-term capital gains of $313,854.17 each.[1]

The Commissioner asserted a deficiency, treating the gain as ordinary income on the ground that the corporations were "collapsible" within the meaning of [§341(a)]. The Tax Court sustained the Commissioner, 36 T.C. 22, and the Court of Appeals affirmed the Tax Court, 305 F.2d 949, holding that (1) the taxpayers had the requisite "view" during construction of the property; (2) more than 70% of the gain realized by the taxpayers was attributable to the constructed property; and (3) [§341(a)] applies even if the constructed buildings would have produced capital gain on a sale by the taxpayers had no corporations been formed. This last holding was in response to an argument by the taxpayers based on a theory similar to that adopted by the Court of Appeals for the Fifth Circuit in United States v. Ivey, 294 F.2d 799. In view of the conflict between the decision below and that in *Ivey* on this point, we granted certiorari, 371 U.S. 933, stating that the grant was limited to the following question:

> Whether [§341(a)], which provides that gain "from the sale or exchange . . . of stock of a collapsible corporation" is taxable as ordinary income rather than capital gain, is inapplicable in circumstances where the stockholders would have been entitled to capital

[1] The parties have agreed that the distributions from the corporations and the amounts received directly from the buyers of the stock may be considered together, as if the entire amount had been received from the buyers.

gains treatment had they conducted the enterprise in their individual capacities without utilizing a corporation.

Briefly summarized, petitioners' argument runs as follows. As the legislative history shows, the collapsible corporation provisions of the code were designed to close a loophole through which some persons had been able to convert ordinary income into long-term capital gain by use of the corporate form. For example, in the case of an individual who constructed a property which he held primarily for sale to customers in the ordinary course of his trade or business, any gain from the sale of the asset would be ordinary income; but if that same individual were to form a corporation to construct the property, intending to sell his stock on the completion of construction it was at least arguable prior to the enactment of [§341] that the proceeds of the ultimate sale of the stock were entitled to capital gains treatment.* It was this and similar devices that [§341] was designed to frustrate, but it was *not* intended to have the inequitable effect of converting into ordinary income what would properly have been a capital gain prior to its enactment even in the absence of any corporate form. Thus, it is argued, the phrase "gain attributable to such property," as used in [§341(a)], must apply only to profit that would have constituted ordinary income if a corporation had not been utilized, for only in such cases is the corporation made to serve as a device for tax avoidance. In the present case, neither the corporation nor the individual petitioners were in the trade or business of selling apartment buildings, and thus the corporations were not used to convert ordinary income into capital gain and the provisions of [§341] are inapplicable.[2]

We have concluded that petitioners' contentions must be rejected. Their argument is wholly inconsistent with the plain meaning of the language of [§341], and we find nothing in the purpose of the statute, as indicated by its legislative history, to warrant any departure from that meaning in this case.

I

As to the language used, [§341(a)] defines a collapsible corporation as embracing one formed or availed of principally for the manufacture, construction, or production of property with a view to (1) the sale or exchange of stock prior to the realization by the corporation of a substantial part of the net income from the property *and* (2) the realization "of gain attributable to such property." The section

* Another possibility: a motion picture producer and the leading performers organize a corporation to manufacture and market a single film. They invest nominal amounts, receiving the corporation's stock in return, and the corporation borrows enough to defray the costs of production. Since the producer and the key performers receive modest salaries, if any, the costs of production are appreciably less than normal. After the picture has been completed, contracts for its distribution are made by the corporation. Then the corporation is liquidated, the shareholders surrendering their stock in exchange for proportionate interests in the distribution contracts. Since §331(a)(1) provides that a complete liquidation shall be treated as a sale, the shareholders report the difference between the value of the contracts (estimated from the film's early reception) and the cost basis of the shares as long-term capital gain. The value reported for the shareholder's rights under the contract is then depreciated over the estimated commercial life of the film. If the net receipts correspond to the reported value, there will be no further gain or loss. If, however, the receipts depart from the estimate, the shareholder will realize income or loss in the amount of the difference.

With the enactment of §341, the liquidation of such a corporation (if it is found to be collapsible) will produce ordinary income to the shareholders, rather than long-term capital gain. — Ed.

2 The Government has assumed for purposes of its argument here, but does not concede, that petitioners would have been entitled to capital-gains treatment had they conducted the enterprise without utilizing a corporation.

is then expressly made inapplicable to gain realized during any year "unless more than 70 per centum of such gain is attributable to the property so manufactured, constructed, or produced." [§341(d)(2).] If used in their ordinary meaning, the word "gain" in these contexts simply refers to the excess of proceeds over cost or basis and the phrase "attributable to" merely confines consideration to that gain caused or generated by the property in question. With these definitions, the section makes eminent sense, since the terms operate to limit its application to cases in which the corporation was availed of with a view to profiting from the constructed property by a sale or exchange of stock soon after completion of construction *and* in which a substantial part of the profit from the sale or exchange of stock in a given year was in fact generated by such property.

There is nothing in the language or structure of the section to demand or even justify reading into these provisions the *additional* requirement that the taxpayer must in fact have been using the corporate form as a device to convert ordinary income into capital gain. If a corporation owns but one asset, and the shareholders sell their stock at a profit resulting from an increase in the value of the asset, they have "gain attributable to" that asset in the natural meaning of the phrase regardless of their desire, or lack of desire, to avoid the bite of federal income taxes.

II

Nor is there anything in the legislative history that would lead us to depart from the plain meaning of the statute as petitioners would have us do. There can of course be no question that the purpose of [§341] was, as petitioners contend, to close a loophole that Congress feared could be used to convert ordinary income into capital gain. See H.R. Rep. No. 2319, 81st Cong., 2d Sess.; S. Rep. No. 2375, 81st Cong., 2d Sess. But the crucial point for present purposes is that the *method* chosen to close this loophole was to establish a carefully and elaborately defined category of transactions in which what might otherwise be a capital gain would have to be treated as ordinary income. There is no indication whatever of any congressional desire to have the Commissioner or the courts make a determination in each case as to whether the use of the corporation was for tax avoidance. Indeed, the drawing of certain arbitrary lines not here involved — such as making the section inapplicable to any shareholder owning 10% or less of the stock or to any gain realized more than three years after the completion of construction* — tends to refute any such indication. It is our understanding, in other words, that Congress intended to define what it believed to be a tax avoidance device rather than to leave the presence or absence of tax avoidance elements for decision on a case-to-case basis.

We are reinforced in this conclusion by the practical difficulties — indeed the impossibilities — of considering without more legislative guidance than is furnished by [§341] whether there has in fact been "conversion" of ordinary income into capital gains in a particular case. For example, if we were to inquire whether or not the profit would have been ordinary income had an enterprise been individually owned, would we treat each taxpaying shareholder differently and look only to *his* trade or business or would we consider the matter in terms of the

---

* For the taxable year before the court in *Braunstein*, persons owning not more than 10 per cent of the corporation's stock could, if they met certain other requirements, escape the impact of §341. This escape hatch is now open only to taxpayers owning not more than 5 per cent of the stock. See §341(d)(1).

See also §341(d)(3), providing an escape from §341 in the case of gain realized more than 3 years after completion of the construction, manufacture, etc. of the collapsible property. — Ed.

trade or business of *any* or at least a substantial number of the shareholders? There is simply no basis in the statute for a judicial resolution of this question, and indeed when Congress addressed itself to the problem in 1958, it approved an intricate formulation [§341(e)] falling between these two extremes.

As a further example, what if the individual in question is not himself engaged in any trade or business but owns stock in varying amounts in a number of corporate ventures other than the one before the court? Do we pierce *each* of the corporate veils, regardless of the extent and share of the individual's investment, and charge him with being in the trade or business of each such corporation? Again, there is no basis for a rational judicial answer; the judgment is essentially a legislative one and in the 1958 amendments Congress enacted a specific provision [§341(e)], designed to deal with this matter, that is far too complex to be summarized here.

These examples should suffice to demonstrate the point: The question whether there has in fact been a "conversion" of ordinary income in a particular case is far easier to state than to answer, and involves a number of thorny issues that may not appear on the surface.[3] We find no basis in either the terms or the history of [§341] for concluding that Congress intended the Commissioner and the courts to enter this thicket and to arrive at *ad hoc* determinations for every taxpayer. Accordingly, the judgment below must be affirmed.

MR. JUSTICE DOUGLAS dissents.

NOTE

1. *Definition of "collapsible corporation."* A "collapsible corporation," as the term is defined by §341(b)(1), must be formed or availed of:

(a) principally for the manufacture, construction, or production of property, for the purchase of certain categories of property (primarily property held for sale to customers in the ordinary course of its trade or business), or for the holding of stock in another corporation so formed or availed,

(b) with a view to (1) a sale or exchange of its stock, or a distribution to its shareholders, before it has realized a substantial part of the taxable income to be derived from the manufactured or purchased property, and (2) a realization by the shareholders of gain attributable to the property.

Requirement (a) is satisfied by a great many corporations, especially since the concept of "manufacture, construction, or production of property" is defined very expansively. Regs. §1.341-2(a)(5); Farber v. Commissioner, 312 F.2d 729 (2d Cir. 1963). Query: can a personal service firm be considered a collapsible corporation on the ground that it was formed or availed of for the "production of property," viz., goodwill?

Most of the litigation concerning the definition of "collapsible corporation" has turned on whether requirement (b) was satisfied, i.e., whether the shareholders had the requisite "view." In the *Braunstein* case, the shareholders asserted that the corporations were formed to accumulate substantial estates for their families, and that the distributions and sales were attributable to an unanticipated decline in the profits generated by the buildings after construction was completed. The Tax Court rejected these contentions, finding that the shareholders contemplated a quick profit that was not dependent on continued ownership of the buildings; the Court of Appeals for the Second Circuit affirmed, and the Supreme Court's grant of certiorari excluded this issue. 36 T.C. 22; 305 F.2d 949. The Regulations speak of a "view" that exists before the manufacture, construction, production, or purchase of property is completed, and are willing to overlook a subsequently

[3] The Government has emphasized in its argument here that the present case involves a particularly "blatant" conversion of ordinary income because by charging the corporations only for the out-of-pocket costs of construction "petitioners contributed their services to create a valuable property for the corporation[s] and then realized upon that value by selling their stock." Thus, the Government concludes, the petitioners claim as capital gain "what ought to have been (and, in an arm's-length transaction, would have been) taxed as compensation for services."

conceived "view," at least in ordinary circumstances. Regs. §1.341-2(a)(3). This approach has led to a few shareholder victories; see Jacobson v. Commissioner, 281 F.2d 703 (3d Cir. 1960) (sale not contemplated until after construction was completed; held, not collapsible); Temkin v. Commissioner, 35 T.C. 906 (1961) (sale attributable to ill health of a principal shareholder, arising after construction was completed; held, not collapsible). Several courts have suggested that the Regulations are too complaisant, however, and that even a post-construction "view" meets the statutory requirement. If the statute is construed this broadly, is the "view" ipso facto present whenever a sale, liquidation, or distribution precedes substantial realization of the income? See Farber v. Commissioner, 312 F.2d 729 (2d Cir. 1963), and cases there cited.

When §341 was first enacted, the commentators engaged in a lively debate over the referent of the adverb "principally" in §341(b)(1). In Weil v. Commissioner, 252 F.2d 805 (2d Cir. 1958), the court said that "principally" modifies only "manufacture, construction," etc., and that the "view" need not be "the principal corporate objective." Although the *Weil* case has gained a large measure of support, no court has as yet worked out the implications of the statement in the Regulations that the "view" requirement is satisfied even if a sale, liquidation, etc. is no more than "a recognized possibility." Regs. §1.341-2(a)(2).

2. *Realization of "substantial part" of taxable income.* If the shareholders *intend* to liquidate the corporation before it has realized "a substantial part of the taxable income to be derived from [the collapsible] corporation," but *in point of fact* the corporation is not liquidated until after all the taxable income has been realized, is §341 applicable? Although the language of §341(b)(1)(A) implies that the "view" rather than the fact is controlling, the Regulations adopt a contrary position — if the income is realized, we are to forgive and forget the tainted purpose. Regs. §1.341-5(c)(2).

Is the corporation collapsible if it has realized a substantial part of the income to be derived from the collapsible property, but a substantial part remains to be realized when the sale or liquidation occurs? Compare Commissioner v. Kelley, 293 F.2d 904 (5th Cir. 1961) (corporation realized 33 per cent of potential income; held, not collapsible), with Abbott v. Commissioner. 258 F.2d 537 (3d Cir. 1958) ("substantial part" refers to amount to be realized, not amount already realized).

3. *The operative effects of §341.* If a corporation is collapsible, the shareholders (subject to certain exceptions) must report as ordinary income any gain from a sale or exchange of the stock, a distribution in partial or complete liquidation, or a non-dividend distribution under §301(c)(3)(A) that would otherwise be reported as long-term capital gain. In the *Braunstein* case, the gain realized by the shareholders was composed partly of a non-dividend distribution under §301(c)(3)(A) and partly of profit on the sale of their shares; both would have been long-term capital gain had §341 been inapplicable. Although §341(a) does not explicitly mention long-term capital gain on a redemption of shares, it may be that redemptions are embraced by the reference to a "sale" of stock in §341(a)(1). Section 341 does not transform short-term capital gain into ordinary income, and it has no impact if the shareholders incur a loss on the transaction.

Collapsible corporations are disqualified by §337(c)(1) from using §337 to avoid recognition of gain on a sale of property. Were it not for this limitation, a corporation could avoid recognition of gain on a sale of its assets under §337 and the shareholders could avoid §341 on the ground that the sale constituted a "realization" by the corporation of its gain (even though no corporate tax was payable because the gain was not "recognized") that made the corporation non-collapsible. By selling its assets and recognizing its gain, however, an otherwise collapsible corporation will take itself out of the collapsible category — see Regs. §1.341-5(c)(2) — with the result that the tax at the corporate level will permit the taxpayers to report their profit on the liquidation as capital gain.

4. *Minority shareholders.* In determining whether the forbidden "view" exists, the Regulations look to "those persons in a position to determine the policies of the corporation, whether by reason of their owning a majority of the voting stock of the corporation or not." Regs. §1.341-2(a)(2). Since the punitive rules of §341(a) apply to all shareholders of a collapsible corporation, a minority shareholder cannot escape by showing that he did not share in the forbidden "view." But if he is the only shareholder who sells his stock, the corporation may be non-collapsible because the dominant shareholders did not intend

to sell *their* shares before a substantial part of the income was realized by the corporation. See Goodwin v. United States, 320 F.2d 356 (Ct. Cl. 1963).

Regardless of his "view," however, a person who owns (directly or constructively) no more than 5 per cent of the collapsible corporation's stock may be able to avail himself of the exception of §341(d)(1).

5. *The limitations of §341(d).* By virtue of §341(d), §341 is inapplicable to gain realized more than three years after the construction, etc., is completed, to gain recognized during a taxable year unless more than 70 per cent of it was attributable to the collapsible property, or, if certain conditions are satisfied, to persons owning not more than 5 per cent of the corporation's stock. The three-year rule is difficult to satisfy in view of the broad meaning given to "manufacture, construction, or production," and the 5 per cent rule is limited in its usefulness because of the constructive ownership rules of §341(d) (last sentence). The 70 per cent rule may be significant if the corporation holds both collapsible and non-collapsible property; if enough of the gain is attributable to the latter category, the gain attributable to the collapsible property slips through unscathed by §341. When the corporation's principal or only asset is real estate on which it has constructed a building, however, shareholders have not been very successful in establishing that 30 per cent or more of their gain was of the non-collapsible variety. See Farber v. Commissioner, supra page 687, and cases there cited. In *Braunstein,* this escape was held inapplicable by the Tax Court and the Court of Appeals; their determination on this issue was not reviewed by the Supreme Court.

6. *Distributions of "excess" mortgage proceeds by collapsible corporations.* Much of the §341 litigation has concerned corporations (as in *Braunstein*) which constructed apartment houses or other buildings under the Federal Housing Act and were able to borrow, on federally insured mortgages, more than the cost of construction. This excess of the mortgage loan over the corporation's cost might be attributable to construction economies, to inflation in the value of previously acquired land, to overly generous appraisals by the federal authorities, to the uncompensated personal efforts of the shareholders (see footnote 3 of the *Braunstein* opinion), or to the unlawful substitution of shoddy materials for those specified in the contract on which the government's appraisal was based. Before 1954, it was common (as in *Braunstein*) for such excess mortgage proceeds to be distributed to shareholders before the corporation had any earnings and profits (so the distribution would not be a taxable dividend). In Commissioner v. Gross, 236 F.2d 612 (2d Cir. 1956), it was held that such a distribution was to be applied against the shareholder's basis for his stock, and that any excess over his basis was capital gain under §301(c)(3)(A). This result was changed (prospectively only) by the enactment in 1954 of §312(j), under which a distribution creates earnings and profits if the corporation's assets are subject to a loan that was made, guaranteed, or insured by the United States and that exceeds the adjusted basis of the mortgaged property. A distribution in these circumstances, therefore, will be a taxable dividend to the shareholders.

Section 312(j) did not make §341 unnecessary as to such construction companies, however, because §312(j) does not apply if the shareholders realize on the excess mortgage money by selling their stock rather than by causing the corporation to distribute the funds to them.

7. *The amnesty of §341(e).* Section 341(e), inapplicable to the taxable year before the Supreme Court in the *Braunstein* case (1950), was enacted in 1958 in recognition of the fact that §341 not only prevents some taxpayers from transmuting potential ordinary income into capital gain, but also forces others to report as ordinary income a gain that would have been taxed as capital gain if realized without the intervention of a corporation. But §341(e) accomplishes its intended purpose in remarkably labyrinthian fashion, and its involutions are not easily summarized. Roughly speaking, its underlying theory is that the collapsible corporation provisions should not be applied if the net unrealized appreciation in the corporation's "subsection (e) assets" (property that would produce ordinary income if sold by the corporation or by its principal shareholders) amounts to less than 15 per cent of the corporation's net worth. As the *Braunstein* opinion indicates, §341(e) looks not only to the corporation's trade or business in determining whether property constitutes a "subsection (e) asset," but also to the trade or business of the corporation's principal shareholders (those owning, directly or constructively, more than 20 — sometimes 5 — per cent of the stock); and sometimes §341(e) takes account of a hypo-

thetical trade or business that is imputed to a shareholder because of the activities of other corporations in which he owned stock in the past, directly or constructively. Section 341(e) not only contains provisions to protect the shareholder of an otherwise collapsible corporation against the rules of §341(a), but also permits the corporation, on meeting certain conditions, to make use of §337 on a sale of its assets.

Since two of the principal shareholders in the *Braunstein* case had been engaged in the real estate construction business for many years, directly or through other corporations (36 T.C. 22, 23), they might not have qualified for relief under §341(e) even if it had been in force in 1950. If they had been investors in real estate, with no interests in other corporations, however, and if the buildings were held by the corporations for rental purposes, §341(e)(1) would have been applicable: the buildings would not be "subsection (e) assets" and hence none of the corporations' net worth would have been attributable to unrealized appreciation in such assets, with the result that the corporations (regardless of the shareholders' "view") would not be collapsible.

8. *Non-statutory attacks on collapsible corporations.* Was §341 necessary? When it was enacted, the Congressional committees stated that "no inference shall be drawn from the amendment with respect to gains realized prior to 1950." H.R. Rept. No. 2319 and S. Rept. No. 2375, 81st Cong. 2d Sess., 1950-2 C.B. 380, 451, 516. Could the collapsible corporation have been assailed successfully with such weapons as Commissioner v. Laughton, supra page 401; Lucas v. Earl, supra page 343; Higgins v. Smith, 308 U.S. 473 (1940); and Griffiths v. Helvering, 308 U.S. 355 (1940)? See Bittker and Redlich, Corporate Liquidations and the Income Tax, 5 Tax L. Rev. 437, 437-448 (1950).

In the first pre-§341 case of an attempt by the Treasury to disregard the liquidation of a collapsed corporation, it lost. Herbert v. Riddell, 103 F. Supp. 369 (S.D. Cal. 1952). There, however, the court found that the stockholders did not intend to collapse the corporation when they organized it; the liquidation was decided upon subsequently, as a result of a difference of opinion among its stockholders as to future business policy. See also O'Brien v. Commissioner, 25 T.C. 376 (1955), following Herbert v. Riddell, although there was evidently no showing that the shareholders intended to make more than a single motion picture. In Jacobs v. Commissioner, 224 F.2d 412 (9th Cir. 1955), however, a corporation organized to enable the owner of appreciated inventory property to sell it for a capital gain (by transferring the property to the corporation and selling its stock) was disregarded, and the transaction was treated as a sale of the property itself rather than the stock. The taxable year antedated the enactment of §341(b)(3), which permits inventory property to be treated as "collapsible" property in applying §341.

Tax Inst. 269, is an exhaustive study of §341, which cites the principal earlier literature; Nordberg, "Collapsible" Corporations and the "View," 40 Taxes 372 (1962); Boland, Collapsible Corporations Under the 1958 Amendments, 17 Tax L. Rev. 203 (1962).

Section I. Stock Dividends and Recapitalizations

1. *Stock Dividends*

Section 305(a) of the 1954 Code, relating to distributions by a corporation of its own stock, substantially changes §115(f)(1) of the 1939 Code.

Section 305(b)(1), relating to distributions of stock in discharge of preference dividends, has no counterpart in the 1939 Code.

Section 305(b)(2), relating to elective distributions of stock, is derived from §115(f)(2) of the 1939 Code.

Section 307(a) of the 1954 Code, relating to the basis of stock received tax-free, is derived from §113(a)(19) of the 1939 Code.

Section 307(b) of the 1954 Code, relating to the basis of certain stock rights, has no counterpart in the 1939 Code.

The federal income tax treatment of distributions by a corporation of its own stock (and of rights to acquire its own stock) can be divided into five eras:

1. *1913-1916.* The Revenue Act of 1913 said nothing about stock dividends. Despite this omission, the Treasury sought to tax stock dividends under the catchall language of §22(a) of pre-1954 law, now §61(a). The Treasury position was upheld in Towne v. Eisner, 242 Fed. 702 (S.D.N.Y. 1917), but this decision was reversed by the Supreme Court, 245 U.S. 418 (1918), on the ground that a stock dividend was not "income" as that term was used in the statute. The Court also said that "it is not necessarily true that income means the same thing in the Constitution and the [Revenue] Act." This suggested that the Court was not passing on the constitutionality of an explicit provision taxing stock dividends.

2. *1916-1921.* The Revenue Act of 1916 taxed all stock dividends (if covered by post-1913 earnings and profits). In Eisner v. Macomber, supra page 56, this provision was held unconstitutional as applied to a distribution of common stock on common stock by a corporation having no other class of stock outstanding. Eisner v. Macomber should be reviewed at this point.

3. *1921-1938.* In response to Eisner v. Macomber, Congress provided in the Revenue Act of 1921 that "a stock dividend shall not be subject to tax," and this provision was carried forward until the enactment of the Revenue Act of 1936.

During this period the Treasury's Regulations required the adjusted basis of the old stock to be allocated between the old shares and the dividend shares in proportion to their respective market values at the time of distribution. In Koshland v. Helvering, 298 U.S. 441 (1936), this regulation was held invalid as to a taxpayer who had received a dividend of common stock on non-voting preferred shares. No such distribution was made on the common stock. The Court reasoned that the dividend shares, unlike those in Eisner v. Macomber, gave "the stockholder an interest different from that which his former stockholdings represented." Therefore, said the Court, the shares were constitutionally taxable when received. The Court then held that the failure of Congress to tax the dividend shares did not authorize the Treasury to allocate part of the basis of the old shares to the dividend shares. Consequently the old shares retained their full basis for determining gain or loss on their disposition.

Besides making clear that Eisner v. Macomber did not immunize all stock dividends, the *Koshland* case opened up the possibility of an escape from taxation for taxpayers who had accepted the benefit of the regulation in question by allocating part of their original basis to the dividend shares on sales of those shares. It was possible that such taxpayers could claim the full original basis on a later sale of the original shares. Not long after the *Koshland* case, the Court held in Helvering v. Gowran, 302 U.S. 238 (1937), that under the 1921-1936 statutes the basis of dividend shares was zero, since they cost the stockholder nothing and were not taxed as income when received. This determination opened up the possibility — the converse of the possible escape from taxation under the *Koshland* case — that a taxpayer who had complied with the invalidated regulation on selling his original shares (by allocating part of their basis to the retained dividend shares) would now have to use a zero basis on selling the dividend shares, and thus would never recover tax-free his total investment.

To counteract these possible results of the *Koshland* and *Gowran* cases, Congress in 1939 enacted §113(a)(19) of the 1939 Code, the predecessor of §307(a) of the 1954 Code. It adopted the rules applied under the invalidated Treasury regulation and also made provision for situations in which income on the sale of either the original or the dividend shares had been computed in a fashion inconsistent with the old regulation. Alvord and Biegel, Basis Provisions for Stock Dividends Under the 1939 Revenue Act, 49 Yale L.J. 841 (1940). At the same time, Congress provided that the "holding period" of non-taxable shares includes the period during which the original shares were held. This provision is now §1223(5).

4. *1936-1954.* In response to the *Koshland* case, supra, holding that some stock dividends were constitutionally subject to tax, Congress provided in §115(f)(1) of the Revenue Act of 1936 that:

A distribution made by a corporation to its shareholders in its stock or in rights to acquire its stock shall not be treated as a dividend to the extent that it does not constitute income to the shareholder within the meaning of the Sixteenth Amendment to the Constitution.

Did this section tender the Supreme Court an opportunity to re-examine Eisner v. Macomber or did it take that case as its starting point? In Helvering v. Griffiths, 318 U.S. 371 (1943), a majority of the Court held that §115(f)(1) was not intended to invite a reconsideration of Eisner v. Macomber; the minority saw such an invitation, accepted it, and expressed the view that Eisner v. Macomber should be overruled. As §115(f)(1) was interpreted by the majority, then, "the tax status of a stock dividend now [pre-1954] turns in effect on what would have been unconstitutional under Eisner v. Macomber if Eisner v. Macomber had been correct in its premise that a constitutional issue is present.' ' Cohen, Surrey, Tarleau, and Warren, A Technical Revision of the Federal Income Tax Treatment of Corporate Distributions to Stockholders, 52 Colum. L. Rev. 1, 9-10 (1952).

Just what stock dividends could be taxed under §115(f)(1) of the 1939 Code, as thus construed, was veiled with obscurity. In Strassburger v. Commissioner, 318 U.S. 604 (1943), the Supreme Court held (by a 5-to-3 vote) that a distribution of a newly created issue of non-voting cumulative preferred stock by a corporation that had only common stock outstanding was not taxable. All of the common stock was owned by a single stockholder, the taxpayer. The Court said:

While the petitioner . . . received a dividend in preferred stock, the distribution brought about no change whatever in his interest in the corporation. Both before and after the event he owned exactly the same interest in the net value of the corporation as before. At both times he owned it all and retained all the incidents of ownership he had enjoyed before. [318 U.S. at p. 607.]

In Helvering v. Sprouse, decided at the same time as the *Strassburger* case, the Court held that a distribution of non-voting common stock by a corporation having both voting and non-voting common outstanding was also non-taxable. The non-voting common was distributed to the holders of both the voting and the non-voting common, but the taxpayer, before the stock dividend, owned only voting common. The government argued that the distribution came within the rule of the *Koshland* case that "where a stock dividend gives the stockholder an interest different from that which his former stockholdings represented he receives income." But the Court (5-to-3) said:

We think Koshland v. Helvering, 298 U.S. 441, distinguishable. That was a case where there were both preferred and common stockholders and where a dividend in common was paid on the preferred. We held, in the circumstances there disclosed, that the dividend was income but we did not hold that any change whatsoever in the character of the shares issued as dividends resulted in the receipt of income. On the contrary the decision was that, to render the dividend taxable as income, there must be a change brought about by the issue of shares as a dividend whereby the proportional interest of the stockholder after the distribution was essentially different from his former interest. [318 U.S. at pp. 607, 608.]

Two other pre-1954 decisions that are worthy of note are Tourtelot v. Commissioner, 189 F.2d 167 (7th Cir. 1951), cert. denied, 343 U.S. 901 (1952), and Wiegand v. Commissioner, 194 F.2d 479 (3d Cir. 1952); see also Lowndes, The Taxation of Stock Dividends and Stock Rights, 96 U. of Pa. L. Rev. 147 (1947); Rottschaefer, Present Taxable Status of Stock Dividends in Federal Law, 28

Minn. L. Rev. 106 and 163 (1944); Schmitt v. Commissioner, 208 F.2d 819 (3d Cir. 1954).

5. *1954.* Section 305(a) of the 1954 Code reinstates the 1921-1936 rule that distributions by a corporation of its own stock or of rights to acquire its own stock are not taxable. See, however, the limitations of §305(b). The corresponding basis provision, §307(a), continues the method of allocation first established by the Treasury regulation that was invalidated by the *Koshland* case and reinstated by §113(a)(19) of the 1939 Code. An exception, to avoid trifling basis adjustments when stock rights are received, is provided by §307(b). Where stock rights take over (either by election under §307(b)(2) or because §307(b)(1)(B) is not satisfied) part of the basis of the stock with respect to which they are distributed, upon exercise their basis will be added to the cost of the stock thus acquired in determining its basis. If stock rights with a basis are allowed to lapse without exercise, the Treasury takes the position that no loss is incurred, and that the shares in respect to which the rights were issued reacquire their original basis.

By virtue of §312(d), a non-taxable distribution of stock does not reduce the earnings and profits of the distributing corporation. Moreover, under §312(f)(2), if a corporation receives a non-taxable stock distribution from another corporation, the recipient corporation's earnings and profits are not increased thereby. Section 1223(5) provides that the holding period for non-taxable stock dividends and rights includes the period during which the taxpayer held the stock on which the dividend stock or rights were received; and §1223(6) provides that the holding period for stock purchased by the exercise of rights commences on the date the right was exercised.

See generally Bittker, Stock Dividends, Distributions in Kind, Redemptions, and Liquidations Under the 1954 Code, 1955 So. Calif. Tax Inst. 349; Whiteside, Income Tax Consequences of Distributions of Stock Rights to Shareholders, 66 Yale L.J. 1016 (1957).

CHAMBERLIN v. COMMISSIONER

207 F.2d 462 (6th Cir. 1953), cert. denied, 347 U.S. 918 (1954)

Before SIMONS, Chief Judge, and MCALLISTER and MILLER, Circuit Judges.

MILLER, Circuit Judge.

Petitioner C. P. Chamberlin seeks a review of an income tax deficiency determined by the Respondent for the calendar year 1946, and sustained by the Tax Court. In the Tax Court the proceeding was consolidated with the proceedings of five other taxpayers similarly situated, all of which proceedings involved the same factual and legal questions. The taxpayers, all of whom were stockholders of Metal Moulding Corporation, about which this litigation centers, and their respective deficiencies were as follows:

C. P. Chamberlin	$343,650.86
Grace A. Chamberlin, his wife	63,225.55
John H. Toner	19,620.37
Benjamin James Carl	7,244.29
Guy V. Schrock	9,177.83
Robert and Josephine Pierce	14,635.19

The Tax Court upheld the deficiency assessment in each proceeding. . . .

The facts in the main are stipulated and are not in dispute. . . .

The Metal Moulding Corporation, hereinafter referred to as the Corporation, is a Michigan corporation engaged in the business of manufacturing metal mouldings and bright work trim used in the manufacture of automobiles. . . . From

1940 until December 20, 1946, the issued and outstanding common stock totaled 1,002½ shares, of which Chamberlin and his wife together owned 83.8%. . . .

The business of the Corporation prospered, and after paying substantial cash dividends over a period of years, its balance sheet at the end of the first six months in 1946 reflected total assets of $2,488,836.53 and included in current assets $722,-404.56 cash and $549,950 United States Government Bonds and notes.

On December 16, 1946, the Corporation's authorized capital stock was increased from $150,000 to $650,000, represented by 6,500 shares of $100 par value common stock. On December 20, 1946, a stock dividend was declared and distributed of five shares of common for each share of common outstanding, and the Corporation's accounts were adjusted by transferring $501,250 from earned surplus to capital account.

On December 26, 1946, the articles of incorporation were amended so as to authorize, in addition to the 6,500 shares of common stock, 8,020 shares of 4½% cumulative $100 par value preferred stock. On December 28, 1946, a stock dividend was declared of 1⅓ shares of the newly authorized preferred stock for each share of common stock outstanding, to be issued pro rata to the holders of common stock as of December 27, 1946, and the Company's accounts were adjusted by transferring $802,000 from earned surplus to capital account. The preferred stock was issued to the stockholders on the same day. Prior to the declaration of the preferred stock dividend, the Corporation at all times had only one class of stock outstanding.

On December 30, 1946, as the result of prior negotiations hereinafter referred to, all of the holders of the preferred stock, except the estate of Edward W. Smith, deceased, which owned 20 shares, signed a "Purchase Agreement," with the Northwestern Mutual Life Insurance Company and The Lincoln National Life Insurance Company, which instrument was also endorsed by the Corporation for the purpose of making certain representations, warranties and agreements. Under the "Purchase Agreement" 4,000 shares of the preferred stock was sold to each of the two insurance companies at a cash price of $100 per share plus accrued dividends from November 1st, 1946 to date of delivery. Pursuant to the "Purchase Agreement" the holders of the preferred stock, with the exception of the estate of Edward W. Smith, delivered their stock certificates endorsed in blank to agents of the two insurance companies, who transferred to C. P. Chamberlin as agent for the stockholders funds for the amount of the purchase price, which Chamberlin distributed to the stockholders in proportion to their interests by delivery of his personal checks. . . .

In the latter part of 1945, the Corporation's attorney and Chamberlin discussed with an investment firm in Chicago the possibility of selling an issue of preferred stock similar to the stock subsequently issued. The Corporation had such a large accumulated earned surplus it was fearful of being subjected to the surtax provided for by [§531], but at the same time Chamberlin, the majority stockholder, was not willing to have the Corporation distribute any substantial portion of its earned surplus as ordinary dividends because his individual income was taxable at high surtax rates. It was proposed that the issuance of a stock dividend to the stockholders and the sale of it by the stockholders would enable the stockholders to obtain accumulated earnings of the Corporation in the form of capital gains rather than as taxable dividends. The investment counselor contacted The Lincoln National Life Insurance Company of Fort Wayne, Indiana, and during October 1946, furnished the Insurance Company financial information relative to the Corporation. On November 7, 1946, a representative of the Insurance Company came to Detroit and made an inspection of the plant and properties of the Corporation. On November 20, 1946, The Lincoln National Life Insurance Com-

pany's finance committee approved the proposed issue and the purchase of one-half thereof. The Northwestern Mutual Life Insurance Company was contacted for the purpose of participating in the purchase of the preferred stock. It made a detailed investigation of the Corporation and of the terms and conditions of the proposed preferred stock issue, and about two weeks before December 30, 1946, its committee on investments approved the purchase of 4,000 shares of the preferred stock to be issued, and passed the matter over to its legal department for the conclusion of the transaction.

The preferred stock contained the following provisions among others: The holders were entitled to cumulative cash dividends at the rate of $4.50 per annum payable quarterly beginning November 1, 1946; the stock was subject to redemption on any quarterly dividend date in whole or in part at par plus specified premiums and accrued dividends; it was subject to mandatory retirement in amounts not exceeding 2,000 shares on May 1, 1948 and 1,000 on May 1st on each succeeding year, depending upon the Corporation's net earnings for the preceding year, until fully retired on May 1, 1954; in the event of certain defaults, in dividend payments or annual retirements, the holders were entitled to elect a majority of the directors; as long as any preferred shares remained outstanding the consent of the holders of at least 75% thereof was required to validate certain actions, including changing the articles of incorporation or capital structure, the sale of the company's property, or the incurrence of indebtedness for borrowed money in excess of a certain amount; the Corporation could not pay any cash dividend upon any stock junior to the preferred if there was any default in the payment of dividend upon and the annual retirements of the preferred, or if such dividend reduced the net working capital of the Corporation below an amount equal to 150% of the aggregate par value of all outstanding preferred, or $750,000, whichever amount was greater, or reduced the current assets of the Company to an amount less than 200% of current liabilities. These provisions had been discussed with the Lincoln National Life Insurance Company and some of them, at least, were included in order to satisfy the investment requirements of the two insurance companies.

No agreement of purchase and sale was entered into between any of the petitioners and either of the two insurance companies prior to the "Purchase Agreement" executed on December 30, 1946, but the stockholders and directors of the Corporation took the necessary actions to put the negotiated plan into effect, as hereinabove set out, only after the insurance companies certified their willingness to participate in the purchase, if, as, and when the preferred stock was issued on the terms and conditions prescribed by them and as set out in the Company's charter as amended on December 27, 1946. . . .

The Tax Court held that the issue of whether the stock dividend constituted income to the stockholders should be determined from a consideration of all the facts and circumstances surrounding the issuance of the dividend and not by a consideration limited to the characteristics of the stock declared as a dividend; that each case involving a stock dividend must be decided upon its own facts and circumstances as establishing whether the receipt of a particular kind of stock dividend was in fact taxable; that such a decision did not rest upon matters of form or nomenclature attending a stock dividend distribution but rather upon the real substance of the transaction involved; that disregarding the circumstances and terms of the issue it might be said that as a mater of form the stock dividend . . . fell within the *Strassburger* case [supra p. 691], but that considering the real substance of the transaction it was of the opinion that the stock dividend was not in good faith for any bona fide corporate business purpose, and that the attending circumstances and conditions under which it was issued made it the equivalent of a cash dividend distribution out of available earnings, thus con-

stituting ordinary taxable income in the amount of the value of the preferred shares received. The Court also said that the real purpose of the issuance of the preferred shares was concurrently to place them in the hands of others not then stockholders of the Corporation, thereby substantially altering the common stockholders' pre-existing proportionate interests in the Corporation's net assets and thereby creating an entirely new relationship amongst all the stockholders and the Corporation. One judge concurred in the result without separate opinion; one judge concurred in a separate opinion which did not concur in the reasoning of the majority opinion, and a third judge wrote a dissenting opinion.

In our opinion, the declaration and distribution of the preferred stock dividend, considered by itself, falls clearly within the principles established in Towne v. Eisner and Eisner v. Macomber [supra p. 56], and is controlled by the ruling in the *Strassburger* case. Accordingly, as a preliminary matter, we do not agree with the Tax Court's statement that the stock dividend is taxable because as a result of the dividend and immediate sale thereafter it substantially altered the common stockholders' pre-existing proportional interests in the Corporation's net assets. The sale to the insurance companies of course resulted in such a change, but the legal effect of the dividend with respect to rights in the corporate assets is determined at the time of its distribution, not by what the stockholders do with it after its receipt. . . .

Nor is there any question about the genuineness and unconditional character of the sale of the preferred stock by the stockholders who received it to the two insurance companies. The facts show conclusively that title passed irrevocably from the stockholders to the insurance companies, and that the sellers received in cash without restriction a full consideration, the adequacy of which respondent does not question. But respondent contends that the sale of the stock following immediately upon its receipt resulted in the stockholder acquiring cash instead of stock, thus making it a taxable dividend under Secs. 22(a) and 115(a), [1939] Internal Revenue Code. There are two answers to this contention.

A non-taxable stock dividend does not become a taxable cash dividend upon its sale by the recipient. On the contrary, it is a sale of a capital asset. Eisner v. Macomber, 252 U.S. 189; Miles v. Safe Deposit & Trust Co., 259 U.S. 247. The rulings in those cases make it clear that its character as a capital asset is in no way dependent upon how long it is held by the taxpayer before its sale. In none of the Supreme Court cases referred to above, dealing with the taxability of stock dividends, was the length of the holding period considered as a factor. Obviously, if the non-taxability of a stock dividend rests solely upon the principle that it does not alter the pre-existing proportionate interest of any stockholder or increase the intrinsic value of his holdings, the disposition of the stock dividend by the stockholder thereafter is not a factor in the determination. See also: Insull v. Commissioner, 7 Cir., 87 F.2d 648; Silas H. Burnham, 29 B.T.A. 605.

The foregoing conclusion is supported by [§1223(5)], which provides that for the purpose of determining whether a non-taxable stock dividend which has been sold is a long-term capital gain there shall be included in the holding period the period for which the taxpayer held the stock in the distributing corporation prior to the receipt of the stock dividend. This necessarily recognizes that a stock dividend will often be sold before the expiration of six months after its receipt, and makes no distinction between a stock dividend held one day or for any other period less than six months. . . .

The other answer to the contention is that although the stockholder *acquired* money in the final analysis, he did not *receive* either money or property *from* the corporation. Sec. 115(a), [1939] Revenue Code [1954 Code, §316(a)], in dealing with taxable dividends, defines a dividend as "any distribution *made by a corpora-*

tion to its shareholders, whether in money or in other property . . . out of its earnings or profits. . . ." (Emphasis added.) The money he received was received from the insurance companies. It was not a "distribution" by the corporation declaring the dividend, as required by the statute.

We come then to what in our opinion is the dominant and decisive issue in the case, namely, whether the stock dividend, which, by reason of its redemption feature, enabled the Corporation to ultimately distribute its earnings to its stockholders on a taxable basis materially lower than would have been the case by declaring and paying the usual cash dividend, was a bona fide one, one in substance as well as in form. . . .

It seems clear that it was an issue of stock in substance as well as in form. According to its terms, and in the absence of a finding that it was immediately or shortly thereafter redeemed at a premium, we assume that a large portion of it has remained outstanding over a period of years with some of it still unredeemed after nearly seven years. It has been in the hands of the investing public, free of any control by the corporation over its owners, whose enforceable rights with respect to operations of the corporation would not be waived or neglected. Substantial sums have been paid in dividends. The insurance companies bought it in the regular course of their business and have held it as approved investments. For the Court to now tell them that they have been holding a sham issue of stock would be most startling and disturbing news.

It also seems clear that the insurance companies were not purchasers in form only without acquiring any real interest in the property conveyed. The character of the transaction as a bona fide investment on the part of the insurance companies is not challenged by the respondent. The element of a formal conduit without any business interest is entirely lacking.

If the transaction lacks the good faith necessary to avoid the assessment it must be because of the redemption feature of the stock, which, in the final analysis, is what ultimately permitted the distribution of the corporate earnings and is the key factor in the over-all transaction. Redemption features are well known and often used in corporate financing. If the one in question was a reasonable one, not violative of the general principles of bona fide corporate financing, and acceptable to experienced bona fide investors familiar with investment fundamentals and the opportunities afforded by the investment market we fail to see how a court can properly classify the issue, by reason of the redemption feature, as lacking in good faith or as not being what it purports to be. The insurance companies, conservative, experienced investors, analyzed the stock issue very carefully, provisions were required to make it conform to sound investment requirements, and each of the two companies, acting independently of the other, purchased a very substantial amount in the regular course of their investment purchases. If the redemption feature was unreasonable or not in accord with generally accepted investment principles the stock would not have been approved as an investment and purchased by the two insurance companies. In our opinion, the redemption feature, qualified as it was with respect to premiums, amounts subject to redemption in each year, and the length of time the stock would be outstanding, together with the acceptance of the stock as an investment issue, did not destroy the bona fide quality of the issue. We cannot say that the preferred stock was not in fact what it purported to be, namely, an issue of stock in substance as well as in form.

Each case necessarily depends upon its own facts. The facts in this case show tax avoidance, and it is so conceded by petitioner. But they also show a series of legal transactions, no one of which is fictitious or so lacking in substance as to be anything different from what it purports to be. Unless we are to adopt the broad policy of holding taxable any series of transactions, the purpose and result of

which is the avoidance of taxes which would otherwise accrue if handled in a different way, regardless of the legality and realities of the component parts, the tax assessed by the Commissioner was successfully avoided in the present case. We do not construe the controlling decisions as having adopted that view. . . .

The judgment is reversed and the case remanded to the Tax Court for proceedings consistent with the views expressed herein.

NOTE

1. *The legislative response to the "preferred stock bail-out": §306.* Section 306 of the 1954 Code is aimed squarely at the *Chamberlin* type of preferred stock "bail-out." If distributed after §306 took effect, the preferred stock received as a dividend in the *Chamberlin* case would be "§306 stock" under §306(c)(1)(A) and §306(c)(2). As a consequence, a sale of the preferred stock by one of the stockholders would produce ordinary income under §306(a)(1) to the extent of its share of the corporation's earnings and profits at the time it was issued. In the *Chamberlin* case, the stock was worth $100 per share when issued, and this amount was fully covered by earnings and profits; therefore, on a sale of the stock the proceeds would be ordinary income up to $100, and the balance, if any, would be taxed as a capital gain to the extent that it exceeded the stock's adjusted basis. For examples, see Regs. §1.306-1(b)(2).

If "§306 stock" is not sold but is instead redeemed by the corporation, the redemption is to be treated like an ordinary distribution, so that ordinary income will be received to the extent of the corporation's earnings and profits at the time of redemption. The proceeds of a sale, on the other hand, will be ordinary income to the extent of the stock's ratable share of earnings and profits when it was issued, even though the corporation has no earnings and profits when the stock is sold; and if the corporation has earnings and profits at that time, they are not reduced despite the fact that the shareholder is required to report ordinary income on the sale. Thus, to revert to the *Chamberlin* case, the sale of "§306 stock" by the recipients would have been taxed as an ordinary dividend, but the corporation's earnings and profits account would not reflect this fact, and a subsequent distribution of the very earnings and profits that caused the preferred stock to be treated as "§306 stock" will also be taxed as ordinary income to the stockholders. If they had caused the corporation to redeem their "§306 stock," on the other hand, they would have realized ordinary income to the extent of earnings and profits at the time of redemption, but the corporate earnings and profits account would be reduced accordingly. Whether the stock is sold or redeemed, however, the adjusted basis of the "§306 stock" will often not be recovered. Compare the status of stock redeemed under §302(d), supra page 659; and see the remedy adopted by Regs. §1.306-1(b)(2).

It will be noted that §306 is applicable even if there is no pre-arranged plan to sell the stock or to cause its redemption.

2. *Exceptions to §306.* The draconic rules just described are modified by the exceptions of §306(b). If the shareholder disposes of his entire stock interest (determined by applying the constructive ownership rules of §318) under circumstances set out in §306(b)(1), he can avoid ordinary income treatment. A redemption of the "§306 stock" in partial or complete liquidation will also relieve him of the special rules of §306. With respect to this exception, §306(b)(2), the Senate Report states (p. 243):

> In the case of a partial liquidation your committee contemplates a contraction of the corporate business so that it is immaterial that the distribution in partial contraction is with respect to section 306 stock. A bona fide contraction of the corporate business is not considered a means of distributing corporate earnings to shareholders at capital gains rates.

See page 664 supra on the relation of the term "partial liquidation" to a corporate contraction. An exchange of "§306 stock" in a non-taxable transaction (such as a tax-free reorganization or a §1036 exchange) is also excepted from the general rule of §306(a), but the stock received on the exchange will ordinarily become "§306 stock"; and its disposition will be subject to the same rules that would have governed a disposition of the "§306 stock"

given up. Finally, §306(b)(4) excepts transactions where it is established to the satisfaction of the Secretary of the Treasury that tax avoidance was not a principal purpose. This exception includes "isolated dispositions of section 306 stock by minority stockholders who do not in the aggregate have control of the distributing corporation" (S. Rept., p. 243), as well as dispositions of "§306 stock" by stockholders who have previously disposed of, or who simultaneously dispose of, the stock on which the "§306 stock" was issued.

Note that common stock distributed on common stock is not "§306 stock." §306(c)(1)(A). Why not? What *is* "common stock"? See Rev. Rul. 57-132, 1957-1 C.B. 115.

A gift of "§306 stock" is not a disposition under §306(a), according to Rev. Rul. 57-328, 1957-2 C.B. 229, but the stock continues to be "tainted" in the hand of the donee, by virtue of §306(c)(1)(C). But if the donee is a tax-exempt organization, it will pay no tax on a sale or redemption of the "§306 stock." What if a taxpayer, owning all of the stock of a corporation, causes it to issue a preferred stock dividend, which he then donates to a tax-exempt organization in anticipation of an immediate redemption?

Note that preferred stock issued in a §351 transaction (unless issued in exchange for "§306 stock") is not "tainted." To what extent, if at all, can such preferred stock be used to circumvent the statutory scheme of §306?

3. *"Bail-outs" under §115(g) of the 1939 Code.* The problem of the preferred stock "bail-out" is not new. Note the parenthetical phrase in §115(g) of the 1939 Code, quoted supra page 657. The prototype of §115(g), enacted in 1921, was directed *exclusively* at the redemption of shares that had been issued as stock dividends. The parenthetical phrase, subjecting redemptions to the test of §115(g) whether the stock was issued as a dividend or not, was enacted in 1926; among other reasons for its enactment was a realization that a corporation wishing to distribute cash at capital gains rates might redeem some of its originally issued stock on a pro rata basis, either getting along thereafter with a smaller stated capital or replacing the redeemed stock with a stock dividend at a subsequent time. For some time after 1926, however, the courts, influenced by §115(g)'s original purpose, were reluctant to apply it to the redemption of shares that had not been issued as a stock dividend. In the course of time, however, the courts departed more and more frequently from this restrictive construction. Bittker and Redlich, Corporate Liquidations and the Income Tax, 5 Tax L. Rev. 437, 466-468 (1950).

For discussions of the pre-1954 law, which by virtue of §306(h) remains applicable to dispositions and redemptions of stock received before the new Code took effect, see DeWind, Preferred Stock Bail-Outs and the Income Tax, 62 Harv. L. Rev. 1126 (1949); Darrell, Recent Developments in Nontaxable Reorganizations and Stock Dividends, 61 id. 958 (1948); Kanter, The Present Tax Status of Stock Dividends, 31 Taxes 418 (1953). In Rosenberg's Estate v. Commissioner, 36 T.C. 716 (1961), involving a transaction similar to that in the *Chamberlin* case, the Tax Court adhered to its view that the shareholders realized ordinary income on disposing of their shares; an appeal was dismissed on stipulation of the parties.

4. *Reference.* Alexander and Landis, Bail-Outs and the Internal Revenue Code of 1954, 65 Yale L.J. 909 (1956).

2. *Recapitalizations*

Section 354(a)(1) of the 1954 Code, relating to the recognition of gain or loss on exchanges of stock or securities in corporate reorganizations, is identical with §112(b)(3) of the 1939 Code.

Section 354(a)(2) of the 1954 Code, imposing a limitation on the "general rule" of §354(a)(1), has no counterpart in the 1939 Code.

Section 368(a)(1)(E) of the 1954 Code, defining "reorganization" to include a "recapitalization," is identical with §112(g)(1)(E) of the 1939 Code.

While the tax status of stock dividends has varied from time to time, it has always been clear that a distribution of its own *debt* securities by a corporation with earnings and profits is a taxable dividend. But the status of debt securities

issued by a corporation in the course of a corporate *recapitalization* has been less clear.

Before the 1954 Code was enacted, §112(b)(3) of the 1939 Code provided, as does the "general rule" laid down in §354(a)(1) of the 1954 Code, that no gain or loss was to be recognized if stock or securities of a corporation that was a party to a "reorganization" were exchanged for other stock or securities of the same corporation. Section 112(g)(1)(E) of the 1939 Code, like §368(a)(1)(E) of the 1954 Code, defined "reorganization" to include a "recapitalization." Suppose, then, that a corporation "recapitalized" by calling in its outstanding common stock and issuing in exchange other common stock (with a different par value or some other alteration of rights) plus bonds, debentures, or notes? Was the transaction a tax-free exchange of the old stock for the new stock and bonds or other securities? A taxable sale or exchange of the old stock? A dividend of the bonds or other securities? The case that follows considers this problem.

The effect of the enactment in 1954 of §354(a)(2), limiting the general rule of §354(a) if securities are received but not given up in the exchange (or if the principal amount of the securities received exceeds that of those that are surrendered), is examined in the note that follows the *Bazley* case.

BAZLEY v. COMMISSIONER

331 U.S. 737 (1947)

MR. JUSTICE FRANKFURTER delivered the opinion of the Court.

The proper construction of provisions of the Internal Revenue Code relating to corporate reorganizations is involved in both these cases. Their importance to the Treasury as well as to corporate enterprise led us to grant certiorari, 329 U.S. 695. While there are differences in detail to which we shall refer, the two cases may be disposed of in one opinion.

In the *Bazley* case, No. 287, the Commissioner of Internal Revenue assessed an income tax deficiency against the taxpayer for the year 1939. Its validity depends on the legal significance of the recapitalization in that year of a family corporation in which the taxpayer and his wife owned all but one of the Company's one thousand shares. These had a par value of $100. Under the plan of reorganization the taxpayer, his wife, and the holder of the additional share were to turn in their old shares and receive in exchange for each old share five new shares of no par value, but of a stated value of $60, and new debenture bonds, having a total face value of $400,000, payable in ten years but callable at any time. Accordingly, the taxpayer received 3,900 shares of the new stock for the 798 shares of his old holding and debentures in the amount of $319,200. At the time of these transactions the earned surplus of the corporation was $855,783.82.

The Commissioner charged to the taxpayer as income the full value of the debentures. The Tax Court affirmed the Commissioner's determination, against the taxpayer's contention that as a "recapitalization" the transaction was a tax-free "reorganization" and that the debentures were "securities in a corporation a party to a reorganization," "exchanged solely for stock or securities in such corporation" "in pursuance of a plan of reorganization," and as such no gain is recognized for income tax purposes. [§§368(a)(1)(E) and 354(a)(1).*] The Tax Court found that the recapitalization had "no legitimate corporate business purpose" and was therefore not a "reorganization" within the statute. The distribution of debentures, it concluded, was a disguised dividend, taxable as earned income under [§§61(a) and 301]. 4 T.C. 897. The Circuit Court of Appeals for

* Section 354(a)(2), which limits the general rule of §354(a)(1), was not enacted until 1954. — ED.

the Third Circuit, sitting en banc, affirmed, two judges dissenting 155 F.2d 237.

Unless a transaction is a reorganization contemplated by [§368(a)], any exchange of "stock or securities" in connection with such transaction, cannot be "in pursuance of the plan of reorganization" under [§354]. While [§368(a)] informs us that "reorganization" means, among other things, "a recapitalization," it does not inform us what "recapitalization" means. "Recapitalization" in connection with the income tax has been part of the revenue laws since 1921. Congress has never defined it and the Treasury Regulations shed only limited light. Treas. Reg. [§1.368-1(b)]. One thing is certain. Congress did not incorporate some technical concept, whether that of accountants or of other specialists, into [§368(a)], assuming that there is agreement among specialists as to the meaning of recapitalization. And so, recapitalization as used in [§368(a)] must draw its meaning from its function in that section. It is one of the forms of reorganization which obtains the privileges afforded by [§368(a)]. Therefore, "recapitalization" must be construed with reference to the presuppositions and purpose of [§368(a)]. It was not the purpose of the reorganization provision to exempt from payment of a tax what as a practical matter is realized gain. Normally, a distribution by a corporation, whatever form it takes, is a definite and rather unambiguous event. It furnishes the proper occasion for the determination and taxation of gain. But there are circumstances where a formal distribution, directly or through exchange of securities, represents merely a new form of the previous participation in an enterprise involving no change of substance in the rights and relations of the interested parties one to another or to the corporate assets. As to these, Congress has said that they are not to be deemed significant occasions for determining taxable gain.

These considerations underlie [§368(a)] and they should dominate the scope to be given to the various sections, all of which converge toward a common purpose. Application of the language of such a revenue provision is not an exercise in framing abstract definitions. In a series of cases this Court has withheld the benefits of the reorganization provision in situations which might have satisfied provisions of the section treated as inert language, because they were not reorganizations of the kind with which [§354], in its purpose and particulars, concerns itself. See Pinellas Ice & Cold Storage Co. v. Commissioner [infra p. 726]; Gregory v. Helvering [infra p. 707]; Le Tulle v. Scofield [infra p. 729].

Congress has not attempted a definition of what is recapitalization and we shall follow its example. The search for relevant meaning is often satisfied not by a futile attempt at abstract definition but by pricking a line through concrete applications. Meaning frequently is built up by assured recognition of what does not come within a concept the content of which is in controversy. Since a recapitalization within the scope of [§368(a)] is an aspect of reorganization, nothing can be a recapitalization for this purpose unless it partakes of those characteristics of a reorganization which underlie the purpose of Congress in postponing the tax liability.

No doubt there was a recapitalization of the Bazley corporation in the sense that the symbols that represented its capital were changed, so that the fiscal basis of its operations would appear very differently on its books. But the form of a transaction as reflected by correct corporate accounting opens questions as to the proper application of a taxing statute; it does not close them. Corporate accounting may represent that correspondence between change in the form of capital structure and essential identity in fact which is of the essence of a transaction relieved from taxation as a reorganization. What is controlling is that a new arrangement intrinsically partake of the elements of reorganization which underlie the Congressional exemption and not merely give the appearance of it to ac-

complish a distribution of earnings. In the case of a corporation which has undistributed earnings, the creation of new corporate obligations which are transferred to stockholders in relation to their former holdings, so as to produce, for all practical purposes, the same result as a distribution of cash earnings of equivalent value, cannot obtain tax immunity because cast in the form of a recapitalization-reorganization. The governing legal rule can hardly be stated more narrowly. To attempt to do so would only challenge astuteness in evading it. And so it is hard to escape the conclusion that whether in a particular case a paper recapitalization is no more than an admissible [inadmissible?] attempt to avoid the consequences of an outright distribution of earnings turns on details of corporate affairs, judgment on which must be left to the Tax Court. See Dobson v. Commissioner, 320 U.S. 489.

What have we here? No doubt, if the Bazley corporation had issued the debentures to Bazley and his wife without any recapitalization, it would have made a taxable distribution. Instead, these debentures were issued as part of a family arrangement, the only additional ingredient being an unrelated modification of the capital account. The debentures were found to be worth at least their principal amount, and they were virtually cash because they were callable at the will of the corporation which in this case was the will of the taxpayer. One does not have to pursue the motives behind actions, even in the more ascertainable forms of purpose, to find, as did the Tax Court, that the whole arrangement took this form instead of an outright distribution of cash or debentures, because the latter would undoubtedly have been taxable income whereas what was done could, with a show of reason, claim the shelter of the immunity of a recapitalization-reorganization.

The Commissioner, the Tax Court and the Circuit Court of Appeals agree that nothing was accomplished that would not have been accomplished by an outright debenture dividend. And since we find no misconception of law on the part of the Tax Court and the Circuit Court of Appeals, whatever may have been their choice of phrasing, their application of the law to the facts of this case must stand. A "reorganization" which is merely a vehicle, however elaborate or elegant, for conveying earnings from accumulations to the stockholders is not a reorganization under [§368]. This disposes of the case as a matter of law, since the facts as found by the Tax Court bring them within it. And even if this transaction were deemed a reorganization, the facts would equally sustain the imposition of the tax on the debentures under [§356(a)(1) and §356(a)(2)]. Commissioner v. Estate of Bedford, 325 U.S. 283. . . .

Other claims raised have been considered but their rejection does not call for discussion.

Judgments affirmed.

MR. JUSTICE DOUGLAS and MR. JUSTICE BURTON dissent in both cases for the reasons stated in the joint dissent of Judges Maris and Goodrich in the court below. Bazley v. Commissioner, 3 Cir., 155 F.2d 237, 244.

NOTE

1. *A change of form or of substance?* The Court says that Congress has determined that gain and loss shall not be recognized "where a formal distribution, directly or through an exchange of securities, represents merely a new form of the previous participation in an enterprise, involving no change of substance in the rights and relations of the interested parties one to another or to the corporate assets." Why is this not an apt description of the *Bazley* case recapitalization? Is is not more applicable to this exchange than to an exchange in the course of a statutory merger of two previously independent corporations, a transaction that is clearly included in the term "reorganization" by §368(a)(1)(A)?

If the transaction in the *Bazley* case was not a "reorganization," why was it not a sale

or exchange of the old common stock for the new common stock and the debentures, to be governed by §1036, §1031(b), and §1031(c)?

2. *The 1954 change in §354.* If the transaction had occurred after the enactment of the 1954 Code, the taxpayers in *Bazley* would have had to face an additional hurdle: the provision of §354(a)(2), enacted in 1954, which limits the general rule of §354(a)(1). By virtue of §354(a)(2), in conjunction with §356(a), the debentures would have been "boot" even if the transaction had been held a "reorganization."

3. *The effect of the Bedford case.* The *Bedford* case, cited by the Court, involved these facts: Under a recapitalization, a shareholder exchanged 3000 shares of cumulative preferred stock (par value $100) for 3500 shares of cumulative preferred stock (par value $75), 1500 shares of common stock (par value $1), and $45,240 in cash. The shareholder's gain (the difference between the adjusted basis of the shares given up and the value of the stock plus the cash received) was $139,740. The corporation's "earnings and profits" were sufficient to cover the entire cash distribution. It was admitted by the government that the transaction was a reorganization exchange, and it was admitted by the taxpayer that the cash was "boot." The only issue was whether under what is now §356(a)(1) and §356(a)(2) the "boot" should be taxed as capital gain or as a dividend. The Court, admitting that the matter "is not wholly free from doubt," concluded that because the corporation had earnings and profits, the distribution of cash had "the effect of the distribution of a taxable dividend." Its conclusion should be compared with the way the courts construed the phrase "essentially equivalent to the distribution of a taxable dividend" under §115(g) of the 1939 Code, supra page 657.

Although the *Bedford* case has sometimes been thought to establish that a distribution is ipso facto a dividend to the extent of the corporation's earnings and profits, it has not always been applied so austerely. See Idaho Power Co. v. United States, 161 F. Supp. 807 (Ct. Cl. 1958) (boot held not to be the equivalent of a dividend). For discussion of the *Bedford* case, see Moore, Taxation of Distributions Made in Connection with a Corporate Reorganization, 17 Tax L. Rev. 129 (1961); Wittenstein, Boot Distributions and Section 112(c)(2); A Reexamination, 8 id. 63 (1952); Darrell, The Scope of Commissioner v. Bedford Estate, 24 Taxes 266 (1946).

4. *The "dividend-within-gain" concept of §356.* In citing §356 and the *Bedford* case as an alternative route to the same result reached by the "no reorganization" route, the Court may have overlooked the fact that §356 requires "boot" to be treated as a dividend only if, and to the extent that, the taxpayer realized a gain on the exchange itself. The value of the securities received in *Bazley* may well have exceeded the taxpayer's basis for the stock he surrendered, but there was no finding to this effect by the Tax Court.

5. *Use of debt in corporation's capital structure.* It has been seen previously that on original organization corporations often issue bonds or debentures to the incorporators, instead of only stock, so that the corporation can lay a basis for the deduction of interest under §163. Morover, the bonds can be retired at capital gains rates under §1232, whereas the redemption of stock would open the Pandora's box of §302. In addition, an accumulation of surplus by the corporation to pay off the indebtedness, unlike an accumulation for the purpose of redeeming stock, may be permissible under §531, supra page 625. The *Bazley* case and §354(a)(2) mean that a corporation which does not issue debt securities for these purposes to its stockholders at the time of organization will not find it easy to rectify its error later on.

Does the *Bazley* case also threaten the corporation which issues bonds or other evidences of indebtedness at the time of organization? Note the statement that the debentures "were virtually cash." Does this mean that they might be regarded as "boot" rather than "securities" if issued in a §351 transaction?

SEIDE v. COMMISSIONER

18 T.C. 502 (1952)

RAUM, Judge: The New Jersey Publishing Company had three classes of stock outstanding in August 1942: 1,600 shares of voting common, 2,500 shares of non-

voting common, 3,200 shares of non-voting 8 per cent cumulative preferred having a par value of $100. The shares of stock were held as follows:

Owner	Voting Common	Non-Voting Common	Preferred
Daisy Seide		850	1,300
Harold Seide	200	300	300
Joan Fagan Trust		200	400
Lois Fagan Trust		200	400
Frederick A. Seide	600	100	
Arthur L. Fagan	800	100	
Elizabeth M. Fagan		500	
Arthur L. Fagan Jr., Trust . .		250	
Elisabeth Fagan			160
Marilyn Fagan			160
Robert A. Fagan			160
Peter S. Fagan			160
Constance A. Fagan			160
Total	1,600	2,500	3,200

Pursuant to a plan of readjustment of its corporate structure, the Company issued a total of $320,000 face amount 8 per cent 20-year debentures in August 1942, and exchanged the debentures for all its preferred stock, each holder receiving a $1,000 debenture for 10 shares of preferred stock. The Company canceled the stock thus received and adjusted the capital on its books accordingly. In determining the deficiencies originally, the Commissioner apparently took the position that the distribution of the debentures in redemption and cancellation of the preferred stock was essentially equivalent to the distribution of a taxable dividend, within the meaning of §115(g) of the [1939] Revenue Code. The Commissioner now makes that contention only as to the four petitioners who held common (either voting or non-voting), and argues that the other five* realized capital gain upon receipt of the debentures and that they have not proved their basis in the preferred stock which they surrendered. We hold that the exchange of debentures for preferred stock was not essentially the equivalent of a taxable dividend and that the exchange was tax free pursuant to [§354(a)].†

Section [354] provides for the nonrecognition of gain or loss "if stock or securities in a corporation a party to a reorganization are, in pursuance of the plan of reorganization, exchanged solely for stock or securities in such corporation. . . ." And [§368(a)(1)(E)] defines "reorganization" to include "a recapitalization." There was here in fact a readjustment of the Company's capital structure, and there was an exchange of preferred stock solely for debentures. The transaction literally falls within the foregoing statutory provisions (cf. Wolf Envelope Co., 17 T.C. 471), and unless there are considerations which render these provisions inapplicable they are dispositive of the present controversy.

The situation here is wholly unlike that presented in Bazley v. Commissioner, 331 U.S. 737, where the form of reorganization was employed in an effort to achieve the distribution of a disguised dividend, and where it was held that the reorganization provisions were not intended to govern in such circumstances. The net effect of the transaction in the *Bazley* case was a pro rata distribution of debentures among stockholders in such manner as to render them the substantial equivalent of a cash dividend. No such circumstances are present here. The

* Only nine of the shareholders were parties to this proceeding. — Ed.

† The limitation of §354(a)(2) was not enacted until 1954. — Ed.

exchange of debentures for the preferred did not even remotely resemble a pro rata distribution of debentures among the holders of the two classes of common stock, considered either separately or together.

Five holders of the preferred stock owned no common stock whatever. The holders of 87½ per cent of the voting common owned no preferred and thus received no debentures. Similarly, several holders of a substantial block of non-voting common owned no preferred and likewise received no debentures. And finally, those holders of common who also owned preferred received debentures in percentages entirely unrelated to their holdings of common. To be sure, it is not a sine qua non of a taxable dividend that the distribution be made pro rata among the stockholders. But the fact that an alleged distribution is highly disproportionate raises a serious question whether it is in truth a disguised dividend.

Moreover, the debentures here involved were not readily marketable by reason of the following considerations: They were unsecured and had a remote maturity date, without likelihood of acceleration except in the event of dissolution or insolvency; there was the risk that they might be subordinated to the payment of other obligations; the Company had obsolete plant and equipment, and its business was in an unhealthy state, having sustained net losses in four of five preceding years and having fared poorly in relation to its competitors. The petitioners have asked us to find that the debentures had no fair market value at all. This we have not done, but the factors outlined above do show that the debentures could not readily have been sold, notwithstanding the Company's relatively strong balance sheet, and this fact is an additional element to be considered in determining whether the transaction was in fact a distribution of earnings rather than the reorganization which it purported to be. Taking all the facts into account we conclude that there was not here a distribution essentially equivalent to a taxable dividend. The *Bazley* case is not controlling; indeed, it points in the other direction.

Nor are the reorganization provisions inapplicable by reason of the absence of a "business purpose." One of the reasons for the elimination of the preferred stock was to wipe out the accumulated "deficit" in unpaid dividends, and we have no reason to conclude on this record that such objective was not attained. This was a valid business or corporate purpose . . . and the reorganization provisions, which otherwise literally cover this controversy, cannot therefore be rendered inapplicable.

NOTE

1. *Effect of the 1954 Code.* How would the foregoing reorganization be treated under the 1954 Code? Note that the table in the Court's opinion might be recast in the following form:

Owner	Voting Common	Non-Voting Common	Preferred
Seide Family	800	1250	1600
Fagan Family	800	1250	1600

In determining whether a recapitalization exchange "has the effect of the distribution of a dividend," §356(a)(2), can the effect on persons related to or controlled by the taxpayer be taken into account? Note that the constructive ownership rules of §318(a) come into force only when they "are expressly made applicable."

2. *Business purpose.* Does the last paragraph of the opinion mean that a "business purpose" must be served by the recapitalization, else the gain (or loss) will be recognized? Is there a difference between a "shareholder" business purpose and a "corporate" business purpose? The lower courts in the *Bazley* case had written extensively on the subject of

business purpose; note that the Supreme Court approved their conclusions "whatever may have been their choice of phrasing." See Bittker, What Is "Business Purpose" in Reorganization?, 8 N.Y.U. Inst. on Fed. Taxation 134 (1950).

See also Berner v. United States, 282 F.2d 720 (Ct. Cl. 1960), which discusses the relevance of the judicial requirement of a "continuity of interest" (infra p. 726) to recapitalizations.

3. *References.* Tarleau, Recapitalizations, 11 N.Y.U. Inst. on Fed. Taxation 371 (1953); Friedman and Silbert, Recapitalizations — Exchanges of Stock, Securities and Property of the Same Corporation Under the Internal Revenue Code of 1954, 13 id. 533 (1955).

Section J. Spin-Offs, Split-Offs, and Split-Ups

Section 355 of the 1954 Code, relating to divisive reorganizations, is derived, with substantial modifications, from §112(b)(11) and §112(b)(3) of the 1939 Code.

Section 356 of the 1954 Code, relating to the receipt of "boot," is derived, with modifications, from §112(c) and §112(e) of the 1939 Code.

Section 368(a)(1)(D) of the 1954 Code, defining the term "reorganization," is similar to §112(g)(1)(D) of the 1939 Code.

Section 368(b) and §368(c) of the 1954 Code, defining the terms "party to a reorganization" and "control" respectively, are similar to §112(g)(2) and §112(h) of the 1939 Code.

When the shareholders of a corporation no longer wish to entrust their eggs to one basket, there are various ways of getting them into several baskets. One is a corporate distribution to the stockholders of some of the assets; this will constitute a "dividend" if the corporation has earnings and profits. If instead, the assets are distributed to the shareholders in exchange for some of the corporation's stock, the distribution may run afoul of §302(d), supra page 652, at least if the distribution is on a pro rata basis.

Other methods of dividing up the corporate investment are the "spin-off," the "split-off," and the "split-up." In a *spin-off,* the existing corporation, A, transfers some of its assets to B Corporation, newly organized for the purpose, in exchange for B's stock, which A then distributes to its shareholders. In a *split-off,* A also transfers some of its assets to B for B's stock, but A distributes the B stock in exchange for part of its own stock. In a *split-up,* A transfers part of its assets to B Corporation and the rest to C Corporation, both newly organized for the purpose, and then completely liquidates, distributing the B and C stock in exchange for its own. The economic consequences to A's stockholders of all three methods are practically identical. Until 1954, however, the tax consequences of these transactions were quite divergent.

The split-up, under the 1939 Code, was a tax-free reorganization. The transfer of A's assets to B and C was a reorganization, as that term was defined by §112(g)(1)(D) (see §368(a)(1)(D) of the 1954 Code), and all three corporations were "parties to the reorganization" by virtue of §112(g)(2) (see §368(b) of the 1954 Code). Consequently A recognized neither gain nor loss on its exchanges of property for the stock or securities of B and C because of §112(b)(4) (see §361(a) of the 1954 Code). And A's stockholders recognized neither gain nor loss on their exchange of A stock for the stock or securities of B and C under §112(b)(3) (see §354(a) of the 1954 Code).

The spin-off, on the other hand, did not fit into the statutory sections just outlined. The transfer by A of a part of its assets to B constituted a "reorganization" under §112(g)(1)(D), so the corporation would recognize no gain or loss under §112(b)(4). But the distribution of the B stock to A's stockholders created

difficulty. This was because in a spin-off there is no *exchange* of stock by A's stockholders, as was required by §112(b)(3). Before 1934, as Gregory v. Helvering, infra page 707, indicates, no exchange was required, but the Revenue Act of 1934 amended the statute so as to require an exchange. Thus the spin-off became a taxable distribution (if the corporation had earnings and profits), and it retained this unhappy status until 1951. Section 112(b)(11) of the 1939 Code, added in 1951, allowed spin-offs to be accomplished tax-free, but only under certain restrictions. These restrictions were that both corporations must be intended to "continue the active conduct of a trade or business" after the spin-off and that the new corporation must not be "used principally as a device for the distribution of earnings and profits." These requirements, in modified form, have been carried over by the 1954 Code, but they are now applicable to all divisive reorganizations.

During the period (1934-1951) when the spin-off was a taxable dividend rather than a tax-free reorganization, the status of the split-off was rather uncertain. It could be fitted into the language of the 1939 Code, just as neatly as the split-up. But the Treasury's view was that the split-off was functionally equivalent to the spin-off (why?), and that the two should be treated identically for tax purposes. This contention was rejected by the Tax Court in Spangler v. Commissioner, 18 T.C. 976 (1952), and the Treasury finally conceded the point, Rev. Rul. 289, 1953-2 C.B. 37; but for many years the split-off was in general avoided by tax practitioners.

The foregoing discussion indicates that until 1954, the split-up was the safest method of dividing up a corporate enterprise. But it entailed a destruction of the old corporate entity, which might cause a loss of credits, carryovers, and other tax advantages, as well as the possible loss of franchises or favorable contracts, the confusion of customers, etc.

The 1954 Code seeks to treat all divisive reorganizations in the same way. Section 355 is the capstone of its structure; it is applicable both to distributions (spin-offs) and to exchanges (split-ups and split-offs). Moreover, the old corporation can distribute (a term that includes exchanges) the stock or securities of a controlled corporation that it already owns, whereas under the 1939 Code there could be no tax-free transfer except in a "reorganization," which required that the controlled corporation be created as part of the plan. The requirements of §355 that are of particular interest are §355(a)(1)(B) and §355(b). What types of transactions are they intended to forestall, and why? Note that these requirements are not explicitly imposed upon other types of reorganizations by §354. Section 354(b) is intended to prevent divisive reorganizations from taking place under §354 to avoid the more restrictive provisions of §355.

Note also that §355(a)(2) explicitly permits non-pro-rata distributions. This is important because the split-off and split-up can be used as a method of settling shareholder disputes by giving one group of assets to some of the shareholders and the rest to the others. For the pre-1954 difficulties in this area, see Williamson v. Commissioner, 27 T.C. 647 (1957); Lyons, Realignment of Stockholders' Interests in Reorganizations Under Section 112(g)(1)(D), 9 Tax L. Rev. 237 (1954).

We have been concerned in the foregoing discussion with the question of what types of transactions come within the letter of the statute. But this is an area in which literal compliance with the law has been only the first step; and many transactions have failed of their purpose because they did not have the right spirit. The cases that follow should be read not as ancient history, but for the light they shed on the practical problems with which §355 is concerned and on the approach that the courts are likely to adopt in construing it. Does the statute now carry its own safeguards so that the courts will say that Congress could not have intended them to act as policemen any longer?

GREGORY v. HELVERING

293 U.S. 465 (1935)

MR. JUSTICE SUTHERLAND delivered the opinion of the Court.

Petitioner in 1928 was the owner of all the stock of United Mortgage Corporation. That corporation held among its assets 1,000 shares of the Monitor Securities Corporation. For the sole purpose of procuring a transfer of these shares to herself in order to sell them for her individual profit, and, at the same time, diminish the amount of income tax which would result from a direct transfer by way of dividend, she sought to bring about a "reorganization" under §112(g) of the Revenue Act of 1928, set forth later in this opinion. To that end, she caused the Averill Corporation to be organized under the laws of Delaware on September 18, 1928. Three days later, the United Mortgage Corporation transferred to the Averill Corporation the 1,000 shares of Monitor stock, for which all the shares of the Averill Corporation were issued to the petitioner. On September 24, the Averill Corporation was dissolved, and liquidated by distributing all its assets, namely, the Monitor shares, to the petitioner. No other business was ever transacted, or intended to be transacted, by that company. Petitioner immediately sold the Monitor shares for $133,333.33. She returned for taxation, as capital net gain, the sum of $76,007.88, based upon an apportioned cost of $57,325.45. Further details are unnecessary. It is not disputed that if the interposition of the so-called reorganization was ineffective, petitioner became liable for a much larger tax as a result of the transaction.

The Commissioner of Internal Revenue, being of opinion that the reorganization attempted was without substance and must be disregarded, held that petitioner was liable for a tax as though the United Corporation had paid her a dividend consisting of the amount realized from the sale of the Monitor shares. In a proceeding before the Board of Tax Appeals, that body rejected the commissioner's view and upheld that of petitioner. 27 B.T.A. 223. Upon a review of the later decision, the Circuit Court of Appeals sustained the commissioner and reversed the board, holding that there had been no "reorganization" within the meaning of the statute. 69 F.(2d) 809. Petitioner applied to this court for a writ of certiorari, which the government, considering the question one of importance, did not oppose. We granted the writ. 293 U.S. 538.

Section 112 of the Revenue Act of 1928 deals with the subject of gain or loss resulting from the sale or exchange of property. Such gain or loss is to be recognized in computing the tax, except as provided in that section. The provisions of the section, so far as they are pertinent to the question here presented, follow:

> Sec. 112. . . . (g) *Distribution of Stock in Reorganization.* If there is distributed, in pursuance of a plan of reorganization, to a shareholder in a corporation a party to the reorganization, stock or securities in such corporation or in another corporation a party to the reorganization, without the surrender by such shareholder of stock or securities in such a corporation, no gain to the distributee from the receipt of such stock or securities shall be recognized. . . .
>
> (i) *Definition of Reorganization.* As used in this section . . .
>
> (1) The term "reorganization" means . . . (B) a transfer by a corporation of all or a part of its assets to another corporation if immediately after the transfer the transferor or its stockholders or both are in control of the corporation to which the assets are transferred. . . .

It is earnestly contended on behalf of the taxpayer that since every element required by the foregoing subdivision (B) is to be found in what was done, a statutory reorganization was effected; and that the motive of the taxpayer thereby

to escape payment of a tax will not alter the result or make unlawful what the statute allows. It is quite true that if a reorganization in reality was effected within the meaning of subdivision (B), the ulterior purpose mentioned will be disregarded. The legal right of a taxpayer to decrease the amount of what otherwise would be his taxes, or altogether avoid them, by means which the law permits, cannot be doubted. United States v. Isham, 17 Wall. 496, 506; Superior Oil Co. v. Mississippi, 280 U.S. 390, 395, 396; Jones v. Helvering, 71 F.(2d) 214, 217. But the question for determination is whether what was done, apart from the tax motive, was the thing which the statute intended. The reasoning of the court below in justification of a negative answer leaves little to be said.

When subdivision (B) speaks of a transfer of assets by one corporation to another, it means a transfer made "in pursuance of a plan of reorganization" (section 112(g)) of corporate business; and not a transfer of assets by one corporation to another in pursuance of a plan having no relation to the business of either, as plainly is the case here. Putting aside, then, the question of motive in respect of taxation altogether, and fixing the character of the proceeding by what actually occurred, what do we find? Simply an operation having no business or corporate purpose — a mere device which put on the form of a corporate reorganization as a disguise for concealing its real character, and the sole object and accomplishment of which was the consummation of a preconceived plan, not to reorganize a business or any part of a business, but to transfer a parcel of corporate shares to the petitioner. No doubt, a new and valid corporation was created. But that corporation was nothing more than a contrivance to the end last described. It was brought into existence for no other purpose; it performed, as it was intended from the beginning it should perform, no other function. When that limited function had been exercised, it immediately was put to death.

In these circumstances, the facts speak for themselves and are susceptible of but one interpretation. The whole undertaking, though conducted according to the terms of subdivision (B), was in fact an elaborate and devious form of conveyance masquerading as a corporate reorganization, and nothing else. The rule which excludes from consideration the motive of tax avoidance is not pertinent to the situation, because the transaction upon its face lies outside the plain intent of the statute. To hold otherwise would be to exalt artifice above reality and to deprive the statutory provision in question of all serious purpose.

Judgment affirmed.

NOTE

1. *The scope of Gregory.* This is one of the most famous cases in our field, and it has been almost all things to all men. Judge L. Hand, who had decided the case in the Court of Appeals, once wrote of the case:

> In Gregory v. Helvering . . . , the incorporators adopted the usual form for creating business corporations; but their intent, or purpose, was merely to draught the papers, in fact not to create corporations as the court understood that word. That was the purpose which defeated their exemption, not the accompanying purpose to escape taxation; that purpose was legally neutral. Had they really meant to conduct a business by means of the two reorganized companies, they would have escaped whatever other aim they might have had, whether to avoid taxes, or to regenerate the world. [Chisolm v. Commissioner, 79 F.2d 14, 15 (2d Cir. 1935).]

Is this explanation consistent with the following later comment by Judge Hand?

> The doctrine of Gregory v. Helvering . . . means that in construing words of a tax statute which describes commercial or industrial transactions we are to understand them to refer to transactions entered upon for commercial or industrial purposes and

not to include transactions entered upon for no other motive but to escape taxation. [Commissioner v. Transport Trading & Terminal Corp., 176 F.2d 570, 572 (2d Cir. 1949).]

2. *The statutory changes of 1934, 1951, and 1954.* The statutory provision making a spin-off tax-free was repealed by the Revenue Act of 1934, before the *Gregory* case was decided by the Supreme Court. This action by Congress was partly the result of the fact that the Board of Tax Appeals in 1932 had decided the *Gregory* case in the taxpayer's favor, saying: "A statute so meticulously drafted must be interpreted as a literal expression of the taxing policy, and leaves only the small interstices for judicial consideration." 27 B.T.A. 223, 225. Thereafter, until §112(b)(11) of the 1939 Code was enacted by the Revenue Act of 1951, a spin-off was a taxable distribution. In 1954, §355 was enacted to put all divisive reorganizations on a par, regardless of the form used.

BONSALL v. COMMISSIONER
317 F.2d 234 (2d Cir. 1963)

Before SMITH, KAUFMAN and MARSHALL, Circuit Judges.

J. JOSEPH SMITH, Circuit Judge.

Albany Linoleum & Carpet Company was organized in 1924 and since that time has engaged in the wholesale distribution of various floor covering materials. Its largest supplier has been Armstrong Cork Company. Henry and Martha Bonsall, husband and wife, have at all pertinent dates been the controlling shareholders and principal officers of Albany Linoleum. C. Jordan Vail and his wife Nancy were minority shareholders, and he was an employee of the company. Albany Linoleum acquired its principal place of business at 64 Northern Boulevard in Albany, New York, in 1945, at a cost of roughly $75,000. The gross usable floor area of this building was 40,200 square feet. At the same time, it acquired a small adjoining building located at 231 Elk Street. The gross usable floor area of these premises was 3,312 square feet. From 1946 to 1956 Albany Linoleum leased 2,770 square feet of its Northern Boulevard building to Armstrong Cork Company. From 1949 to 1954 the Elk Street building was leased to Albany Poultry Company. Rental income in comparison to corporate income as a whole can be summarized as follows:

Year	Gross profit from sales	Gross rental income	Net income
1952	$318,650.55	$1,710.00	$40,955.17
1953	333,118.52	1,350.00	43,309.75
1954	322,412.45	1,158.00	32,865.77
1955	351,479.74	1,054.00	36,853.84
1956	388,890.81	628.00	38,951.81

In 1956 it was decided to tear down the Elk Street building and put up an addition to the Northern Boulevard property. To raise construction funds and pay off the current mortgage, a new mortgage was financed through the Albany Savings Bank for $90,000. The bank required that a new corporation be formed to take title to the property with Albany Linoleum as tenant, as a condition to making the loan, and that the lease rentals be assigned by that new corporation to the bank as collateral for the loan. In compliance with this requirement, the shareholders of Albany Linoleum voted to form Abon, Inc. to acquire its buildings on Northern Boulevard and Elk Street. The certificate of incorporation was filed with the Secretary of State of New York on July 27, 1956, providing for 1,500 shares of stock at $100 par value.* On August 2, 1956 a meeting was held at

* By subsequent amendment, the authorized shares were increased to 150,000, with a par value of $1.00 each — ED.

which Bonsall and his wife and three others were elected directors, and Vail, Bonsall's son, and one Jones were elected as officers. It was then resolved to accept an offer from Albany Linoleum to convey the properties to Abon in return for assumption of an existing mortgage of $54,000, obligations pursuant to the building of the addition, and issuance of its stock to the Albany Linoleum shareholders, one share for every twenty shares of Albany Linoleum stock owned. Bonsall and his wife each owned 9,300 shares of Albany Linoleum stock, entitling them to 466 shares each of Abon stock; Vail and his wife owned a total of 700 shares of Albany Linoleum stock, entitling them to 35 shares of Abon stock.

A meeting of Abon stockholders was held on September 12, 1956 at which the prior acts of the incorporators and directors were ratified. Vail, Bonsall, and Bonsall's wife signed the minute book of this meeting. Mr. and Mrs. Bonsall also executed a written waiver of notice. The next day, title to the properties at 64 Northern Boulevard and 231 Elk Street was conveyed to Abon and accepted by its directors, and a lease of the premises was executed between Abon and Albany Linoleum. Abon then drew a mortgage loan of $90,000 from Albany Savings Bank, and assigned its future rentals due as collateral, pursuant to the prior agreement. The fair market value of net assets transferred to Abon was $9,707.87 or $7.96 per share, computed on the basis of 1219 shares required to be issued under the agreement with Albany Linoleum. . . .

Abon filed a corporate income tax return for 1956 reporting an entry for common stock of $1,219 on March 15, 1957. Albany Linoleum's balance sheet as of December 31, 1956 showed no stock or other ownership in Abon but did reflect decreases in land and buildings and other fixed depreciable assets. Bonsall and his wife and Vail and his wife did not report any Abon stock received from Albany Linoleum as a dividend for 1956 on their returns for that year. The Commissioner of Internal Revenue asserted that Bonsall and his wife received an added $7,418.72 in dividend income — the value of the Abon stock — and determined an income tax deficiency of $4,027.91. Vail and his wife were likewise found to have failed to report $278.60 in dividend income with a resulting deficiency of $50.25. Petitioners argued in the Tax Court that no distribution of Abon stock was made to them until 1957, and even if made in 1956, that it was tax-free within the Internal Revenue Code of 1954, §355. The Tax Court rejected these contentions and sustained the deficiencies. Taxpayers petition to review that decision. We affirm.

[The court affirmed the decision below that the distribution was made in 1956 rather than in 1957.]

The petitioners assert that even if the stock was transferred to them in 1956 it is not taxable as a dividend because of the effect of Internal Revenue Code of 1954, §355. (It should be noted that they concede that the distribution was made to them by Albany Linoleum even though it never actually owned the stock.) That section provides, as relevant here, that if a corporation distributes to a shareholder with respect to his stock, stock of a corporation which it controls immediately prior to the distribution and (1) the transaction was not used primarily as a device for distributing the earnings and profits of either corporation, (2) the requirements of [§355(b)] relating to the active conduct of businesses are satisfied, and (3) at least a controlling percentage (as defined) of the stock of the subsidiary is distributed, then no gain or loss shall be recognized to the shareholder on receipt of the stock. The requirements of [§355(b)] are, in part, that the distributing corporation and the subsidiary corporation both be engaged in the "active conduct of a trade or business" immediately after the distribution. A corporation can be so regarded only if "such trade or business has been actively conducted throughout the 5-year period ending on the date of the distribution."

Other limitations are set down that are not applicable here. The Tax Court found that Albany Linoleum had not been engaged in the active conduct of a real-estate rental business for five years prior to the distribution and therefore that Abon was not engaged in the active conduct of a trade or business within the meaning of the statute.

There is ample support for the factual determination that Albany Linoleum was not actively conducting a real-estate rental business. As the table above indicates, the portion of its income realized from real estate rentals was minute. There was testimony by Bonsall himself tending to negate active efforts at promoting rentals: the buildings had never been listed with an agent, nor were there even signs on them indicating that space was available. No activity appeared beyond a few casual conversations with prospective tenants. Moreover, most of the floor-space of the two buildings combined was occupied by the floor-covering business. Only a very small part was available for rental, and an even smaller part actually leased. The continuing rental to Armstrong Cork Co. which provided most of the rental income appeared to be an accommodation to a large supplier of the floor-covering business and thus an adjunct to it, rather than indicative of an independent business, for the Tax Court found that the premises were let at less than fair rental value over the five-year period. Finally, no separate records of rental income and expenses were kept. Absence of such records is at least probative of the fact that the managers of Albany Linoleum did not regard it as engaged in an independent rental business. The Tax Court was plainly justified in concluding that the small amount of rental activity was merely an incidental part of the sole business of the corporation — wholesale floor-coverings. See Theodore F. Appleby, 35 T.C. 755 (1961), aff'd per curiam, Appleby v. C.I.R., 296 F.2d 925 (3 Cir.), cert. denied, 370 U.S. 910; Isabel A. Elliott, 32 T.C. 283 (1959).

Petitioners argue in reply that even if Albany Linoleum is found to have been conducting but one business, the recent decision of the Tax Court in Edmund P. Coady, 33 T.C. 771 (1960), aff'd per curiam, C.I.R. v. Coady, 289 F.2d 490 (6 Cir., 1961), permits the tax-free division of that business as has been done in this case. This is to misconceive the scope of that decision. *Coady* only decided that the division of a single business into two operating halves, each continuing the previous activity (which had been carried on for more than five years) could fall within §355, invalidating the Regulation that stated that the section did not apply to division of a single business as unauthorized by the statute. See Regs. §1.355-1(a). Each corporation was engaged in the "active conduct of a trade or business" within the statute because it could be traced back through five years or more of the same activity, whether it was an old or new corporate entity. That is not true here. As the Tax Court properly found no prior real estate rental business, Abon must be taken to have embarked on a wholly new venture when it was formed. It is lacking the five-year history that the statute requires for "active conduct of a trade or business."

It is clear that careful scrutiny of purported "real-estate rental" businesses is necessary to prevent evasion of the purposes of the statute. The possibility of the shareholders abstracting accumulated earnings at capital gains rates is present whenever a corporation owns its own factory or office building. Under taxpayers' interpretation, all that need be done is to transfer the building to a new corporation and distribute the stock received in return. The shareholders would then be free to sell their stock and pay a capital gains rate on the proceeds while the corporation can rent or purchase another building and reduce its accumulated earnings. The present case is little more than that, and it is noteworthy that the two prior cases decided under this section other than *Coady,* Theodore F. Ap-

pleby, supra, and Isabel A. Elliott, supra, were likewise factually similar. Only long application may completely clarify the difficult terminology of section 355. But obvious cases such as presented here plainly must be excluded from tax-free treatment.

The Commissioner also urged before the Tax Court that the transaction was disqualified from tax-free treatment by the express provision of section 355(a)(1)(B) as it was "used principally as a device for the distribution of the earnings and profits of the distributing corporation." As the Tax Court found it unnecessary to pass on this point, the Commissioner argued in this Court that a remand for further findings should be made if his contention that there was no active rental business were not sustained. In view of our disposition of the case, we need not pass on this question. It should be noted, however, that there was no valid shareholder business purpose for the distribution of the Abon shares. The reasons for the creation of Abon were adequate, but no necessity for the distribution of its stock was shown. See Parshelsky's Estate v. Commissioner, 303 F.2d 14 (2 Cir., 1962).

The distribution of Abon stock to Albany Linoleum shareholders was taxable as a dividend in 1956. It being undisputed that Albany Linoleum had earnings and profits on December 31, 1956 far in excess of the fair market value of the stock, the dividend is properly taxable at ordinary income rates. See Internal Revenue Code of 1954, §§301, 316.

The decision of the Tax Court is affirmed.

REV. RUL. 59-400

1959-2 C.B. 114

Advice has been requested whether a distribution of stock by a corporation engaged in the hotel and real estate business qualifies under the nontaxable provisions of section 355 of the Internal Revenue Code of 1954.

M corporation was engaged in two businesses, operating a hotel and renting improved real estate (both commercial and residential). The hotel business was started upon organization in 1920 and has been actively conducted up to the present time. In 1934, *M* corporation also entered into the rental real estate business when it purchased property, constructed a garage and automobile agency facilities thereon and rented it to a dealer. In the intervening years, it acquired other rental properties which it has continued to operate. In 1954, the hotel had a fair market value of 550*x* dollars and a net book value of 350*x* dollars. The rental properties had a fair market value of 305*x* dollars and a net book value of 167*x* dollars.

During the five-year period commencing with 1954, the operation of the hotel business resulted in earnings, after taxes, of 240*x* dollars, and the operation of the real estate business resulted in earnings of approximately 75*x* dollars. In 1958, a new rental office building was built for 400*x* dollars, some 175*x* dollars thereof being provided by loans from banks. At the beginning of 1959, the hotel business was placed in a new corporation *N*, and the stock thereof distributed to the shareholders of *M* on a pro rata basis. *N* corporation received the hotel, plus certain receivables and other hotel business assets. *M* corporation retained the real estate liabilities and assets, which at that time had a net book value of 372*x* dollars and a fair market value of 705*x* dollars.

Section 355 of the Code states, in part, that in order for a distribution of stock to qualify under the nontaxable provisions of such section, each of the corporations involved must be engaged in a trade or business which has been actively conducted throughout the five-year period ending on the date of distribution,

and that the transaction must not be used principally as a device to distribute the earnings and profits of either corporation.

The purpose behind the five-year limitation of section 355 is to prevent the corporate earnings of one business from being drawn off for such a period and put into a new business and thereby, through the creation of a marketable enterprise, convert what would normally have been dividends into capital assets that are readily saleable by the shareholders.

It is the position of the Internal Revenue Service that where a corporation which is devoted to one type of business also engages in the rental business, and substantial acquisitions of new rental property are made within the five-year period preceding the separation of these businesses, a "spin-off" transaction will not qualify under section 355 unless it can be shown that the property acquisitions were substantially financed out of the earnings of the rental business and not out of the earnings of the other business.

From the facts presented herein, it is readily apparent that there has been a very substantial increase in the rental properties subsequent to 1954, primarily as a result of the addition of the large office building in 1958. Further, it is also apparent that, viewing the transaction most favorably to the taxpayer, earnings properly attributable to the hotel business, in the amount of approximately 150*x* dollars, have been employed in increasing the real estate business. In view of this substantial financing out of the earnings of the hotel business, it is held that the distribution of the stock of *N* corporation to the shareholders of *M* corporation will not qualify as a nontaxable distribution under section 355 of the Code.

NOTE

1. *Requirement of "active conduct of a trade or business."* When the tax-free spin-off was reinstated in 1951 by §112(b)(11) of the 1939 Code, its advantages were denied if "it appears that . . . any corporation which is a party to such reorganization was not intended to continue the active conduct of a trade or business after such reorganization." This provision, which presumably stemmed from a fear of Gregory-type spin-offs, would have permitted a single business to be split into two businesses by the spin-off itself, so long as both were to be actively conducted thereafter. Did §355(b) intend to call a halt to this possibility of dividing an existing business into two separate enterprises? If so, why? Note how the Treasury interpreted the requirement of §355(b)(1)(A) in Examples (2), (5), (11), (12), and (16) of Regs. §1.355-1(d). Do these transactions resemble dividends?

In the *Coady* case, cited by the court in *Bonsall*, a corporation engaged in the heavy construction business, for the purpose of settling a dispute between its two shareholders, transferred a contract for the construction of a sewage disposal plant at Columbus, Ohio, part of its equipment and cash, and some other items to a newly created corporation, and distributed all of the new corporation's stock in exchange for all of its own stock owned by one of the shareholders. The distributing corporation, which thus became wholly owned by the other shareholder, was left with a contract for the construction of another sewage plant in Charleston, West Virginia, and the balance of the equipment and cash. Relying on the fact that before the split-off there was only a single business, rather than two five-year old businesses, the Internal Revenue Service held that the transaction did not satisfy the requirements of §355(b). The Tax Court (affirmed per curiam by the Court of Appeals for the Sixth Circuit) rejected the government's contention and held that the two-business requirement of Regs. §1.355-1(a) was invalid:

> Respondent [Commissioner] maintains that a reading of §355(b)(2)(B) in conjunction with the requirement of §355(b)(1) that both "the distributing corporation, *and* the controlled corporation . . . , [be] engaged immediately after the distribution in the active conduct of a trade or business" (emphasis supplied) indicates Congress intended the provisions of the statute to apply only where, immediately after the

distribution, there exist two separate and distinct businesses, one operated by the distributing corporation and one operated by the controlled corporation, both of which were actively conducted for the 5-year period immediately preceding the distribution. In our judgment the statute does not support this construction.

As noted, the only reference to plurality appears in section 355(b)(1), and deals with corporate entities, not businesses. Recognizing the divisive nature of the transaction, subsection (b)(1) contemplates that where there was only one corporate entity prior to the various transfers, immediately subsequent thereto, there will be two or more *corporations*. In order to insure that a tax-free separation will involve the separation only of those assets attributable to the carrying on of an active trade or business, and further to prevent the tax-free division of an active corporation into active and inactive entities, (b)(1) further provides that each of the surviving corporations must be engaged in the active conduct of *a* trade or business.

A careful reading of the definition of the active conduct of a trade or business contained in subsection (b)(2) indicates that its function is also to prevent the tax-free separation of *active* and *inactive* assets into *active* and *inactive* corporate entities. This is apparent from the use of the adjective "such," meaning before-mentioned, to modify "trade or business" in subsection (b)(2)(B), thus providing that the trade or business, required by (b)(2)(B) to have had a 5-year active history prior to the distribution, is the same trade or business which (b)(2)(A) requires to be actively conducted immediately after the distribution. Nowhere in (b)(2) do we find, as respondent suggests we should, language denying the benefits of section 355 to the division of a single trade or business.

Nor can respondent derive support for his position by reading subsections (b)(1) and (b)(2) together, inasmuch as the plurality resulting therefrom is occasioned, not by any requirement that there be a multiplicity of businesses, but rather by the divisive nature of the transaction itself: i.e., one corporation becoming two or more corporations. Moreover, from the fact that the statute requires, immediately after the distribution, that the surviving corporations each be engaged in the conduct of a trade or business with an active 5-year history, we do not think it inevitably follows that each such trade or business necessarily must have been conducted on an individual basis throughout that 5-year period. As long as the trade or business which has been divided has been actively conducted for 5 years preceding the distribution, and the resulting businesses (each of which in this case, happens to be half of the original whole) are actively conducted after the division, we are of the opinion that the active business requirements of the statute have been complied with. [33 T.C. 771, 777, 778 (1960).]

Six judges of the Tax Court dissented, one without opinion and five on the ground that the statute was susceptible to different interpretations and that the Treasury Regulations were not unreasonable or inconsistent with its purpose.

The Tax Court's decision in *Coady* was affirmed, 289 F.2d 490 (6th Cir. 1961), and the Court of Appeals for the Fifth Circuit came to the same conclusion in United States v. Marett, 325 F.2d 28 (5th Cir. 1963). Thereafter, the Internal Revenue Service announced that it would follow these decisions, and that modifications of the regulations and of Rev. Rul. 61-198, 1961-2 C.B. 61 (non-acquiescence in *Coady*) were under consideration. TIR-564 (April 3, 1964).

Note that §346(b) requires that the corporation, at the time of a partial liquidation, be engaged in the conduct of two businesses; see S. Rept. on 1954 Code, p. 262: "the distributing corporation must be engaged in the active conduct of at least 2 businesses which must have been actively conducted (whether or not by it) for the 5-year period." Does this interpretation of §346(b) shed any light on the problem before the court in the *Coady* case?

If the real estate in the *Bonsall* case had been put into a subsidiary corporation and rented to the parent corporation for five years, would the subsidiary be actively engaged in a five-year-old business so that a distribution of its stock would meet the requirements of §355? Recall that rental real estate is ordinarily "used in the trade or business" for purposes of §1221(2) and §1231, supra page 549; does this mean that the owner of such

property is "engaged in the active conduct of a trade or business" within the meaning of §355(b)?

2. *A "device" for the distribution of earnings and profits?* The "device" language of §355(a)(1)(B) comes from §112(b)(11) of the 1939 Code. Why is a pre-arranged sale of the stock of either the distributing or the controlled corporation viewed with such suspicion by §355(a)(1)(B) and Regs. §1.355-2(b)? See also Rev. Rul. 55-103, 1955-1 C.B. 31.

In *Parshelsky's Estate* (cited in *Bonsall* in connection with the "device" provision of §355) the court said of the "device" language of §112(b)(11) of the 1939 Code:

> Normally when a corporation distributes assets to its shareholders or sells the assets and distributes their proceeds, a dividend results and the shareholders pay ordinary income tax. However, if the corporation is permitted to transfer the assets to a new corporation and distribute the new corporation's stock to its shareholders in a tax-free spin-off, the shareholders could completely liquidate the new corporation or sell its stock, thus realizing capital gain rather than ordinary income. Because of these tax-avoidance possibilities, Congress intended to limit tax exemption to those spin-offs where the taxpayer had corporate or shareholder purposes such as would motivate a reasonable businessman to effect a spin-off. Therefore, the court must first ascertain the taxpayer's corporate and shareholder purposes and then evaluate their validity on such an objective basis.
>
> Parshelsky's executors argue that one reason for the spin-off was to remove the valuable real estate from the hazards of the declining wholesale business. However, after the reorganization Parshelsky Brothers retained in excess of $750,000 in Treasury notes and cash, and the corporation's current liabilities had declined to approximately $16,000. In short, these facts lend little support to this argument of the executors. Moreover, the real estate could have been safguarded from the creditors of the wholesale business merely by having Parshelsky Brothers transfer the wholesale business to a subsidiary corporation and retain the real estate. In light of the tax-avoidance possibilities which a spin-off often provides, there must be non-tax reasons not only for the separation of the two businesses but also for direct ownership of both by the shareholders. The fact that creation of a subsidiary corporation would necessarily bring with it either the intercorporate dividend tax or the additional tax on corporations filing a consolidated return is not by itself sufficient to justify split ownership at the shareholder level. [303 F.2d 14, 20 (2d Cir. 1962).]

The court in *Parshelsky's Estate* also held that the business purpose for "split ownership at the shareholder level" could be a "shareholder," instead of a "corporate," business purpose (other than tax-avoidance):

> We find, therefore, that the Tax Court erred in this case when it examined only those reasons for the reorganization "relating to the business being carried on by the corporation, or relating otherwise to the corporation's organization or functioning" and refused to examine those "arising from and serving only the personal or noncorporate-business interests of the shareholders." [303 F.2d at p. 19.]

In harmony with this conclusion, the court held that the consummation of a plan under which the two corporations were to be transferred by will to different legatees was a business purpose for the spin-off, and this was evidently regarded as rebutting — or at least helping to rebut — the government's charge that the transaction was a "device" to distribute earnings and profits.

The Regulations state that a transaction does not qualify under §355 if "carried out for purposes not germane to the business of the corporation." Regs. §1.355-2(c). Does this mean that §355 is more restrictive than §122(b)(11) of the 1939 Code, as construed by *Parshelsky's Estate?*

3. *Distributions of securities or preferred stock.* Under §112(b)(11) of the 1939 Code, only common stock could be spun-off. This restriction was intended to prevent a tax-free spin-off of preferred stock as the first step in a bail-out of earnings and profits. Section 355 of the 1954 Code imposes no restriction on the type of stock or securities to be distributed in a divisive reorganization. If securities are distributed, however, they will

constitute "boot" under §356(d) to the extent that their principal amount exceeds the principal amount of any securities that are surrendered; and if preferred stock is distributed, it may be "tainted" by virtue of §306(c)(1)(B).

4. *Distribution of all, or substantially all, of controlled corporation's stock and securities.* By virtue of §355(a)(1)(D), the distributing corporation must either distribute all of the stock and securities which it holds in the controlled corporation or distribute an amount of stock constituting "control" (as defined by §368(c)) and satisfy the Treasury that the retention of stock in the controlled corporation was not in pursuance of a tax avoidance plan. For a somewhat similar provision, see Regs. 118, §39.112(b)(11)-2(c), issued under §112(b)(11) of the 1939 Code. Why this emphasis on a complete, or virtually complete, separation of the two corporations?

5. *Criss-cross transactions.* If A owns 50 per cent of the stock of X Corporation and of Y Corporation and B owns the other 50 per cent of X and Y, can they employ §355 to effect a division of their investments so that A will become the sole owner of X and B the sole owner of Y? What might be the mechanics of such a division? Compare Badanes v. Commissioner, 39 T.C. 38 (1962), with Regs. §1.355-3(a) (last sentence). Does the *Badanes* case sanction the use of §355 to accomplish an exchange under which A, owning all of the stock of X Corporation and B, owning all of the stock of Y Corporation, each succeed in becoming the sole owner of the other man's corporation?

6. *Non-qualifying transactions.* The transactions in *Bonsall* and in Rev. Rul. 59-400 were spin-offs. If a spin-off does not qualify under §355, the distribution falls under §301 and will be taxed as a dividend to the extent of the distributing corporation's earnings and profits. If the transactions had been split-offs, in which the shareholders had surrendered an appropriate portion of the old corporation's stock in exchange for the stock of the controlled corporation, what would be the effect of failing to qualify under §355? Could the transaction be taxed as a sale of the old stock? Would §302 or §346 be applicable? Or would the transaction be a dividend distribution?

7. *Jury trials under §355.* Occasionally a case involving an issue like the validity of a spin-off is submitted to a jury in a District Court refund case. A recent example is Rinkel v. Knox, reported at 7 A.F.T.R.2d 943 (1961), where the judge's charge to a jury included the following:

> Members of the jury, I suppose when you reported for work this morning you didn't expect to get such a concentrated course in economics, but you have paid very good attention to a subject matter that is strange to most of us. Really, it's a relatively easy question that's going to be submitted to you, although it's not easy to explain what that question is.
>
> Most of these income tax cases are tried to the Court without a jury so we don't normally have the problem of trying to explain complicated problems of income taxation to jurors. . . .
>
> Well, this business about corporate reorganization is kind of a technical field in itself. I think that Congress appreciated the fact that many times businesses must readjust their method of operation by having different corporations in different states and some for international operations and so forth, and the Congress, in essence, has said that when there is a reorganization of a corporation for a legitimate purpose and after the reorganization things are about the same insofar as ownership and interest is concerned as they were before, well, there isn't going to be any kind of a tax from that kind of shifting around. So in essence they said if there is a legitimate reorganization of a corporation you don't have to pay any income tax on it; but if there is any shenanigans, so to speak, then the Government is going to look into it and you are going to have to pay an income tax on it. Now, that's not technically the way to say this but that's a layman's explanation of the situation. . . .
>
> So as I view the evidence, you should answer that question [whether the spin-off was a device for the distribution of earnings and profits] no, but, of course, I am not the jury and any thinking that I have about it or my observations or judgment are not in any way binding upon you at all. If you are convinced by the arguments of the able Government counsel and feel as he has urged you to feel, then have no hesi-

> tation in subscribing to his arguments and to the conclusion which he recommends for you. . . .
>
> Members of the jury, I see it's 20 minutes to 5:00. I suggest you go to your jury room and if you reach a verdict by 5:00 o'clock, fill in your form and the marshal will bring you back here. If you don't reach a verdict by 5:00 o'clock I suggest you deliberate until about 6:00 and then go to your homes and come back tomorrow at about 10:00 o'clock in the morning and continue your deliberations. If you reach a verdict, say tonight between 5:00 o'clock and 6:00 o'clock, fill in the form of verdict and give it to your foreman and let him put it in an envelope and put it in his pocket and then he and all of you should return to this court room at 2:00 o'clock tomorrow afternoon. . . .

The jury returned a pro-taxpayer verdict at 5:00 P.M. The court subsequently granted judgement to the government notwithstanding the verdict, 196 F. Supp 21 (D. Minn. 1961), but without re-examining the jury's determination on the issue submitted to it.

8. *Distributions of divested stock under antitrust decree.* In United States v. E. I. du Pont de Nemours & Co., 366 U.S. 316 (1961), the Court referred to the "harsh tax consequences" of a divestiture by du Pont of its General Motors stock under an antitrust decree, and a tax ruling on this subject is summarized by Mr. Justice Frankfurter in his dissenting opinion. There is a more complete discussion of this question in the District Court opinion. 177 F. Supp. 1, 17 et seq. (N.D. Ill. 1959). Why would §355 not apply to du Pont's distribution of its G.M. stock?

Section 1111, though it does not say so explicitly, was enacted to accommodate the du Pont divestiture. For §1111's legislative history, see 1962-1 C.B. 375-392.

SECTION K. REINCORPORATIONS

REV. RUL. 61-156
1961-2 C.B. 62

Advice has been requested whether the transaction described below should be treated, for Federal income tax purposes, as a sale of corporate assets to a newly organized corporation followed by the liquidation of the "selling" corporation under sections 337 and 331 of the Internal Revenue Code of 1954, or whether the transaction should be treated as a reorganization within the meaning of section 368 of the Code.

Within a 12-month period following the adoption of a plan of complete liquidation, a corporation sold substantially all of its assets to a new corporation formed by the management of the selling corporation. The "purchasing" corporation paid 18,000*x* dollars for the assets as follows:

(a) 2,025*x* dollars in shares of its stock equal to 45 percent of all the shares to be issued,

(b) 4,975*x* dollars in long-term notes, and

(c) 11,000*x* dollars in cash obtained through a first mortgage borrowing on the assets acquired.

Immediately thereafter, the new corporation sold shares of its stock, equal to 55 percent of all the shares to be issued, to the public through underwriters.

The "selling" corporation was then completely liquidated, paying off its funded and unfunded liabilities and distributing the balance of its assets, in-

cluding the 45 percent stock interest in the purchasing corporation, the long-term notes, and cash to its shareholders. As a result of the transaction, the business enterprise continued without interruption in the corporate form with a subtantial continuing stock interest on the part of those persons who were shareholders in the selling corporation.

Section 1.331-1(c) of the Income Tax Regulations provides as follows:

> A liquidation which is followed by a transfer to another corporation of all or part of the assets of the liquidating corporation or which is preceded by such a transfer may, however, have the effect of the distribution of a dividend or of a transaction in which no loss is recognized and gain is recognized only to the extent of "other property." See sections 301 and 356.

In this case, if the issuance of stock to the new investors is disregarded, there is clearly a mere recapitalization and reincorporation coupled with a withdrawal of funds. The withdrawal would be treated either under section 356(a) of the Code as "money or other property" received in connection with a reorganization exchange of stock for stock, or under section 301 of the Code as an unrelated distribution to the shareholders.

The issuance of stock to new investors can be disregarded as being a separate transaction, since even without it the dominant purpose — to withdraw corporate earnings while continuing the equity interest in substantial part in a business enterprise conducted in corporate form — was fully achieved. The issuance of stock to new investors was not needed to implement the dominant purpose and, therefore, the rest of the transaction was not fruitless without it and so dependent on it.

The transaction was shaped so as to make it essentially "a device whereby it has been attempted to withdraw corporate earnings at capital gains rates by distributing all the assets of a corporation in complete liquidation and promptly reincorporating" them. See Conference Report No. 2543, 83d Cong., to accompany H.R. 8300 (Internal Revenue Code of 1954), page 41.

It was not intended by Congress that such a device should obtain the benefits of section 337 and avoid dividend taxation. In substance there was no reality to the "sale" of corporate assets or to the "liquidation" of the selling corporation, since each was only a formal step in a reorganization of the existing corporation. The entire transaction was consummated pursuant to a plan of reorganization which readjusted interests in property continuing in a modified corporate form. Sections 1.368-1(b) and 1.368-2(g) of the regulations.

The newly formed "purchasing" corporation was utilized to effect, in substance, a recapitalization and a change in identity, form, or place of organization of the "selling" corporation and, at the same time, to withdraw accumulated earnings from the corporate enterprise for the benefit of the shareholders, while they nevertheless continued a substantial equity interest in the enterprise.

The fact that the shareholders of the "selling" corporation own only 45 percent of the stock of the "purchasing" corporation because of the public stock offering does not dispose of the reorganization question. A surrender of voting control, or ownership of less than 50 percent of the stock of a newly-formed corporation, does not in itself mark a discontinuity of interest. In John A. Nelson Co. v. Helvering, 296 U.S. 374 (1936), the Supreme Court of the United States held that there was a "reorganization" even though the shareholders of the acquired corporation received less than half of the stock of the acquiring corporation and received only nonvoting preferred stock therein. It is necessary only that the shareholders continue to have a definite and substantial equity interest in the assets of the acquiring corporation.

In view of the foregoing, it is held that the transaction here described constitutes a reorganization within the meaning of sections 368(a)(1)(E) and (F) of the Code. No gain or loss is recognized to the "selling" corporation on the exchange of property, as provided by section 361 of the Code. The basis of the assets in the hands of the "purchasing" corporation will be the same as in the hands of the "selling" corporation, as provided in section 362(b) of the Code. No gain or loss is recognized under section 354 of the Code on the exchange of the stock of the "selling" corporation for stock of the "purchasing" corporation pursuant to the plan of reorganization.

With regard to the stockholders' withdrawal of money and other property from the corporate solution, it is necessary to determine whether such withdrawal is to be treated as "boot" received as part of the consideration for their stock in the "selling" corporation in accordance with section 356(a) of the Code or as a separate dividend distribution taxable in accordance with the provisions of section 301 of the Code. See sections 1.301-1(l) and 1.331-1(c) of the regulations and Bazley v. Commissioner, 331 U.S. 737, rehearing denied and amended, 332 U.S. 752 (1947).

Under section 356(a)(1) of the Code, gain would be recognized to the shareholders of the "selling" corporation upon the surrender of their shares of stock in exchange for stock of the "purchasing" corporation, its long-term notes, cash, and other assets, but in an amount not in excess of the sum of cash and the fair market value of the long-term notes and other assets received. Under section 356(a)(2) of the Code, such gain would be taxable as a dividend to each shareholder to the extent of his ratable share of the undistributed earnings and profits of the corporation accumulated after February 28, 1913; the remainder, if any, would be treated as gain from the exchange of property. Under section 301 the distribution would be taxable as a dividend to the same extent as a dividend formally declared in the same amount.

In this case, viewing the issuance of stock of the "purchasing" corporation to new investors as a transaction separate from the reorganization, it is concluded that the distribution to stockholders of the "selling" corporation of the cash, long-term notes, and other assets should be treated as a distribution under section 301 of the Code.

In view of the conclusions reached herein, reconsideration has been given to Revenue Ruling 56-541, C.B. 1956-2, 189, which holds under similar circumstances that a nontaxable corporate sale of assets was effected under section 337 of the Code and that distributions to the shareholders were to be treated as in full payment in exchange for their stock under a plan of complete liquidation of the old corporation. The conclusions reached in the instant case are equally applicable to the question involved in Revenue Ruling 56-541. Accordingly, Revenue Ruling 56-541 is revoked.

Under authority of section 7805(b) of the Code, this Revenue Ruling will not be applied retroactively in any case in which transactions were consummated prior to August 21, 1961, in reliance on the Service's position as published in Revenue Ruling 56-541 and a retroactive application would be to the taxpayer's detriment.

NOTE

1. *Reincorporations.* In approaching Rev. Rul. 61-156, the student might consider the tax consequences of following naked reincorporation plan: the stock of XYZ, Inc., a successful corporation with a large earnings and profits account and highly appreciated assets, is inherited by A, Jr., on the death of his father. The date-of-death value

of the stock, and consequently its basis to A, Jr., is $2 million — the fair market value of the corporate assets. A, Jr., liquidates the corporation and, in accordance with a prearranged plan, transfers the assets to a newly organized corportion, taking in return all of its stock. If this transaction is respected as a liquidation under §331(a)(1) (on which no gain or loss is recognized because the fair market value of the assets received by A, Jr., is equal to the basis of his stock), followed by a non-taxable incorporation under §351, note the following results:

(a) The assets will acquire a stepped-up basis in the hands of the new corporation, equal to their fair market value at the time of liquidation.

(b) The old corporation's earnings and profits account will be obliterated, so that distributions to A, Jr., will constitute returns of capital (until the corporation's operations produce new earnings and profits), and the new corporation will have a clean slate so far as §531 (unreasonable accumulations) is concerned.

(c) The new corporation will be entitled to make elections as to such matters as accounting methods, accounting periods, depreciation methods, etc., unencumbered by the old corporation's elections and tax history.

Variations on the above plan could include the issuance to A, Jr., of debt as well as stock by the new corporation, thus laying a foundation for tax-free retirement of the debt from future earnings; or the issuance of preferred stock which would not constitute §306 stock because of the absence of earnings and profits. Another variation would be a transfer by a corporation of its operating assets to a newly organized subsidiary, followed by a complete liquidation of the old corporation. The shareholders would thus receive stock of the new operating corporation, plus the liquid or investment assets. (Section 355 would not have been open to the old corporation, assuming the existence of only one active business.)

If the plan were as bald as just described, it would no doubt be disregarded as a sham, or treated as a Type E or F reorganization, as Rev. Rul. 61-156 suggests. See Heller v. Commissioner, 2 T.C. 371 (1943). The proper treatment is not so obvious, however, if we assume a business purpose for the transaction, coupled with a change in ownership, or if the liquidation and reincorporation were separated by time and not prearranged (e.g., if the old corporation was liquidated because a proprietorship or partnership seemed a preferable business form, and reincorporation resulted from a genuine, unexpected change of plans).

2. *Implications of Rev. Rul. 61-156.* If the form of the transaction described in Rev. Rul. 61-156 had been respected, the shareholders of the old corporation would have recognized capital gain or loss, depending upon whether the value of the liquidating distribution exceeded or fell short of the basis of their shares. (Since this determination is made shareholder-by-shareholder, some might have incurred losses and others gains.) The "purchasing" corporation would have taken the assets at a basis equal to their "cost," and it would have commenced life with no earnings and profits. Is the Internal Revenue Service's view of the transaction *necessarily* disadvantageous to the shareholders and the new corporation? Could Rev. Rul. 61-156 aid the new corporation but be detrimental to some or all of the shareholders — or vice versa? If so, how is the last sentence of the ruling to be applied?

If the "reorganization" approach of the ruling is accepted, does it follow that the cash and notes received by the shareholders of the old corporation should be treated as a §301 distribution rather than as boot under §356? Note how the ruling's reliance on §301 escapes the "dividend-within-gain" limitation of §356(a)(2), under which boot constitutes a dividend only to the extent that the shareholder realizes a gain on the transaction (supra p. 702).

3. *Reincorporations before 1954 Code.* Before 1954, reincorporations were ordinarily attacked by the Internal Revenue Service as constituting Type D reorganizations (transfer by a corporation of all or part of its assets to a corporation controlled by transferor's shareholders). See Bard-Parker Co. v. Commissioner, 218 F.2d 52 (2d Cir. 1954) (two transfers were but procedural steps used to complete what, in substance, constituted a single transfer); Liddon v. Commissioner, 230 F.2d 231 (6th Cir. 1956) (accord); but see United States v. Arcade Co., 203 F.2d 230 (6th Cir. 1953) (separate steps honored). For unsuccessful attempts by taxpayers to avoid reorganization status under pre-1954 law

on the ground that the reincorporation-liquidation was not animated by a business purpose and hence did not meet the requirements of Regs. §1.368-2(g), see Survaunt v. Commissioner, 162 F.2d 753 (8th Cir. 1947); Lewis v. Commissioner, 176 F.2d 646 (1st Cir. 1949).

The "Type D" reorganization approach to reincorporation was made more complicated in 1954, with the addition to §368(a)(1)(D) of the second clause, under which a transaction qualifies as a Type D reorganization only if it is coupled with a distribution of the transferee corporation's stock or securities in a transaction qualifying under §354, §355, or §356. The liquidation-reincorporation device does not qualify under §355, because it does not operate to divide the assets of the old corporation, and there may be other barriers to its qualifying under §355 as well (e.g., the two trade or business requirement). Qualification by virtue of §354 is possible only if substantially all of the old corporation's assets are transferred — see §354(b)(1)(A) — and this requirement creates difficulties if the shareholders of the old corporation retain or receive a significant part of the assets, as they did in some of the cases decided under pre-1954 law. (In this connection, consider whether §368(a)(1)(D) could have been persuasively invoked by Rev. Rul. 61-156.)

Because the pre-1954 case law on reincorporations was thought to supply inadequate protection against the bail-out of corporate earnings at the capital gain rate, the House Ways and Means Committee's version of the 1954 Code included a provision under which assets retained by the shareholders on reincorporating would be taxed as a dividend. A reincorporation was subject to the provision if more than 50 per cent of the old corporation's assets were transferred to a controlled corporation within 5 years after a liquidation, but an exception was provided for transactions not having tax avoidance as a principal purpose.

The House proposal was eliminated in conference, the conferees stating:

> The House bill in section 357 contained a provision dealing with a device whereby it has been attempted to withdraw corporate earnings at capital gains rates by distributing all the assets of a corporation in complete liquidation and promptly reincorporating the business assets. This provision gave rise to certain technical problems and it has not been retained in the bill as recommended by the accompanying conference report. It is the belief of the managers on the part of the House that, at the present time, the possibility of tax avoidance in this area is not sufficiently serious to require a special statutory provision. It is believed that this possibility can appropriately be disposed of by judicial decision or by regulation within the framework of the other provisions of the bill.

This implied invitation to issue appropriate regulations was accepted by the Treasury Department. See Regs. §1.331-1(c) (quoted in Rev. Rul. 61-156); §1.301-1(l). For the judicial response to the conference committee's expression of confidence, see Grubbs v. Commissioner, 39 T.C. 42 (1962), and Gallagher v. Commissioner, 39 id. 144 (divided court, with extended discussion).

4. *Carryover of tax attributes in reorganizations under §381.* Revenue Ruling 61-156 invokes both §368(A)(1)(E) (recapitalization) and §368(A)(1)(F) (mere change in identity). Does it make a difference, so far as the transferee corporation's earnings and profits, accounting methods, basis, and other tax attributes are concerned, whether the transaction is viewed as a Type E reorganization, a Type F reorganization, or a sham? Section 381, enacted in 1954 to require the transferee corporation in most reorganizations to take over such tax attributes of the transferor corporation, does not embrace Type E reorganizations, presumably on the assumption that the recapitalized enterprise is the same corporation and that an explicit provision for a carryover of tax attributes is unnecessary.

ization Transfers and Survival of Tax Attributes, 16 Tax L. Rev. 207 (1961); Lane, The Reincorporation Game: Have the Ground Rules Really Changed? 77 Harv. L. Rev. 1218 (1964).

SECTION L. COMBINING TWO OR MORE ENTERPRISES: MERGERS AND CONSOLIDATIONS

Section 354(a)(1) of the 1954 Code, providing for the nonrecognition of gain or loss on reorganization exchanges, is identical with §112(b)(3) of the 1939 Code.

Section 354(a)(2) of the 1954 Code, limiting the general rule of §354(a)(1) in certain cases, has no counterpart in the 1939 Code.

Section 354(b) of the 1954 Code, making §354(a)(1) inapplicable to divisive reorganizations, is new and is associated with §355.

Section 356 of the 1954 Code, relating to the receipt of "boot," is derived, with modifications, from §112(c) of the 1939 Code.

Section 368(a) of the 1954 Code, defining the term "reorganization," is derived, with modifications, from §112(g)(1) of the 1939 Code.

Section 368(b) and (c) of the 1954 Code, defining the terms "party to a reorganization" and "control" respectively, are similar to §112(g)(2) and 112(h) of the 1939 Code.

In the preceding sections of this chapter, we have been concerned primarily with readjustments of a single corporate enterprise. Section 351 permits the tax-free incorporation of an enterprise. It also authorizes the tax-free creation of a subsidiary, overlapping in this respect §§368(a)(1)(D) and 361(a). Section 331 deals with the complete or partial liquidation of a corporation; §332, with the complete liquidation of a subsidiary. Recapitalization of a corporation involves §§305 and 354. The material on spin-offs, split-offs, and split-ups was concerned with the division of an existing enterprise into several entities.

We now turn to the problem of combining two or more enterprises. Suppose, for example, that A Corp., a local department store, is to be acquired by B Corp., a national chain. The shareholders of A may simply sell their stock to B for cash or they may cause A to sell its assets to B for cash. The tax effects of either type of sale are not difficult to work out. Suppose, however, that the consideration is to be paid partly or entirely in stock or securities of the acquiring corporation. Then the following routes, among others, are open:

(a) A can be merged into B, stock or securities in B being issued to A's stockholders in exchange for their A stock. A variation on this plan would be a consolidation of A and B, stock or securities in the consolidated corporation being issued to the stockholders of both A and B. Either transaction is a "reorganization" by virtue of §368(a)(1)(A), and the exchange of stock by the stockholders is tax-free under §354.

(b) A's stockholders can transfer their stock to B in exchange for voting stock of B, A becoming a subsidiary of B. This is a reorganization under §368(a)(1)(B), and the stockholders' exchange is tax-free under §354. If desired, A could be liquidated by B under §332.

(c) A can transfer its assets to B in exchange for B's voting stock. This is a reorganization under §368(a)(1)(C), and A's exchange of its assets for B stock is tax-free under §361(a). A can be kept alive, as a holding company, or it can be liquidated as part of the reorganization. Such a liquidation would be a tax-free exchange under §354, since A's stockholders would exchange their A stock for the B stock.

(d) A and B could both transfer their assets to a newly organized corporation, C, in exchange for C stock. These transfers would be tax-free under §351. Both A and B would then be holding companies.

(e) The stockholders of A and B could transfer their A and B stock to a newly organized corporation, C, in exchange for C stock. These transfers would qualify under §351. C would then be a holding company.

The illustration above involves the combination of two previously unrelated businesses into a single corporate entity or hierarchy, but combinations of previously related entities are also common. Indeed, we have already encountered an example of such a transaction: the liquidation of a subsidiary under §332. But the more elaborate methods of effecting a combination described above could also be adapted for use in combining two or more enterprises that were already affiliated in one way or another.

Some of the problems that may arise in acquisitions of the type just described are considered in the material that follows. As has already been seen in our consideration of other aspects of the reorganization provisions of the Code, however, their history hangs heavy over our head.

CORTLAND SPECIALTY CO. v. COMMISSIONER

60 F.2d 937 (2d Cir. 1932)

[The taxpayer, engaged in the business of buying and selling petroleum products, entered into an agreement with the Deyo Oil Company, whereby it was to transfer 91½ per cent of its net assets to Deyo (retaining the balance of its assets to take care of liabilities) and go out of business. The taxpayer's sole stockholder was thereupon to become Deyo's general manager in the territory previously served by the taxpayer. Deyo was to pay about $77,000 in cash and about $160,000 in promissory notes (with serial maturities of which the longest was fourteen months) for the transferred assets.]

Before L. HAND, AUGUSTUS N. HAND, and CHASE, Circuit Judges.

AUGUSTUS N. HAND, Circuit Judge.

The question raised by this appeal is whether the transfer by Cortland Specialty Company to Deyo Oil Company, Inc., hereinafter described was a reorganization within the meaning of §203(h)(1) of the Revenue Act of 1926, which relieved the Cortland Company from paying an income tax upon any gain that might result therefrom, or whether the transfer was a mere sale which subjected the transferor to a tax on any profit which is realized. . . .

It may be said at the outset that the contract of Cortland with Deyo and the corporate resolution authorizing it to be made treat the transfer to the latter as a sale. The instrument begins by reciting that Cortland "has determined . . . to sell and dispose of all its physical and tangible assets," and that Deyo "has determined to purchase said assets." It goes on to say that Cortland "agrees to sell, transfer and convey . . . all and singular its real property, interests in real property, leases of real property . . . and equipment . . ." and later to say that it "shall sell . . . all of the merchantable gasoline, kerosene, oils and other petroleum products," and that Deyo "agrees to pay" the "purchase price of $213,000.00" for the "real property . . . and equipment" and a further "purchase price" to be determined by "an inventory taken at prevailing cost prices" for the "petroleum products." Nothing is said about the acquisition of any vested interest by Cortland or its stockholders in the business or assets of Deyo, but, on the contrary, it is provided that their interest shall be completely severed for, under article fifth of the contract, Cortland is "not to engage in the business of buying, selling or dealing in gasoline, kerosene or other petroleum products from and after October 1st,

1925," and is to receive nothing but cash and short time promissory notes as the consideration for the business and property sold. The transaction certainly bore all the characteristics of a simple sale.

But it is argued that under subdivisions (e) and (e)(1) of §203 of the Revenue Act of 1926, "no gain or loss shall be recognized if a corporation a party to a reorganization" distributes "stock or securities" and "money" "in pursuance of the plan of reorganization," and that under subdivision (h)(1)(A) of the section of the act, the term "reorganization" is defined broadly enough to exempt Cortland from a profit tax on its transfer. In subdivision (h)(1)(A) a reorganization is defined as *"a merger or consolidation,"* and the subdivision goes on to say that "merger or consolidation" *include* "the acquisition by one corporation of at least a majority of the voting stock and at least a majority of the total number of shares of all other classes of stock of another corporation, or substantially all the properties of another corporation." If the last clause means that any transfer of "substantially all the properties" of one corporation to another corporation is a reorganization, the position of Cortland is strong; but we do not regard such an interpretation as warranted.

Reorganization, merger, and consolidation are words indicating corporate readjustments of existing interests. They all differ fundamentally from a sale where the vendor corporation parts with its interest for cash and receives nothing more. Reorganization in the most ordinary sense suggests "the formation of a new corporation [by the creditors and shareholders of a corporation] that is in financial difficulties, for the purpose of purchasing the company's works and other property, after the foreclosure of a mortgage or judicial sale." Morawetz Corp. §812; Symmes v. Union Trust Co. (C.C.) 60 F. 830. While the term includes financial readjustments in ways other than by judicial sale, it does not properly embrace mere purchases by one company of the assets of another. Little Rock Chamber of Commerce v. Reliable Furniture Co., 138 Ark. 403, 211 S.W. 371. Reorganization is defined in subdivisions (h)(1)(A) as including "a merger or consolidation." A merger ordinarily is an absorption by one corporation of the properties and franchises of another whose stock it has acquired. The merged corporation ceases to exist, and the merging corporation alone survives. A consolidation involves a dissolution of the companies consolidating and a transfer of corporate assets and franchises to a new company. In each case interests of the stockholders and creditors of any company which disappears remain and are retained against the surviving or newly created company. . . . Undoubtedly such statutes vary in the different states particularly in respect to how far the constitutent companies may be deemed to survive the creation of the new or modified corporate structure, but we believe that the general purpose of them all has been to continue the interests of those owning enterprises, which have been merged or consolidated, in another corporate form. A sale of the assets of one corporation to another for cash without the retention of any interest by the seller in the purchaser is quite outside the objects of merger and consolidation statutes.

Section 203 of the Revenue Act of 1926 must be interpreted in this setting. Its purpose was to relieve those interested in corporations from profits taxes in cases where there was only a change in the corporate form in which business was conducted without an actual realization of any gain from an exchange of properties. When describing the kind of change in corporate structure that permits exemption from these taxes, §203 does not disregard the necessity of continuity of interests under modified corporate forms. Such is the purpose of the word "reorganization" in section 203(b)(3) of the act, where a corporation exchanges its property "solely for stock or securities." Such also is the nature of the "merger or consolidation" described in subdivision (h)(1)(A) where a corporation acquires

a majority of the stock of another, and such is the nature of the "reorganization" described in subdivision (h)(1)(B) of section 203, where a corporation transfers assets to another corporation, and the transferor, or its stockholders, immediately thereafter are in control of the transferee. The words "A recapitalization," in subdivision (h)(1)(C) of section 203, and "A mere change in . . . form . . . of organization, however effected," in subdivision (h)(1)(D) of §203, involve the same idea.

When subdivision (h)(1)(A) included in its definition of "merger or consolidation" the "acquisition by one corporation of . . . substantially all the properties of another," it did this so that the receipt of property by the corporation surviving the merger might serve to effect a reorganization as does an acquisition of stock. Each transaction presupposed a continuance of interest on the part of the transferor in the properties transferred. Such a limitation inheres in the conventional meaning of "merger and consolidation," and is implicit in almost every line of section 203 which we have quoted. In Pinellas Ice & Cold Storage Co. v. Commissioner, 57 F.(2d) 188, the Court of Appeals of the Fifth Circuit decided that a transaction almost exactly like the present was not a "merger or consolidation," but a mere sale carrying no exemption. Judge Groner's opinion in Corbett v. Burnet, 50 F.(2d) 492, is in accord. In defining "reorganization," §203 of the Revenue Act gives the widest room for all kinds of changes in corporate structure, but does not abandon the primary requisite that there must be some continuity of interest on the part of the transferor corporation or its stockholders in order to secure exemption. Reorganization presupposes continuance of business under modified corporate forms.

Furthermore the Cortland Company cannot come within the exception to the general rule that gains realized from exchanges of property represent taxable income unless §203(e) and §203(e)(1) apply. Under those clauses, even if the transfer to Deyo was an exchange in pursuance of a "plan of reorganization," the property received by Cortland had to include *some* "stock or securities" (§203(e)), or the exemption could not be had. As no stock was issued against the transfer, the conditions for an exemption were not fulfilled unless the notes, all payable within fourteen months of the date of the transfer, and all unsecured, can be considered "securities" under §203(e). Inasmuch as a transfer made entirely for cash would not be enough, it cannot be supposed that anything so near to cash as these notes payable in so short a time and doubtless readily marketable would meet the legislative requirements.

The very reason that §203(e) requires that some of the property received in exchange should be *"stock or securities"* is to deprive a mere sale for cash of the benefits of an exemption and to require an amalgamation of the existing interests. There can be no justice or propriety in taxing one corporation who transfers its properties for cash and in relieving another that takes part of its pay in short time notes. The situation might be different had the "securities," though not in stock, created such obligations as to give creditors or others some assured participation in the properties of the transferee corporation. The word "securities" was used so as not to defeat the exemption in cases where the interest of the transferor was carried over to the new corporation in some form. . . .

The orders of the Board of Tax Appeals are affirmed.

NOTE

1. *Type of consideration permitted in Type C reorganizations under current law.* After the *Cortland Specialty Co.* case was decided, the statutory definition of "reorganization" was amended. Under the statute as it stands today, a corporation that transfers

substantially all its assets to another corporation is permitted to receive *only voting stock* of the transferee corporation (or of a corporation in control of the transferee), except that (as a result of an amendment in 1954) not more than 20 per cent of the property can be acquired for other property or money. §368(a)(1)(C) and 368(a)(2)(B). The requirement that at least 80 percent of the assets be acquired for voting stock is in effect a statutory guarantee that the transferor will have a continuing interest in the transferred assets. Although the statute itself has thus to some extent taken over the protective function of the judicially created doctrine of "continuity of interest," it remains important in a variety of contexts, as will be seen hereafter.

2. *"Continuity of interest."* The decision of the Court of Appeals in the *Pinellas* case, cited in the opinion above, was affirmed by the Supreme Court. Pinellas Ice & Cold Storage Co. v. Commissioner, 287 U.S. 462 (1933). The following excerpt is important:

> The "vendor" agreed "to sell," and "the purchaser" agreed "to purchase," certain described property for a definite sum of money. Part of this sum was paid in cash; for the balance the purchaser executed three promissory notes, secured by the deposit of mortgage bonds, payable, with interest, in about forty-five, seventy-five, and one hundred and five days, respectively. These notes — mere evidences of obligation to pay the purchase price — were not securities within the intendment of the act and were properly regarded as the equivalent of cash. It would require clear language to lead us to conclude that Congress intended to grant exemption to one who sells property and for the purchase price accepts well secured, short-term notes (all payable within four months), when another who makes a like sale and receives cash certainly would be taxed. . . .
>
> Certainly, we think that to be within the exemption the seller must acquire an interest in the affairs of the purchasing company more definite than that incident to ownership of its short-term purchase-money notes. [287 U.S. at 468-470.]

Two years later the Supreme Court held that a transfer of substantially all the assets of a corporation for voting trust certificates (worth about $540,000), representing 18,000 shares of common stock of another corporation, plus about $425,000 in cash was a "reorganization" under the statute applicable to the year in question. After repeating the last sentence of the foregoing quotation from its opinion in the *Pinellas* case, the Court went on:

> And we now add that this interest must be definite and material; it must represent a substantial part of the value of the thing transferred. This much is necessary in order that the result accomplished may genuinely partake of the nature of merger or consolidation. . . .
>
> The transaction here was no sale, but partook of the nature of a reorganization, in that the seller acquired a definite and substantial interest in the purchaser.
>
> True it is that the relationship of the taxpayer to the assets conveyed was substantially changed, but this is not inhibited by the statute. Also, a large part of the consideration was cash. This, we think, is permissible so long as the taxpayer received an interest in the affairs of the transferee which represented a material part of the value of the transferred assets. [Helvering v. Minnesota Tea Co., 296 U.S. 378, 385-386 (1935).]

How long must the continuity of interest last? See Campbell v. Commissioner, 15 T.C. 312 (1950).

It was pointed out above that in a Type C reorganization under the present statute, at least 80 per cent of the assets must be acquired for voting stock. In the *Minnesota Tea* case, supra, the "continuity of interest" doctrine was held to be satisfied by a transfer for $540,000 in voting trust certificates (representing common stock in the transferee) and $425,000 in cash. A fortiori a transfer solely for voting stock would have qualified. But *does* the transferor have a "definite and material interest" in the transferee, representing "a substantial part of the value of the thing transferred," if he owns an insubstantial fraction of the stock of a national company? Minnesota Tea's stake

in Grand Union, its transferee, was 7¾ per cent of the outstanding stock. This fact caused the Board of Tax Appeals to comment:

> Thus the transaction appears to be far from a continuing interest in the same property through a mere change in forms of ownership but rather an almost complete change in the essential assets owned. . . . [28 B.T.A. 591, 595 (1933).]

Transactions of this kind pose two questions of policy: Is the transfer a sale in substance if the transferor gets stock (or, if a merger or consolidation is used, stock and/or securities) of a national corporation representing a relatively minor, marketable interest in an enterprise whose financial stability is almost totally independent of the newly acquired assets? More broadly, do the reorganization provisions contribute toward a concentration of industrial and mercantile enterprise that the antitrust laws and other national policies are designed to discourage? If so, can transactions of this type be effectively differentiated for tax purposes from the combination of two enterprises of approximately equal size, where the formerly independent proprietors still have a substantial stake in their old assets and where the combination does not measurably contribute to a concentration of economic power?

The House version of the 1954 Code distinguished between closely held and publicly held corporations by allowing publicly held corporations to obtain the tax advantages of the reorganization provisions by any statutory merger or consolidation that qualified under state law, but requiring closely held corporations to meet other qualifications as well. The reason for imposing greater restrictions on closely held corporations was stated in the House Report (p. 39) as follows:

> Publicly held corporations usually have a corporate existence separate from that of their shareholders and as a rule do not merge or consolidate with a view to the tax advantages which may result therefrom at the shareholder level. There is ample evidence, however, that closely held corporations may undertake these transactions solely in the hope of distributing earnings to shareholders at capital gains rates.

The Senate rejected the proposal, saying (S. Rept., p. 42):

> Not only is it difficult, if not impossible, to formulate satisfactory definitions as to the types of corporations which will be deemed "publicly held" or "closely held" for tax purposes, but there is considerable doubt as to whether it would be sound policy for the tax laws to impose greater restrictions on a class of corporations which is ordinarily small than on their larger competitors.

3. *Use of non-qualifying consideration in Type B and C reorganizations.* Section 368(a)(1)(B) defines a Type B reorganization as an acquision of stock in exchange *solely* for voting stock of the acquiring corporation. What if voting stock is not the sole consideration, e.g., the acquiring corporation gives cash, non-voting stock, or debentures, as well as voting stock? For many years, the cognoscenti assumed that the transaction was not a "reorganization." True, §354(a)(3) contains a cross reference to §356, which in turn provides rules for dealing with "boot" — but it was generally thought that these rules took hold only if the transaction was a "reorganization" and that this threshold question was to be answered by looking solely to the definitions of §368(a)(1) (or the corresponding provisions of prior law). Consequently, there was much fluttering in the dovecotes when Howard v. Commissioner, 238 F.2d 943 (7th Cir. 1956), held that "boot" could be disregarded in determining whether the transaction was a reorganization, and even more when the Tax Court endorsed this decision in Turnbow v. Commissioner, 32 T.C. 646 (1959). *Turnbow* was reversed on appeal, however, in an opinion which extensively reviewed the legislative history of the reorganization provisions, 286 F.2d 669 (9th Cir. 1960). The court pointed out that the *Howard* theory would be equally applicable to Type C reorganization; and that if it were correct, the final clauses of §368(a)(1)(C) and §368(a)(2)(B) would be surplusage. The taxpayer argued that if Type B reorganization status could be defeated by adding cash or debentures to voting stock as consideration, taxpayers would be able to arrange for the recognition of losses by using a trifling amount of boot; the court thought that such a transaction might be defeated

by other parts of §368(a)(1) (without specifying which ones) and that, in any event, this was a matter for Congress. Is there a basis for ignoring trivial amounts of cash, if paid in order to lay the basis for deducting a loss on the transfer of depreciated stock in such transactions?

The Supreme Court granted certiorari in the *Turnbow* case, and affirmed the Court of Appeals, 368 U.S. 337 (1961).

For applications of *Turnbow,* see Mills v. Commissioner, 331 F.2d 321 (5th Cir. 1964) (cash paid to avoid issuing fractional shares in stock-for-stock acquisition does not disqualify transaction as Type B reorganization); Lutkins v. United States, 312 F.2d 803 (Ct. Cl. 1963) (use of cash in acquiring stock; held, not a Type B reorganization). See also Randall, Income Tax Consequences of Boot in Section 368(a)(B) Stock for Stock Reorganizations, 71 Yale L.J. 1316 (1962).

If cash is required to eliminate fractional shares, pay off dissenters, defray reorganization expenses, etc., what can be done in a Type B or C reorganization to achieve these ends without violating the restrictions of §368(a)(1)(B) and (C)?

Note that the type of consideration that may be employed in a Type A reorganization (statutory merger or consolidation) is not specified by §368(a)(1)(A).

4. *Use of parent's stock in Type B and C reorganizations.* Before 1954, the acquiring corporation in a Type B or C reorganization could issue only its own stock as consideration for the stock or assets of the other corporation. See Groman v. Commissioner, 302 U.S. 82 (1937); Helvering v. Bashford, 302 U.S. 454 (1937); Mellon v. Commissioner, 12 T.C. 90 (1949). In 1954, the definition of the Type C reorganization was amended by adding the parenthetical phrase of §368(a)(1)(C), to permit use of stock of the parent of the acquiring corporation, and a companion change in §368(c) provides that the parent is a "party to the reorganization" so that its stock will qualify for non-recognition under §354. See also Rev. Rul. 64-73, 1964-10 I.R.B. 11 (assets acquired for stock of L but transferred to L's subsidiary M and M's subsidiary N; held, a Type C reorganization). In 1964, similar statutory changes were made to permit the use of the stock of a parent corporation in a Type B reorganization.

An alternative route to the same result is afforded by §368(a)(2)(C), which permits a corporation to acquire the stock or assets for its own stock, and then to transfer the acquired stock or assets to a subsidiary.

5. *Type B reorganizations and "creeping control."* Does §368(a)(1)(B) embrace every acquisition of stock for voting stock of the acquiring corporation, no matter how small, provided the acquiring corporation has control (defined by §368(c) to mean 80 per cent of voting power and 80 per cent of non-voting shares by number) immediately after the acquisition? See McDonald and Willard, Tax Free Acquisitions and Distributions, 14 N.Y.U. Inst. on Fed. Taxation 859, 871-876 (1956).

6. *"Substantially all of the properties" in Type C reorganizations.* The acquiring corporation in a Type C acquisition must take over "substantially all of the properties" of the acquired corporation. In Rev. Rul. 57-518, 1957-2 C.B. 253, the Internal Revenue Service expressed the view that this phrase could not be translated into a specific percentage, but that "the nature of the properties retained by the transferor, the purpose of the retention, and the amount thereof" were among the elements to be weighed. In the case to which the ruling was directed, the transferor retained cash, accounts receivable, notes, and 3 per cent of its inventory, with an aggregate value about equal to its liabilities, and used these assets to discharge its liabilities; the Service ruled that this was consistent with §368(a)(1)(C)'s requirement that "substantially all of the [transferor's] properties" be transferred.

Whether the acquiring corporation has received "substantially all of the properties" of the other corporation is ordinarily determined as of the time of the transfer. If the acquiring corporation was not interested in acquiring all of the assets, however, and some were distributed or disposed of by the transferor corporation in anticipation of a Type C reorganization, the comparison may be made as of the time the plan was put into action, especially if the anticipatory disposition was tax-free. See Helvering v. Elkhorn Coal Co., 95 F.2d 732 (4th Cir. 1937), cert. denied, 305 U.S. 605 (1938); Mellon v. Commissioner, 12 T.C. 90 (1949), aff'd on other grounds, 184 F.2d 157 (3d Cir. 1950).

Rev. 1 (1958); Advisory Group on Subchapter C (House Ways and Means Committee), Revised Report (1958).

LeTULLE v. SCOFIELD

308 U.S. 415 (1940), rehearing denied, 309 U.S. 694

Mr. Justice Roberts delivered the opinion of the Court.

We took this case because the petition for certiorari alleged that the Circuit Court of Appeals had based its decision on a point not presented or argued by the litigants, which the petitioner had never had an opportunity to meet by the production of evidence.

The Gulf Coast Irrigation Company was the owner of irrigation properties. Petitioner was its sole stockholder. . . . November 4, 1931, the Irrigation Company, the Gulf Coast Water Company, and the petitioner, entered into an agreement which recited that the petitioner owned all of the stock of the Irrigation Company; described the company's properties, and stated that, prior to conveyance to be made pursuant to the contract, the Irrigation Company would be the owner of certain other lands and irrigation properties. . . . The contract called for a conveyance of all the properties owned, and to be owned, by the Irrigation Company for $50,000 in cash and $750,000 in bonds of the Water Company, payable serially over the period January 1, 1933, to January 1, 1944. The petitioner joined in this agreement as a guarantor of the title of the Irrigation Company and for the purpose of covenanting that he would not personally enter into the irrigation business within a fixed area during a specified period after the execution of the contract. . . .

The contract between the two corporations was carried out November 18, with the result that the Water Company became owner of all the properties then owned by the Irrigation Company. . . . The [Irrigation Company] reported no gain for the taxable year in virtue of its receipt of bonds and cash from the Water Company. The Commissioner of Internal Revenue assessed additional taxes . . . against the petitioner as transferee of the Irrigation Company's assets in virtue of the gain realized by the company on the sale of its property. The tax was paid and claims for refund were filed. . . . The respondent's contention that the transaction amounted merely to a sale of assets by the petitioner and the Irrigation Company and did not fall within the statutory definition of a tax-free reorganization was overruled by the District Court and judgment was entered for the petitioner.

The respondent appealed, asserting error on the part of the District Court in matters not now material and also assigning as error the court's holding that the transaction constituted a nontaxable reorganization.

The Circuit Court of Appeals concluded that, as the Water Company acquired substantially all the properties of the Irrigation Company, there was a merger of the latter within the literal language of the statute, but held that, in the light of the construction this Court has put upon the statute, the transaction would not be a reorganization unless the transferor retained a definite and substantial interest in the affairs of the transferee. It thought this requirement was satisfied by the taking of the bonds of the Water Company, and, therefore, agreed with the District Court that a reorganization had been consummated. It added, however, "We find a reason for reversing the judgment which has not been argued."

[Explanation of the Court of Appeals' reason for reversing the District Court is omitted.]

We find it unnecessary to consider petitioner's contention that the Circuit Court of Appeals erred in deciding the case on a ground not raised by the pleadings, not before the trial court, not suggested or argued in the Circuit Court of Appeals, and one as to which the petitioner had never had the opportunity to present his evidence, since we are of opinion that the transaction did not amount to a reorganization and that, therefore, the petitioner cannot complain, as the judgment must be affirmed on the ground that no tax-free reorganization was effected within the meaning of the statute.

[Section 112(i), Revenue Act of 1928] provides, so far as material:

(1) The term "reorganization" means (A) a merger or consolidation (including the acquisition by one corporation of at least a majority of the voting stock and at least a majority of the total number of shares of all other classes of stock of another corporation, or substantially all the properties of another corporation) . . .

As the court below properly stated, the section is not to be read literally, as denominating the transfer of all the assets of one company for what amounts to a cash consideration given by the other a reorganization. We have held that where the consideration consists of cash and short term notes the transfer does not amount to a reorganization within the true meaning of the statute, but is a sale upon which gain or loss must be reckoned. Pinellas Ice & Cold Storage Co. v. Commissioner, 287 U.S. 462. We have said that the statute was not satisfied unless the transferor retained a substantial stake in the enterprise and such a stake was thought to be retained where a large proportion of the consideration was in common stock of the transferee, Helvering v. Minnesota Tea Co., 296 U.S. 378, or where the transferor took cash and the entire issue of preferred stock of the transferee corporation. John A. Nelson Co. v. Helvering, 296 U.S. 374. And, where the consideration is represented by a substantial proportion of stock, and the balance in bonds, the total consideration received is exempt from tax under [§112(b)(4) and 112(g), Revenue Act of 1928]. See Helvering v. Watts, 296 U.S. 387.

In applying our decision in the *Pinellas* case, supra, the courts have generally held that receipt of long term bonds as distinguished from short term notes constitutes the retention of an interest in the purchasing corporation. There has naturally been some difficulty in classifying the securities involved in various cases.

We are of opinion that the term of the obligations is not material. Where the consideration is wholly in the transferee's bonds, or part cash and part such bonds, we think it cannot be said that the transferor retains any proprietary interest in the enterprise. On the contrary, he becomes a creditor of the transferee; and we do not think that the fact referred to by the Circuit Court of Appeals, that the

bonds were secured solely by the assets transferred and that, upon default, the bondholder would retake only the property sold, changes his status from that of a creditor to one having a proprietary stake, within the purview of the statute.

We conclude that the Circuit Court of Appeals was in error in holding that, as respects any of the property transferred to the Water Company, the transaction was other than a sale or exchange upon which gain or loss must be reckoned in accordance with the provisions of the revenue act dealing with the recognition of gain or loss upon a sale or exchange. . . .

The judgment of the Circuit Court of Appeals is affirmed and the cause is remanded to the District Court with directions to proceed in accordance with the opinion and mandate of the Circuit Court of Appeals.

So ordered.

Affirmed and remanded.

NOTE

1. *"Continuity of interest" and the creditor.* The record in LeTulle v. Scofield does not include a balance sheet for the Water Company. If the bonds received by the transferor represented a substantial part of the Water Company's liabilities, should not the continuity of interest doctrine be regarded as satisfied? Contrast, as to "continuity of interest," these possibilities for the owner of a one-man corporation:

(a) A statutory merger in which the individual exchanges his stock for $500,000 of bonds in the successor corporation whose balance sheet is as follows:

Assets	$1,000,000	Bonds	$500,000
		Common stock (stated capital plus surplus	500,000
	$1,000,000		$1,000,000

(b) A statutory merger in which the transferor exchanges his stock for $500,000 (market value) of stock in the successor whose balance sheet looks like this:

Assets	$25,000,000	Bonds	$15,000,000
		Common stock (stated capital plus surplus)	10,000,000
	$25,000,000		$25,000,000

Do the bonds in (a), or the stock in (b), confer the more substantial, definite, and material interest in the transferred assets?

If a corporation's capital structure is "thin," do its "creditors" have a proprietary interest for reorganization purposes?

In John A. Nelson Co. v. Helvering, 296 U.S. 374 (1935), approved in the *LeTulle* case, the Court found that a transfer of substantially all of a corporation's property for $2,000,000 in cash plus non-voting preferred stock of the transferee worth (apparently) $1,250,000 qualified as a "reorganization." In Helvering v. Watts, 296 U.S. 387 (1935), also approved in the *LeTulle* case, a transfer of all the stock of a corporation for $1,000,000 of the transferee's common stock and about $1,200,000 of bonds of the transferred corporation guaranteed by the transferee was held to be a "reorganization."

2. *Current importance of LeTulle v. Scofield.* Like the *Cortland Specialty Co.* case, supra page 723, *LeTulle* is concerned with a transaction that would not meet the standards of §368(a)(1)(C) of current law, which requires that at least 80 per cent of the assets be acquired for voting stock of the acquiring corporation. But the issue in *LeTulle* can arise in other transactions that meet the literal requirements of §368(a)(1)(A) (statutory mergers and consolidations), as the case that follows indicates.

ROEBLING v. COMMISSIONER

143 F.2d 810 (3d Cir. 1944)

Before JONES and MCLAUGHLIN, Circuit Judges, and KALODNER, District Judge.

KALODNER, District Judge.

This appeal presents three questions: (1) Whether the transaction hereafter stated between a lessor corporation and a lessee corporation constituted a "statutory merger," within the meaning of [§368(a)(1)(A)]; (2) whether the doctrine of "continuity of interest" as enunciated in LeTulle v. Scofield, 308 U.S. 415, applies to a "statutory merger," and (3) whether under the facts a "continuity of interest" actually existed.

Taxability on gain resulting to the petitioner on the exchange of stock in the lessor corporation for bonds of the lessee corporation under the provisions of §112(b)(3) of the Revenue Act of 1938 depends on the disposition of the issues above stated.*

The facts are all stipulated. Summarized they are as follows:

Petitioner, an individual residing in Trenton, New Jersey, filed a Federal income tax return for the calendar year 1938 with the Collector of Internal Revenue for the First District of New Jersey.

On December 5, 1935, petitioner acquired by gift 166 shares of the stock of South Jersey Gas, Electric and Traction Co. (hereinafter referred to as South Jersey). This stock had been acquired by petitioner's donor on March 12, 1914, at a cost of $16,600.

South Jersey was a corporation organized on August 31, 1900, under the laws of the State of New Jersey, for the purpose of furnishing electricity and gas for public and private use in that state.

In June, 1903, South Jersey had leased all its franchises, plants and operating equipment to Public Service Corporation of New Jersey for 900 years. The lessee was to pay rent which beginning December 1, 1908, amounted to $480,000 per annum. In addition the lessee agreed to pay the interest charges on the lessor's bonded indebtedness, all taxes, insurance and such sums as were necessary to maintain, repair, improve and extend the leased properties. *All replacements and additions became the property of South Jersey subject to the terms of the lease.*

The lease further provided that *upon default of the terms of the lease* for a period of 30 days, after notice, *South Jersey could terminate the lease, reenter and reacquire the property and additions and extensions thereto.*

Under the terms of the lease South Jersey could enter upon the leased property for the purpose of inspecting it and determining its condition and the character of the management and whether the covenants of the lease were being complied with.

In July, 1924, this lease was assigned by Public Service Corporation of New Jersey to Public Service Electric and Gas Company which assumed the obligations thereof. . . .

Public Service Electric and Gas Company as a part of its unified electrical system held and operated under long-term leases the properties of many other utility companies. For more than ten years Public Service and its parent, Public Service Corporation of New Jersey, had engaged in a systematic effort to acquire the fee to these properties, and by 1927 had acquired more than two-thirds of the stock of certain of these lessor companies.

---

* Section 112(b)(3) of the 1938 Act corresponded to §354(a)(1) of the 1954 Code. The restriction of §354(a)(2) was not enacted until 1954; had it been in effect for the taxable year involved in *Roebling*, it would have altered the result. — ED.

On May 10, 1937, the directors of South Jersey and of Public Service Electric and Gas Company adopted a "Plan of Reorganization" under which it was proposed that the former company be merged into the latter in accordance with the statutes of New Jersey. This plan provided that the stockholders of South Jersey (other than Public Service Electric and Gas Company) should exchange, dollar for dollar, their stock in South Jersey for 8 per cent one hundred years first mortgage bonds of Public Service Electric and Gas Company. These bonds were to be issued under a prior mortgage of Public Service Electric and Gas Company dated August 1, 1924, and under a supplemental indenture later to be executed. It was expressly provided in the "Agreement of Merger" executed on the same day: "The capital stock of the Public Service Electric and Gas Company . . . will not be changed by reason of this agreement." . . .

The "Agreement of Merger" was consummated pursuant to its provisions. In accordance therewith the taxpayer received in exchange for his 166 shares of stock in South Jersey, $16,600, principal amount of 8 per cent bonds which on November 25, 1938, had a fair market value of $34,777.

The Commissioner determined that the difference between the basis of the taxpayer's stock in South Jersey and the fair market value of the bonds received in exchange therefor must be recognized as taxable income in 1938 and he asserted a deficiency which the Tax Court sustained, so far as it was based upon this item.

The issues presented here arise by reason of taxpayer's contention (1) that the merger of South Jersey into Public Service Electric and Gas Co. was a "true statutory merger" under the laws of the state of New Jersey and therefore the exchange of stock for bonds was not a taxable event under §112 of the Revenue Act of 1938; (2) that since there was a "true statutory merger" the "continuity of interest" doctrine in the LeTulle v. Scofield case is inapplicable and (3) that in any event a "continuity of interest" actually existed in the instant case.

As to the taxpayer's first two contentions, which may be considered together: The admitted fact that the merger of the two corporations was a "true statutory merger" under the New Jersey law is not dispositive of the question as to whether there was a "statutory merger" here within the meaning of [§368(a)(1)(A). It is well-settled that a State law cannot alter the essential characteristics required to enable a taxpayer to obtain exemption under the provisions of a Federal Revenue Act.

We so held in Commissioner v. Gilmore's Estate, 3 Cir., 130 F.2d 791. Indeed that case is completely dispositive of the taxpayer's first two contentions. In *Gilmore's Estate* we found that though there was, in that case, a "true statutory merger" under the identical laws of New Jersey involved here, (1) such "true statutory merger" is insufficient without more to qualify as a "reorganization" under the Revenue Act, and (2) that a "continuity of interest" as enunciated in numerous decisions of the Supreme Court of the United States and [Regs. §1.368-1(b)] must still be present to establish a true reorganization. In *Gilmore's Estate* we said, on page 794:

> It is now settled that whether a transaction qualifies as a reorganization under the various Revenue Acts *does not turn alone upon compliance with the literal language of the statute.* The judicial interpretation has determined that something more may be needed and that, indeed, under some circumstances, something less will do. Our concern in this case is the "something more" since we have concluded that there was a literal compliance. . . .
>
> The reorganization provisions were enacted to free from the imposition of an income tax purely "paper profits or losses" wherein there is no realization of gain or loss in the business sense *but merely the recasting of the same interests in a different form,* the tax being postponed to a future date when a more tangible gain or loss is realized. . . . (emphasis supplied)

Morgan Manufacturing Co. v. Commissioner, 4 Cir., 124 F.2d 602, is in agreement with our ruling in *Gilmore's Estate.* In Helvering v. Alabama Asphaltic Limestone Co., 1942, 315 U.S. 179, at 182, the Supreme Court of the United States succinctly stated the rule as follows:

> From the *Pinellas* case, Pinellas Ice & Cold Storage Co. v. Commissioner, 287 U.S. 462, to the *LeTulle* case, LeTulle v. Scofield, 308 U.S. 415, it has been recognized that a transaction may not qualify as a "reorganization" under the various revenue acts though the literal language of the statute is satisfied. See Paul, Studies in Federal Taxation (3d Series), p. 91 et seq. The *Pinellas* case introduced the continuity of interest theory to eliminate those transactions which had "no real semblance to a merger or consolidation" (287 U.S. page 470) and to avoid a construction which "would make evasion of taxation very easy." . . .

In view of the cases cited we cannot subscribe to the taxpayer's contention that under [§368(a)(1)(A)] the requirements of New Jersey law supersede the "continuity of interest" test as applied in LeTulle v. Scofield and the numerous other decisions.

The taxpayer's remaining contention that the requisite "continuity of interest" is present under the peculiar facts in this case is premised on a rather novel theory. He urges that "prior to the merger, the stockholders of South Jersey had *no proprietary interest* in its properties in any real sense," and that in sanctioning the merger "the decision of the New Jersey courts recognized that the stock in the lessor companies was substantially equivalent to a perpetual 8 per cent bond."

This contention places the taxpayer in an anomalous position. Whereas the "continuity of interest" principle is predicated on the existence of a proprietary right which must be carried over into the reorganized corporation, the taxpayer at one and the same time asserts that a "continuity of interest" existed in the reorganized company, even though there was *no* proprietary interest by the stockholders in the merged corporation to be carried over into the reorganized corporation.

It is unnecessary, however, to further explore this contention because two things are so clear that he who runs may read. First, the stockholders in South Jersey had a definite and clearly fixed proprietary interest in its property. The lease provided that all replacements and additions to the leased property were to be the property of South Jersey and subject to the terms and conditions of the lease. Further, on the expiration of the lease all the property subject to its terms was to be returned to South Jersey. South Jersey owned the property under lease even though that lease was for a 900-year term. The lease further provided that upon default of its terms South Jersey could terminate the lease and *re-enter and re-acquire the property and additions and extensions thereto.*

In view of the incontrovertible facts the taxpayer's argument that the stockholders in South Jersey had *no* proprietary interest is without basis.

Finally, it is equally clear that when the stockholders of South Jersey exchanged their stock in that corporation for the long-term bonds of Public Service Electric and Gas Company, they surrendered their proprietary interest and simply became creditors of Public Service. They no longer owned any of the former property of South Jersey and they had no proprietary interest in the property of Public Service. The Tax Court succinctly described the situation when it stated:

> . . . *It follows that no continuing stake in the merged enterprise was retained by South Jersey or its stockholders, and hence that the requisite continuity of interest is not furnished either by the proprietary interests acquired by the merged corporation, nor by the bondholders' status conferred upon the former shareholders.* (emphasis supplied)

Taxpayer urges that the substance of the transaction here is close to that involved in Commissioner v. Neustadt's Trust et al., 2 Cir., 131 F.2d 528. That is

not so. In the *Neustadt's Trust* case the taxpayers merely exchanged their holdings of long-term debenture bonds for an equivalent face amount of short-term debenture bonds and both the Tax Court and the United States Circuit Court of Appeals for the Second Circuit ruled that the transaction was part of a "recapitalization" where no transfer of assets and no change of capital stock occurred.

For the reasons stated the decision of the Tax Court of the United States is affirmed.

NOTE

1. *Applications of Roebling.* The Court of Appeals for the Fifth Circuit expressed its approval of the *Roebling* case in Southwest Natural Gas Co. v. Commissioner, 189 F.2d 332 (5th Cir.), cert. denied, 342 U.S. 860 (1951), but split on whether the necessary continuity of interest was present in the case before it. There the holders of 41 per cent of the stock of the merged corporation received a total of $230,300 in cash, and holders of the remaining 59 per cent received about 16 per cent of the common stock of the continuing corporation (worth about $5600) plus about $340,000 of its bonds (worth 90 per cent of par) and $17,800 in cash. The majority thought that the low value of the stock disqualified the transaction, while Chief Judge Hutcheson, dissenting, thought this ignored "the fundamental facts of corporate investment." He argued that the common stock conferred an interest in the corporation's future and an opportunity to participate in control that justified finding the requisite continuity of interest.

2. *Dissenting shareholders.* A Type A reorganization (statutory merger or consolidation) may be used in preference to a Type B acquisition (stock for voting stock) because the acquiring corporation anticipates difficulties in acquiring the 80 per cent of the acquired corporation's stock required by §368(a)(1)(B); and the state law provisions for paying off dissenters may suggest use of a Type A reorganization rather than a Type C transaction (assets for voting stock), or vice versa. In the *Southwest Natural Gas Co.* case, summarized in the preceding paragraph, many of the old shareholders elected to take cash rather than stock or securities in the transferee corporation. This practice was commented on in Miller v. Commissioner, 84 F.2d 415, 418-419 (6th Cir. 1936):

> We attach no importance to the fact that some of the stockholders in the transferring corporation acquired no interest in the transferee. This is certainly not a test by which the effectuation of a merger or consolidation is to be determined, for it will rarely result when reorganizations, even in their strict literal sense, are undertaken that all stockholders will approve. It is almost universal experience that some non-assenting stock must be acquired otherwise than through the mechanics of the consolidation plan.

In Reilly Oil Co. v. Commissioner, 189 F.2d 382 (5th Cir. 1951), a reorganization was held to qualify under §368(a)(1)(D) although 31 per cent of the transferor's shareholders elected to receive cash. The court said:

> We are aware of no authority or valid reason which would support the contention that all or substantially all of the transferor's stockholders must acquire an interest in the corporation before a non-taxable reorganization can be effected. [189 F.2d at 384.]

A minority of the Tax Court, 13 T.C. 919, 929 (1949), felt that all, or at least substantially all, of the transferor's stockholders must participate in the exchange. The minority's position was based upon a "textual analysis" of §112(g) of the 1939 Code; the statute has since been slightly changed, see §368(a)(1)(D), but apparently not with this problem in mind.

Textual analysis aside, does the continuity of interest doctrine require that no large body of stockholders be paid off in cash or bonds? If a substantial part of the old stockholders sell out, should the whole transaction be regarded as a sale instead of a reorganization? The Regulations contain this somewhat ambiguous statement:

> Requisite to a reorganization under the Code are a continuity of the business enterprise under the modified corporate form, and . . . a continuity of interest therein

on the part of those persons who, directly or indirectly, were the owners of the enterprise prior to the reorganization. [Regs. §1.368-1(b).]

The problem is complicated by the fact that §368(a)(2)(B), enacted in 1954, specifically authorizes a limited amount of cash or other property to be used in a Type C reorganization. Should any inferences be drawn from this new provision about the use of cash and other property in other types of reorganizations?

In a Type B reorganization, the statute allows only voting stock to be employed to acquire the stock of another corporation. There is no direct way to compensate non-assenters in cash. Would it be possible for the acquiring corporation to acquire 80 per cent of the stock of the other corporation for voting stock, and to buy out the non-assenters subsequently; or for assenting stockholders of the corporation that is being acquired to buy out the non-assenters for cash, and then transfer the stock in exchange for voting stock of the acquiring corporation?

3. *Bonds and notes under §354(a)(2) of the 1954 Code.* If the shareholders in the *Roebling* case had received both bonds and stock of Public Service under the merger, and the continuity of interest doctrine was satisfied, §354(a)(2) and §356(a) would require the bonds to be treated as "boot." Would the shareholder's gain (if any) constitute capital gain or ordinary income? Why does §354(a)(2), enacted in 1954, deny or restrict non-recognition if securities are received but not surrendered?

4. *The status of creditors in corporate reorganizations.* The materials in this section focus primarily on the consequences of a corporate reorganization to the shareholders of the corporation whose assets or stock are transferred. Almost always, however, the corporation will have creditors. How are they affected by the reorganization? Do they recognize gain or loss if they surrender their claims and get in exchange stock or securities of the reorganized corporation or other claims against it?

At the outset it should be noted that the creditors will not necessarily participate in the reorganization exchange. Thus, in a Type B reorganization, where the acquiring corporation exchanges its voting stock for stock of the acquired corporation, the creditors of both corporations may simply ride through the reorganization, preserving intact their claims against their respective debtors. Similarly, in a Type C reorganization, where the acquiring corporation exchanges voting stock for substantially all the properties of another corporation, the latter's creditors do not necessarily participate in the reorganization. They may continue as creditors of the transferor corporation, the assets of which now consist of the acquiring corporation's stock.

Alternatively, the acquiring corporation may assume the transferor corporation's liabilities, or take the properties subject to those liabilities, still without any exchange by the creditors. Ordinarily this will not constitute "boot" to the transferee. §357. Nor will the creditors recognize gain or loss, since their claims have not been paid, retired, or exchanged. Moreover, §368(a)(1)(C) states explicitly that the requirement that the acquisition be solely for the acquiring corporation's voting stock in a Type C reorganization is not breached by its assuming liabilities or taking property subject to liabilities. Similarly, in both Type A and Type D reorganizations, the creditors of the old corporation need not participate in an exchange.

On the other hand, there frequently will be an exchange. The creditors may surrender bonds, debentures, or notes of one corporation and receive stock or securities of another corporation. In general, the exchange will qualify under §354. One difficulty that may arise, however, is that short-term notes (whether given up or received) may not qualify as "securities." See further page 725 supra. There may be other problems as well. If in conjunction with a Type B reorganization (stock for stock), the acquiring corporation issues bonds in exchange for bonds of the acquired corporation, will the transaction fall outside §368(a)(1)(B) on the ground that it is not "solely" for voting stock? If the stock-for-stock exchange qualifies, will the bondholders' exchange be "in pursuance of the plan of reorganization" under §354(a)(1)? If the transaction does not qualify as a reorganization, all parties to it will recognize gain or loss; if it is a reorganization, but the bondholders' exchange does not qualify under §354(a)(1), they (but not the stockholders) will recognize gain or loss. Similarly, in a Type C reorganization, if the acquiring corporation issues its own evidences of indebtedness to creditors of the transferor corporation, instead of merely assuming the liabilities, will the transaction lose its status as a reorganization? If not, will

the bondholders' exchange qualify under §354(a)(1)? See Stoddard v. Commissioner, 141 F.2d 76 (2d Cir. 1944).

5. *Reorganizations of insolvent or financially distressed corporations.* In Helvering v. Alabama Asphaltic Limestone Co., 315 U.S. 179 (1942), the creditors of an insolvent corporation who received stock of a reorganized corporation were held to have a "continuing interest" because, under the full priority rule of bankruptcy proceedings, they had "effective command over the disposition of the property" of the old corporation.

In Neville Coke & Chemical Co. v. Commissioner, 148 F.2d 599 (3d Cir. 1945), it was held that noteholders of a reorganized corporation who exchanged their notes for debentures and common stock could not claim non-recognition of their gain under what is now §354. The court relied on the *Pinellas* case and on LeTulle v. Scofield as establishing that notes received on an exchange do not evidence a continuing interest in the enterprise and are not "securities." It then held that notes are equally deficient if given up in the exchange. The debtor was in financial difficulties at the time of the exchange, but the court was unwilling to find that the creditors already owned the entire equity, and in fact the old stockholders did participate in the exchange. If, however, the creditors of a distressed corporation in reorganization receive stock or securities evidencing a proprietary interest in the enterprise, is it not probable that the claims they gave up, whatever their form, already represented in economic reality a proprietary interest in the assets? For a forceful statement of this view, see Griswold, Securities and Continuity of Interest, 58 Harv. L. Rev. 705 (1945).

A number of special problems are encountered in the reorganization of financially distressed or insolvent corporations. See §§371-373; Eustice, Cancellation of Indebtedness and The Federal Income Tax: A Problem of Creeping Confusion, 14 Tax L. Rev. 225 (1959); Darrell, Creditors' Reorganizations and the Federal Income Tax, 57 Harv. L. Rev. 1009 (1944); Tarleau, Some Tax Considerations in Reorganizations of Insolvent Corporations, 8 N.Y.U. Inst. on Fed. Taxation 201 (1950).

REV. RUL. 63-28
1963-1 C.B. 77

Advice has been requested whether the transaction described below qualifies as a reorganization under section 368(a)(1)(C) of the Internal Revenue Code of 1954.

M corporation and *N* corporation were respectively engaged in the manufacture of children's toys and in the distribution of steel and allied products. At some time in the past, *M* corporation sold a substantial part of its operating assets for cash and notes to a third party and more recently sold all but a small part of the remaining operating assets for cash, also to a third party. Thereafter, for valid business reasons, it acquired all of the property of *N* corporation solely in exchange for its voting stock. *N* corporation distributed the *M* stock received to its shareholders and then dissolved. *M* corporation used the assets resulting from the sale of its operating assets to expand the operations of the steel distributing business acquired from *N* corporation.

Section 368(a)(1)(C) of the Code states that the term "reorganization" means the acquisition by one corporation, in exchange solely for all or part of its voting stock, of substantially all the properties of another corporation.

Section 1.368-1(b) of the Income Tax Regulations specifies that a reorganization, to satisfy the requirements of the Code, must result in a continuity of the business enterprise under modified corporate form. This requirement will not be satisfied unless the surviving corporation is organized to engage in a business enterprise. See, for example, Standard Realization Company v. Commissioner, 10 T.C. 708 (1948), acquiescence, C.B. 1948-2, 3. However, the surviving corporation need not continue the activities conducted by its predecessors. See Donald L. Bentsen et al. v. Phinney, 199 Fed. Supp. 363 (1961; and Ernest F. Becher v Commissioner, 221 Fed. (2d) 252 (1955). . . .

Since *M* corporation engaged in the steel distribution business after the merger, the requirement that the reorganization result in a continuity of the business enterprise within the meaning of section 1.368-1(b) of the regulations was satisfied in the instant case, even though the toy business formerly conducted by *M* corporation was discontinued.

Accordingly, it is held that the acquisition by *M* corporation of all of the properties of *N* corporation solely in exchange for its voting stock constitutes a reorganization as defined in section 368(a)(1)(C) of the Code.

In view of these conclusions, reconsideration has been given to Revenue Ruling 56-330, C.B. 1956-2, 204, which held, in part, that the required continuity of the business enterprise was lacking where the successor corporation in a transaction otherwise qualifying as a reorganization engaged in a new business enterprise entirely different from that conducted by its predecessors. The conclusions reached in the instant case are equally applicable to the question involved in Revenue Ruling 56-330.

Accordingly, Revenue Ruling 56-330 is revoked.

NOTE

1. *Continuity of business enterprise.* The Regulations have long stated that a reorganization presupposes both "a continuity of interest" on the part of the owners and "a continuity of the business enterprise." Regs. §1.368-1(b). What are the meaning and function of the later phrase in the light of Rev. Rul. 63-29?

2. *Carryover of tax attributes.* If N corporation had earnings and profits, would they be acquired by M along with the assets? See §381(a)(2) and §381(c)(2)(A). Would an operating loss incurred by N in the steel distribution business be acquired by M? See §382(b)(1) and §382(b)(2). If M had incurred an operating loss in the toy business, could it be applied to profits realized by M in the steel distribution business? See Beckett v. Commissioner, 41 T.C. No. 41 (1963) (§382 not exclusive route to disallowance of operating loss carryovers); Libson Shops, Inc. v. Koehler, supra page 429.

REV. RUL. 57-212

1957-1 C.B. 114

Advice has been requested as to the status, under section 306 of the Internal Revenue Code of 1954, of amounts paid by a corporation to its shareholders under its sinking fund provisions in redemption of preferred shares previously issued pursuant to a nontaxable reorganization.

Pursuant to a merger agreement, corporation *B* was merged into corporation *C* under the nontaxable provisions of sections 368(a)(1)(A), 361(a) and 354(a) of the Code. Both corporations were large publicly owned corporations. Under the terms of the merger agreement, each share of corporation *B* common stock (the only class of stock outstanding) was converted into one share of first preferred stock, one-half share of second preferred stock, and three shares of common stock of corporation *C*.

Under the amended certificate of incorporation, as set out in the merger agreement, corporation *C* is required, so long as any of the shares of first preferred stock are outstanding, to set apart in each year on specified dates cash in amounts equal to three percent of the greatest aggregate par value of shares of first preferred stock outstanding at any time after the effective date of the merger. In lieu of cash, corporation *C* may set aside at the par value thereof shares of first preferred stock acquired by it, other than through the operation of the sinking

fund. Any cash set aside is to be applied to the purchase of shares of preferred stock at a price not exceeding their par value or in redemption of such shares at par value.

Each of the three classes of outstanding shares of corporation *C* is widely held and is listed and traded extensively on the New York Stock Exchange. Since the first preferred stock has been selling on the New York Stock Exchange at a price in excess of its par value, cash set aside in the sinking fund has not been applied to the purchase of any such shares in the open market, but has been applied to the redemption, by lot, of sufficient first preferred shares to satisfy the sinking fund requirements.

In Revenue Ruling 56-116, C.B. 1956-1, 164, it was held that preferred stock issued (together with common stock) by the surviving corporation in exchange for common stock of the merging corporation in connection with a nontaxable statutory merger was section 306 stock as defined in section 306(c)(1)(B) of the Code. However, in view of the exception provided by section 306(b)(4), since the stocks of the two corporations were widely held by the public, it was held that section 306(a)(1) shall not be applicable to the proceeds of the disposition of the preferred stock issued in the merger, unless such disposition is in anticipation of a redemption after the issuance of the stock. Therefore, the issue presented in the instant case is whether the exception provided by section 306(b)(4), which otherwise would appear to be applicable under the above-cited Revenue Ruling, is rendered inapplicable by the operation of the sinking fund provisions.

In view of the facts presented, the Internal Revenue Service holds that the distribution of the first preferred stock at the time of the merger and the subsequent redemption of portions thereof under the sinking fund provisions are not in pursuance of a plan having as one of its principal purposes the avoidance of Federal income tax within the meaning of section 306(b)(4). Therefore, the provisions of section 306(a)(1) will not be applicable to the proceeds of a sale of such shares (whether or not in anticipation of a redemption through the operation of the sinking fund), and the provisions of section 306(a)(2) will not be applicable to amounts distributed by corporation *C* in redemption of such first preferred shares to meet the requirements of its sinking fund provisions.

NOTE

1. *Implications of Rev. Rul. 57-212.* Should preferred stock issued as described in Rev. Rul. 57-212 or in Rev. Rul. 56-116 be classified as "section 306 stock"? The appropriate portion of the definition is §306(c)(1)(B), which "taints" preferred stock received in a tax-free reorganization only if it is issued in exchange for "section 306 stock" (not applicable here) or if "the effect of the transaction was substantially the same as the receipt of a stock dividend." Regs. §1.306-3(d) states that the preferred stock is "tainted" if "cash received in lieu of such stock would have been treated as a dividend . . ." Would the shareholders of the merged corporation in these rulings have been subjected to dividend treatment if they had received cash for their stock? If they had received a combination of common stock and cash? See §356, supra page 702. Is there to be a distinction, in "tainting" the preferred stock received, between those shareholders of the merged corporation who realized gain (so that cash might have been taxed, under §356(a)(2), as a dividend) and those who realized a loss on the exchange?

In Rev. Rul. 60-1, 1960-1 C.B. 143, the Internal Revenue Service ruled that preferred stock issued in a merger to preferred shareholders of one of the merging corporation did not constitute "section 306 stock," even though some of the shareholders also owned a small part of the common stock of the reorganized corporation.

SECTION M. ELECTIONS UNDER SUBCHAPTER S

In 1954, the Senate Finance Committee recommended the enactment of "new provisions which for the first time will eliminate the effect of the Federal tax laws on the form of organization adopted by certain small businesses . . . by giving certain corporations the option to be taxed as partnerships and by allowing certain proprietorships and partnerships the option to be taxed as a corporation." S. Rept., p. 118. The option permitting proprietorships and partnerships to be taxed as corporations was enacted as Subchapter R (§1361) of the 1954 Code. The proposal to permit corporations to be taxed as partnerships was rejected in conference in 1954, but it was revived four years later, modified, and enacted as Subchapter S (§§1371-1377).

In striking contrast to Subchapter R, which has proved to be of limited interest to taxpayers (supra p. 612), Subchapter S has been extensively utilized. For the taxable year 1960-61, for example, Subchapter S elections were in force for 90,000 corporations (almost 8 per cent of all business corporations filing returns). The principal features of Subchapter S are:

1. *Eligibility.* Subchapter S is applicable only to a "small business corporation," defined by §1371(a) as a domestic corporation which does not have more than 10 shareholders (all of whom must be either individuals or estates) or more than one class of stock. Subject to a minor exception enacted in 1964, an electing corporation may not be a member of an affiliated group (as defined in §1504, relating to consolidated returns), and it may not have a non-resident alien as a shareholder.

2. *Election.* A "small business corporation" becomes an "electing small business corporation," so as to bring Subchapter S into play, by filing an election, which is valid only if all shareholders consent. Once made, the election is effective for the taxable year for which it is made and for all succeeding taxable years, unless it is terminated (a) by the failure of a new shareholder to consent to the election, (b) by revocation, with the consent of all shareholders, (c) by disqualification (e.g., acquisition of stock by a trust, corporation, or other ineligible shareholder, issuance of a second class of stock, etc.), (d) by the corporation's deriving more than 80 per cent of its gross receipts from sources outside the United States, or (e) by the corporation's deriving more than 20 per cent of its gross receipts from certain personal holding company sources.

Once an election has been terminated or revoked, the corporation (and any successor corporation) is ineligible to make another election under Subchapter S for five years, unless the Treasury consents.

3. *Undistributed corporate income.* While the election is in effect, the corporation is not subject to the corporate income tax, the accumulated earnings tax, or the personal holding company tax; and the corporate income, whether distributed or not, is taxed to the shareholders. Not having been subjected to a tax at the corporate level, however, the income is not eligible for the dividends received exclusion or credit in the hands of the shareholder. In the interest of simplicity, the income must be treated as ordinary income by the shareholder, without regard to any special characteristics it may have had at the corporate level, except that the excess of long-term capital gain over short-term capital loss is passed through to the shareholder. Since he is taxed on the corporation's undistributed income, provision is made for a later tax-free distribution to him of this previously taxed income.

4. *Corporate losses.* If a corporation suffers a net operating loss for a year during which the Subchapter S election is in effect, it is passed through to the

shareholders, each of whom may use his share of the loss (up to the aggregate basis of his investment in the corporation, in the form of stock or indebtedness) to offset his personal income from other sources. The balance, if any, may be carried back to prior years and forward to later years as though the loss had been incurred in his individual business.

5. *Adjustments to basis.* The shareholder's basis for his stock is increased to reflect the fact that he is taxed on his share of the corporation's undistributed income, and is decreased if this income is distributed to him. If the corporation suffers a net operating loss, the shareholder must reduce the basis of his stock (and, if necessary, any corporate obligations he may hold) to reflect the fact that the loss has been passed through to him for use on his individual tax return.

Despite the use of the term "small business corporation" in Subchapter S, the size of the corporation's income, assets, net worth, or other financial characteristics plays no part in determining its eligibility under Subchapter S; the only restriction of this type is that it may not have more than 10 shareholders. More important than labels, however, is the fact that an electing corporation remains a corporation — not only as a matter of state law, but also for many federal income tax purposes. This point cannot be over-emphasized, because it is often erroneously said that Subchapter S permits corporations to be treated as partnerships. In point of fact, there are many differences between a partnership and an "electing small business corporation." Even while the election is in effect, corporate redemptions, liquidations, reorganizations, and many other transactions are governed by the tax law applicable to corporations, rather than by the law of partnerships;* and if the election is terminated, the corporate income tax will once again become fully applicable. Recognizing these facts, some commentators have sought to sum them up in a label — "pseudo-corporation," "conduit-corporation," and "hybrid corporation," to say nothing of more barbarous coinages like "corpnership" and "pseudo-type corporation." The more neutral terms "electing corporation" or "Subchapter S corporation" seem preferable, because they serve as a constant reminder that the corporation does not cease to be a corporation by electing to come under Subchapter S.

A radical innovation like Subchapter S inevitably breeds a host of technical questions which will be answered only slowly by administrative rulings, litigation, and legislative amendments.† Although the tax bar, with its usual skill, patience, and intensity, has been dissecting Subchapter S since its enactment in 1958, the process of conjuring up problems and difficulties is still far from complete.

HAUPTMAN v. DIRECTOR OF INTERNAL REVENUE

309 F.2d 62 (2d Cir. 1962)

Before WATERMAN, KAUFMAN and MARSHALL, Circuit Judges.

WATERMAN, Circuit Judge.

Novo-Plas Mfg. Co., a New York corporation from 1946 through 1957, filed its corporate income tax returns on a calendar year basis. In 1955 and 1956 its returns disclosed taxable income in the approximate sum of $29,000, upon which it duly remitted taxes to the District Director of Internal Revenue. In 1957 the corporation suffered a net operating loss of $10,424.93. On May 6, 1958, one Raymond Zurawin became the sole shareholder of Novo-Plas Mfg. Co., Inc. The

* One of the attractions of Subchapter S, in fact, is that the shareholders may participate in pension and profit-sharing plans, etc., which are closed to individual proprietors and partners.

† The following is from an editorial note in 37 Taxes 20 (1959): "The evidence is mounting that the new Subchapter S . . . is a hasty pudding, with a number of errors in its drafting and providing some unintended benefits. However . . . it is a commendable piece of legislation [!]"

corporation allegedly incurred a net operating loss of $184,535.70 during 1958, and apparently did not pay all of its employment, social security, and withholding taxes.

On September 2, 1958, the Internal Revenue Code was amended to create Subchapter S, Sections 1371-1377; and any corporation that could qualify as a small business corporation under that subchapter was granted 90 days within which to elect to receive the tax treatment permissible under these amendments. Novo-Plas Mfg. Co., Inc., having but one stockholder, was eligible, and on November 29, 1958, elected to receive small business tax treatment under Subchapter S.

On January 23, 1959, Novo-Plas assigned its assets for the benefit of creditors, by an assignment duly filed under the New York State law. On February 16, 1959, an involuntary petition in bankruptcy was filed against the corporation, and on March 23, 1959, it was adjudged a bankrupt.

The petitioner-appellant herein is the trustee in bankruptcy. . . . On September 2, 1959, the trustee, by two separate refund claims filed with the Director, made claim for tax loss carry-back refund based on the bankrupt's above mentioned operating losses for 1957 and 1959. . . .

In the same year Raymond Zurawin and wife filed a claim for a refund of income taxes that they had paid, and asserted that the net operating loss of the corporation for the year 1958 was allowable to them personally rather than to the corporation because of the election the corporation made on November 29, 1958, under Section 1372(a) of the Internal Revenue Code. The trustee then moved the referee in bankruptcy for an order recognizing only the trustee, to the exclusion of the Zurawins, as the one entitled to utilize the bankrupt corporation's operating loss for the calendar years 1957 and 1958 as a basis for a tax refund of income taxes paid for the years 1955 and 1956, and to restrain the Zurawins from utilizing the operating losses as a basis for personal tax loss carry-back. . . .

The only issue before us is whether the trustee of the bankrupt corporation or the individual shareholder is entitled to the right to utilize the bankrupt corporation's 1958 operating loss as a basis for tax deductions by carrying back the net operating loss for that year and applying it against taxes paid for the years 1955 and 1956.

Section 1374 of the Internal Revenue Code, a part of Subchapter S, allows the shareholders of a corporation qualifying under that subchapter to deduct on personal income tax returns for the net operating loss incurred by the corporation. A related section, Section 172(h) of the Code, precludes the corporation from taking a net operating loss deduction when such deduction is taken by the shareholders of the corporation and used by them to reduce their respective personal income tax liabilities.

Reminding us that a court sitting in bankruptcy is a court of equity and relying heavily on Pepper v. Litton, 308 U.S. 295 (1939), the bankruptcy trustee in the present case asserts that it would be inequitable to permit the bankrupt's sole shareholder, instead of the bankrupt's creditors, to take advantage of the large tax deduction which is at issue here. In the *Pepper* case the Supreme Court held that a claim for unpaid salary filed by the sole shareholder of the bankrupt corporation there involved should be disallowed inasmuch as the claim was an unconscionable attempt to swallow up all of the corporate assets and thus avoid liability for a debt the corporation owed to a general creditor.

We are aware of the equitable nature of bankruptcy proceedings. See e.g., Pepper v. Litton, supra, at 304. . . . However, permitting the shareholder to avail himself of the net operating loss incurred by the bankrupt corporation here would not appear to be so unfair that equity requires us to determine this appeal in the trustee's favor. The trustee would have us hold that an otherwise qualify-

ing corporation may not elect Subchapter S tax treatment when the corporation is insolvent or when corporate bankruptcy is imminent. The language of the Code does not refer to such a limitation upon the shareholders' power to elect Subchapter S treatment. The so-called equitable considerations urged upon us by the trustee are substantially weakened by the fact that the present litigation is as much a squabble between two sets of creditors — the Government, a preferred creditor, on the one hand, and the remaining creditors on the other — as it is a dispute between the sole shareholder of the bankrupt corporation and the bankrupt's creditors.

The trustee contends that it is unjust to allow the shareholder of a one-man corporation to elect under Subchapter S and thereby personally receive the use of the deduction for the corporation's net operating loss at a time when liquidation of the corporation is foreseeable. In Section 1374, however, Congress invited shareholders of small business corporations to avail themselves of the tax advantage derived from using their corporation's net operating losses as deductions on their personal income tax returns. It is common knowledge that corporate operating losses often lead to corporate liquidation. Therefore, the likelihood that an otherwise qualifying corporation may be liquidated is not a factor that should be considered in order to justify a judicial restriction upon the right to elect the tax treatment Congress granted by Subchapter S. See Patty, Qualification and Disqualification Under Subchapter S, N.Y.U. 18th Inst. on Fed. Tax 661, 665 (1960).

Further valuable evidence of the statutory policy allowing an election even though liquidation is foreseeable is the Commissioner's refusal to make a pertinent proposed regulation a part of his final regulations. Proposed Treas. Reg. §1.1372-1(a)(2) provide in part:

> [A] corporation is not eligible to make an election under Sec. 1372(a) if it is in the process of complete or partial liquidation, if it has adopted a plan of such liquidation, or if it contemplates such liquidation or the adoption of a plan of such liquidation in the near future.

By not adopting this regulation the Commissioner would appear to have indicated his own belief that the policy behind Subchapter S permitted small business corporations to elect the benefits of the statute even though corporation liquidation was contemplated.

The trustee has a further argument in support of his position that it is unfair to the corporate creditors to permit the sole shareholder to use on his personal income tax return the corporation's net operating loss deduction. The trustee informs us that because of the limitation in §1374(c)(2) on the extent to which a shareholder may avail himself of his corporation's net operating loss, a large part of the net operating loss deduction here at issue will likely go unused, and an undeserved benefit will thereby be bestowed upon the Government. This contention is summarily answered by pointing out that tax benefits offered by the Code frequently turn out to be unavailable to taxpayers because of rather rigid statutory limitations Congress placed upon the right to receive those benefits.

The trustee has failed to show us a convincing reason why Section 1374 should not be interpreted in accordance with its obvious meaning.

NOTE

1. *Pass-through of business losses under Subchapter S.* Because §1374 provides that the net operating loss of a Subchapter S corporation is passed through to its shareholders, the election may be attractive to the shareholders of a corporation that anticipates a series

of loss years. (By virtue of §1374(c)(2), however, a shareholder may not deduct more than the adjusted basis of his investment in the corporation.) How would the taxpayer in the *Whipple* case (supra p. 285) have been affected if his corporation had made an election under Subchapter S?

2. *Subchapter S and partial liquidations.* Consider the possibility of using Subchapter S in these circumstances: XYZ, Inc., owns an apartment building with a fair market value of $150,000 and an adjusted basis of $50,000. The shareholders would like to arrange a sale of the building and a distribution of part of the proceeds, but they do not want to employ §337 because a complete liquidation of the corporation would entail recognizing capital gain on the distribution of its other assets. If they make a Subchapter S election for the year of the sale (intending to revoke it for the following year) and cause the corporation to sell the building and distribute $100,000 of the proceeds, what will the tax results be? What would have been the result if the same amount had been distributed without a Subchapter S election, or if the corporation had distributed the building to the shareholders and it had then been sold by them?

3. *Use of Subchapter S by collapsible corporations.* If the shareholders of a real estate corporation want to effect a sale of its property and a liquidation, but are fearful that it may be a collapsible corporation, can they sidestep §341 by electing under Subchapter S and having the corporation sell the property, distribute the profit to them, and liquidate subsequently? Recall that §337(c)(1)(A) prevents a collapsible corporation from making use of §337, so that the corporation's gain on a sale of the property would be taxable to it in the absence of a Subchapter S election. Note also that if the shareholders relied on §341(e) to escape the stigma of collapsibility (supra p. 688), their own business activities would be taken into account in determining whether the building was a "subsection (e) asset." If they employ Subchapter S, is the building's status as a capital asset to be determined solely by reference to the corporation's activities? See Regs. §1.1375-1(d).

4. *Other occasions for Subchapter S elections.* Although the central purpose of Subchapter S is to permit taxpayers to employ a corporation for its local law characteristics but to report its current income on a quasi-partnership basis, Subchapter S elections may also be used to obtain the federal tax advantages of the corporate form without paying the corporate income tax. Thus, a corporation may elect a taxable year different from its shareholders' year, whereas a partnership is forbidden by §706(b)(1) to adopt a taxable year different from that of its principal partners unless a business purpose for doing so can be established. Similarly, shareholders can become "employees" of their corporation for such tax purposes as qualified pension plans, excludable sick pay, etc., while partners cannot qualify as employees of their firm. An election under Subchapter S may also be appealing if the sole or principal shareholder is prepared to transfer some of his shares to members of his family by gift preparatory to routing a proportionate share of the corporation's income to them. Note, however, that §1375(c) imposes a limitation on using the Subchapter S corporation as an income-splitting device that is comparable to §704(e)'s restriction on the use of the family partnership.

CHAPTER 8

Partners and Partnerships

Section 181-190 of the 1939 Code, relating to partners and partnerships, provided only a bare outline, which was filled in, if at all, only by case law and administrative practice.

The corresponding provisions of the 1954 Code, §§701-771, are far more detailed. They do not reject the spirit of pre-1954 law, and to some degree they codify old cases, but there are also many modifications. The relevant sections are referred to in the editor's notes hereafter.*

SECTION A. CURRENT PARTNERSHIP INCOME

SENATE REPORT NO. 1622

Senate Finance Committee, 83d Cong., 2d Sess. 376-378 (1954)

Section 702. Income and credits of partner

This section [of the 1954 Code] represents no change in current law and practice. . . .

[Section 702(a)] requires each partner, in computing his individual tax, to take into account separately his distributive share of certain items of income, deduction, credit, etc., of the partnership. For purposes of applying this subsection, a partner's distributive share of any item is to be computed in accordance with the provisions of section 704.

Paragraphs (1) through (7) of [§702(a)] specifically require conduit treatment with respect to several major items of income, deduction, etc. The first three of such paragraphs provided that each partner shall treat his distributive share of partnership short-term and long-term capital gains and losses, and gains and losses

---

* See Willis and Bauman, Recent and Prospective Developments in Taxation of Partnerships, 16 Vand. L. Rev. 291 (1963):

"Subchapter K of the Internal Revenue Code of 1954 and the Regulations promulgated pursuant to it introduced substantial and radical changes into the codified tax laws applicable to partners and partnerships. The developments in this area, however, from that time until now have been relatively few in number and conservative in nature. Whether it be that the partnership area is one which, because of its complexity or otherwise, causes more tax planning and consultation before transactions are consummated, whether it be that the provisions of the Code have not had time to be applied prospectively in published rulings or retrospectively in litigation following audits, or whether it be simply that the partnership is an infrequently used or seldomly audited entity, the amount of authority is sparse. The activity in the area in terms of recent developments is meager."

For proposals to amend the still-pristine changes of 1954, see Advisory Group on Subchapter K, First Report (1957) and Supplementary Report (1958); Hearings, House Committee on Ways and Means, 86th Cong., 1st Sess. 974-1006 (February and March, 1959); Anderson and Coffee, Proposed Revision of Partner and Partnership Taxation: Analysis of the Report of the Advisory Group on Subchapter K, 15 Tax L. Rev. 285 and 497 (1960).

For a general survey of the 1954 provisions, see Jackson, The Internal Revenue Code of 1954: Partnerships, 54 Colum. L. Rev. 1183 (1954); McDonald, Income Taxation of Partnerships — A Critique, 44 Va. L. Rev. 903 (1958).

from sales or exchanges of property subject to the provisions of section 1231 (relating to certain property [used] in a trade or a business and involuntary conversions), as though realized by the partner separately. Such gains and losses accordingly are to be added to, or subtracted from, any items of similar character realized by the partner outside the partnership.

Under paragraph (4), each partner will treat as a charitable contribution by him his distributive share of charitable contributions made by the partnership. The partner's distributive share of such charitable contributions will be taken into account in applying, at the individual level, the limitation on charitable deductions.

Under paragraph (5), each partner is credited with his share of any dividends received by the partnership for purposes of determining his dividends received credit, the dividends received exclusion, or the dividends received deduction (in the case of a corporation which is a member of a partnership). A technical amendment by your committee to this provision of the House bill makes clear that only dividends which would qualify for the dividends received credit under section 34 or the dividends received deduction under part VIII of subchapter B are considered as received by the partners separately under this paragraph.

Under paragraph (6), taxes paid or accrued by the partnership to a foreign country or possession of the United States, and with respect to which the foreign tax credit may be claimed under section 901, are attributed to the partners individually, in accordance with their respective share of such taxes. Accordingly, each partner will add his distributive share of such taxes to any similar taxes paid or accrued by him individually. The partner then has the option to apply the total amount of such taxes as a deduction against income, or as a credit against tax, subject to the limitation on the foreign tax credit.

Paragraph (7) treats partially tax exempt interest on obligations of the United States or instrumentalities of the United States as though realized by each partner separately, in accordance with his distributive share of such income.

Paragraph (8) is a "catch-all" provision which authorizes the Secretary or his delegate to prescribe regulations to require each partner to take into account separately his distributive share of any other items of income, gain, loss, deduction, or credit, the character of which would affect the computation of the partner's personal income tax. For example, partnership gain or loss from gambling operations may be required to be segregated in order to permit individual partners to offset personal gambling gains and losses against their shares of such gains and losses realized by the partnership. Similarly, non-business income or loss may be required to be segregated for purposes of applying the net operating loss provisions to the partners separately.

Paragraph (9) provides that the total amount of taxable income or loss, exclusive of items required to be segregated by other provisions of this subsection, shall be attributed to each partner in accordance with his distributive share thereof. In general, the income or loss under paragraph (9) corresponds to the so-called "ordinary" partnership income or loss under the provisions of the 1939 Code.

[Section 702(b)] contains a "conduit" rule which makes clear that the character of any item realized by the partnership, and included in a partner's distributive share shall be the same as though he had realized such item directly, rather than through his membership in a partnership, from the source from which it was realized by the partnership and in the same manner.

[Section 702(c)] relates to the determination of a partner's share of the gross income of a partnership. It will be noted that section 61(a), which defines gross income, has been amended by your committee to make clear that a partner's gross income, includes his distributive share of a partnership gross income. How-

ever, under [§702(b)], the determination of a partner's share of the gross income of the partnership need not be made annually, but only where the determination of the partner's individual gross income is required for income tax purposes. For example, a partner is required to include his distributive share of partnership gross income in computing his individual gross income for the purpose of determining the necessity of filing a return. A partner's gross income may also be relevant for other tax purposes, such as . . . the amount of gross income received from possessions of the United States [§931], and the extended period of limitations applicable to deficiencies where there has been an omission of 25 per cent of gross income [§6501(e)].

Section 703. Partnership computations

[Section 703(a)] combines provisions of sections 183 and 189 of the 1939 Code, effecting no change in existing law. It states that the taxable income of a partnership, although not taxable as such, shall be computed in the same manner as the taxable income of an individual, with certain exceptions. The classes of items described in section 702(a) must be separately stated. In addition, certain deductions which are applicable only to individuals are not allowed in the computation of partnership income. These are the optional standard deduction, the deduction for personal exemptions, the net operating loss deduction, and the itemized deductions for individuals provided in part VII, such as the medical expense deduction.

The House provisions have been amended by your committee to make clear that partnerships shall not be entitled to deductions for taxes paid or accrued to foreign countries or possessions of the United States, or for charitable contributions, since such deductions are taken by the partners individually under section 702.

[Section 703(b)] requires that all elections (other than the election with respect to foreign taxes) affecting the computation of income derived from a partnership shall be made by the partnership. Thus, elections as to methods of accounting, methods of computing depreciation, the use of the installment sales provision, the option to expense intangible drilling and development costs, *etc.*, must be made by the partnership, and must be applicable to all partners equally. An exception is made permitting a separate election by each partner to use his distributive share of taxes paid or accrued by the partnership to foreign countries and possessions of the United States either as a credit or as a deduction. The exception as to foreign taxes does not constitute a change in existing law, although it eliminates a possible interpretation of sections 183 and 186 of the 1939 code which might permit both the credit to the partners and the deduction to the partnership.

NOTE

1. *The partner's "distributive share" of income.* Section 702(a) requires the partner to take into account, in determining his own income tax, "his distributive share" of the partnership's income. The 1939 Code explicitly provided, in §182, that this must be done "whether or not distribution is made" to the partner, and this was construed to require a partner to report his proper share of partnership income even though distribution was delayed by a dispute or litigation among the partners. Bell v. Commissioner, 219 F.2d 442 (5th Cir. 1955); Beck Chemical Equipment Corp. v. Commissioner, 27 T.C. 840, 854-856 (1957); for the effect of fraud, see Starr v. Commissioner, 267 F.2d 148 (7th Cir. 1959); Woods v. Commissioner, ¶58,134 P-H Memo T.C.

Having taken his share of the firm's income into account as it was earned, the partner is of course not required to report it a second time when it is distributed to him. The statutory framework insulating him from a second tax is §731(a)(1), under which no gain is recognized by the partner on a distribution unless the money distributed exceeds the

adjusted basis of his interest in the partnership — and his basis will have been previously increased under §705(a) by his distributive share of the partnership's income. Similarly, if the partner sells his interest in the firm rather than withdrawing his share of the income, his basis will reflect his share of the undistributed income and hence he will realize no gain pro tanto.

2. *Year-end changes in partners' shares.* Minkoff v. Commissioner, ¶56,269 P-H Memo T.C., concerned a partnership agreement providing for specific partnership interests but also for a division of profits at the end of the year "on a mutually agreeable basis." The division thus agreed upon was held binding for tax purposes, in the absence of some reason for disregarding it. See also Straight v. Commissioner, 221 F.2d 284 (8th Cir. 1955), where the agreement for a limited partnership provided for a stated rate of return for the limited partners, plus a larger percentage at the option of the general partners. The added amount was held taxable to the limited partners who received it, not to the general partners, in the absence of a showing that the arrangement was made to avoid taxes.

3. *Allocation of specific items by agreement.* Assume that A and B share equally in the profits of a partnership that in a given year realizes total income of $50,000, of which $5000 is tax-exempt interest on municipal bonds and $20,000 is long-term capital gain. May the tax-exempt interest and capital gain be allocated to A, a high bracket taxpayer, and the ordinary income to B, who is either in a low bracket or has offsetting losses on non-partnership transactions? See §704(b); Regs. §1.704-1(b); Cleveland v. Commissioner, 297 F.2d 169 (4th Cir. 1961) (deduction of §174 research expenditures by joint venturer).

4. *The partnership's taxable year.* See §706(a), re-enacting §188 of the 1939 Code. If two taxpayers on the calendar year basis form a partnership on February 1, 1964, and select February 1 through January 31 as the partnership's fiscal year, no partnership income will be reported in their individual returns until 1965, and there will be a similar lag between income and tax in later years, resulting in a postponement of tax that may be helpful to a new and expanding enterprise. But note that §706(b), which is new, prevents the partnership from adopting or changing to a taxable year different from that employed by its principal partners unless it establishes a business purpose for doing so, and imposes a correlative limitation on changes by the principal partners of their personal taxable years. See also §442, requiring Treasury consent to a change in the taxpayer's annual accounting period.

A disparity between the tax years of the partner and the partnership may be reflected in a disadvantage as well. To continue with the example just given, if the partnership's taxable year should close on December 31, 1965, as the consequence of a termination of the firm, the 1965 returns of the individual partners must include both the February 1, 1964, through January 31, 1965, income of the partnership and its February 1, 1965, through December 31, 1965, income, with a consequent pyramiding of tax. Guaranty Trust Co. v. Commissioner, 303 U.S. 493 (1938); see also Girard Trust Co. v. Commissioner, 182 F.2d 921 (3d Cir. 1950); Commissioner v. Waldman, 196 F.2d 83 (2d Cir. 1952). But this is less of a problem than it was before the 1954 Code was enacted, because §706(c) provides that the partnership's taxable year shall not close as a general rule in circumstances that before 1954 would often have produced a termination of the taxable year. Even before §706(c) was enacted, moreover, there was a growing tendency to allow the taxable year of the firm to continue despite the death or retirement of one partner. See Rev. Rul. 144, 1953-2 C.B. 212; Commissioner v. Tyree, 215 F.2d 78 (10th Cir. 1954).

5. *Electing "out" of partnership provisions.* Section 761(a) authorizes the Secretary by regulation to excuse certain unincorporated organizations from filing a partnership return. The Senate Report (p. 407) states: "In order for any organization to be so excluded, the members of such an organization must be able to determine their income without the necessity of computing a partnership taxable income." The provision seems primarily designed for co-owners holding real estate for investment and for certain oil ventures. See Regs. §1.761-1(a)(2).

See again §1361 (supra p. 612), permitting certain partnerships to elect to be taxed as corporations.

ment. Allocation of Income, Gain and Loss in Partnership Taxation, 38 Tulane L. Rev. 104 (1963).

FALCONER v. COMMISSIONER

40 T.C. 1011 (1963)

[In 1957, the taxpayer entered into a partnership agreement with Stella Breazeale to operate an employment agency. Stella Breazeale contributed the entire capital of the firm ($19,775), and the agreement provided for a salary of $150 per week to the taxpayer for his services. During the years 1957-1958, he received payments totally $5400 for services. The firm was dissolved on May 12, 1958, having suffered an operating loss in 1958 of about $7300, and was succeeded by a corporation. At the time of the dissolution, taxpayer executed a demand promissory note payable to the order of Stella Breazeale in the amount of $9862.50.

[The taxpayer did not report the $5400 he received from the partnership on his 1957-1958 returns, and he deducted one half of the $7300 loss on his 1958 return.

[Among other provisions, the partnership agreement provided:

6.

As compensation for services to be rendered by the partners, each is to be paid as a salary the sum of $150.00 per week, such salaries to be paid on such date of the week as may be mutually agreed. The amount of compensation for each partner so agreed to is subject to change only by the mutual agreement of the partners. The salaries so paid insofar as the partners are concerned shall be considered as a part of the operating expense of the business.

7.

It is recognized by the partners that Breazeale has advanced certain sums of money to the partnership and may advance additional sums before the business has attained a sufficient volume of business and attained successful operation so as to pay the operating costs and expenses. It is agreed when the income of the business is sufficient to meet the cost of operations, any and all excess of such income shall be paid monthly to Breazeale until she has been repaid in full all of such advances.

The ownership of the partnership business shall be on the basis of 50% by Falconer and 50% by Breazeale, and after all advances referred to in the preceding paragraph have been paid to Breazeale, the share of the net profits shall be paid to Falconer as to 50% and paid to Breazeale as to 50%; the division of the net profits and the payment of the same to the respective partners shall be at such time or times as the partners may from time to time mutually agree. In the event of losses accruing to the partnership, each partner shall contribute his or her 50% portion of such loss or losses so that each partner shall bear his or her just portion of such loss and thus avoid the necessity of either partner having to suffer the entire loss. Neither partner shall draw from the business more than his or her respective portion of the net profits without the written consent of the other.

DAWSON, Judge: . . .

Issue 1. Guaranteed Payments.

It is the petitioner's contention that the payments, totalling $5,400, which he received from the partnership in 1957 and 1958 were loaned to him by his partner, Stella Breazeale, and, therefore, created a debt to her, as evidenced by the demand promissory note executed on the date the partnership was dissolved. Respondent, on the other hand, argues that the amounts received constitute guaranteed salary payments under the provisions of section 707(c). We agree with the respondent.

Section 707(c) has no counterpart in the Internal Revenue Code of 1939. It initially appeared in the Internal Revenue Code of 1954. Since we have been

unable to locate in our research any court decisions pertaining directly to the issue here presented, we approach the problem as one of first impression. But compare Foster v. United States, 221 F. Supp. 291 (S.D.N.Y. 1963). The legislative history of section 707(c) reveals that it was specifically intended to require ordinary income treatment to the partner receiving guaranteed salary payments and to give a deduction at the partnership level.[1]

The touchstone for determining "guaranteed payments" is whether they are payable without regard to partnership income. And, in determining whether in a particular case an amount paid by a partnership to a partner is a "drawing" or a "guaranteed payment," the substance of the transaction, rather than its form, must govern. See section 1.707-1(a), Income Tax Regs. These are both factual matters to be judged from all the circumstances.

We are convinced that the facts of this case clearly place the payments made to petitioner within the ambit of the term "guaranteed payments" as used in section 707(c). Paragraph 6 of the partnership agreement provided that each partner was to receive a salary of $150 per week from the partnership as compensation for services rendered; that the amount of the *compensation* agreed to was subject to change only by mutual agreement of the partners; and that such *salaries* were to be considered a part of the operating expenses of the business. In addition, paragraph 9 of the partnership agreement provided that, if a partner should be disabled for more than six months, the *compensation* provided for in paragraph 6 would not be paid to the disabled partner after such six month period expired. There is no doubt in our minds that these weekly salary payments were made "without regard to the income of the partnership." The partnership was being operated at a loss and, consequently, it was necessary to make the guaranteed salary payments out of the capital Stella Breazeale had contributed. Petitioner's mere characterization of the payments in the partnership returns as "withdrawals" is not persuasive when viewed in connection with the precise provisions of the partnership agreement. This leads us inescapably to the conclusion that the amounts received by petitioner from the partnership under the terms of the agreement are guaranteed payments without regard to the income of the partnership and, as such, are includible in his gross income.

Under the provisions of section 706(a) such payments are characterized as ordinary income to the recipient for his taxable year within or with which ends the partnership taxable year in which the partnership deducted the payments. Hence, the taxable year of the partnership must be first determined.

In view of these rules and the facts herein, this partnership could only adopt a calendar year basis. Since the petitioner reported his income on a calendar year basis during 1957 and 1958, and was a principal partner by virtue of owning a 50 percent interest in the partnership, the partnership was precluded from adopting a fiscal year basis without the prior approval of the Secretary of the Treasury or his delegate. The record not only fails to reveal such approval, but there is no evidence that such approval was ever sought. Thus, the only recourse remaining to the partnership was the adoption of a calendar year which under the specific

---

[1] S. Rept. No. 1622 to accompany H.R. 8300, 83d Cong., 2d Sess., p. 387 (1954), contains the following explanation:

"Subsection (c) provides a rule with respect to guaranteed payments to members of a partnership. A partner who renders services to the partnership for a fixed salary, payable without regard to partnership income, shall be treated, to the extent of such amount, as one who is not a partner, and the partnership shall be allowed a deduction for a business expense. The amount of such payment shall be included in the partner's gross income, and shall not be considered a distributive share of partnership income or gain. A partner who is guaranteed a minimum annual amount for his services shall be treated as receiving a fixed payment in that amount."

language of section 1.706-1(b)(1)(ii), Income Tax Regs., does not require the prior approval of the Commissioner. See Austin Clapp, 36 T.C. 905 (1961), where we construed the provisions of section 706(b)(1) and the regulations with respect thereto. It then follows that the payments, totaling $2,550, made to petitioner during the partnership's taxable year ending December 31, 1957, were includible in his taxable income for the calendar year 1957. Since the partnership's existence terminated upon its dissolution on May 12, 1958, the partnership taxable year was closed on that date. As a result thereof, the guaranteed payments of $2,850 made by the partnership during the taxable year beginning January 1, 1958 and ending May 12, 1958, were includible in petitioner's taxable income for the calendar year 1958.

Petitioner stresses that the "withdrawals by F. A. Falconer, constituted a loan to him and not income." We find no merit in this position. His attempt to cast the relationship between himself and Stella Breazeale as that of debtor and creditor is wholly inconsistent with the express terms of the partnership agreement and contrary to all outward manifestations of their intent. Nor are we swayed by the fact that the petitioner executed a demand note for $9,862.50 to Stella Breazeale on the day the partnership was terminated. We do not even know for what purpose the note was given. The petitioner, who has the burden of proof, offered no evidence regarding it. Consequently, any conclusions we might try to draw with respect to the note and the purpose for it would be purely speculative. Even if we assume, as petitioner would have us do, that the note represented the "withdrawals" by the petitioner from the partnership and "his part of the expenses" paid from the capital account, it cannot serve to convert what was paid as salaries into something else. Certainly the character of such payments cannot be changed retroactively into a loan. . . .

Issue 3. Net Operating Loss.

. . . .

From the inception of the partnership through its dissolution, the petitioner made no contributions to capital. By the provisions of section 704(d), a partner may deduct currently his portion of distributable losses only to the extent of the adjusted basis of his interest in the partnership. Stated differently, a partner in any accounting year may deduct all of his portion of partnership loss *only* if he has sufficient "capital" retained in the partnership. Thus a determination of the basis of petitioner's partnership interest becomes necessary. Section 705 sets forth the basis of a partner's interest. Insofar as pertinent here, section 705-(a)(2)(A) provides that the adjusted basis of a partner's interest in a partnership shall be the basis of such interest determined under section 722 decreased (but not below zero) by the sum of his distributive share for the taxable years and prior taxable years of losses of the partnership. Since petitioner contributed neither money nor property to the partnership, the basis of his interest was zero. As previously noted, the petitioner's distributive share of the partnership loss is limited by section 704(d) to his adjusted basis, which was also zero, in determining the amount allowable as a deduction under section 702(a)(9). Accordingly, we conclude that none of the loss of the partnership is deductible by petitioner in either 1957 or 1958. . . .

NOTE

1. *"Guaranteed payments" to a partner.* Section 707(c) provides that "guaranteed payments" (payments to a partner for services or the use of capital, determined without regard to the partnership's income) shall be treated as payments to a non-partner, but only for

purposes of §61(a) and §162(a). What is the function of this provision? See Regs. §1.707-1, especially Example (3).

Because a guaranteed payment is not treated as a distribution of the partner's share of the firm's income, it does not operate as a "pass-through" of capital gains, tax-exempt interest, etc.

The Internal Revenue Service has ruled that a "guaranteed payment" received by a partner who is absent from work because of sickness does not qualify for the exclusion of §105(d) (relating to wage continuation payments): "Section 707(c) . . . does not have the effect of converting a partnership relationship into an employee relationship for the purpose of section 105(d) of the Code." Rev. Rul. 56-326, 1956-2 C.B. 100; Regs. §1.707-1(c). O'Brien's Estate v. Commissioner, ¶62,169 P-H Memo T.C., although holding against the taxpayer on the facts, seems to accept the theory that a guaranteed payment to a partner might meet the standards of §105(d). Other points at which the theory of the Regulations that the recipient of a guaranteed payment is not an "employee" would be relevant are: §101(b) (relating to employee death benefits); §119 (meals and lodging for convenience of employer); and §401 (qualified pension and profit-sharing plans for employees).

2. *Transactions between partner and partnership.* Section 707(a) provides for transactions between a partnership and a partner "other than in his capacity as a member of such partnership." In general, such transactions as the sale or rental of property by the partner to his firm, or vice versa, are treated as arm's-length business transactions in computing gain or loss, depreciation, etc. Note, however, the exceptions of §707(b).

3. *Ceiling on deductibility of partnership loss.* In the *Falconer* case, the court held that the taxpayer could not deduct his share of the partnership loss because the adjusted basis of his partnership interest was zero, relying on §704(d). Since he was liable under paragraph 7 of the partnership agreement for 50 per cent of the losses, and since §752(a) provides for an upward adjustment of a partner's basis to reflect any increase in his share of the firm's liabilities, why was his basis not at least as large as the loss he sought to deduct?

Will the taxpayer in *Falconer* ever be entitled to deduct the disallowed loss? See the second sentence of §704(d), relating to payments "to the partnership," and note that he executed a note to his co-partner when the firm was liquidated.

4. *Reference.* Crampton, Partner-Partnership Transactions, 15 N.Y.U. Inst. on Fed. Taxation 71 (1957).

SECTION B. CONTRIBUTED PROPERTY

HELVERING v. WALBRIDGE
70 F.2d 683 (2d Cir. 1934)

Before L. HAND, SWAN, and CHASE, Circuit Judges.

L. HAND, Circuit Judge.

This is a petition of the Commissioner of Internal Revenue to review an order of the Board of Tax Appeals which reduced a deficiency in the respondent's income tax for the year 1928. The taxpayer, Walbridge, with three others, formed a partnership to trade in financial securities; he and two other partners contributed shares of stock, and the fourth gave cash. The firm sold some of the shares contributed by Walbridge at a price higher than that at which he had bought them, and higher than their value when he contributed them.* In its income tax return the firm charged itself with the difference between the sale price of the shares and the cost at which it had accepted them, and concededly Walbridge was liable for an income upon his proportion of that profit. But the Commissioner further charged his income with the difference between the price at which the shares had been taken by the firm and their cost to him; and it is the tax on this

* The partnership was formed on November 30, 1928. On this date the securities, which had cost the taxpayer $114,360, were worth $237,297. They were sold by the partnership for $260,104. — ED.

gain that is now at issue. Walbridge maintains that he is not taxable upon it until the firm is dissolved, at which time it will come in as a profit or loss, according as his liquidating dividend is greater or less than the original cost of the shares to him. The Board so held and the Commissioner appealed.

Under the Act of 1928, as earlier, partnerships were obliged to make returns, and their income was computed as that of an individual, but the tax was imposed upon the partners, the firm itself not being taxable. Ever since the Act of 1918 the Regulations had provided that only upon dissolution of the firm did the partner individually "realize" any gain or loss on firm transactions, and at that time his gain was the difference between his liquidating dividend and the original cost to him of his contribution. . . . Indeed if the liquidating dividend was in kind, no gain was "realized" until the property distributed was sold, a provision of doubtful validity except perhaps in cases where the dividend did not itself have any "fair market value." In the face of such long continued departmental interpretation we should be slow to construe the statute otherwise; indeed we would not do so at all unless the statute flatly required it. It does not. The relevant section is [§1001(b)], which provides that "the amount realized . . . shall be the sum of any money received plus the fair market value of the property . . . received"; the critical words are "fair market value." The section has stood in substantially this form since 1918, with the exception of the Act of 1921, §202(c), 42 Stat. 230, where it read, "readily realizable market value"; a more comprehensive formula, for one may at times "readily realize" on goods which have no true market, "fair" or "unfair." [Regs. §1.001-1(a)] in implementation of this section declares that although "fair market value" is a question of fact, "only in rare and extraordinary cases does property have no fair market value." . . . The gloss we have quoted we cannot accept; "fair market value" is not nearly so universal a phenomenon as to justify such a comment, and the implication is misleading. Perhaps there need not be a "market" to establish a "market value," but there must be some assurance that the value is what a "market" would establish; and a "market" itself presupposes enough competition between buyers and sellers to prevent the exigencies of an individual from being exploited. It may well imply that the goods have several possible buyers, so that a necessitous seller shall not be confined to one; and that there are several possible sellers of the same goods or their substantial equivalent, so that a hard-pressed buyer shall not have to accept the first offer. . . . In the case at bar Walbridge's share in this firm, engaged in marketing securities, was not "marketable"; the assumption is wholly unfounded that it was worth the value of his contribution. Under the Partnership Law of New York §53, a sale of a partner's interest no longer disrupts the firm; it does not transfer any interest in the firm assets, but only the assignee's [assignor's?] rights upon an accounting and during the continuance of the firm. That goes along for its prescribed term and the eventual liquidating dividend cannot possibly be learned in advance. The decisions have so far attempted no definition of the phrase, proceeding rather by exclusion; we agree that it does not require a price determined in a conventional market like a stock or produce exchange; there are other "market" prices, recognized and accepted as such in trade. But all the cases have required some more palpable measure than any available here, which can be no more than an opinion as to the value of a unique right of action for which there were no known buyers, nor any but an imaginary demand. . . . So far therefore as the Commissioner proceeded on the theory that the value of Walbridge's shares in the firm could be made the minuend in an equation determining a "recognizable gain," he was wrong.

The Commissioner's second argument treats the partnership pluralistically, as the common law did before equity intervened. His theory is that when a firm sells

property contributed by a partner, it is a sale of the partner's property, and the gain may properly be divided into two parts; that which accrued before the contribution, and which can be taxed against him, and that arising thereafter, which must be taxed against the firm. Such a view ignores even the bare common-law outlines of a partnership — joint ownership and joint obligation — to say nothing of the scaffolding reared by equity to support the concept of the firm as an entity. By his transfer the partner ceases to be sole owner of what he contributes and thereafter holds jointly; his consideration is his own share in the contributions of the other partners. When the firm sells the entire interest in the contributed property the contributing partner sells only his reserved proportion, and the other partners sell their acquired proportions. If we kept very literally to the common-law view, we might say that the partner had "realized" a "gain" based upon the difference between his proportion of the selling price and the same proportion of his original cost, but that is as far as we could go. The other partners would have "realized" the difference between their proportion of the selling price and the same proportion of their cost, whatever that was; conceivably it might be either the original cost of the property to the contributing partner, in analogy with the rule as to gifts, or its value at the time of contribution. But in neither case could that gain be assessed against the partner who contributed the property, for he had no interest whatever in this part of the profit. He had altogether parted with the property except that proportion which he retained as partner; he had got for it his interest in the contribution of the other partners, and any gain to him must be measured in terms of that exchange. Moreover, he may not be taxed even upon the profit realized on that proportion of the property of which at common-law he remained owner. It was firm assets, he could not withdraw it; he had no effective power over it, and therefore no interest in it, save as it might figure in "his share of the profits and surplus." Section 52, N.Y. Partnership Law. It is true that the common-law even after equity was through, had not conceived the firm as a juristic person. . . . But for practical purposes the distribution was not very different and the legal interest of a partner as joint owner has long since lost most of its legal incidents. United States v. Kauffman, 267 U.S. 408. Thus it appears to us that the regulation provided the proper way to deal with a partner's rights, and that a necessary corollary from it is that no gain is "realized" by a separate partner when the firm sells partnership property.

Order affirmed.

NOTE

1. *Basis of contributed property:* §723. See also Archbald v. Commissioner, 27 B.T.A. 837 (1933), aff'd per curiam, 70 F.2d 720 (2d Cir. 1934).

In thinking through the implications of the *Walbridge* case, of a statutory change that the decision in the Board of Tax Appeals helped to bring on, and of the next case, the following illustration may be helpful: A and B each own an item of non-depreciable property with an adjusted basis of $25,000 and a present value of $35,000. They decide to pool their resources in an equal partnership, so its assets are worth $70,000. The assets are sold for that amount by the partnership and the proceeds are invested by the firm in other property costing $70,000. Thereafter these assets are distributed to A and B in liquidation of the firm; at the time of liquidation, the distributed assets are still worth $70,000, so A and B each get property worth $35,000. Then A sells his property for $35,000 and B does the same. It is clear enough that a total of $20,000 of taxable gain ought to be reported by A and B at some stage in the described proceedings. But when?

One might argue for the earliest date, when the partnership is formed. This is when the profit would be taxed if there were a transfer to a corporation, were it not for §351, and it could be argued by a parity of reasoning that A and B have each sold or exchanged

property for an interest in the partnership. Each would then have gain in the amount of $10,000, the difference between the basis of the property given up and the value of what was received in exchange. A variation on this approach would treat the transfer by A as a sale or exchange of a one-half interest in his property for a one-half interest in B's, and vice versa. Then, unless the transactions were viewed as a transfer of property for other property of a like kind under §1031, A and B would each recognize $5000 of income. That is, one half of A's property, with an allocated basis of $12,500, would be regarded as sold or exchanged for one half of B's property, with a value of $17,500, and vice versa. The rest of A's and B's income would be taxed at a later time, when the property is sold by the firm, when the firm liquidates, or when the assets received in liquidation are sold by A and B. But the *Walbridge* case refuses to view the transfer of appreciated property to a partnership as a taxable occasion, and its conclusion has met with general acceptance. See §721, codifying pre-1954 case law.

Under a second approach, it might be argued that when the property was sold by the partnership for $70,000, A and B each realized and should recognize his own $10,000 gain. This theory too was rejected by the *Walbridge* case, but here its conclusion has not been accepted. In fact, a few days before the case was decided by the Court of Appeals (but with the Board of Tax Appeals' decision in mind), Congress had already enacted what is now §723, providing that the partnership's basis for contributed property is the same as the transferor's basis.

Why did Congress reject this part of the *Walbridge* case? Not because the *Walbridge* case meant that the pre-contribution gain of A and B would go forever unrecognized; it would be quite consistent with the *Walbridge* case for the gain to be recognized (to return to the facts of the example above) either when the reinvested proceeds of the sale were distributed in kind to A and B or when the assets thus distributed were sold by them. A clue to the legislative rejection of the *Walbridge* rule may be found in Chisholm v. Commissioner, 79 F.2d 14 (2d Cir. 1935). Although this case was decided after §113(a)(13) of the 1939 Code (§723 of the 1954 Code) was enacted, it illustrates a tax technique about which Congress was concerned. Two individuals each owned 300 shares of corporate stock with a cost basis of $8000, but a total market value of almost $1,000,000. In contemplation of a sale, they transferred the shares to a partnership, which promptly sold the shares and retained and reinvested the proceeds. Under the *Walbridge* case, the partners did not realize gain either when the firm was formed or when it sold the stock (except to the extent that the property increased in value from the date it was contributed to the date it was sold). An attempt by the Commissioner to attack the transaction along *Gregory* lines failed, the court finding that "the purpose was certainly to form an enduring firm which should continue to hold the joint principal and to invest and reinvest it." * 79 F.2d at 15. While gain would be recognized by the partners either when they liquidated the partnership or at the latest when they sold the proceeds received on the liquidation, those dates could be selected at their option. Moreover, death might intervene and provide a stepped-up basis under §1014. Section 723, of course, alters this result by providing that the partnership's basis for the assets is the same as the individuals'.

When §723 was enacted in 1934, Congress sought to have its rule applied to past transactions, through an announcement in the committee reports that the section was declaratory of existing law, but as the *Walbridge, Archbald,* and *Chisholm* cases indicate, this proved to be mere whistling in the dark. H.R. Rept. No. 704, 73 Cong., 2d Sess., reprinted in 1939-1 C.B. (Part 2) 554, 567-568; S. Rept. No. 558, id. 586, 600-601.

2. *Allocation of income and deductions attributable to contributed property: §704(c).* Although §723 saddles the partnership with the partner's basis for contributed property, it does not prescribe a method for allocating the income thus computed among the partners. To vary the illustration above in order to present the problem, assume that A con-

* In distinguishing the *Gregory* case, the court said: "In Gregory v. Helvering . . . , the incorporators adopted the usual form for creating business corporations; but their intent, or purpose, was merely to draught the papers, in fact not to create corporations as the court understood that word. That was the purpose which defeated their exemption, not the accompanying purpose to escape taxation; that purpose was legally neutral. Had they really meant to conduct a business by means of the two reorganized companies, they would have escaped whatever other aim they might have had, whether to avoid taxes, or to regenerate the world." 79 F.2d at 15.

tributes securities worth $35,000 but having a basis of $25,000, while B contributes $35,000 in cash. If the partnership should sell the securities for $35,000, there will be a gain of $10,000 as a result of §723. How is it to be allocated between A and B?

Before turning to §704(c), which for the first time provides a statutory guide to this area, we might consider several possible ways of dividing the gain. In the absence of a provision in the partnership agreement, there are three principal methods that might be adopted:

(a) The sale by the partnership could be regarded as a realization by A of the pre-contribution gain, and the entire $10,000 of income would then be taxed to him alone.

(b) The gain could be reported equally by A and B, if that is how post-contribution gains are shared. The basis of both A's and B's partnership interest would be increased by $5000, the amount of income taxed to each though not withdrawn. With this adjustment, A's partnership interest would have a basis of $30,000 and B's $40,000. On ultimate liquidation or sale of his interest, A would have a gain of $5000 (thus reporting in two steps his pre-contribution appreciation of $10,000), while B would have a loss of $5000, to offset the $5000 of taxable income previously reported by him when he had enjoyed no economic gain.

(c) At the time the partnership was formed, A's basis of $25,000 and B's basis of $35,000 could be redistributed between them, so that each would take a basis of $30,000 for his interest. On the sale of the securities, the $10,000 gain would be taxed to them equally, and the basis of the partnership interest of each would be increased from $30,000 to $35,000 in recognition of the taxed but retained income. There would then be no further tax to either A or B on the final liquidation or sale of his investment in the partnership or its property. A would ultimately be taxed on only $5000 though he had enjoyed $10,000 of gain, while B would be taxed on $5000 of gain he did not enjoy. These disparities would have certain compensations in simplicity of administration.

A choice among these methods for handling the gain or loss on contributed property that has a basis different from its value at the time of contribution is complicated by the fact that the property may be depreciable. Assume that A contributes depreciable property having an adjusted basis of $25,000 but a value of $35,000 and that B contributes $35,000 in cash. The partnership's basis for depreciation under §§167(f), 1011, and 723 is $25,000. Over the life of the asset, A and B together will be entitled to a total of $25,000 in depreciation deductions. But how should these deductions be allocated between them, assuming the partnership agreement is silent? Three methods, which correspond to the three methods described above for allocating the gain or loss on pre-contribution appreciation, may be noted:

(1) One method would be to allow A to take $7500 of the total depreciation deductions, while allocating $17,500 to B. To see how this method would work out, assume that after the property contributed by A has been fully depreciated, the firm has left only the $35,000 contributed by B and that no other transactions need be accounted for. Since A and B have equal interests in the firm's remaining assets of $35,000, A's interest cost him $25,000 for tax purposes (his adjusted basis for the contributed property) and is now worth $17,500, while B contributed $35,000 and now also has a partnership interest worth $17,500. The depreciation deductions of $7500 allowed to A under this method and $17,500 allowed to B will properly compensate them both for their losses. The basis of A's interest in the partnership would be $17,500 ($25,000 contributed, $7500 deducted) and B's basis would also be $17,500 ($35,000 contributed, $17,500 deducted), and no further gain or loss would be recognized on sales by them of their interests.

(2) A second method would allocate the total of $25,000 in depreciation deductions equally between A and B, allowing each to adjust the basis for his partnership interest to correspond, i.e., A would reduce his basis from $25,000 to $12,500 while B would reduce his basis from $35,000 to $22,500. Now if A sells his partnership interest (worth $17,500), he will recognize $5000 of gain. His actual loss of $7500 over the life of the firm (i.e., $25,000 of basis for the contributed property less $17,500 received on the sale) is reflected for tax purposes by $12,500 of depreciation deductions and $5000 of gain on the sale. B would recognize a loss of $5000 on selling his partnership interest. Thus his actual loss of $17,500 ($35,000 contributed; $17,500 received on the sale) would be recognized

for tax purposes in the form of $12,500 in depreciation deductions and $5000 of loss on the sale.

(3) A third method would start with an adjustment of the basis of the partnership interests at the time the property is contributed. This adjustment, described in (c) above, would give A and B a basis of $30,000 each for their respective partnership interests. The depreciation deductions would then be allocated equally between A and B, and the basis of each partnership interest would be reduced by $12,500 to $17,500. There would then be neither gain nor loss on sales by them of their partnership interests. The net result would be a loss by A of $7500 (i.e., adjusted basis of contributed property was $25,000; amount received on sale was $17,500) but tax deductions of $12,500. B would have suffered an economic loss of $17,500 but would have deductions of only $12,500. The aggregate of deductions ($25,000) would correspond with the aggregate losses ($25,000), but the allocation between A and B would be unfair. Just as this method produces an inaccurate allocation of gain if the property is sold, so it produces an inaccurate allocation of depreciation; but for both purposes it is easier of application.

Of these methods, the first was adopted by the Internal Revenue Service in G.C.M. 10092, XI-1 C.B. 114 (1932). This ruling was revoked in 1950 by G.C.M. 26379, 1950-1 C.B. 58, but the Service did not then endorse another method. The American Law Institute Draft of a revised Internal Revenue Code recommended adoption of the third method, with provision for an election to employ either of the other two. See Jackson, Johnson, Surrey, and Warren, A Proposed Revision of the Federal Income Tax Treatment of Partnerships and Partners — American Law Institute Draft, 9 Tax L. Rev. 109, 119-133 (1954); Little, Federal Income Taxation of Partnerships 112-123 (1952).

The 1954 Code provides, in §704(c)(1), for use of the second method as a general rule. But §704(c)(2) permits the partnership agreement to provide for a different allocation "so as to take account of the variation between the basis of the property to the partnership and its fair market value at the time of contribution." The Senate Report (pp. 381-382) uses the first method as an illustration of a permissible method under §704(c)(2). It is not clear whether the third method would be permissible; it requires a determination of the partners' bases for their interests in the firm at variance with that prescribed by §§705 and 722; but see §705(b) and S. Rept. 384.

See also §704(c)(3), relating to undivided interests in contributed property, which permits the contributed property to be segregated from the rest of the partnership property, with gain, loss, depreciation, etc. treated as though it were still owned by the individual partners. See Examples, Regs. §1.704-1(c)(3).

SECTION C. SALES OF PARTNERSHIP INTERESTS

UNITED STATES v. WOOLSEY

326 F.2d 287 (5th Cir. 1963)

Before HUTCHESON and GEWIN, Circuit Judges, and HOOPER, District Judge.

GEWIN, Circuit Judge:

This case involves Federal income taxes for the years 1955 through 1959. The Government has appealed from a final judgment of the U.S. District Court for the Southern District of Texas in favor of the taxpayers. The question presented is whether the amounts received by the taxpayers in consideration for the sale of their rights and interests in their partnership business which owned a management contract with a mutual insurance company are taxable as ordinary income or as a long term capital gain. The sale involved a total consideration of $171,500.00. Many of the facts were stipulated and other facts were developed by testimony. There is no dispute as to the facts found by the trial court.

The taxpayers, R. T. Woolsey and V. G. Woolsey, were engaged in the management of mutual insurance companies for over 25 years. The management contract here involved existed between the taxpayers and Gulf Security Life Insurance Company, a mutual company. The taxpayers contend that the total consideration involved should be taxed as a long term capital gain, and the trial court so held. The management activities of the taxpayers were conducted as a partnership, also called Gulf Security Life Insurance Co., in which each of the brothers owned a 50% interest.

By the terms of the contract, 40% of all premiums were paid into a fund designated the "general fund," and delivered to the taxpayers. From this fund the taxpayers were required to pay all of the operating expenses of the company and any balance remaining was retained as a fee or compensation for managerial services. The management contract under consideration was executed on July 6, 1949, and was to continue for a period of 25 years. It provided that all office furniture, equipment, fixtures and all of the operating records of the company were to remain the property of the taxpayers and payment for these items was made by the taxpayers out of the 40% mentioned above. . . . For a number of years prior to 1955 the partnership filed Federal partnership returns showing income from the "management contract," and deductions for operative expenses of the insurance company together with deductions for depreciation attributable to the physical assets used in the operation and for amortization for the cost of the state-wide charter. The partnership return filed for 1954 was examined by Internal Revenue Service and accepted without change. The partnership owned no right to any renewal commissions on any insurance, but both of the brothers owned rights to renewal commissions for insurance written by them individually. Such rights to renewal commissions were not sold.

All negotiations and the sale involved the management contract, all the physical assets used in connection with management, the state-wide charter, and the operating records owned by the partnership together with all good will. The sale was consummated on August 15, 1955. In their respective returns for the year 1955, the taxpayers reported their gain from the sale on an installment basis as authorized by §453 of the I.R.C. of 1954, a pro rata portion of such gain having been reported in the years 1955 through 1959. Profits were treated as long term capital gains. The contract between the Woolseys and Gulf Security Life Insurance Company was to continue for a period of 25 years, and it contained a provision authorizing an assignment of the contract by the Woolseys in whole or in part. At the time of the assignment and sale of the contract by the Woolseys, there remained a period of approximately 19 years of the 25 years originally agreed upon. The Government contended that the gain from the sale . . . was ordinary income rather than a capital gain and asserted tax deficiencies. These deficiencies were paid by the plaintiffs, claims for refund were filed and denied, and thereafter this suit for refund was filed.

The taxpayers urgently insist that the sale involved was a sale of capital assets either under §741 or §1221-22, I.R.C. of 1954. The taxpayers vigorously contend that they sold a complete partnership interest which is a capital asset entitled to long term capital gains treatment as provided by §741; and they claim that §751 does not apply because there were no (1) unrealized receivables, or (2) inventory items which have appreciated substantially in value. The taxpayers lay much stress on the fact that the sale was of "a partnership" and "a going concern," and therefore contend that the entire transaction must be treated as the sale of a capital asset. It is strenuously argued that under the facts in this case the consideration should not be comminuted, fractionalized or fragmented and allocated to the various component parts of the "bundle" of rights and interests transferred.

Although the taxpayers set forth persuasive and ingenious arguments, we cannot agree with them.

In analyzing the problems presented by this case, it is appropriate to state that the courts have long held that the term "capital asset" is to be narrowly construed and defined. The term connotes the investment of money in property with a resulting appreciation in value accruing over the requisite length of time, and the statute is designed to lessen the hardship of taxing such appreciation in one year. Hort v. Comm., 313 U.S. 28; Corn Products Co. v. Comm., 350 U.S. 46; Comm. v. Gillette Motor Co., 364 U.S. 130. Throughout the Revenue Code there are exclusions and exception to the statute authorizing capital gains treatment. Section 751 is an illustration of such exclusions. While the term "capital asset" is to be narrowly construed, the exclusions or exceptions from the operations from the operation of the capital gains statute are to be broadly and liberally construed. Corn Products Co. v. Comm., supra.

Intricate and complicated problems are presented in applying the recognized rules to the facts in each case. Fundamental to a proper decision in each case, and to the application of well recognized rules, is a determination of the type and nature of the underlying right or property assigned or transferred. It is always pertinent to inquire how the proceeds to be received would have been taxable if there had been no assignment of the contract. Close scrutiny is required if the consideration received is actually a present substitute for what would have been ordinary earned income in the hands of the assigning taxpayer, if the assignment or transfer had not been made. A mere "sale or exchange" does not convert a right to earn income in the future which would be taxable as ordinary income to the taxpayer, into a capital gain. See Mertens Law of Fed. Income Tax., Vol. 3B, §2212, pp. 59-60.

The taxpayers have thoroughly impressed upon us their strong reliance upon §741 dealing with the capital asset provision in the sale or exchange of an interest in a partnership; but we cannot escape the conclusion that the taxpayers have over-emphasized §741 and have de-emphasized the exceptions to it as set forth in §751. The existence of a partnership does not result in the creation of a sovereign alchemist that can transmute ordinary income into a capital asset. When we look at the underlying right assigned in this case, we cannot escape the conclusion that so much of the consideration which relates to the right to earn ordinary income in the future under the "management contract," taxable to the assignee as ordinary income, is likewise taxable to the assignor as ordinary income although such income must be earned. Section 751 has defined "unrealized receivables" to include any rights, contractual or otherwise, to ordinary income from "services rendered *or to be rendered*" (emphasis added) to the extent that the same were not previously includable in income by the partnership, with the result that capital gains rates cannot be applied to the rights to income under the facts of this case, which would constitute ordinary income had the same been received in due course by the partnership. Roscoe v. Comm., 5 Cir. 1954, 215 F.2d 478; Wiseman v. Halliburton Oil Well Cementing Co., 10 Cir. 1962, 301 F.2d 654; Holt v. Comm., 9 Cir. 1962, 303 F.2d 687; United States v. Edison, 5 Cir. 1962, 310 F.2d 111. As stated by Judge Friendly in footnote 3 in *Ferrer,* after summarizing numerous cases dealing with the problem:

> These cases could well have been decided on the basis that the taxpayer held only a contract right giving him an opportunity to earn future income.

It is our conclusion that such portion of the consideration received by the taxpayers in this case as properly should be allocated to the present value of their right to earn ordinary income in the future under the "management contract" is

subject to taxation as ordinary income. This conclusion is not affected by the fact that the management contract was owned by a partnership. To paraphrase a statement from C.I.R. v. P. G. Lake, Inc., 356 U.S. 260: In short, consideration was paid for the right to earn and receive future income, not for an increase in the value of the income producing property.

We further conclude that while the assets sold may have consisted mainly of the "management contract," the consideration for which must be treated as ordinary income, capital assets also appear to have been transferred and sold. We refer to such apparent capital assets as operating records of the company; good will; and the state-wide charter. C.I.R. v. Killian, 5 Cir. 1963, 314 F.2d 852. In our opinion, part of the consideration involved requires taxation as ordinary income, and another part of it apparently requires capital gains treatment; and therefore, the consideration involved should be comminuted into its fragments and the purchase price or consideration should be allocated among the various assets sold. Williams v. McGowan, 2 Cir. 1945, 152 F.2d 570. . . .

While we are aware of the fact that it will be difficult to fragmentize the consideration, the difficulty of the task is no answer to the problem. Perfect accuracy cannot and is not expected. As stated in *Ferrer,* ". . . roughly hewn as the decision may be, the result is certain to be fairer than either extreme. . . ." (Accordingly, we Reverse and Remand to the trial court for the purpose of determining what portion of the consideration received by the taxpayers should be allocated to the "management contract" to be taxed as ordinary income; and what portion thereof should be allocated to other assets transferred which may be determined to be capital assets qualified for capital gains treatment. Further evidence will be required unless the parties can agree upon a practical solution of the problems presented.

Reversed and remanded.

NOTE

1. *Partnership interests as "capital assets."* Section 741 provides that gain or loss on the sale or exchange of a partnership interest shall be considered as capital gain or loss, except as provided in §751 (relating to unrealized receivables and substantially appreciated inventory). Before the enactment of §741 in 1954, partnership interests were treated as "capital assets" by the case law, but the government sometimes endeavored to allocate part of the sales proceeds to the selling partner's pro rata share of accounts receivable (if the partnership was on the cash basis and had not yet taken them into income), unbilled fees for services already performed, etc., and to treat this part of the proceeds as ordinary income. In a leading case involving a sale of an interest in a law partnership, such an attempt to split up the sales price was rejected by the court:

> The Commissioner here attempts to segregate partnership accounts receivable and unbilled fees for work in process and arbitrarily label both past earnings. The Commissioner argues that fees billed but uncollected, together with potential fees for work in process but not ready for billing or collection were taxpayer's "distributive share of partnership earnings" and therefore not a part of his partnership interest. We cannot agree. . . .
>
> Taxpayer was on a cash receipts basis, as was the partnership. Uncollected fees for work in process not yet completed had not been transformed on the date of taxpayer's sale of his interest into gross income within the meaning of [§183(b)(2), 1939 Code].
>
> In various of the cases heretofore cited listed among the partnership assets were such items as accounts receivable, rents receivable and unfinished work which in due course would yield gross income to the partnership. Nevertheless the various Court of Appeals and also the Tax Court treated the partnership interest as a whole, with-

out regard to the nature of the underlying assets, and held the interest to be a capital asset. [Swiren v. Commissioner, 183 F.2d 656, 660 (7th Cir. 1950), cert. denied, 340 U.S. 912.]

One judge dissented:

> . . . It cannot be gainsaid that fees earned for services performed constitute ordinary income, and that upon petitioner's withdrawal from the partnership, he had the right to receive his distributive share of the uncollected fees, or past earnings, of the partnership. Had he remained a partner, his share of the fees would have been taxable as ordinary income to him when collected. Helvering v. Smith, 2 Cir., 90 F.2d 590, and Doyle v. Commissioner, 4 Cir., 102 F.2d 86. Compare Helvering v. Horst, 311 U.S. 112; Helvering v. Eubank, 311 U.S. 122; and Austin v. Commissioner, 6 Cir., 161 F.2d 666. The courts have said that the sale of a right to receive ordinary income is not the sale of a capital asset. This is so even if the sale is of something which may be termed "property." In such a situation the sale price simply replaces the future income, but the sale price does not convert the ordinary income into capital gain. Horst v. Commissioner, 313 U.S. 28. The rule is illustrated by a decision holding that when a dividend on corporate stock has been declared, a sale of the dividend rights prior to the time the dividend is payable results in ordinary income and not capital gain. Rhodes' Estate v. Commissioner, 6 Cir., 131 F.2d 50. [183 F.2d at 661.]

Some courts rejected the *Swiren* view, however, and required a portion of the sales proceeds to be allocated to the partner's pro rata share of various "ordinary income" assets. For a review of the cases, see Sherlock v. Commissioner, 294 F.2d 863 (5th Cir. 1961).

2. *"Unrealized receivables" and "substantially appreciated inventory."* The term "unrealized receivables" is defined by §751(c) to include "any rights (contractual or otherwise) to payment for . . . services rendered, or to be rendered," if not already taken into income. In the case of a law firm, would this definition include the value of work already completed if the firm's fee is dependent upon the outcome of litigation or is discretionary with a court? See Wolcott v. Commissioner, 39 T.C. 538 (1962) ("unrealized receivables" includes amounts to be earned by architectural firm under contracts to be performed in the future); Roth v. Commissioner, 321 F.2d 607 (9th Cir. 1963) (profits to be realized under contract for distribution of motion picture).

The special treatment of substantially appreciated inventory items under §751 limits the use of the "collapsible partnership" as a substitute for the "collapsible corporation," now outlawed by §341, supra page 683. Previously it had been thought by some practitioners that partners could dispose of appreciated inventory held by a partnership at the capital gain rate by selling their interests in the firm instead of allowing the firm to sell the underlying property. See Axelrad, Collapsible Corporations and Collapsible Partnerships, 1960 So. Calif. Tax Inst. 269.

When §1245 (recapture of depreciation) was enacted in 1962, the definition of the term "unrealized receivables" in §751(c) was enlarged to include §1245 property to the extent of the §1245 gain that would be realized if it were sold by the partnership as its fair market value. A similar change was made in 1964 with the enactment of §1250 (recapture of depreciation on real property).

3. *Installment obligations.* In Rev. Rul. 60-352, 1960-2 C.B. 208, the Internal Revenue Service ruled that a limited partner who donated his partnership interest to a charitable organization realized income to the extent of his share of the partnership's "installment obligations." Under §453(d), a disposition of such obligations by gift is a taxable occasion, and the Service held that the taxpayer transferred his interest in the obligations along with his interest in the partnership:

> In G.C.M. 26379, C.B. 1950-1, 58, the Internal Revenue Service accepted the view of prevailing court decisions that, with stated qualifications, the sale of a partnership interest should be treated as a sale of a capital asset for Federal income tax purposes, rather than as a sale of the partner's undivided interest in each and every asset owned by the firm. This does not mean, however, that a partnership was thereafter treated as an entity for income tax purposes as is a corporation. On the contrary, it is still held that the members of a partnership, whether general or limited partners, jointly

own all of the partnership assets, including items of gross income, even though the provisions of the Code enabling the partnership to adopt its own accounting period and accounting method for information return purposes might cause such items of partnership income to be reflected in the individual tax returns of the partners in years other than those in which they would have been reported if the partnership had not intervened.

Thus, while the partnership interest generally may be regarded as constituting a partner's interest in the profits and surplus of the partnership, the fundamental principles of Federal income taxation require that an interest in income earned by the partnership which has not been realized, or has not yet been subjected to taxation, be treated as distinct from any "partnership interest" which is recognized as a capital asset for income tax purposes. Therefore, unrealized or untaxed rights to partnership income may be transferred with, but not as a part of, the partnership interest which constitutes a capital asset.

Is this theory consistent with the approach of §751(a), or does §751(a) assume that the transfer of the partnership interest embraces the firm's unrealized receivables?

4. *Sale of partnership interest or sale of partnership business?* Section 741 speaks of a sale or exchange "of an interest in a partnership." Did the court in *Woolsey* view the transaction as (a) a sale by the taxpayers of their interests in the partnership, (b) a sale by the partnership of its assets, followed by a distribution of the sales proceeds to the partners in liquidation of their partnership interests, or (c) a liquidating distribution of the assets of the partnership, followed by a sale by the partners of the property received in liquidation? For the treatment of liquidating distributions by partnerships, see page 764 infra. Consider also, on the problem of classifying an ambiguous transaction, the possible relevance of the *Court Holding Co.* and *Cumberland Public Service Co.* cases, supra pages 675 and 676.

5. *Reference.* Costelloe, Problems Under Section 751 upon Current and Liquidating Distributions and Sales of Partnership Interests, 15 N.Y.U. Inst. on Fed. Taxation 131 (1957).

FORD v. COMMISSIONER
6 T.C. 499 (1946)

LEECH, Judge: . . . The issues are: (1) Whether the cost basis of partnership assets should be adjusted upon the purchase of the interest of a withdrawing partner. . . .

On December 29, 1932, petitioners, together with Sara C. Ford, executed a written partnership agreement under the firm name of "The Luther Ford Investment Company." The activities of the partnership consisted primarily of purchasing, holding and selling securities. The share interests of the respective partners, as shown by the books, were as follows:

Sara C. Ford	9/27
Allyn K. Ford	6/27
Robert E. Ford	4/27
Lina Y. Ford	4/27
Emily B. Ford	4/27

On November 26, 1938, petitioners offered in writing to purchase, as individuals, for cash the 9/27 interest in the partnership of Sara C. Ford, for a total consideration of $134,738.69. Each was to contribute towards the purchase price an amount in proportion to his or her interest in the partnership. It was further provided that the remaining partners were to continue the business uninterrupted in the same name. On the same day Sara C. Ford duly accepted such offer. Appropriate entries to reflect the transaction were made on the partnership books. The partnership was continued in the same business under the same name without inter-

ruption. In December 1941, the partnership sold certain of its securities at a considerable loss. . . . In determining the deficiencies, respondent allowed two-thirds of the partnership's original cost plus one-third of the market value of all such securities as of November 26, 1938, the date of the purchase of the interest in the partnership of Sara C. Ford. It is respondent's position that each partner owns an undivided interest in each separate asset of the partnership and that when the retiring partner sells his interest to the remaining partners there is a purchase and sale of a specific asset. In support of his position reliance is placed upon the rationale of Henry V. B. Smith, 5 T.C. 323; City Bank-Farmers Trust Co. v. United States, 47 Fed. Supp. 98; and George H. Thornley, 2 T.C. 220. The respondent urges us to reaffirm our decision in the latter case, notwithstanding its reversal by the Circuit Court of Appeals for the Third Circuit, 147 Fed.(2d) 416. Those cases, however, involved the tax liability of a retiring partner. The issue here is the cost basis of capital assets of the partnership.

The courts have repeatedly recognized a partnership as a unit for computing the income tax liabilities of the individual members. . . . The respondent would have us abandon this well established concept. Unless the partnership was dissolved by the withdrawal of Sara C. Ford, respondent's theory, as we understand it, is that the partnership is not a juristic entity, even for income tax computing purposes, but is an association of individuals each of whom owns an undivided interest in each specific asset. We think such argument ignores the fact that Congress has regarded the partnership as a separate unit for computing income taxes. Thus, when a capital asset is acquired or disposed of, the gain or loss is that of the computing unit and not the individual partners. In the instant case four of the partners purchased the interest in the partnership from the other partner. The partnership, as such, engaged in no transaction affecting it as a computing unit. It continued after the withdrawal of the partner in the same business, under the same name, without interruption, as agreed. Realistically speaking, the only change that has taken place is that the remaining partners have acquired a greater interest in the profits and surplus when final liquidation occurs. After that transaction occurred, the partnership had the same identical assets as before. The partnership as a computing unit had neither disposed of any of its old assets nor acquired any new assets. Hence, there exists no logical reason for disturbing the cost basis to the partnership of specific partnership assets. The respondent suggests that the withdrawal of the partner whose interest was purchased on November 26, 1938, constituted a dissolution or termination of the partnership and the commencement of a new partnership. By the general rule of law, death or withdrawal of a partner dissolves the partnership, but it is competent for the parties to provide otherwise. . . .

In the instant proceeding, the offer to purchase the partnership interest specifically provided for the continuation of the partnership without interruption. The partners having legally contracted for the continuation of the partnership and having actually continued it, those facts should be recognized and effect thereto given, unless prohibited by some provision of the taxing act. We are not aware of any such prohibition. Moreover, under section 27 of the Uniform Partnership Act, which has been adopted by the State of Minnesota, it is specifically provided that a transfer of a partnership interest does not of itself dissolve the partnership.

The respondent has allowed two-thirds of the original cost, plus one-third of the fair market value of the securities sold as of November 26, 1938, when the retiring partner sold her interest, as the cost basis to the remaining partners. We think he erred. Since there was no dissolution or termination of the partnership in fact or by operation of law, we conclude that with respect to those securities sold by the partnership the original cost basis to the partnership of such securities

is the proper cost basis for determining gain or loss to the partnership and the individual partners, petitioners herein. . . .

NOTE

1. *The Ford case and §743(a) of the 1954 Code.* Assume A, B, and C each put up $10,000 to form a partnership. The $30,000 is invested by the firm in securities and, at a time when the securities are worth $75,000, A buys out C for $25,000. The *Ford* case holds that on a sale of the securities by the firm, A has $30,000 and B $15,000 of gain. This result can be justified as to B, who has invested $10,000 and now owns a one-third interest in $75,000. But A has invested $35,000 and has a two-thirds interest in $75,000. How can his taxable gain of $30,000 be reconciled with the fact that he has had an economic gain of only $15,000? Note that the discrepancy would be offset by a (capital) loss on liquidation: since A now has a basis of $65,000 for his partnership interest (investment of $35,000 plus $30,000 of unwithdrawn but taxed income), but will receive only $50,000 in liquidation, he will realize a loss of $15,000.

The result in the *Ford* case is endorsed by §743(a) of the 1954 Code.

2. *Elective adjustment of partnership basis under §743(b) of the 1954 Code.* Section 743(b), new in the 1954 Code, permits the partnership to elect to adjust the basis of the partnership property "with respect to the transferee partner only." Upon electing under §734(b), the basis of the partnership property as to A would be $20,000 (i.e., his two thirds of the partnership's basis) plus $15,000 (the excess of the basis of his partnership interest, $35,000, over his share of the partnership's basis, $20,000), or a total of $35,000. Upon a sale of the property for $75,000, A's gain will be $15,000 (his two thirds of the sales price, less his $35,000 basis as adjusted under the §743(b) election), while B's gain would be $15,000 (his one third of the proceeds, less his one third of the partnership basis).

A similar adjustment to basis is authorized in the case of the death of a partner. Before 1954, although the value of the deceased partner's interest at the date of his death was included in his estate in calculating the estate tax, the basis of the property of the firm was not adjusted; so that income was realized by the estate or the heir upon a subsequent sale of the property by the firm at its estate tax value. First National Bank of Mobile v. Commissioner, 183 F.2d 172 5th Cir. 1950).

SECTION D. PARTNERSHIP LIQUIDATING DISTRIBUTIONS

CARTER v. COMMISSIONER
36 B.T.A. 60 (1937)

[The petitioners and Robert Burkham, deceased, were partners in the practice of law under an agreement, executed in 1927, providing:

[I]n the event of the death of any member of the firm, his heirs, executor or administrator shall receive from the firm a sum equal to one-half of the amount actually received by such deceased partner during the two calendar years next preceding such death, said sum to be paid in equal monthly installments without interest, for a period of twelve months. . . . Such payment shall be in lieu of all interest which the heirs, executors or administrators of such deceased partner may have in any fees received by the firm subsequent to the date of such death . . . and in full payment of the interest of such deceased partner in the library and office equipment of the firm.

Each member of the firm hereby agrees in the event of his death that no administration of the firm or its assets shall be required, and waives all right thereto and agrees that the payment made to his heirs, executors or administrators as above provided, shall be taken and received by them in full payment for his interest in the firm and its assets.

[Upon the death of Robert Burkham, the payments required by the agreement were made to his estate.]

HILL: Petitioners allege that respondent, in determining the deficiencies, erred in treating as distributable income of the partnership [a law firm] and including in taxable income of each of the petitioners, other than the estate of Robert Burkham, deceased, their respective proportionate interests in the amount paid to the estate of decedent during the taxable year, pursuant to the partnership agreement of January 1, 1927. Substantially, the position of the petitioners is that the sum paid to the deceased partner's estate was that portion of the income from fees received by the partnership which was due the decedent's estate, and was received by the partnership as trustee for such estate.

The facts were stipulated by the parties, and on this issue, among other things, it is stated that neither of the petitioners nor any members then constituting the co-partnership

> received any part of the sum . . . paid to the estate of Robert Burkham, deceased, but pursuant to the terms of the agreement of January 1, 1927 herein referred to, said sum was received by the co-partnership with the duty imposed to pay the same to the said estate of Robert Burkham, deceased, which duty was duly performed, as aforesaid.

The meaning intended to be expressed in the quoted stipulation . . . is not entirely clear, but we need not construe it. If it was meant to say that the money out of which the sum in controversy was paid to the decedent's estate was not first "received" by the partnership it is contrary to the facts otherwise clearly established by the record and must be rejected. William Ernest Seatree, 25 B.T.A. 396; Volunteer State Life Insurance Co., 35 B.T.A. 491. If the parties intended to stipulate that the sum was received by the partnership not as its own property but in trust for the estate of the deceased member, then the stipulation amounts to a legal conclusion and must be disregarded. . . .

It is conceded by all parties that the death of Robert Burkham dissolved the old partnership, and that the new partnership organized by the surviving members paid the amount in controversy to the decedent member's estate under and pursuant to the terms of the partnership agreement of January 1, 1927; also that the principal purpose of the agreement was to eliminate a partnership administration upon the death of a partner and an accounting over a long period of time by the surviving partners.

Solution of the problem presented here depends upon whether the sum paid to Burkham's estate represented his share of fees earned by the partnership prior to but uncollected at the time of his death, or whether such payments constituted the consideration paid by the surviving members for Burkham's interest in the old partnership and its assets. Bull v. United States [infra p. 1090].

The conclusion seems inescapable to us that by the payment of a definitely ascertainable consideration, which is the amount here in controversy, the surviving partners of the old partnership purchased all of the interest of the deceased Burkham in the firm and its assets. The parties have stipulated that one of the purposes of the partnership agreement was to fix at death a definite sum for payment to the estate of a deceased member, regardless of whether, in the absence of such agreement, the amount payable to the deceased partner's estate for his interest in the partnership would have been greater or less than the amount fixed by the agreement.

Whether the interest of the deceased Burkham had in fact a fair value of more or less than the amount paid under the contract, and whether or not the survivors derived a profit from their purchase of his interest for such sum, does not appear from the record. No question is raised on this point. Likewise, it does not appear what assets, if any, the partnership owned other than a library and office equip-

ment of undisclosed value. The petitioners offered no evidence as to these matters. But in the state of the record before us, they are in any event immaterial.

The fact remains that the surviving partners purchased the interest of Burkham in the firm and its assets, for a stated consideration. Thereupon, they became the exclusive owners of all uncollected fees, whether the services for the rendition of which such fees were received were performed either prior or subsequent to his death. It was out of such fees that the amount in question was paid to Burkham's estate. The amount, therefore, constituted distributive income of the new partnership when received, and is taxable to the petitioners to the extent of their respective interests, whether in fact distributed to them or not.

The partnership did not act in a fiduciary capacity in respect of any of the fees collected after the death of Burkham. His estate had no interest therein. Under the partnership contract it had only the right to demand payment of the stipulated amount. It was not entitled to payment out of fees; and in case no fees had been collected within the time fixed for payment, the estate would still have been entitled to receive the amount agreed upon, and the partnership could have fully discharged its obligation by payment out of any fund, whether or not it embraced fees collected subsequent to Burkham's death. . . .

The conclusions reached above are not in conflict with our decision in Gussie K. Barth, 35 B.T.A. 546. The latter case is distinguishable on the facts. There the partnership contract provided that "the partnership shall not be immediately dissolved by reason of the death of a partner but his interest therein shall be determined" by payments to his widow for a period of three years of specified percentages of what would have been the deceased partner's distributive share in the proceeds from the business if he had remained alive. The amount received by Barth's widow did not represent payment for capital assets. In the instant case, the old partnership owned tangible assets and the amount paid to the decedent's estate was for his interest in the old partnership, including such assets.

Furthermore, in the *Barth* case, the question presented was whether the amount paid by the surviving partner constituted income taxable to the widow of the deceased partner. Here the question is whether the amount paid to the decedent's estate by the surviving partners, having been paid out of income (that is, out of fees collected by them), constituted distributive income taxable to the members of the new or succeeding partnership. Since the transaction before us was clearly a purchase and sale of the deceased partner's "interest in the old partnership and its assets," the consideration paid by the new partnership out of income is taxable to the members of that partnership, whether or not the consideration so paid also represents *in whole or in part* taxable profit to the decedent's estate. In no event, therefore, does the *Barth* case rule the decision in the instant case.

HALL v. COMMISSIONER

19 T.C. 445 (1952)

TIETJENS, Judge: The partnership of Touche, Niven & Company paid certain amounts during its fiscal year ended September 30, 1947 to Whitworth, Clowes, and the estate of Victor E. Stempf. The sole issue is whether $48,668.26 of these amounts was paid as part of the purchase price of the interests of these former partners, or as a distribution of profits, as income, to the retired partners and the estate. . . .

The payments in controversy were part of a total of $288,433.26 which the administrative partners had agreed to pay Whitworth, Clowes, and the estate of Stempf under the partnership agreement of 1936, which was in effect at the times Whitworth and Clowes retired and Stempf died. This agreement provided

that the death or retirement of a partner should not dissolve the partnership between the remaining partners and required the continuing partners to make certain payments to the retired partners or estates of deceased partners. The continuing partners were required by Article XI, section 1, to repay any loan made the firm by the former partner, as well as his current account balance and his share of the past distributable profits. His paid-up participation in the stated capital was to be repaid in installments with interest. Article XI, section 2, provided that in case of the death of a partner, or his retirement at age 65 there was to be paid, in addition, an amount to be fixed by the administrative partners, which amount was to be measured by the former partner's share in earnings in past years or the share he would have had in the next 3 years' profits had he continued as a partner; it was to be paid out of distributable profits in installments over a period of 6 years; and the agreement stated the payment "is intended as a distribution of income to the retiring partner or the estate of a deceased partner for a limited period subsequent to his retirement or death." In section 3 of Article XI, authority was given the administrative partners to pay such sum as they might deem advisable in the case of any partner retiring before reaching age 65, or withdrawing for any other reason.*

The solution of the question depends upon the intent of the parties and that is to be derived from the 1936 partnership agreement. Despite contrary arguments, we think the payments here involved were made pursuant to section 2 of Article XI of that agreement and, accordingly, are controlled by that section. . . .

---

* "Section 2. If any partner shall retire pursuant to Section 2 of Article X hereof after attaining the age of sixty-five years or shall die at any age, there shall be payable, in addition to the amounts hereinbefore provided in paragraphs (a), (b) and (c) of Section 1 of this Article XI, to such retiring partner, or to the personal representatives of such deceased partner, out of distributable profits, such amount as may be determined by the decision of a majority in interest of the Administrative partners but in no event less than the smaller of the following:

"(a) an amount equal to three (3) times the annual average of the sum of the salary plus the distributable profits of the partnership which such deceased or retiring partner received or was entitled to receive in respect of the business of the partnership carried on during the ten (10) fiscal years of the partnership next preceding the fiscal year in which such partner died or retired; or

"(b) an amount equal to the sum of the salary plus the distributable profits of the partnership to which such deceased or retiring partner would have been entitled, if he had not died or retired and if his ratio in the profits of the partnership had not been altered, in respect of the business of the partnership carried on during the three (3) succeeding fiscal years of the partnership, including the fiscal year in which such partner died or retired, but for the purposes of this subdivision (b) the distributable profits shall be determined after deducting current salaries and current interest on capital of any additional partners as well as those of the surviving or continuing partners.

"The amount so determined to be payable shall be payable, without interest, in six (6) equal annual instalments, the first of which shall become payable at the expiration of one (1) year from the date of death or retirement or at such earlier date as a majority in interest of the Administrative partners may determine, but, unless the distributable profits then available shall not be sufficient, no annual instalment payment during each of the first three (3) years after such death or retirement shall be less than fifty per cent (50%) of the annual salary of such deceased or retired partner at the date of his death or retirement, or less than five thousand dollars ($5,000) per annum.

"The payment under this Section 2 is intended as a distribution of income to the retiring partner or the estate of a deceased partner for a limited period subsequent to his retirement or death.

"The provisions for the payment to be made under this Section 2 of this Article XI are limited to the cases specifically provided for hereunder and do not apply to any partner who retires or withdraws at any other age or for any other cause.

"Section 3. Notwithstanding any of the provisions of this Article XI, by decision of a majority in interest of the Administrative partners, there may be paid such sum of money in such instalments as they shall deem advisable to any partner retiring before he attains the age of sixty-five (65) years or to any other partner who may withdraw for any other reason." — Ed.

The payments, being made pursuant to section 2, are subject to certain other provisions of that section. They were to be made "out of distributable profits" and they were "intended as a distribution of income to the retiring partner or the estate of a deceased partner for a limited period subsequent to his retirement or death." Also, it was provided that no annual installment in the first 3 years should be less than 50 per cent of the partner's annual salary at death or retirement or less than $5,000, "unless the distributable profits shall not be sufficient." Thus the payments were keyed to the existence of profits, and the intent appears that a partner who retired, or the estate of a partner who died, was to continue for a time to participate in the profits on the same basis and in approximately 50 per cent of the amount as before the event. We find no language in the written agreement which would justify a conclusion that the retiring partners intended to "sell" their interest in the partnership to the continuing partners, or vice versa, that the continuing partners intended to "buy" the retiring partners' interests.

The case of Charles F. Coates, 7 T.C. 125, is here apposite. There are factual differences, but we do not think them significant. Respondent has acquiesced in that case, 1946-2 C. B. 2. Coates was a continuing partner in an accounting firm which provided in the partnership contract that the death of a partner should not operate to dissolve the co-partnership, that the estate should continue as a member for 5 years with no direct voice in management, that the estate should participate in the net earnings in stated proportions and not be liable for losses, that the deceased partner's "capital interest" should be settled as soon as possible, and that at the end of 5 years and the completion of the payments the interest of the deceased parties should terminate. No partner had contributed any capital and capital was not important in that personal service organization. The "capital interest" consisted of (1) the pool of undrawn earnings (the amount withdrawn having been limited to 85 per cent of each partner's share for the previous year) and (2) the value of the work then in process. We noted that since the agreement provided for the return of any remaining interest in the firm's assets it was difficult to find evidence of an intent to sell the interest of the deceased partner, that the parties placed no value upon the good will and partnership name and that ordinarily no substantial value attaches to good will of such a personal service partnership. We said further:

In addition to the provisions for the return of the "capital interests" to the estates are the provisions with which we are here concerned for participation by the estate of a deceased partner in the earnings of the partnership for five years after the partner's death. These payments have no relation to the other type of payments provided for the liquidation of the capital account. They provide simply that the estate of any deceased partner shall participate to the extent there provided in the net earnings of the partnership for a period of five years. The evidence establishes that this provision was intended by the parties not to be the consideration paid by the surviving partners for the capital interest of a deceased partner upon the dissolution and liquidation of the partnership, but was intended to be a present consideration given by each partner upon the formation of the partnership. It was intended to be in the nature of a mutual insurance plan, the disadvantage of which each partner was willing to accept in consideration of a similar commitment for his benefit on the part of all other partners, and, in part, as further compensation for the past services of the deceased partner payable after his death.

These payments were not made in liquidation of any capital interest of the deceased partner in the firm's assets. The only payments of this nature required upon the death of a partner were the payments on account of past earnings and work in process, here designated as the "capital account." In addition to these payments, the estate of a deceased partner was entitled to the payment of a share of post death earnings, not in consideration of a sale of partnership assets on liquidation, but in consideration of mutual promises

contained in the original partnership agreement having no relationship to such a sale. These payments arose out of and depended upon the contract and their character must be determined by its terms. The estate acquired, upon the death of the partner, a vested contractual right to a share of the earnings, as earnings, and this right was fortified by a power lodged in the trustee to require a liquidation of the business if its rights were not fully respected by the surviving partners. When and as the income was earned, it became immediately subject to the preexisting rights of the estates to their share of it. The amounts so distributable to the estates were not distributable to any surviving partner, with the result that here, as in Richard P. Hallowell, 2nd, supra, the disputed amount attributed by the respondent to each surviving partner may not be regarded as "his distributive share, whether distributed or not, of the net income of the partnership."

The case of Richard P. Hallowell, 2nd, 39 B.T.A. 50, referred to in the above quotation, is also in point. There, the agreement provided that the interest of the estate of a deceased partner should be deemed a loan and that the estate should have the same interest in profits the deceased partner would have had if living, until the termination of a period agreed upon. Since settlement of the capital interest was to be accomplished under other provisions of the agreement, we concluded that the estate shared in profits as a matter of right under the contract. See also Sidney Hess, 12 T.C. 773, and cf. Estate of Boyd C. Taylor, 17 T.C. 627.

Clowes and Whitworth, and respondent in this proceeding, rely upon certain cases to the effect that where the partners agree that a deceased partner's interest shall be acquired by the surviving partners by payments of firm profits to his estate, there is a sale of the interest and the profits so paid are taxable to the survivors and represent the purchase price of a capital asset. See Hill v. Commissioner (C.A. 1, 1930), 38 F.2d 165; Pope v. Commissioner (C.A. 1, 1930), 39 F.2d 420; W. Frank Carter, 36 B.T.A. 60 (1937), and Estate of Bavier C. Miller, 38 B.T.A. 487 (1938). In these cited cases the deceased partners had made a capital investment in the partnership which was not repaid to their estates, but was transferred to the surviving partners in consideration of the payments involved. In the present case the capital investments of the deceased or retiring partners were returned to them in full pursuant to section 1(c) of Article XI. Payment of the distributable profits for the current year of retirement or death was also provided for in section 1(b) of Article XI. The payments provided for in section 2 or 3 of that Article were additional and distinct. Since they could not be a return of capital they could be only distributions of income. We think these cases are distinguishable on their facts. No sale or purchase of partnership interests was here intended. See Bull v. United States, 295 U.S. 247 (1935).

Clowes and Whitworth contend that the partnership had good will of a considerable value and working papers which were an asset in their business, that the interest of the retiring partners in these items was the subject of a sale in the transfer of their interests to the continuing partners and that the payments in controversy were intended as the purchase price of these assets. This argument is not borne out by the agreement. Article IV provides that a deceased, retiring, or withdrawing partner shall have no interest in the firm name and no right to receive any payment therefor. As to the good will, in the first place it is inextricably associated with the firm name and not transferable otherwise, and in the second place the good will of a personal service organization such as this, is rarely a vendible article. Charles F. Coates, supra. As for any good will attaching to Whitworth or Clowes individually and separate from firm good will, these retiring partners made no agreement not to compete with the firm and hence must be deemed not to have relinquished or transferred it, if indeed it could be transferable. The firm in its financial calculations at no time placed any value upon the

firm name, good will, or working papers. Nor do we find anything in the agreement disclosing any intention to value good will as such or to make any payments in consideration of the sale thereof to the surviving partners.

We think that the partners in entering into the 1936 agreement, intended that a retired partner, or the estate of a deceased partner, should share in the profits of the firm, as profits, for a limited period after the event, that the provision was in the nature of a mutual insurance plan in which each partner assumed its possible burdens in consideration of the assumption of a like obligation by his partners to him, and that the payments here in controversy were properly deducted by the continuing partners in determining the distributable partnership income taxable to them.

Because of conceded adjustments,

Decision will be entered under Rule 50.

NOTE

1. *Liquidating payments to retiring or deceased partners under the 1954 Code.* In 1954, because "existing case law presents no consistent approach" to the tax treatment of payments to retiring or deceased partners (S. Rept. 97), Congress enacted §736 as a statutory guide to this area. The *Carter* and *Hall* cases should be re-examined with §736 in mind. Assuming a payment in cash (a payment in property presents added complications, though the basic principle is the same), §736(b) provides for segregating the portion that is paid "in exchange for the interest of such [retiring or deceased] partner in the partnership property." This may not include any amount paid for goodwill, unless the partnership agreement provides for such a payment, or for unrealized receivables. The amount thus paid for the partner's interest is treated as a distribution by the partnership, and hence is subject to the rules of §731; so far as the retiring partner or the successor in interest of the deceased partner is concerned, and assuming no substantially appreciated inventory is involved, this means that capital gain or loss will be recognized to the extent of the difference between the amount received and the basis of the retiring or deceased partner's interest. Conversely, the continuing partners may not deduct the payments.

Liquidating payments that are not paid "in exchange for the interest of such [retiring or deceased] partner in the partnership property" (as just defined) are treated as a distributive share of partnership income if the amount is determined by reference to the partnership's income, and otherwise as guaranteed payments. In either event, the payments will be taxed as ordinary income to the recipient and will be either excluded or deducted so far as the continuing partners are concerned.

Of special importance is §731(b)(2)(B), under which a payment for goodwill falls on the ordinary income side of the line "except to the extent that the partnership agreement provides for a payment with respect to good will." Must the agreement expressly label the payment, or can a taxpayer prove independently that a payment was intended as compensation for goodwill? See Smith v. Commissioner, 313 F.2d 16, 20, 21 (10th Cir. 1962), citing the *Lester* case, supra page 184, in holding that the agreement must be explicit:

> [The reasoning of the *Lester* case] would appear to be particularly applicable here and we think the payment in question should be treated as ordinary income rather than capital gain since the articles of partnership do not specifically provide that the payment is for goodwill. If intent is to be determined by something other than the plain language of the partnership agreement, uncertainty and confusion will becloud the issue and the efforts of Congress to clarify a complex situation will go for naught. Important, also, is the fact that this result treats fairly both the expelled partner and the remaining partners as the tax consequences are determined in advance by the contract to which they all agreed.

See also Jackson Investment Co. v. Commissioner, 42 T.C. No. 67 (1964) (original partnership agreement did not provide for goodwill payments; held, later agreement to make

payment for goodwill does not constitute an amended partnership agreement within meaning of §761(c), so as to satisfy §736(b)(2)(B)'s requirement of a provision in "partnership agreement").

If the agreement of a professional partnership explicitly provides that a payment is for goodwill, however, may it be disregarded in whole or in part in the light of Rev. Rul. 57-480, supra page 575, and Rev. Rul. 60-301, supra page 576?

Suppose the agreement provides that upon the death of a partner, his entire interest in the firm's assets and earnings shall cease, and that a "death benefit" shall be paid to beneficiaries named by him, either in a stated sum or in an amount equal to a specified percentage of the firm's previous or subsequent earnings for a stated period. Is §736 applicable? Does it apply to an agreement providing that upon the death of a partner, his executor may elect to continue as a partner for a limited period, receiving a stated percentage of the firm's profits, with the estate having no further claim of any kind on the firm's assets or earnings?

2. *Liquidation vs. sale of partner's interest.* Note that "payments made in liquidation of the interest" of a retiring or deceased partner under §736 are taxed differently from the proceeds of a "sale or exchange of an interest in a partnership." On a sale or exchange, the amount received will produce capital gain or loss in its entirety under §741, except for the amount, if any, attributable under §751 to unrealized receivables or substantially appreciated inventory items. Supra page 761. A major distinction between the two approaches lies in the treatment of a payment for goodwill. Such a payment will produce ordinary income under §736, unless it is provided for in the partnership agreement, and even then the Senate Report (p. 395) states that the payment "may not exceed the reasonable value" of the partner's interest in goodwill. See again what is said about goodwill in the *Hall* case. Under §§741 and 751, however, a payment for goodwill is not taxed as ordinary income when a partnership interest is sold or exchanged.

Section 736 deals only with "payments made in liquidation of the interest" of a retiring or deceased partner, and by virtue of §761(d) this phrase is restricted to a distribution, or a series of distributions, "to the partner by the partnership." Payments by others are governed by §§741 and 751 rather than by §736. Note the statement in the *Carter* case that "the surviving partners of the old partnership purchased all of the interest of the deceased Burkham in the firm and its assets"; similarly in the *Hill* case, cited by the court, the partnership agreement "provided for the sale of the interest of a deceased partner to the surviving partners." Would the payments in these cases be governed by §736 or by §741? Is there a difference between selling the retiring or deceased partner's interest to the surviving partners in proportion to their respective interests in the firm, and a liquidation of the partner's interest under §736? See Regs. §1.736-1(a)(1)(i); Foxman v. Commissioner, 41 T.C. No. 51 (1964) (transaction treated as sale of partnership interest to two remaining partners, rather than a liquidation).

3. *Optional adjustment of basis on partner's death.* The election under §743, discussed supra page 764, in connection with transfers of partnership interests, is also applicable on the death of a partner.

CRAWFORD v. COMMISSIONER

39 B.T.A. 521 (1939)

HILL: . . .

Petitioners filed this proceeding . . . for a determination by the Board of an alleged overpayment of taxes amounting to $39,883.56 for said year. . . . The facts are stipulated.

The petitioners are executors of the will of George W. Crawford, deceased. During his lifetime the decedent was a one-fourth co-owner of the Venempa Investment Co., a partnership, formed December 26, 1938, in Pittsburgh, Pennsylvania, to engage in buying, selling, and dealing in stocks, bonds, and other commercial securities. Including contributions made at the time of the partnership's organization, each of the four partners paid in to its capital cash in the amount of $262,815.96, and securities for which they were given capital credits on the partnership books. The securities contributed by the decedent included 10,000 shares of Western Public Service Corporation stock which cost him $25,200 when acquired in 1928; also, two blocks (of 1,250 shares each) of Lone Star Gas Corporation stock, each block costing $5,195.27 when purchased. The 10,000 shares of Western Public Service Corporation stock had a fair market value of $283,125 when contributed to the partnership, and decedent received a credit upon the partnership books in the amount of their cost ($25,200) for the same. The two blocks of Lone Star Gas Corporation stock had fair market values in the respective amounts of $82,812.50 and $81,250 when contributed to the partnership, and decedent received a credit therefor upon the partnership books in the respective amounts of $81,250 and $50,000.

In and during the years 1928 to 1932, inclusive, the partnership had net earnings which, for the whole period, exceeded its losses. It distributed no part of its earnings to members and, at the end of 1932, had on hand undistributed earnings, represented principally by investments in securities, of which the value of decedent's partnership interest amounted to $128,250.65. On December 31 of the latter year the partnership was dissolved by mutual consent and its assets distributed. The decedent received in this distribution $83.69 in cash and securities of a total market value amounting to $233,500.

In decedent's income tax return for 1932 no deduction from gross income was claimed for any loss sustained in liquidating his interest, as aforesaid, in the partnership. The petitioners claim, and ask us to find in this proceeding, that a loss was sustained in that transaction, and that failure to take a deduction for it in decedent's income tax return for 1932 resulted in an overpayment of taxes in the amount of $39,883.56. The issue is governed by the Revenue Act of 1932, and the pertinent provisions of Treasury Regulations No. 77.

Relating to "Readjustment of Partnership Interests," article 604 of Regulations 77, among other things, provides that when a partner retires from a partnership, or it is dissolved, the partner realizes a gain or loss measured by the difference between the *price received* for his interest and the *cost to him* of such interest, including in such cost the partner's share in undistributed partnership net income on which income taxes have been paid. Also, that if in a dissolution the partnership assets are distributed to the members *in kind and not in cash,* the partner *realizes no gain or loss until he disposes of the property received in liquidation.*

The petitioners contend that by virtue of the provision first above mentioned, a loss to the decedent through liquidation of his partnership interest is established. That this loss is the amount by which the cost of his partnership interest exceeds the cash ($83.69) and the market value ($233,500) of the assets distributed to him.

The parties are in accord on the cost of decedent's partnership interest. They also agree what the "market value" of all assets distributed to decedent was when the partnership was dissolved. However, at the time the return here involved was filed, the assets distributed to decedent had not been disposed of, and the respondent contends that, under the provision of the regulation last above mentioned, no gain or loss may be recognized until a sale or disposition of them has been made. The petitioners counter this contention with the argument that application of the provision is logical and proper, only when applied to cases where the

assets distributed in a partnership liquidation have no determinable value. They argue that where basic values are agreed upon, as in the case at bar, the actual gain or loss is ipso facto established and must be recognized under the provisions of such regulations, as well as under [§1001(a) and (b), relating to the computation of gain or loss on the sale or other disposition of property].

The petitioners also contend that the effect of respondent's holding in the premises is to place an unconstitutional construction upon and render void the provision of the regulation relied upon by him.

In pressing their argument that the challenged portion [Art. 604, Regs. 77] is illegal, and therefore void, the petitioners admit in their brief that they know of no case directly in point, but cite Helvering v. Walbridge [supra p. 752], where the court in its opinion by way of dictum referred to the provision as "of doubtful validity," except in cases where the asset dealt with had no fair market value. Petitioners also quote [Magill, Taxable Income 134-138 (rev. ed. 1945)], where that author in discussing a related phase of the problem of partnership gains refers to reasons given by the Advisory Board of the Treasury for the rule of construction here applied by the respondent, as "not wholly convincing."

In our opinion the portion of the regulation objected to by the petitioners is reasonable in its application to the facts before us and must be sustained. Obviously, the petitioners misconstrue the exact character of the transactions which, they conclude, resulted in a loss to the decedent. The net effect of petitioners' reasoning is that, when a partnership dissolves and distributes its capital assets among members, each member *disposes* of his partnership interest for a price, or that he receives such distribution in cancellation or redemption of an interest in the partnership. The fact is that such distribution does not confer title to the assets upon the members, but is merely an apportioning among them of what they already owned jointly. Petitioners' decedent and others contributed securities and cash to a fund to be used in the partnership business. The partnership operated this fund over a period of years. The net profits from such operation were taxable distributively to the members of the partnership and likewise the net losses of the operation were deductible proportionately by the members in determining their income tax liability. What remained of the fund at the dissolution of the partnership was the property of the members and was the residuum of what they had contributed to the fund. The partnership fund was at all times the property of the members and neither the dissolution of the partnership nor the distribution of the fund affected such ownership in any way.

The fallacy of petitioners' assumption is clear when one considers the character of partnerships. An ordinary partnership, such as we have here, has no entity in the sense that it may own property separate and apart from the ownership thereof of its members. The members, at all times, own the partnership business and the assets employed in it, and are, therefore, never separated from title thereto. The dissolution of the partnership in question in no way affected the title to the assets of the partnership fund but the title to such assets, which, ab initio had rested in the members, continued in them. Accordingly, the distribution of assets which took place upon dissolution of the partnership neither added to, nor took from, the economic interests of the partners. The net effect of the process was not to create new interests and values, but merely to apportion and deliver to each member, according to his ratable interest, that which represented his then investment, leaving him no richer or poorer than he was before the dissolution. Cf. William S. Gordon, Trustee, 33 B.T.A. 460, 464; J. Henry Dick Estate, 20 B.T.A. 637. Such result, of course, does not obtain where the partnership is a business syndicate beyond the direct control of the individual members. William S. Gordon, Trustee, supra. Nor, in a case where a partner sells his interest to another, or

retires from the partnership, upon an agreed consideration and the business is continued. In such cases, title to the retiring partner's interest passes to another, and a closed transaction takes place. Hill v. Commissioner, 38 Fed.(2d) 165; Pope v. Commissioner, 39 Fed.(2d) 420.

The distinction between the transaction at bar and the cases just cited by us is obvious and clear. What the decedent received in the distribution was not a consideration in exchange for his investment in the partnership fund, but his aliquot part, in kind, of the assets comprising such fund which theretofore he and his partners owned and held at risk in the business. Obviously, there was no disposition of partnership interest or of the interest of decedent in the partnership fund in this case and the provision of the regulation aptly applied to the transaction.

The petitioner's contention that the challenged provision denies to them the benefit of loss deductions otherwise allowable under the revenue acts is unwarranted by the facts. The petitioners assume that a loss must be conceded, because the stipulation shows that the market value of the assets distributed to decedent was less than his contributions to the partnership's capital plus his part of its undisbursed income. This assumption is erroneous. As hereinbefore pointed out, the assets received by the decedent on dissolution of the partnership represented his part in an investment which still exists. The fact that the investment was made through the medium of a partnership did not change its character, and the provision of the regulation, supra, which postpones realization of gain or loss until the assets are sold is obviously made to preserve such character.

The petitioners cite certain court and Board decisions which they contend support their theory that the distribution here considered must be given the effect of a sale or exchange in which a transfer of title to an interest in the assets disbursed took place. Among the cases cited in support of such theory are the Board cases of Edward B. Archbald, 27 B.T.A. 837; affd., 70 Fed. (2d) 720; Carroll E. Donner et al., Executors, 32 B.T.A. 364, and Cyrus S. Eaton, 37 B.T.A. 715; and Federal court cases, Chisholm v. Commissioner, 79 Fed. (2d) 14; and Helvering v. Walbridge, supra.

In our opinion, none of the cases so cited support the contentions petitioners here make. Rather, we think, if applicable to any phase of this controversy, the cases, in so far as they throw light, support the respondent's theory that the bare distribution of partnership assets "in kind" upon dissolution is not such a liquidation of the partner's interest as to bring into realization gain or loss to the partner. The cases cited do not deal with dissolved partnerships, or the direct question here involved. They do deal, however, with questions involving the taxability to partners, as individuals, of the increments or values by which assets contributed to the partnership capital may have increased over their initial cost of the partner.

On the latter question, the cases cited concur in holding that no gain results to the contributing partner for the increment to assets contributed in kind to the partnership until the partnership is dissolved because, until then, there is no liquidation of the assets whereby such increment can be realized as gain. Moreover, the cases hold that the ownership of partnership assets, at all times, is in the members; from which it follows that, when the assets are distributed "in kind," rather than being liquidated through sale and the cash disbursed, the partner receives, individually, his interest or part of that property which he theretofore already owned, although collectively or jointly with his copartners. If the corpus of the partnership is first reduced to cash, and the cash distributed to the member, then, of course, gain or loss may be realized as provided for in like cases of sales of property. We find no conflict in the decisions cited and the views we have

herein expressed. We think the provision in the regulation challenged is in harmony with the law and we therefore sustain the respondent's interpretation. . . .

NOTE

1. *Liquidating distributions under the 1954 Code.* The theory of the old regulation and of this case has been in general carried over by §731(a), but some modifications have been introduced.

Under §731(a)(2), a partner having a gain on a liquidation will (a) recognize it in full if the distribution consists entirely of cash, (b) recognize it to the extent that the cash exceeds the adjusted basis of his partnership interest if he receives both cash and money, and (c) recognize no gain until the property is sold if he receives only property.

A partner suffering a loss on a liquidation recognizes it if he receives only cash; but if he receives property (or property and cash), he must ordinarily postpone a recognition of the loss until the property is sold. See generally Little, Partnership Distributions Under the Internal Revenue Code of 1954, 10 Tax L. Rev. 161, 335 (1954). But if the distribution is entirely of cash, unrealized receivables, or inventory (or a combination of these items), loss will be recognized. Thus if the partner, in liquidation of an interest that has an adjusted basis of $10,000, receives $3000 in cash, and unrealized receivables and inventory with an adjusted basis to the firm of $5000, the partner will have a loss of $2000 regardless of the value of the receivables and inventory. This is because his adjusted basis for his partnership interest ($10,000) exceeds by $2000 the sum of the money received ($3000) and his adjusted basis, determined under §732(b) and (c), of the receivables and inventory ($5000). Why is the basis to the distributee partner of the inventory and receivables deliberately kept down to the firm's basis therefor, even though doing so gives him an immediate loss on the liquidation? Note §735(a) and the second sentence of §731(a).

2. *Basis of property distributed in liquidation.* If the partner's gain or loss is not recognized at the time of liquidation, it is necessary to allocate his adjusted basis for his partnership interest among the various assets received by him. Note that §732(b) and (c) does not countenance a stepped-up basis for unrealized receivables and inventory.

CHAPTER 9

Accounting and Income Taxation

SECTION A. ACCOUNTING METHODS

1. *Introductory*

Section 446(a) and (b), providing that taxable income shall be computed under the taxpayer's regular method of accounting unless it does not "clearly reflect income," is substantially the same as §41 of the 1939 Code.

Section 446(c), specifying certain methods of computing taxable income, is new.

Section 446(d), permitting the taxpayer to use a different method of accounting for each trade or business in which he is engaged, is new.

Section 446(e), requiring the consent of the Treasury if the taxpayer wishes to change his accounting method, is similar to Regs. 118, §39.41-2(c), 1939 Code.

AMERICAN ACCOUNTING ASSOCIATION, ACCOUNTING PRINCIPLES AND TAXABLE INCOME *

27 Accounting Review 427 (1952)

Summary

1. In the several statements of "Accounting Concepts and Standards Underlying Corporate Financial Statements" issued by committees of the American Accounting Association in 1936, 1941, and 1948, fundamental propositions concerning the functions of accounting in respect to revenue realization, costs, income, and capital were set forth. The objective in so doing was to present a coordinated statement of principles and suggested applications representing levels of accounting practice "departures from which should be viewed with concern."

2. Under the tax laws of the United States, Congress has enacted taxes on the net incomes of corporations. In the enactment of these laws and in their administration, by regulation or as a result of Court decisions, there have developed determinations of taxable income which are at variance from determinations of net income for financial statement purposes under generally accepted accounting principles.

3. These differences between taxable income and accounting net income may be classified generally into two principal categories:

(a) Differences of specification — those resulting from Congressional enactments designed to grant concessions as a matter of legislative grace or to deny or limit deductions as a matter of economic control or for purposes of raising revenue.

(b) Difference of timing — those which affect principally the time of recognition of income or of deductions, usually resulting from legalistic interpretations of the tax statutes by Court or regulative decisions (thereby setting a precedent for subsequent administration).

* Reprinted by permission.

4. These differences result largely from differences in purpose. The purpose of the revenue laws is to establish practical formulae for the collection of taxes (and at times to regulate the economy). Financial accounting determinations of net income are designed to measure business results as they occur, without recognizing any artificial exclusions or modifications. Despite these differences in purpose, business has sometimes allowed its accounting practices to be influenced, largely for convenience, by income tax provisions. In at least one case, also, the income tax law has undertaken to decree the procedures of financial reporting.*

5. The Committee has undertaken to examine these conditions for the particular purpose of dealing with the following questions:

(a) Recognizing that the purposes of defining a base for income taxation and of measuring net income for published financial statements do differ, to what extent, if at all, is it necessary or desirable for taxable income to differ from accounting net income?

(b) If such differences appear, to what extent should income tax practice be recognized in determining net income for financial accounting purposes?

(c) Should financial accounting procedures or reporting methods ever be decreed by Congressional statute?

6. The Committee's conclusions on these questions are as follows:

(a) The right of Congress to grant tax concessions as a matter of legislative policy, or to impose economic or social disciplines, or to deny deductions for the purpose of generating revenues, is unquestioned. However, neither the Congress nor the administrative authorities nor the Courts should undertake to modify the application of generally accepted accounting principles, consistently used by the taxpayer for published statement purposes, solely to alter the timing of recognition of income or expense for tax purposes.

(b) Corporate accounting practices for purposes of published financial statements should be governed wholly by generally accepted accounting principles, irrespective of measurements of taxable income under provisions of the tax laws.

(c) Accounting principles should not be formulated or public reporting methods prescribed by directives of the tax laws; the body of accounting principles and the methods of reporting should evolve from the needs and uses of the broad public interest.

Discussion

7. Since the enactment in 1913 of the first revenue act under the Sixteenth Amendment, there has been a notable and unfortunate lag in the legal appreciation of accounting principles. This was responsible for the failure to recognize the accrual concept in the early tax laws. The 1913 income tax law was largely one which, by its terms, assessed a tax against cash income. Because of the problems of interpretation of such a statute and the inequities inherent in it, the regulations and the laws in later years have given general recognition to the accrual principle.

8. The revenue acts in force from 1913 to the present time have all provided for recognition of the method of accounting employed by the taxpayer. [See §446(a) and (b), providing that taxable income "shall be computed under the method of accounting on the basis of which the taxpayer regularly computes his income in keeping his books," but that "if the method used does not clearly reflect income, the computation of taxable income shall be made under such method as, in the opinion of the Secretary or his delegate, does clearly reflect income."]

9. Despite this promulgation, there has developed a widening gap between

---

* Section 472(c) provides that a taxpayer may use the LIFO method of valuing inventories only if no other method is used in reports to stockholders or partners and creditors. — Ed.

accounting net income and taxable income. The factors which have caused these variations are:

(a) Congressional enactments granting concessions (either by exclusions of income or allowances of special deductions from income), or imposing limitations or penalties for purposes of economic or social discipline or to protect the revenues. Examples are (1) the exemption of proceeds of life insurance policies, (2) the granting of percentage depletion allowances, (3) the denial of deductions for compensation paid in violation of wage stabilization laws, and (4) the limitations of deductions for contributions to charity.

(b) Legalistic interpretations of the tax statutes by administrative or Court decisions seemingly influenced largely by considerations of cash flow, in violation of the accrual principle of accounting. These are in the form of differences of timing of the recognition of income or deductions, examples of which are (1) the taxability of prepayments for services which are expected to be rendered in the future, and (2) the denial of deductions for accruals for known liabilities of indefinite amount.

10. The tax laws are designed to effectuate a special purpose — the raising of revenue. It is wholly within the rights of Congress to prescribe its definition of taxable income and, in so doing, to specify additions to or deductions from accounting net income as it sees fit. The allowance of percentage depletion, the exemption of certain reorganizations and like-kind exchanges, the denial of deductions for interest paid to carry tax-exempt securities or to purchase single premium life insurance policies, and other similar provisions, all recognize social, economic, and political considerations without containing any suggestions that they modify business accounting concepts.

11. With such specific and intended exceptions, however, the Committee believes that the public interest will best be served if the differences between taxable income and business income are reduced, and if the general mandate of [§446(a)] is permitted to take precedence over non-accounting interpretations of the individual provisions of the law. The principal differences of this character involve matters of timing of the recognition of income or deductions, ignoring consistent methods of accounting used by the taxpayer or recognized as general practices. The Committee believes that, unless an important overriding consideration dictates a modifying legislative provision of the type described in paragraph 9(a), the interests of government, business, and the public, would best be served if the definition of business income subject to tax were made as nearly as possible coincidental with net income under generally accepted accounting principles; it therefore supports the view that differences of the type described in paragraph 9(b) should be eliminated by administrative regulation or, if necessary by legislation.

12. The tax laws have unduly and unintentionally tended to influence the development of corporate accounting in that to some extent legislative concessions in measuring taxable income have been adopted into accounting practice without justification in principle. An illustration of this is the installment basis of reporting income [§453, permitting the taxpayer to elect to recognize the gain realized on certain installment sales as the payments are received, rather than reporting the full amount of the gain in the year of the sale, infra p. 813]. There is no sound accounting reason for the use of the installment method for financial statement purposes in the case of closed transactions in which collection is dependent upon lapse of time and the probabilities of realization are properly evaluated.[1]

---

[1] On this point, see Supplementary Statement No. 1, issued December 31, 1950. Many accountants, including some members of this Committee, believe that methods consistently applied which accomplish a full matching of costs with revenue do not violate the accrual principle even though recognition is deferred until collection. However, if collection is reasonably assured, such a delay in recognition is not, in the opinion of the Committee, the best practice. Furthermore, where such methods are employed, disclosure is usually incomplete. In any event, the so-called

In the opinion of the Committee, such income has accrued and should be recognized in financial statements, even though deferred for tax purposes. Another example is the practice common during World War II of reflecting amortization of "emergency facilities" in financial statements in amounts corresponding to allowable tax deductions [see §168], even though in some cases the expected useful life of the facilities was longer than the statutory sixty months.

13. In one notable respect, Congress has undertaken specifically to influence accounting practices by legislation, in that the law conditions the use of the LIFO (last-in first-out) method of inventory pricing upon a requirement that the valuation so determined be used for the purpose of reports or statements to shareholders, partners, or proprietors and for credit purposes. This requirement [§472(c)] is an unwarranted and unnecessary encroachment and, in the opinion of the Committee, should be eliminated by legislation.

NOTE

1. *Statutory standards for timing of income and deductions.* After concluding that "social. economic and political considerations" may properly lead Congress to allow percentage depletion, deny the deduction of interest paid to purchase tax-exempt securities, etc., does the American Accounting Association imply that Congress should *never* "alter the timing of recognition of income or expense for tax purposes" (paragraph 6(a) supra)? Does the statement imply that §453 (installment method), §165(h) (certain disaster losses may be deducted in taxable year prior to occurrence), and §165(e) (theft losses deductible in year of discovery) ought to be repealed?

Is there any justification for permitting an item to be treated in a special way for tax purposes only if (as in the case of §472(c), criticized by the Association) it is treated by the taxpayer in the same way in its published financial statements?

2. *Differences between tax accounting and business accounting.* An extensive list of the places where tax accounting and business accounting part company may be found in Reimer, Major Differences Between Net Income for Accounting Purposes and for Federal Income Taxes, 23 Accounting Rev. 305 (1948). Smith and Butters, in Taxable and Business Income (1949), report on a comparison of "book profit" as reported by a number of corporations in their public reports to the Securities and Exchange Commission and the "statutory net income" as computed by the same corporations for tax purposes. For the companies studied, book profit typically exceeded statutory net income by less than 10 per cent, and this difference was more or less wiped out by upward adjustments of statutory net income by the Internal Revenue Service on its audit of the tax returns. For some industries, however, the difference was typically much greater, and this was especially so for mining and public utility corporations, where there are substantial differences in the treatment of depletion and depreciation in computing book profit and statutory net income. Moreover, for individual companies there were also significant divergencies between book profit and statutory net income, though a difference in one direction in one year would sometimes be offset by a difference in another direction in a later year.

3. *1954 provisions to reconcile tax accounting with business accounting.* The 1954 Code contained several provisions "designed to bring the income-tax provisions of the law into harmony with generally accepted accounting principles" (S. Rept. 62). Although widely acclaimed for this reason when enacted, these provisions (§§452 and 462) were repealed in 1955. Infra page 805.

2. *The Cash Receipts and Disbursements Method*

BLATTMACHR, KNAPP, and WARREN, ACCOUNTING PERIODS AND ACCOUNTING METHODS *

30-32 (1952)

Historically, as well as under the Code, the fundamental method of reporting income is on a cash receipts and disbursements basis. Generally speaking, taxpayers using this method report items of income and deductions in the year when actually received or paid. No account is taken of bills rendered or received. Items of income earned by or due to the taxpayer are not included until actually *received*, and expenses incurred or payable are not deducted until actually *paid*. The relative simplicity of the application and use of this method makes it the choice of the large body of individual taxpayers who are salaried or professional people. Since billings need not be taken into account, the cash method usually does not require books of account or at most, requires the use of a very elementary system of bookkeeping. Where the taxpayer does not keep books, the courts have held that income must be reported on the cash basis. . . .

Although the cash method ordinarily implies the receipt of income or the payment of a deductible item, it is not limited to the actual receipt or payment of *cash* by the taxpayer. Receipt or payment may be in the form of equivalents of cash. Thus, income is realized when the taxpayer receives it regardless of its form, whether in cash, property or other benefits measurable in money's worth. The amount received is determined by the arm's-length stipulated value or the market value at the time received.

Regardless of the form of payment, income results and a payment is made at the time when it is received or paid out and the controlling point of time is not when the equivalent of cash is later converted into cash money. Thus, where an employee receives corporate stock as compensation, he has obtained income to the extent of the fair market value of the stock at the time he receives the shares of stock; the receipt of taxable income is not regarded as being delayed until he sells the stock for cash. Similarly, taxable income is received when the note or check is received and not when the instrument is negotiated for money. . . .

In order to constitute income, however, it is not necessary that payment be made directly to the taxpayer. A taxpayer may be considered as having received the benefit of a payment made to a third party. Thus, an employee may receive compensation for his services at the time his income taxes, the premiums on his insurance policy, or his debts are paid by his employer. So, too, a landlord will be held to have received additional rent in the year that his taxes or his mortgage payments are discharged by the tenant. . . .

AMEND v. COMMISSIONER

13 T.C. 178 (1949)

BLACK, Judge: We have two taxable years before us for decision, 1944 and 1946. . . .

In each of the taxable years there is one common issue and that is whether the doctrine of constructive receipt should be applied to certain payments which

* Published by the Practising Law Institute. Reprinted by permission.

petitioner received from the sale of his wheat. There is no controversy as to the amounts which petitioner received or as to the time when he actually received them. Petitioners, being on the cash basis, returned these amounts as part of their gross income in the years when petitioner actually received them. . . .

In applying the doctrine of constructive receipt, the Commissioner relies upon Regulations 118, section 39.42-2, printed in the margin.[1]

In Loose v. United States, 74 Fed.(2d) 147, the rule providing for the taxation of income constructively received is stated as follows:

> . . . the strongest reason for holding constructive receipt of income to be within the statute is that for taxation purposes income is received or realized when it is made subject to the will and control of the taxpayer and can be, except for his own action or inaction, reduced to actual possession. So viewed, it makes no difference why the taxpayer did not reduce to actual possession. The matter is in no wise dependent upon what he does or upon what he fails to do. It depends solely upon the existence of a situation where the income is fully available to him. . . .

Respondent, in his brief, relies upon the *Loose* case, from which the above quotation is taken, and several other cases which deal with the doctrine of constructive receipt. Needless to say, each of those cases depends upon its own facts. In the *Loose* case, for example, interest coupons had matured prior to the decedent's death. The decedent had not presented them for payment because of his physical condition. It was held that, even though the decedent had not cashed them, the interest coupons represented income to him in the year when they matured, under the doctrine of constructive receipt.

It seems clear to us that the facts in the instant case do not bring it within the doctrine of *Loose* v. *United States, supra,* and the other cases cited by respondent dealing with constructive receipt.

In discussing the situation which we have in the instant case, we turn our attention first to the contract of sale which petitioner made of his 1944 wheat crop to Burrus. The testimony was that 1944 was a bumper wheat crop year and that petitioner produced and harvested about 30,000 bushels, some of which was lying out on the ground and some of which was stored on the farm. Petitioner, through his attorney in fact, Paul Higgs, sold this wheat to Burrus for January 1945 delivery at $1.57 per bushel. It was the understanding that petitioner would ship his wheat to Burrus at once and that Burrus would pay him for it in January of the following year. The contract was carried out. Some time during the month of August 1944, after August 2, petitioner shipped the 30,000 bushels to Burrus. Burrus received it, put it in its elevator, and paid petitioner for it by check dated Janary 17, 1945.

Respondent's contention seems to be based primarily on the fact that petitioner could have sold Burrus the wheat at the same price for immediate cash payment in August 1944 and that although he did not do so, he should be treated in the same manner as if he had and the doctrine of constructive receipt should be ap-

---

[1] Sec. 39.42-2. Income Not Reduced to Possession. Income which is credited to the account of or set apart for a taxpayer and which may be drawn upon by him at any time is subject to tax for the year during which so credited or set apart, although not then actually reduced to possession. To constitute receipt in such a case the income must be credited or set apart to the taxpayer without any substantial limitation or restriction as to the time or manner of payment or condition upon which payment is to be made, and must be made available to him so that it may be drawn at any time, and its receipt brought within his own control and disposition.

[The comparable provision of the current Regulations is Regs. §1.451-2: Income although not actually reduced to a taxpayer's possession is constructively received by him in the taxable year during which it is credited to his account or set apart for him so that he may draw upon it at any time. However, income is not constructively received if the taxpayer's control of its receipt is subject to substantial limitations or restrictions. — Ed.]

plied to the payments received. We do not think the doctrine of constructive receipt goes that far. Porter Holmes, who was the manager of the Burrus Panhandle Elevator in Amarillo at the time of the 1944 transaction, testified at the hearing. He testified that it was the usual custom of Burrus to pay cash for wheat soon after it was delivered and that the transaction between Burrus and petitioner for January 1945 delivery and settlement was unusual and that he telephoned the manager at Dallas, Texas, for authority to make the deal that way and secured such authority and the deal was made. He testified that when Burrus' check for $40,164.08 was mailed to petitioner January 17, 1945, it was done in pursuance of the contract. So far as we can see from the evidence, petitioner had no legal right to demand and receive his money from the sale of his 1944 wheat until in January 1945. Both petitioner and Burrus understood that to be the contract. Such is the substance of the testimony of both petitioner, who was the seller of the wheat, and Holmes, who acted for the buyer. Such also is the testimony of Paul Higgs, who represented the seller in the negotiations for the sale. During 1944 all that petitioner had in the way of a promise to pay was Burrus' oral promise to pay him for the wheat in January 1945. Burrus was a well known and responsible grain dealer and petitioner testified that he had not the slightest doubt that he would receive his money in January 1945, as had been agreed upon in the contract. Such a situation, however, does not bring into play the doctrine of constructive receipt. See Bedell v. Commissioner, 30 Fed.(2d) 622, wherein the court said:

> While, therefore, we do not think that the case is like a promise to pay in the future for a title which passes at the time of contract, we would not be understood as holding by implication that even in that case the profit is to be reckoned as of the time of sale. If a company sells out its plant for a negotiable bond issue payable in the future, the profit may be determined by the present market value of the bonds. But if land or a chattel is sold, and title passes merely upon a promise to pay money at some future date, to speak of the promise as property exchanged for the title appears to us a strained use of language, when calculating profits under the income tax. . . . it is absurd to speak of a promise to pay in the future as having a "market value," fair or unfair. . . .

The doctrine that a cash basis taxpayer can not be deemed to have realized income at the time a promise to pay in the future is made was reiterated by the Circuit Court of Appeals for the Eighth Circuit in the more recent case of Perry v. Commissioner, 152 Fed.(2d) 183. In that case it was stated:

> These cases seem to be predicated upon the fact that in a contract of sale of property containing a promise to pay in the future, but not accompanied by notes or other unqualified obligations to pay a definite sum on a day certain, the obligation to pay and the obligation to pass title both being in the future, there is an element of uncertainty in the transaction and the promise has no "market value," fair or unfair. This theory is supported by the decision of the Supreme Court in Lucas v. North Texas Co. . . .

The Commissioner in the instant case is not contending that Burrus' contract to pay petitioner for his wheat in January 1945 had a fair market value equal to the agreed purchase price of the wheat when the contract was made in August 1944. What he is contending is that petitioner had the unqualified right to receive his money for the wheat in 1944; that all he had to do to receive his money was to ask for it; and that, therefore, the doctrine of constructive receipt applies as defined in section 39.42-2, Regulations 118.

For reasons already stated, we do not think the Commissioner's determination to this effect can be sustained. If petitioner had begun this method of selling his wheat in 1944, when he had a bumper crop, there might be reason to doubt the bona fides of the contract, but what we have said about the 1944 transaction between Burrus and petitioner is based upon the finding that the contract between

Burrus and petitioner was bona fide in all respects, though it was initiated by petitioner, and each party was equally bound by its terms. Petitioner did not begin this method of selling his wheat in 1944 — he began it in 1942 and continued it through 1946. No doubt his taxes were more in some years and less in others than they would have been if petitioner had sold and delivered his wheat for cash in the year when it was produced. To illustrate this we need only point out that under the method which petitioner used he reported income in 1945 upon which he paid a tax of $2,672.64. His wife Eva also reported income and paid a tax of about the same amount. By treating petitioner's proceeds from the sale of his 1944 wheat as constructively received in 1944, the Commissioner determined overassessments as to each petitioner for 1945 and deficiencies against each petitioner for 1944.

Petitioner was asked at the hearing why he adopted the manner of selling his wheat which has been detailed in our findings of fact. His answer was as follows:

> Well, that had been my practice, to handle that wheat that way since 1942 and I have handled my wheat that way, '42, '43, '44, '45, '46, '47 and into 1948. It is still my practice to do that and there have been some years in the interval that I would certainly have paid less income had I handled it the other way, but that is a semi-arid country and we are uncertain about our wheat crops and our expenses are always pretty well set and we know they are going to be high and we need for own protection to carry part of this wheat forward. . . .
>
> As I have already explained, it's been a matter of making my income more uniform and even: about five of those years had it all been set back and sold in the year that it was supposed to have been sold in, my income tax would have been less and in the other two it would have been more. I merely emphasize that to show the consistency of my policy and not as a matter of paying any tax.

Whether the reasons advanced by petitioner in his testimony quoted above are good or bad as a business policy, we do not undertake to decide. The question we think we have to decide is whether the contracts detailed in our findings of fact were bona fide arm's-length transactions and whether under them the petitioner had the unqualified right to receive the money for his wheat in the year when the contracts were made and whether petitioner's failure to receive his money was of his own volition. Our conclusion, as already stated, is that the contracts were bona fide arm's-length transactions and petitioner did not have the right to demand the money for his wheat until in January of the year following its sale. This being true, we do not think the doctrine of constructive receipt applies. See Howard Veit, first point decided, 8 T.C. 809.

Petitioner, in each of the years before us, returned as a part of his gross income the checks which he actually received in payment for his wheat. This being so, we think he complied with the income tax laws governing a taxpayer who keeps his accounts and makes his returns on the cash basis.

We have discusseed in detail above only the sale which petitioner made of his wheat to Burrus in August 1944. The sale of his 1945 and 1946 wheat was made to Coffee-Davis Grain Co. under substantially the same circumstances as the sale to Burrus and it need not be separately discussed. . . .

NOTE

1. *Arrangements to postpone realization of income.* What if the taxpayer had received a promissory note, due the following year, when he delivered the grain to the buyer? Would it make a difference whether the note was received as evidence of the debt, or as payment? See Williams v. Commissioner, 28 T.C. 1000 (1957).

Would the result in the case have been different if the taxpayer had sold the wheat on

credit, payment to be on demand, and had refrained from demanding payment until it suited him to do so? What if an attorney, after completing the performance of services for a client, refrains from billing the client in order to postpone the recognition of income until a later year?

Can an employee arrange with his employer to have his compensation paid in installments over a period of time, including the period after retirement when he presumably will be in lower tax brackets? For discussion of a variety of arrangements to accomplish this objective, see Rev. Rul. 60-31, 1960-1 C.B. 174. The business result of one such plan was described as follows by Time (Jan. 19, 1959, p. 66):

> For appearing in Bridge on the River Kwai, William Holden agreed to 10% of the gross, but for tax reasons wanted it paid to him at the rate of only $50,000 a year. The picture has already made so much money (between $20 and $30 million) that Holden's share now stands at between $2,000,000 and $3,000,000. Not only will it take 40-year-old Holden at least 40 years to get the last of his money, but Columbia can in the meantime invest it and make well over $50,000 a year, thus in effect having got Holden's services in Kwai for nothing.

Does a taxpayer constructively receive an amount he refuses to receive? Hedrick v. Commissioner, 154 F.2d 90 (2d Cir. 1946); Commissioner v. Giannini, 129 F.2d 638 (9th Cir. 1942); G.C.M. 27026, supra page 344; Tritt, Renunciation — Income Tax Problems, 1953 So. Calif. Tax Inst. 519. See also §678(d).

For the possibility of amending an existing contract to postpone the receipt of taxable income, see Commissioner v. Olmsted Inc. Life Agency, supra page 442, and Commissioner v. Oates, summarized in the *Olmsted* case.

2. *"Substantial limitations or restrictions."* As formulated in the current Regulations, the doctrine of constructive receipt is not applicable if the taxpayer's control of the income "is subject to substantial limitations or restrictions." If the taxpayer is entitled to receive interest at the rate of 4 per cent per year on a deposit in a savings bank or savings and loan association, but will receive a "bonus" of ½ per cent if he leaves his funds on deposit for five years, does he constructively receive the 4 per cent that is currently credited to his account? See Regs. §1.451-2 (promulgated in 1964); Snider's Estate v. Commissioner, 31 T.C. 1064 (1959) (cash surrender value of annuity policy not constructively received in view of insurer's power to postpone payment for six months, nor was doctrine of constructive receipt made applicable by insured's election to leave principal sum on deposit under installment option); see also Snider's Estate v. Commissioner, 39 T.C. 341 (1962) (later installment of same dispute; held, principal sum not constructively received when insurer's option to postpone payment for six months expired).

For the effect of escrow arrangements, see Dyke v. Commissioner, supra page 585, and authorities cited in the editor's note thereafter; Anderson v. Commissioner, ¶61,139 P-H Memo T.C. (1961).

See also Carpenter v. Commissioner, 34 T.C. 408 (1960) (part of sales proceeds for taxpayer's stock withheld by buyer, pursuant to supplemental agreement, pending settlement of lawsuits challenging her title; held, not constructively received).

3. *Doctrine of constructive receipt invoked by taxpayer.* Ross v. Commissioner, 169 F.2d 483 (1st Cir. 1948), held that a taxpayer could rely on the doctrine of constructive receipt to defeat the Commissioner's assertion of a deficiency for the year of actual payment, although the amounts in question had not been reported by him in the earlier years, which were now barred by the statute of limitations. The amounts in question (accrued salary) had been credited to the taxpayer on the books of his employer, which was on the accrual basis, and deducted by it. The court held that the taxpayer was not estopped or otherwise barred by equitable considerations, partly because there was no misrepresentation of the facts:

> . . . [T]he discrepancy between the individual returns and the corporate return was always evident, whether or not it registered on the official consciousness. . . . A mere failure to report income is not a representation that such income has in fact not been received. Inasmuch as the tax incidence of so many transactions is as doubtful as it is, from the mere failure to report income no more significant inference should be

drawn than the taxpayer's own interpretation of the law. And it seems settled that estoppel cannot be predicated upon a mere statement of law or silence resulting from an error of law. [169 F.2d at 495-496.]

See page 877 infra on the possibility of opening up the earlier years, notwithstanding the running of the statute of limitations, because of the taxpayer's inconsistent position.

COMMISSIONER v. BOYLSTON MARKET ASSN.

131 F.2d 966 (1st Cir. 1942)

Before MAGRUDER, MAHONEY, and WOODBURY, Circuit Judges.

MAHONEY, Circuit Judge.

The Board of Tax Appeals reversed a determination by the Commissioner of Internal Revenue of deficiencies in the Boylston Market Association's income tax of $835.45 for the year 1936, and $431.84 for the year 1938, and the Commissioner has appealed.

The taxpayer in the course of its business, which is the management of real estate owned by it, purchased from time to time fire and other insurance policies covering periods of three or more years. It keeps its books and makes its returns on a cash receipts and disbursements basis. The taxpayer has since 1915 deducted each year as insurance expenses the amount of insurance premiums applicable to carrying insurance for that year regardless of the year in which the premium was actually paid. This method was required by the Treasury Department prior to 1938 by G.C.M. 13148, XIII-1 Cum. Bull. 67 (1934). Prior to January 1, 1936, the taxpayer had prepaid insurance premiums in the amount of $6,690.75 and during that year it paid premiums in an amount of $1082.77. The amount of insurance premiums prorated by the taxpayer in 1936 was $4421.76. Prior to January 1, 1938, it had prepaid insurance premiums in the amount of $6148.42 and during that year paid premiums in the amount of $890.47. The taxpayer took a deduction of $3284.25, which was the amount prorated for the year 1938. The Commissioner in his notice of deficiency for the year 1936 allowed only $1082.77 and for the year 1938 only $890.47, being the amounts actually paid in those years, on the basis that deductions for insurance expense of a taxpayer on the cash receipts and disbursements basis is limited to premiums paid during the taxable year.

We are asked to determine whether a taxpayer who keeps his books and files his returns on a cash basis is limited to the deduction of the insurance premiums actually paid in any year or whether he should deduct for each tax year the pro rata portion of the prepaid insurance applicable to that year. . . .

This court in Welch v. DeBlois, 1 Cir., 1938, 94 F.2d 842, held that a taxpayer on the cash receipts and disbursements basis who made prepayments of insurance premiums was entitled to take a full deduction for these payments as ordinary and necessary business expenses in the year in which payment was made despite the fact that the insurance covered a three-year period. The government on the basis of that decision changed its earlier G.C.M. rule, supra, which had required the taxpayer to prorate prepaid insurance premiums. The Board of Tax Appeals

has refused to follow that case in George S. Jephson v. Com'r, 37 B.T.A. 117; Frank Real Estate & Investment Co., ¶39,499 P-H Memo T.C. and in the instant case. The arguments in that case in favor of treating prepaid insurance as an ordinary and necessary business expense are persuasive. We are, nevertheless, unable to find a real basis for distinguishing between prepayment of rentals . . . ; bonuses for the acquisition of leases . . . ; commissions for negotiating leases . . . ; and prepaid insurance. Some distinctions may be drawn in the cases [citations omitted] on the basis of the facts contained therein, but we are of the opinion that there is no justification for treating them differently insofar as deductions are concerned. All of the cases cited are readily distinguishable from such a clear cut case as a permanent improvement to a building. This latter is clearly a capital expenditure. See Parkersburg Iron & Steel Co. v. Burnet, 4 Cir., 1931, 48 F.2d 163, 165. In such a case there is the creation of a capital asset which has a life extending beyond the taxable year and which depreciates over a period of years. The taxpayer regardless of his method of accounting can only take deductions for depreciation over the life of the asset. Advance rentals, payments of bonuses for acquisition and cancellation of leases, and commissions for negotiating leases are all matters which the taxpayer amortizes over the life of the lease. Whether we consider these payments to be the cost of the exhaustible asset, as in the case of advance rentals, or the cost of acquiring the asset, as in the case of bonuses, the payments are prorated primarily because the life of the asset extends beyond the taxable year. To permit the taxpayer to take a full deduction in the year of payment would distort his income. Prepaid insurance presents the same problem and should be solved in the same way. Prepaid insurance for a period of three years may be easily allocated. It is protection for the entire period and the taxpayer may, if he desires, at any time surrender the insurance policy. It thus is clearly an asset having a longer life than a single taxable year.* The line to be drawn between capital expenditures and ordinary and necessary business expenses is not always an easy one, but we are satisfied that in treating prepaid insurance as a capital expense we are obtaining some degree of consistency in these matters. We are, therefore, of the opinion that Welch v. DeBlois, supra, is incorrect and should be overruled.

The decision of Board of Tax Appeals is affirmed.

NOTE

1. *Implications of the Boylston Market case.* In Waldheim Realty & Investment Co. v. Commissioner, 245 F.2d 823 (8th Cir. 1957), the court rejected the *Boylston Market* theory and held that a cash basis taxpayer may deduct the insurance premiums when paid, but also suggested that the taxpayer might allocate them if he preferred to do so.

In Fackler v. Commissioner, 39 B.T.A. 395, 398 (1939), a taxpayer was allowed to deduct prepaid interest on a mortgage in the year of payment. The court said:

> . . . distortion of the petitioner's income would not result here from the deduction of this prepaid interest payment any more than it would from the payment in one of the current taxable years for interest covering an elapsed period of more than those years.

The *Fackler* case has been accepted by the Service, I.T. 3740, 1945 C.B. 109, and its principle is also applied to the prepayment of taxes, Glassell v. Commissioner, 12 T.C. 232 (1949). Note that §§163 and 164 allow the deduction of taxes and interest "paid or ac-

* See Regs. §1.461-1(a)(1): "If an expenditure [by a cash basis taxpayer] results in the creation of an asset having a useful life which extends substantially beyond the close of the taxable year, such an expenditure may not be deductible, or may be deductible only in part, for the taxable year in which made" — Ed.

crued within the taxable year." Section 162(a) allows "ordinary and necessary expenses paid or incurred during the taxable year" to be deducted. Do these sections justify the deduction of taxes and interest by a cash basis taxpayer in whatever year he pays them, but require expenses to be deducted only in the year in which they constitute *expenses*, as distinguished from *capital investments*?

If the taxpayer in the *Boylston Market* case had purchased and paid for a three-year stock of materials or supplies, it might have been required to inventory them, thus restricting the deduction for the current year to the amount actually consumed then, if this procedure was necessary to prevent a distortion of income. See Regs. §1.162-3. Cash basis farmers sometimes engage in the practice (the converse of the arrangement described in *Amend*, supra p. 780) of paying suppliers of feed, fertilizer, etc. for goods to be delivered in future years. On their right to deduct the payments when made, see Cravens v. Commissioner, 30 T.C. 903 (1958) (held, payment was a deposit, not a deductible expense); Ernst v. Commissioner, 32 T.C. 181 (1959) (contra). See Irwin, Prepayments by a Cash Basis Taxpayer, 1963 So. Calif. Tax Inst. 547.

2. *Postponing payment for tax reasons.* If the taxpayer in the *Boylston Market* case had paid the total premium at the end of the three-year period, could he have deducted the full amount in that year? Is there any restriction on the right of a cash basis taxpayer to postpone payments in order to take deductions in advantageous years?

3. *Use of checks and notes by cash basis taxpayers.* It has been held that the cash basis taxpayer does not get a deduction when he gives his note for a deductible expense, even if the note is taken as payment of the debt. Helvering v. Price, 309 U.S. 409 (1940). On the other hand, the giving of a check fixes the time of deduction if the check is subsequently honored. See Estate of Spiegel v. Commissioner, 12 T.C. 524 (1949); although directly concerned with the meaning of "payment" under §170, the opinion seems equally applicable to other deductions by cash basis taxpayers.

4. *"Constructive payment"?* A corporate taxpayer on the cash basis credited its two principal officers and stockholders with compensation for services under circumstances requiring them to report the salaries as constructively received. In Vander Poel, Francis & Co., Inc. v. Commissioner, 8 T.C. 407 (1947), a divided court held that the salaries could not be deducted by the employer until paid by it; the court refused to accept a doctrine of "constructive payment" as a corollary to constructive receipt.

5. *Cash method of accounting as failing to "clearly reflect income."* The taxpayer's method of accounting is not controlling if it "does not clearly reflect income," in which event the Treasury may prescribe another method under §446(b). For discussion of, and citation of authority on, the circumstances in which the cash method does not clearly reflect income, see Drazen v. Commissioner, 34 T.C. 1070 (1960).

To the effect that the theoretical clarity of the cash method "has been dissipated by accountants careless of pen, lawyers chary of accounting, and commissioners careful of revenue," that there is both a "pure" and an "impure" cash method, and that only the latter may be lawfully used, see Hahn, Methods of Accounting: Their Role in the Federal Income Tax Law, 1960 Wash. L.Q. 1.

3. *Accrual Methods*

GEORGIA SCHOOL-BOOK DEPOSITORY, INC. v. COMMISSIONER
1 T.C. 463 (1943)

KERN, Judge: The question is whether petitioner, which was on an accrual basis, should have accrued certain school book commissions at the time the books were sold by the publishers to the state, or should have returned them as income only when the books were paid for by the state, as petitioner contends.

Petitioner was a broker which received an 8 per cent commission on all school books purchased by the State of Georgia through it. For this commission it performed certain services of advantage to both parties, such as executing the contracts of the state board of education with various publishers, taking care of the

books as a central depository until final distribution, seeing that enough were on hand to meet the state's demands, distributing them, and collecting the moneys in payment from the state and holding them in trust until paid over to the publishers. It was responsible for the return in salable condition of any books not used. It had no title to the books at any time, and (except in the case of one publisher) posted a bond with each publisher to guarantee performance of its duties. Petitioner also carried on a somewhat similar business as a book broker of college books not on the state list and under these contracts was responsible for the collection of all accounts.

Petitioner did not accrue its commissions on the state books but did accrue its commissions on the college books at the same time that its liability for the books to the publishers was accrued. Under the contracts for state school books it was provided that petitioner should receive its brokerage "at the time of settlement" and this term is explained by the provision that the petitioner shall make quarterly reports "so as to show the exact balance due" the publisher by the petitioner, and shall remit "its *pro rata share* of all cash received from the collection of warrants issued by the State of Georgia for books sold to the state when and as such warrants are received."

The publishers could look for payment from the state, and, consequently, petitioner could look for its commissions only from the "Free Textbook Fund," which was renewed only from the excise laid on beer.* During the taxable years 1938 and 1939 this fund was insufficient to pay the petitioner in full. The state, in its accounting, did not treat these large deficits as present liabilities except to the extent that funds were already on hand to meet them, the remainder being considered an encumbrance on the textbook fund in the next year. The "accounts ripen," the auditor reported, "for payment when and as funds become available in the Textbook Fund."

Petitioner contends, first, that the brokerage was not earned until payment, and, secondly, that there was no reasonable expectancy that payment ever would be made; and for these reasons, it urges its ultimate contention that the commissions here involved were not properly accruable in the respective taxable years.

In so far as appears, all acts which were required of petitioner to earn its brokerage, save one, had been done in the taxable year. It had received the books from the publishers, stored them, and later distributed them to the several schools. All it had not done was to receive the money from the state and pay it out to the publishers. On this account the actual payment of the brokerage may not have been due to petitioner until this money was received, but the right to it had accrued by the performance of its duties. United States v. Anderson, 269 U.S. 422. It is the *right* to receive money which in accrual accounting justifies the accrual of money receivable and its return as accrued income.

---

* The court's findings of fact describe the textbook fund as follows:

"On March 4, 1937, the State of Georgia enacted a Free Textbook Act, under which the state board of education was directed to inaugurate and administer a system of free textbooks for the public schools of Georgia, and to execute contracts therefor. The act provides that the cost of administering the free textbook system and purchasing the books shall be paid by the state from such funds as may be provided by the General Assembly for that purpose, ... The Legislature thereupon created a free textbook fund, made up solely from excise taxes on the sale of malt beverages in the state. The act provides that funds derived from taxes on malt beverages shall be apportioned as follows: Not over 3 percent shall be paid to the revenue commission for enforcing the malt beverage act and 'the remainder shall be set aside and devoted for the support of the common schools of the state and used for the purpose of furnishing free textbooks to the children attending the common schools'; any excess to be used for other school purposes. . . ." — Ed.

The Supreme Court said in Spring City Foundry Co. v. Commissioner, 292 U.S. 182 (p. 184):

> . . . Keeping accounts and making returns on the accrual basis, as distinguished from the cash basis, import that it is the right to receive and not the actual receipt that determines the inclusion of the amount in gross income. When the right to receive an amount becomes fixed, the right accrues. . . .

The receipt of the money from the state, the deduction of petitioner's commission, and the transmission of the balance to the publishers were the least of its duties and can not be made the criterion of the arisal of the right. Paragraph 9 of the contract assumes that the publisher's right to payment had arisen, for it requires that the quarterly reports which petitioner was to submit should "show the exact balance due the first party by the second party [petitioner] . . ."

. . .

We pass, then, to the second question, whether there was a reasonable expectancy that the claim would ever be paid. Where there is a contingency that may preclude ultimate payment, whether it be that the right itself is in litigation or that the debtor is insolvent, the right need not be accrued when it arises. This rule is founded on the old principle that equity will not require a suitor to do a needless thing. The taxpayer need not accrue a debt if later experience, available at the time that the question is adjudged, confirms a belief reasonably held at the time the debt was due, that it will never be paid. Corn Exchange Bank v. United States, 37 Fed.(2d) 34 (2d Cir.); H. Liebes & Co. v. Commissioner, 90 Fed.(2d) 932 (9th Cir.), and cases there cited at page 937. On the other hand, it must not be forgotten that the alleviating principle of "reasonable expectancy" is, after all, an exception, and the exception must not be allowed to swallow up the fundamental rule upon which it is engrafted requiring a taxpayer on the accrual basis to accrue his obligations, Spring City Foundry Co. v. Commissioner, supra. If this were so, the taxpayer might at his own will shift the receipt of income from one year to another as should suit his fancy. Cf. Clifton Manufacturing Co., 1 T.C. 71. To allow the exception there must be a definite showing that an unresolved and allegedly intervening legal right makes receipt contingent or that the insolvency of his debtor makes it improbable. Postponement of payment without such accompanying doubts is not enough. . . .

Applying these principles to the instant case, we must conclude that, despite the condition of the treasury of the State of Georgia when the free schoolbook fund was inaugurated and for several years thereafter, there was no reasonable expectation that the sums owed by the state to petitioner's publishers and, consequently, the commissions to petitioner itself, would not ultimately be paid. It would naturally take a few years to establish in full working order a system of such magnitude, but a comparison of the two years before us shows that Georgia was gradually reducing its schoolbook obligations. Georgia is a state possessing great resources and a fine record of fiscal probity, and undoubtedly it can and will meet its obligations. The fact that petitioner, on behalf of its principals, continued to sell and deliver school books to the state indicates that there was no serious doubt as to the ultimate collection of the accounts here involved.

We conclude, therefore, that petitioner's commissions on all books purchased by the state through it in the taxable years should have been accrued and returned as income in those years.

Judgment will be entered for the respondent.

COMMISSIONER v. HANSEN

360 U.S. 446 (1959)

MR. JUSTICE WHITTAKER delivered the opinion of the Court.

These federal income tax cases present questions concerning the proper and timely accrual of gross income deriving from sales of commercial installment paper by retail dealers to finance companies. The taxpayers involved in these cases are two retail automobile dealers and a house trailer dealer. All keep their books on the accrual basis. Most of their sales are "credit sales." It appears that they generally negotiate, consummate, and finance such sales in accordance with a common pattern. The dealer and his customer agree upon a "Cash Delivered Price" for a particular vehicle owned by the dealer. In part payment of that price the customer makes a down payment to the dealer in cash or "trade in," or both. To the remaining balance of that cash price there is added the cost of insurance on the vehicle and a "finance charge." The aggregate is sometimes called the "Deferred Balance." It is evidenced and secured by an assignable or negotiable instrument retaining defeasible title to or a lien on the vehicle — generally on a form supplied by the finance company with which the dealer may then be doing business — and the instrument is signed by the customer, delivered to the dealer, and made payable to him in monthly installments over an agreed period — one to three years on automobiles and three to five years on house trailers. Thereupon, the dealer delivers the vehicle to his customer, with such memoranda or bill of sale as will enable him to register, license and use it.

Soon after completion of these procedures, these dealers sell (discount) those instruments (hereafter called "installment paper") to finance companies for an agreed or formula fixed price, and the dealers guarantee payment, in whole or in part, of the installment paper.

Under contracts between the respective dealers and finance companies here concerned, the latter, upon receipt and acceptance of installment paper, are obligated to pay immediately to the dealers a major percentage of the purchase price, but they are thereby also authorized to retain the remaining percentage of the price and to credit it on the books to a "Dealers Reserve Account" in the name of the particular dealer, for the purpose of securing performance by him of his guarantor, endorser, and other liabilities to the finance company.

The dealers involved in these cases recorded on their books in the years the installment paper was sold, and included in their income tax returns for those years, the cash received from the finance companies, but they did not accrue on their books or include in their returns the percentage of the price that was retained by the finance companies and credited to their reserve accounts.

The Commissioner contends that in the year of their sales of installment paper to the finance companies, the taxpayers acquired a *fixed right to receive* — even though not until a later year — the percentage of the purchase money that was retained by the finance companies and credited on their books to the dealers' reserve account in that year, and, hence, those amounts constituted accrued income to the taxpayers in that year, and should have been accrued on their books and included in their returns for that year. The taxpayers, on the other hand, contend that the amounts so retained and credited were never under or subject to their control, and were always subject to such contingent liabilities of the taxpayers to the finance companies that it could not have been known, in the year of the sales, how much, if any, of the reserves would actually be received by them in cash, and hence they did not acquire, in the year of any of the sales, a fixed

right to receive — in a later year or at any time — the amounts credited to them in the reserves, and, therefore, the reserves did not constitute accrued income to them. This presents, in essence, the issue for decision in these cases. . . .

We turn, first, to the taxpayers' contention that, in substance, the purchaser, not the dealer, obtains the loan directly from a finance company, and that the percentage of the loan which is retained by the finance company — although credited on its books to a reserve account in the name of the dealer as collateral security for the payment of his liabilities to the finance company — is the property of the purchaser of the vehicle, not the dealer, and therefore may not be regarded as accrued income to the dealer.

The basis of the contention (filling in the omitted but necessarily involved steps) is that each of these transactions is a single, "three-cornered" one between the dealer, the finance company and the purchaser; that, in substance, the dealer agrees to sell the vehicle to the purchaser for "a down payment plus cash" (the term "cash" as here used must necessarily refer to the unpaid balance of the purchase price); that the purchaser agrees immediately to obtain from the finance company, and it agrees to make to the purchaser, a loan, on the security of the vehicle, in an amount at least equal to the unpaid balance of the purchase price owing by the purchaser to the dealer for the vehicle; and that the purchaser agrees immediately to pay, or to direct the finance company to pay, to the dealer, out of the proceeds of the loan, an amount equal to 95% (in most instances) of the unpaid balance of the purchase price owing by the purchaser to the dealer for the vehicle. Although this leaves an unpaid balance of the purchase price of the vehicle (5% in most instances) still owing by the purchaser to the dealer, it also leaves in possession of the finance company, out of the proceeds of the loan, an amount at least equal to that 5%. Nevertheless the purchaser, with the consent of the dealer, agrees with the finance company that the latter shall retain that 5% and credit it on its books to a reserve account in the name of the dealer, as collateral security for the payment of his contingent liabilities to the finance company. On these assumptions of fact the taxpayers contend that the reserves retained by the finance companies, though credited on their books to the dealers' reserve accounts, are only contingently so credited and are subject to cancellation if the purchaser fails to pay out his loan and, at all events, the reserves belong to the purchasers, and should not be regarded as accrued income of the dealers. . . .

We agree, of course, that the incidence of taxation depends upon the substance, not the form, of the transaction . . . but we think that the taxpayers have assumed facts which are contrary to the records and are wholly without substance.

These records clearly show that, in every instance, the installment paper was executed by the purchaser and made payable to the dealer . . . and that the same was later assigned or endorsed by the dealer and sent to the finance company for purchase, under and subject to the dealer's contractually assumed contingent liabilities to the finance company respecting it, and that, every instance, the finance company, upon receipt and acceptance of the installment paper and of the dealer's obligations respecting it, immediately paid to the dealer a major percentage of the agreed or formula fixed price for the paper; but, pursuant to the terms of the dealer's contract with the finance company, the latter retained the remaining percentage of the price and credited it on its books to the dealer's reserve account, as collateral security for the payment of his contingent liabilities to the finance company on such installment paper.

It is therefore clear that the retained percentages of the purchase price of the installment paper, from the time they were entered on the books of the finance companies as liabilities to the respective dealers, were vested in and belonged to

the respective dealers, subject only to their several pledges thereof to the respective finance companies as collateral security for the payment of their then contingent liabilities to the finance companies.

This brings us to the question whether amounts of purchase price withheld by finance companies as security to cover possible losses on installment paper purchased from dealers, who employ the accrual method of accounting, constitute income to them at the time the withheld amounts are recorded on the books of the finance companies as liabilities to the dealers. . . .

The taxpayers contend, first, that they cannot *presently* compel the finance companies to pay to them the amounts of their reserve accounts, and therefore they have not acquired a *presently enforcible right to recover* those reserves, and, hence, they should not be deemed to constitute accrued income to them. Inasmuch as these records show that the payout period for automobiles varies from 12 to 36 months and for house trailers from 36 to 60 months, it is doubtless true that the taxpayers, having pledged their reserve accounts to the finance companies as collater security, cannot presently compel the finance companies to pay over their reserves. But the question is not whether the taxpayers can presently recover their reserves, for, as stated, it is the time of acquisition of the *fixed right to receive* the reserves and not the time of their *actual receipt* that determines whether or not the reserves have accrued and are taxable.

The taxpayers next contend that the amounts that were retained by the finance companies and entered on their books as liabilities to the dealers under their reserve accounts, were subject to such contingencies that it could not have been known, in the year of such retentions and credits, what amount of those reserves would actually be received by them and, hence, they did not acquire, in the year of such retentions and credits, a fixed right to receive — in a later year or at any time — the amounts so withheld and credited to them, and therefore those amounts did not constitute accrued income to them.

It is true that the amounts retained by any one of the finance companies, and entered on its books as a liability to a particular dealer, are subject to such liabilities as the dealer may have contractually assumed to the finance company, but only the obligations of the dealer to the finance company arising from those liabilities may be offset against a like amount in the dealer's reserve account. Hence, those liabilities and obligations provide the only conditions that can affect full cash payment to the dealer of his reserve account. No amount may be charged by the finance company against the dealer's reserve account which he has not thus authorized.

It follows that only one or the other of two things can happen to the dealer's reserve account: (1) the finance company is bound to pay the full amount to the dealer in cash, or (2) if the dealer has incurred obligations to the finance company under his guaranty, endorsement, or contract of sale, of the installment paper, the finance company may apply so much of the reserve as is necessary to discharge those obligations, and is bound to pay the remainder to the dealer in cash.

Does the dealer "receive" funds which are so taken from his reserve account and applied to the payment of his obligations to the finance company? The dealer agreed in his contract with the finance company to receive his reserve in offset payment of his obligations to the finance company and the balance in cash. It would therefore seem that funds in the dealer's reserve which are applied to the payment of his obligations to the finance company are as much "received" by him as those which the finance company pays to him in cash. . . .

It follows that the amounts (of purchase price of the installment paper) that were withheld by the finance companies constituted accrued income to these accrual basis dealers at the time the withheld amounts were entered on the books of the finance companies as liabilities to the dealers, for at that time the dealers ac-

quired a fixed right to receive the amounts so retained by the finance companies.

The taxpayers complain that such a holding will unfairly require them to pay taxes upon funds which are not available to them for that purpose. Though the funds are not presently available to the taxpayers for the payment of taxes, they are nevertheless owned by the taxpayers, and the latter cannot expect to collateralize their liabilities, for periods running from 1 to 5 years, by the use of their accrued but untaxed funds. Moreover, it is a normal result of the accrual basis of accounting and reporting that taxes frequently must be paid on accrued funds before receipt of the cash with which to pay them. . . .

To permit accrual basis taxpayers to escape accrual and taxation, in a particular year, of such portions of their sales as they may permit to be retained by buyers, as collateral security, well might violate [§451(a)], and, moreover, might well afford opportunities to accrual basis taxpayers to allocate income to years deemed most advantageous.

The Commissioner has broad powers in determining whether accounting methods used by a taxpayer clearly reflect income, Lucas v. American Code Co., 280 U.S. 445, 449; Automobile Club of Michigan v. Commissioner, 353 U.S. 180, 189-190; and under [§446(b)], the Commissioner, believing that the accounting method employed by a taxpayer "does not clearly reflect the income," may require that "computation shall be made in accordance with such method as in [his] opinion . . . does clearly reflect the income." Since 1931 the Internal Revenue Service has consistently maintained that amounts withheld by finance companies to cover possible losses on notes purchased from dealers constitute income to dealers, who employ the accrual method of accounting, from the time the amounts are recorded on the books of the finance companies as liabilities to the dealers. That position, in general, accords with our view. . . .

MR. JUSTICE DOUGLAS dissents.

MR. JUSTICE BLACK took no part in the consideration or decision of these cases.

NOTE

1. *Legislation re dealers' reserves.* The Dealer Reserve Income Adjustment Act of 1960 was enacted after the *Hansen* case was decided to ease the transition for dealers who were required by the *Hansen* rationale to shift from a different method of reporting their income. See American Community Builders, Inc. v. Commissioner, 301 F.2d 7 (7th Cir. 1962).

May the taxpayers in *Hansen* create a reserve to provide for their liability as guarantors of the discounted notes? See Mike Persia Chevrolet, Inc. v. Commissioner, 41 T.C. 198 (1963), and cases there cited.

2. *Accrual of expenses.* Just as the accrual basis taxpayer must report income when it accrues, even though it has not yet been received in cash or property, so he must deduct expenses when they are incurred, even though payment is postponed. (For the deduction of estimated future expenses, see page 809 infra.) May a taxpayer accrue an expense item if, by reason of his unsound financial condition, it is doubtful whether he will ever be able to pay it? Cohen v. Commissioner, 21 T.C. 855 (1954).

There are some statutory exceptions, however, permitting items to be deducted only if they have been paid. Thus §170(a)(1) permits the deduction of a "charitable contribution . . . payment of which is made during the taxable year"; §404(a) permits the deduction of contributions "paid" by an employer under certain employee benefit plans; §§71(a) and 215(a) require the wife to include and permit the husband to deduct alimony "payments"; §213(a) allows medical expenses "paid during the taxable year" to be deducted; and §561(a) allows a credit (available in computing the personal holding company and §531 surtaxes) for "dividends paid during the taxable year." (In several instances, exceptions have been provided for items paid within a specified time following the close of the taxable year — see §170(a)(2), §404(a)(6), and §563.) Is there any reason why accrual basis taxpayers should be required to employ a cash basis for these items?

See also Regs. §1.301-1(b), providing that a dividend is taxable to shareholders "when

the cash or other property is unqualifiedly made subject to their demands." It has been held that this regulation requires accrual basis taxpayers to report dividends as of the payment date rather than on the record date, thus placing them on a parity with cash basis taxpayers. Commissioner v. American Light & Traction Co., 156 F.2d 398 (7th Cir. 1946).

It has been held that an amount was "paid" by an accrual basis taxpayer when it gave a negotiable demand note to the obligee. Sachs v. Commissioner, 208 F.2d 313 (3d Cir. 1953). The *Price* case, supra page 787, denied a deduction to a cash basis taxpayer who gave a note, but the opinion does not indicate whether the instrument was payable on demand and negotiable.

3. *Disallowance of unpaid expenses owing to related taxpayers.* Section 267(a)(2) might be examined at this point. It finds its principal application when a closely held corporation is on the accrual basis and a dominating stockholder on the cash basis; the corporation cannot deduct accrued salary and interest owing to the individual in question if the amounts are not paid in the taxable year or within two and one-half months thereafter. Why should the corporation's deduction be denied in such circumstances? See Paul, Some Problems Under the New Section 24(c), 32 Taxes 191 (1954).

4. *References.* Holland, Accrual Problems in Tax Accounting, 48 Mich. L. Rev. 149 (1949); Comment, Accrual: The Uncertain Concept of Certainty — A History of the All Events Test, 21 U. of Chi. L. Rev. 293 (1954).

AMERICAN AUTOMOBILE ASSN. v. UNITED STATES

367 U.S. 687 (1961)

MR. JUSTICE CLARK delivered the opinion of the Court.

In this suit for refund of federal income taxes the petitioner, American Automobile Association, seeks determination of its tax liability for the years 1952 and 1953. Returns filed for its taxable calendar years were prepared on the basis of the same accrual method of accounting as was used in keeping its books. The Association reported as gross income only that portion of the total prepaid annual membership dues, actually received or collected in the calendar year, which ratably corresponded with the number of membership months, covered by those dues, occurring within the same taxable calendar year. The balance was reserved for ratable monthly accrual over the remaining membership period in the following calendar year as deferred or unearned income reflecting an estimated future service expense to members. The Commissioner contends that petitioner should have reported in its gross income for each year the entire amount of membership dues actually received in the taxable calendar year without regard to expected future service expense in the subsequent year. The sole point at issue, therefore, is in what year the prepaid dues are taxable as income.

In auditing the Association's returns for the years 1952 through 1954, the Commissioner, in exercise of his discretion under [§446(b)], determined not to accept the taxpayer's accounting system. As a result, adjustments were made for those years principally by adding to gross income for each taxable year the amount of prepaid dues which the Association had received but not recognized as income, and subtracting from gross income amounts recognized in the year although actually received in the prior year. . . .

The Association is a national automobile club organized as a nonstock membership corporation with its principal office in Washington, D.C. It provides a variety of services[1] to the members of affiliated local automobile clubs and those of ten clubs which taxpayer itself directly operates as divisions, but such services are

[1] These generally include road maps, routing, tour books, etc.; emergency road service through contracts with local garages; bail bond protection; personal automobile accident insurance and theft protection; and, in some of its divisions, motor license procurement, brake and headlight adjustment service, notarial duties and advice in the prosecution of small claims.

rendered solely upon a member's demand. Its income is derived primarily from dues paid one year in advance by members of the clubs. Memberships may commence or be renewed in any month of the year. For many years, the association has employed an accrual method of accounting and the calendar year as its taxable year. It is admitted that for its purposes the method used is in accord with generally accepted commercial accounting principles. The membership dues, as received, were deposited in the Association's bank accounts without restriction as to their use for any of its corporate purposes. However, for the Association's own accounting purposes the dues were treated in its books as income received ratably[2] over the 12-month membership period. The portions thereof ratably attributable to membership months occurring beyond the year of receipt, i.e., in a second calendar year, were reflected in the Association's books at the close of the first year as unearned or deferred income. Certain operating expenses were chargeable as prepaid membership cost and deducted ratably over the same periods of time as those over which dues were recognized as income.

The Court of Claims bottomed its opinion on Automobile Club of Michigan v. Commissioner, 353 U.S. 180 (1957), finding that "the method of treatment of prepaid automobile club membership dues employed [by the Association here was] . . . for Federal income tax purposes, 'purely artificial.'" 181 F. Supp. 255, 258. It accepted that case as "a rejection by the Supreme Court of the accounting method advanced by plaintiff in the case at bar." Ibid. The Association does not deny that its accounting system is substantially identical to that used by the petitioner in *Michigan*. It maintains, however, that *Michigan* does not control this case because of a difference in proof, i.e., that in this case the record contains expert accounting testimony indicating that the system used was in accord with generally accepted accounting principles; that its proof of cost of member service was detailed, and that the correlation between that cost and the period of time over which the dues were credited as income was shown and justified by proof of experience. The holding of *Michigan,* however, that the system of accounting was "purely artificial" was based upon the finding that "substantially all services are performed only upon a member's demand and the taxpayer's performance was not related to fixed dates after the tax year." 353 U.S. 180, 189, note 20. That is also true here. As the Association's own accounting expert testified:

> You are dealing with a group or pool. Any pooling or risk situation, particular members may in a particular year require very little of a specific service that is rendered to certain other members. I wouldn't know what the experience on that would be, but I would think it would be rather irregular between individual members . . . I am buying the availability of services, the protection . . . Frankly, the irregularity of the actual furnishing of the maps and helping you out when you run out of gasoline and so on. I frankly don't think that has a blessed thing to do with the overall accounting.

It may be true that to the accountant the actual incidence of cost in serving an individual member in exchange for his individual dues is inconsequential, or, from the viewpoint of commercial accounting, unessential to determination and disclosure of the overall financial condition of the Association. That "irregularity," however, is highly relevant to the clarity of an accounting system which defers receipt, as earned income, of dues to a taxable period in which no, some,

---

[2] In 1952 and 1953 dues collected in any month were accounted as income to the extent of one-twenty-fourth for that month (on the assumption that the mean date of receipt was the middle of the month), one-twelfth for each of the next eleven months, and again one-twenty-fourth in the anniversary month. In 1954, however, guided by its own statistical average experience, the Association changed its system so as to more simply reach almost the same result by charging to year of receipt, without regard to month of receipt, one-half of the entire dues payment and deferring the balance to the following year.

or all the services paid for by those dues may or may not be rendered. The Code exacts its revenue from the individual member's dues which, no one disputes, constitute income. When their receipt as earned income is recognized ratably over two calendar years, without regard to correspondingly fixed individual expense or performance justification, but consistently with overall experience, their accounting doubtless presents a rather accurate image of the total financial structure, but fails to respect the criteria of annual tax accounting and may be rejected by the Commissioner.

The Association further contends that the findings of the court below support its position. We think not. The Court of Claims' only finding as to the accounting system itself is as follows:

> 22. The method of accounting employed by plaintiff during the years in issue has been used regularly by plaintiff since 1931 and is in accord with generally accepted commercial accounting principles and practices and was, prior to the adverse determination by the Commissioner of the Internal Revenue, customarily and generally employed in the motor club field.

This is only to say that in performing the function of business accounting the method employed by the Association "is in accord with generally accepted commercial accounting principles and practices." It is not to hold that for income tax purposes it so clearly reflects income as to be binding on the Treasury. Likewise, other findings merely reflecting statistical computations of average monthly cost per member on a group or pool basis are without determinant significance to our decision that the federal revenue cannot, without legislative consent and over objection of the Commissioner, be made to depend upon average experience in rendering performance and turning a profit. Indeed, such tabulations themselves demonstrate the inadequacy from an income tax standpoint of the pro rata method of allocating each year's membership dues in equal monthly installments not in fact related to the expenses incurred. Not only did individually incurred expenses actually vary from month to month, but even the average expense varied — recognition of income nonetheless remaining ratably constant. Although the findings below seem to indicate that it would produce substantially the same result as that of the system of ratable monthly recognition actually employed, we consider similarly unsatisfactory, from an income tax standpoint, allocation of monthly dues to gross monthly income to the extent of actual service expenditures for the same month computed on a group or pool basis. In addition, the Association's election in 1954 to change its monthly recognition formula to one which treats one-half of the dues as income in the year of receipt and the other half as income received in the subsequent year, without regard to month of payment, only more clearly indicates the artificiality of its method, at least so far as controlling tax purposes are concerned. Moreover, the Association realized that the findings of the Court of Claims were not alone sufficient for its purposes. In its petition for rehearing below, petitioner specifically asked that they be amended and enlarged, especially as to No. 22 set out above. Rehearing and amendment were denied.

Whether or not the Court's judgment in *Michigan* controls our disposition of this case, there are other considerations requiring our affirmance. They concern the action of the Congress with respect to its own positive and express statutory authorization of employment of such sound commercial accounting practices in reporting taxable income. In 1954 the Congress found dissatisfaction in the fact that "as a result of court decisions and rulings, there have developed many divergencies between the computation of income for tax purposes and income for business purposes as computed under generally accepted accounting principles. The

areas of difference are confined almost entirely to questions of when certain types of revenue and expenses should be taken into account in arriving at net income." House Ways and Means Committee Report, H.R. Rep. No. 1337, 83d Cong., 2d Sess. 48. As a result, it introduced into the Internal Revenue Code of 1954 §452 and §462 which specifically permitted essentially the same practice as was employed by the Association here.[3] Only one year later, however, in June 1955, the Congress repealed these sections retroactively. It appears that in this action Congress first overruled the long administrative practice of the Commissioner and holding of the courts in disallowing such deferral of income for tax purposes and then within a year reversed its own action. This repeal, we believe, confirms our view that the method used by the Association could be rejected by the Commissioner. While the claim is made that Congress did not "intend to disturb prior law as it affected permissible accrual accounting provisions for tax purposes. . . ." H.R. Rep. No. 293, 84th Cong., 1st Sess. 4, the cold fact is that it repealed the only law incontestably permitting the practice upon which the Association depends. To say that, as to taxpayers using such systems, Congress was merely declaring existing law when it adopted §452 in 1954, and that it was merely restoring unaffected the same prior law when it repealed the new section in 1955 for good reason, is a contradiction in itself, "varnishing nonsense with the charm of sound." Instead of constituting a merely duplicative creation, the fact is that §452 for the first time specifically declared petitioner's system of accounting to be acceptable for income tax purposes, and overruled the long-standing position of the Commissioner and courts to the contrary. And the repeal of the section the following year, upon insistence by the Treasury that the proposed endorsement of such tax accounting would have a disastrous impact on the Government's revenue,* was just as clearly a mandate from the Congress that petitioner's system was not acceptable for tax purposes. To interpret its careful consideration of the problem otherwise is to accuse the Congress of engaging in sciamachy. We are further confirmed in this view by consideration of the even more recent action of the Congress in 1958, subsequent to the decision in *Michigan,* supra. In that year §455 was added to the Internal Revenue Code of 1954. It permits publishers to defer receipt as income of prepaid subscriptions of newspapers, magazines and periodicals. An effort was made in the Senate to add a provision in §455 which would extend its coverage to prepaid automobile club membership dues. However, in conference the House Conferees refused to accept this amendment. Senator Byrd explained the rejection of the amendment to the Senate (104 Cong. Rec., Part 14, p. 17744):

> It was the position of the House conferees that this matter of prepaid dues and fees received by nonprofit service organizations was a part of the entire subject dealing with the treatment of prepaid income and that such subject should be left for study of this entire problem. . . .

It appears, therefore, that, pending its own further study, Congress has given publishers but denied automobile clubs the very relief that the Association seeks in this Court.

To recapitulate, it appears that Congress has long been aware of the problem this case presents. In 1954 it enacted §452 and §462, but quickly repealed them. Since that time Congress has authorized the desired accounting only in the instance of prepaid subscription income, which, as was pointed out in *Michigan,*

---

[3] The Senate Report included this language:

"Under the 1939 Code, regardless of the method of accounting . . . amounts are includible in gross income by the recipient not later than the time of receipt if they are subject to free and unrestricted use by the taxpayer even though the payments are for goods or services to be provided by the taxpayer at a future time." S. Rep. No. 1622, 83d Cong., 2d Sess 301.

* See paragraph 2 of editor's note, infra page 805. — Ed.

is ratably earned by performance on "publication dates after the tax year." 353 U.S. 180, 189, note 20. It has refused to enlarge §455 to include prepaid membership dues. At the very least, this background indicates congressional recognition of the complications inherent in the problem and its seriousness to the general revenue. We must leave to the Congress the fashioning of a rule which, in any event, must have wide ramifications. The Committees of the Congress have standing committees expertly grounded in tax problems, with jurisdiction covering the whole field of taxation and facilities for studying considerations of policy as between the various taxpayers and the necessities of the general revenues. The validity of the long established policy of the Court in deferring, where possible, to congressional procedures in the tax field is clearly indicated in this case. Finding only that, in light of existing provisions not specifically authorizing it, the exercise of the Commissioner's discretion in rejecting the Association's accounting system was not unsound, we need not anticipate what will be the product of further "study of this entire problem."

Affirmed.

MR. JUSTICE STEWART, whom MR. JUSTICE DOUGLAS, MR. JUSTICE HARLAN and MR. JUSTICE WHITTAKER join, dissenting.

In Automobile Club of Michigan the Court pointed out that the method of accounting employed by the taxpayer was "purely artificial," so far as the record there showed. 353 U.S., at 189. Here, by contrast, the petitioner proved, and the Court of Claims found, that the method of accounting employed by the petitioner during the years in issue was in accord with generally accepted commercial accounting principles and practice, was customarily employed by similar taxpayers, and, in the opinion of qualified experts in the accounting field, clearly reflected the petitioner's net income. I do not understand that the Court today questions either that proof or those findings.

The Court thus holds that the Commissioner is authorized to disregard and override a method of reporting income under which prepaid dues are deferred in direct relation to the taxpayer's costs under its membership contracts. The effect of the Court's decision is to allow the Commissioner to prevent an accrual basis taxpayer from making returns in accordance with the accepted and clearly valid accounting practice of excluding from gross income amounts received as advances until the right to such amounts is earned by rendition of the services for which the advances were made. To permit the Commissioner to do this, I think, is to ignore the clear statutory command that a taxpayer must be allowed to make his returns in accord with his regularly employed method of accounting, so long as that method clearly reflects his income. The result, I am afraid, will be to engender far-reaching confusion and injustice in the administration of the Internal Revenue Laws.[1]

---

1 The scope of the problem is well illustrated by the reported cases. See, e.g., South Dade Farms v. Commissioner, 138 F.2d 818 (rent received in advance); Clay Sewer Pipe Assn. v. Commissioner, 139 F.2d 130 (subscriptions for promotion campaign to be consummated in years subsequent to receipt); Beacon Publishing Co. v. Commissioner, 218 F.2d 697 (advance newspaper subscription payments); Bressner Radio, Inc. v. Commissioner, 267 F.2d 520 (advance payments in a television servicing contract); Schlude v. Commissioner, 283 F.2d 234 (fees for dancing lessons paid in advance); Wallace A. Moritz, 21 T.C. 622 ("customers' deposits" on undeveloped photographs); South Tacoma Motor Co., 3 T.C. 411 (proceeds from sale of coupons entitling bearer to garage services in later years); Your Health Club, Inc., 4 T.C. 385 (advance payments for use of gym and other facilities); Northern Illinois College of Optometry, ¶43,396 P-H Memo T.C.

I

The Commissioner's basic argument against the deferred reporting of prepayments has traditionally been that such a method conflicts with a series of decisions of this Court which establish the so-called "claim of right doctrine." In this case the Government abandoned that argument, with good reason. As four Circuits have correctly held, the claim of right doctrine furnishes no support for the Government's position. Bressner Radio, Inc., v. Commissioner, 267 F.2d 520, 524, 525-528 (C.A. 2d Cir.); Schlude v. Commissioner, 283 F.2d 234 (C.A. 8th Cir.); Schuessler v. Commissioner, 230 F.2d 722, 725 (C.A. 5th Cir.); Beacon Publishing Co. v. Commissioner, 218 F.2d 697, 699-701 (C.A. 10th Cir.). A claim of right without "restriction on use" may be the crucial factor in determining that particular funds are includable in gross income. See North American Oil v. Burnet, 286 U.S. 417; United States v. Lewis, 340 U.S. 590; Healy v. Commissioner, 345 U.S. 278. But it hardly follows that all such funds must necessarily be reported by an accrual basis taxpayer as income in the year of receipt, whether or not then earned.

The Government shifted its argument in this case to the contention that the "annual accounting requirement" demands that "[n]either income nor deduction items may be accelerated or postponed from one taxable year to another in order to reflect the long-term economic result of a particular transaction or group of transactions." The Government finds a basis for this argument in such cases as Security Mills Co. v. Commissioner, 321 U.S. 281; Brown v. Helvering, 291 U.S. 193; Burnet v. Sanford & Brooks Co., 282 U.S. 359; Guaranty Trust Co. v. Commissioner, 303 U.S. 493; and Heiner v. Mellon, 304 U.S. 271.

The Court today does not base its decision on this theory, presumably because the Court believes, as I do, that the theory is not valid. Putting to one side the point that many of the cases relied on involved cash basis taxpayers, these decisions no more pertain to deferred reporting of totally unearned receipts than do the claim of right decisions. These cases, like the claim of right cases, start from the premise that the income in question has been fully earned.[2] The underlying premise of the annual accounting requirement is that *otherwise reportable income* derived from a transaction cannot be excluded from gross income in order to let the taxpayer wait to see in a later year how the overall transaction turns out. This is not the issue in this case. The question here is whether any reportable income has been derived from a transaction when payments are received in advance of performance.

Although wisely rejecting the claim of right and annual accounting arguments, the Court decides this case upon grounds which seem to me equally invalid. I can find nothing in *Automobile Club of Michigan* which controls disposition of this case. And the legislative history upon which the Court alternatively relies seems to me upon examination to be singularly unconvincing.

In *Michigan* there was no offer of proof to show the rate at which the taxpayer fulfilled its obligations under its membership contracts. The deferred reporting of prepaid dues was, therefore, rejected in that case simply because there was no showing of a correlation between the amounts deferred and the costs incurred by the taxpayer in carrying out its obligations to its members. Until today, that case has been recognized as one that simply held that, in the absence of proof that the proration used by the taxpayer reasonably matched actual expenses with the earning of related revenue, the Commissioner was justified in rejecting the taxpayer's proration. I am hardly alone in thinking that *Michigan* was decided

[2] With the possible exception of contingent related expenditures, which cannot be accurately measured. See Brown v. Helvering, 291 U.S. 193, 200-201.

upon the very premise that a realistic deferral of income based upon proof of average costs of service during identifiable periods would be entirely permissible. See Bressner Radio, Inc. v. Commissioner, 267 F.2d 520, 526-529. Such proof was concededly adduced in this case.

As to the enactment and repeal of §452 and §462, upon which the Court places so much reliance, . . . I think that the enactment and subsequent repeal of §452 and §462 give no indication of Congressional approval of the position taken by the Commissioner in this case. If anything, the legislative action leads to the contrary impression.

The statutory provisions in question were passed as part of a general revision of the internal revenue laws in 1954. Section 452 permitted an accrual basis taxpayer to defer the inclusion of advances in gross income until they were earned. Most significantly, a taxpayer could shift to this method without the consent of the Commissioner. Section 462, which permitted the deduction of anticipated expenses, was not aimed specifically at the problem of reporting advances. The function of the provisions was to bring "[t]ax accounting . . . more nearly in line with accepted business accounting by allowing prepaid income to be taxed as it is earned rather than as it is received, and by allowing reserves to be established for known future expenses."

In seeking to accomplish this objective, Congress recognized that as a result of "court decisions and rulings," the claim of right approach had been used to require reporting for the year of receipt all payments "subject to free and unrestricted use . . . even though the payments are for goods or services to be provided by the taxpayer at a future time." H.R. Rep. No. 1337, 83d Cong., 2d Sess. 48, A159. Congressional awareness of administrative and judicial misapplication of the claim of right doctrine clearly did not imply approval of it. For by 1954, "[i]t was long recognized that the difficulty lay, not with the statute, but with administrative and court interpretation." And while the Committee reports contain no express rejection of the Commissioner's interpretation of the 1939 statute, the language used in explaining the need for a change certainly indicates disapproval.

Although §452 and §462 were short-lived, the shape of the decisional law with respect to §41 of the 1939 Code [§446(a) and (b), 1954 Code] changed considerably during the interval between the passage and repeal of the new sections. In Beacon Publishing Co. v. Commissioner, 218 F.2d 697, the Tenth Circuit rejected the Commissioner's reliance on the claim of right rationale and found that the deferment of advances in accord with accrual principles did "clearly reflect . . . income" under §41. At about the same time a Ninth Circuit decision permitted income received from the sale of goods to be offset by a deduction for the future expense of shipping the goods. Pacific Grape Products Co. v. Commissioner, 219 F.2d 862.

When Congress repealed §452 and §462, the record shows that it was fully aware of these decisions. Congress recognized that the rationale of these cases would produce a complete reversal of the previous administrative position with respect to the reporting of unearned receipts under §41 and its counterpart under the 1954 Code, §446. Congressional intent with respect to this possibility was entirely clear — the trend of judicial decisions should be allowed to run its course *without any inference of disapproval being drawn from the repeal of §452 and §462.*

[Mr. Justice Stewart here quoted from a letter from the Secretary of the Treasury to the Chairman of the House Committee on Ways and Means, stating that "the Treasury Department will not consider the repeal of section 452 as any indication of congressional intent as to the proper treatment of prepaid subscriptions and other items of prepaid income, either under prior law or under other prov

sions of the 1954 Code," and from a similar statement in the Senate Report on the repeal legislation itself.]

To my mind, this legislative history shows that Congress made every effort to dissuade the courts from doing exactly what the Court is doing in this case — drawing from the repeal of §452 an inference of Congressional disapproval of deferred reporting of advances. But even if the legislative history on this point were hazy, the same conclusion would have to be reached upon examination of Congressional purpose in repealing §452 and §462. Cf. United States v. Benedict, 338 U.S. 692, 696. For the fact of the matter is, contrary to the impression left by the Court's opinion, that the reasons for rejecting §452 and §462 were entirely consistent with accepting the deferred reporting of receipts in a case like this. Sections 452 and 462 were repealed *solely* because of a prospective loss of revenue during the first year in which taxpayers would take advantage of the new sections. Insofar as the reporting of advances was concerned, that loss of revenue would have occurred solely as a consequence of taxpayers changing their method of reporting, without the necessity of securing the Commissioner's consent, to that authorized under §452 and §462. The taxpayer who shifted his basis for reporting advances would have been allowed what was commonly termed a "double deduction" during the transitional year. Under §462, deductions could be taken in the year of change for expenses attributable to advances taxed in prior years under a claim of right theory, as well as for reserves for future expenditures attributable to advances received and reported during that year. Similarly, under §452, prepayments received during the year of transition would be excluded from gross income while current expenditures attributable to past income would still be deductible.

The Congressional purpose in repealing §452 and §462 — maintenance of the revenues — does not, however, require disapproval of sound accounting principles in cases of taxpayers who, like the petitioner, have customarily and regularly used a sound accrual accounting method in reporting advance payments. No transition is involved, and no "double deduction" is possible. Moreover, taxpayers formerly reporting advances as income in the year of receipt can now shift to a true accrual system of reporting only with the approval of the Commissioner. See Treas. Reg. 111, §29.41-2 (1942); Treas. Reg. 118, §39.41-2(c) (1953); Int. Rev. Code of 1954, §446(e). Before giving his approval the Commissioner can be expected to insist upon adjustments in the taxpayer's transition year to forestall any revenue loss which would otherwise result from the change in accounting method. See Kahuku Plantation Co. v. Commissioner, 132 F.2d 671, 674; 2 Mertens, Law of Federal Income Taxation, §§12.21, 12.21a. Cf. Brown v. Helvering, 291 U.S. 193, 204.

In short, even if the legislative history of the repeal of §452 and §462 did not clearly indicate, as it does, that the repeal of those sections should have no bearing upon judicial determination of whether the deferred reporting of advances "clearly reflects income," the purpose of the Congress which repealed those provisions would lead to the same conclusion. It need hardly be added that the subsequent legislative activity cited by the Court in no way alters this conclusion. Contrary to the Court's suggestion, the "relief that the Association seeks in this Court" is far short of what was sought in 1958 in urging that the coverage of §455 be extended to prepaid automobile club membership dues. As enacted, §455 was not limited in application to publishers previously reporting prepaid subscriptions on a deferral basis. See I.T. 3369, 1940-1 Cum. Bull. 46. It applied to all publishers using the accrual method and permitted a change to deferred reporting of subscriptions for the year 1958 *without consent* of the Commissioner. §455(c)(3)(B).

I think the Government's position in this case is at odds with the statutes, regulations, and court decisions, which, since 1916, have recognized that realistic accrual accounting does "clearly reflect income." If I am correct, the law did not give the Commissioner any "discretion . . . not to accept the taxpayer's accounting system."

The basic concept of including advances in gross income only as they are earned is but an aspect of accrual accounting principles which have consistently received judicial approval. We have, for example, often recognized that deductions for business expenses must be reported as soon as the obligation to pay becomes "certain." See, e.g., United States v. Anderson, 269 U.S. 422; American National Co. v. United States, 274 U.S. 99; Niles Bement Pond Co. v. United States, 281 U.S. 357, 360; United States v. Olympic Radio and Television, 349 U.S. 232, 236. This may be before or after cash payment is made, or even before it is due. The controlling factor is not the flow of cash, but the "economic and bookkeeping" principles with which [§446] is concerned. United States v. Anderson, supra, at 441. See also American National Co. v. United States, supra. These principles are at the foundation of the so-called "all events" test for determining the accrual of deductions. See United States v. Anderson, supra, at 441; United States v. Consolidated Edison Co., 366 U.S. 380. The same principles are applicable to the accrual of income. See Continental Tie & L. Co. v. United States, 286 U.S. 290. As has been correctly noted, "[i]t is a necessary corollary of this 'economic and bookkeeping' proposition" upon which *Anderson* rested that receipts are not reportable in income until "substantially 'all the events' have occurred, both as to the cost and time of performance, which must occur in order to discharge the liability to perform which was given by [the taxpayer] in return for the receipt." Bressner Radio, Inc., v. Commissioner, 267 F.2d 520, 524. See also United States v. Anderson, supra, at 440; Beacon Publishing Co. v. Commissioner, 218 F.2d 697, 699. Indeed, "accrual" of income has been commonly defined in terms of "earnings" from the sale of goods or the performance of services. See, e.g., Spring City Co. v. Commissioner, 292 U.S. 182, 184-185; Stanley and Kilcullen, The Federal Income Tax (3d ed. 1955), 190. In rejecting petitioner's method of allocating prepaid advances, the Court, I think, disregards these basic principles.

The net effect of compelling the petitioner to include all dues in gross income in the year received is to force the petitioner to utilize a hybrid accounting method — a cash basis for dues and an accrual basis for all other items. Schlude v. Commissioner, 283 F.2d 234, 239. Cf. Commissioner v. South Texas Co., 333 U.S. 496, 501. For taxpayers generally the enforcement of such a hybrid accounting method may result in a gross distortion of actual income, particularly in the first and last years of doing business. On the return for the first year in which advances are received, a taxpayer will have to report an unrealistically high net income, since he will have to include unearned receipts, without any offsetting deductions for the future cost of earning those receipts. On subsequent tax returns, each year's unearned prepayments will be partially offset by the deduction of current expenses attributable to prepayments taxed in prior years. Even then, however, if the taxpayer is forbidden to correlate earnings with related expenditures, the result will be a distortion of normal fluctuations in the taxpayer's net income. For example, in a year when there are low current expenditures because of fewer advances received in the preceding year, the result may be an inflated adjusted gross income for the current year. Finally, should the taxpayer decide to go out of business upon fulfillment of the contractual obligations already undertaken, in the final year there will be no advances to report and many costs attributable to

advances received in prior years. The result will be a grossly unrealistic reportable net loss.

The Court suggests that the application of sound accrual principles cannot be accepted here because deferment is based on an estimated rate of earnings, and because this estimate, in turn, is based on average, not individual, costs. It is true, of course, that the petitioner cannot know what service an individual member will require or when he will demand it. Accordingly, in determining the portion of its outstanding contractual obligations which have been discharged during a particular period (and hence the portion of receipts earned during that period), the petitioner can only compare the total expenditures for that period against estimated average expenditures for the same number of members over a full contract term. But this use of estimates and averages is in no way inconsistent with long-accepted accounting practices in reflecting and reporting income. As the Government has pointed out in past litigation, "many business concerns . . . keep accounts on an accrual basis and have to estimate for the tax year the amount to be received on transactions undoubtedly allocable to such year." Continental Tie & L. Co. v. United States, 286 U.S. 290, 295-296. Similarly, the deduction of future expenditures which have already accrued often requires estimates like those involved here. See, e.g., Harrold v. Commissioner, 192 F.2d 1002; Schuessler v. Commissioner, 230 F.2d 722; Denise Coal Co. v. Commissioner, 271 F.2d 930, 934-937; Hilinski v. Commissioner, 237 F.2d 703. Finally, it is to be noted that the regulations under both the 1939 and 1954 Codes permit various methods of reporting income which require the use of estimates.[3] In the absence of any showing that the estimates used here were faulty, I think the law did not permit the Commissioner to forbid the use of standard accrual methods simply upon the ground that estimates were necessary to determine what the rate of deferral should be.

Similarly, it is not relevant that the petitioner "defers receipt . . . of dues to a taxable period in which no, some, or all the services paid for by those dues may or may not be rendered." The fact of the matter is that what the petitioner has an obligation to provide, i.e., the constant readiness of services if needed, will with certainty be provided during the period to which deferment has been made. Averages are frequently utilized in tax reporting. In computing the value of work in process, in distributing overhead to product cost, and in various other areas, the use of averages has long been accepted. See, e.g., Rookwood Pottery Co. v. Commissioner, 45 F.2d 43; Eatonville Lumber Co., 10 B.T.A. 232. The use of an "average cost" is particularly appropriate here where the dues are earned by making services continuously available. The cost of doing so must necessarily be based on composite figures.

For these reasons I think that the petitioner's original return clearly reflected its income, that the Commissioner was therefore without authority under the law to override the petitioner's accounting method, and that the judgment should be reversed.

NOTE

1. *Prepaid lessons.* In Schlude v. Commissioner, 371 U.S. 884 (1963), the Supreme Court held (5-to-4) that a dancing school was taxable in the year of receipt on amounts paid by students for lessons to be rendered in the future; the school's consistent practice had been

[3] See, e.g., Treas. Reg. §1.451-3 (1957) (providing for the percentage of completion method of reporting income on long-term contracts); Treas. Reg. §1.451-4 (1957) (providing for the deduction for redemption of trading stamps based upon "the rate, in percentage, which the stamps redeemed in each year bear to the total stamps issued in such year"). See generally Brown & Williamson Tobacco Corp., 16 T.C. 432.

to treat such payments as deferred income, to be recognized in aliquot portions as the lessons were given or when the student's lack of activity indicated that no more lessons would be called for. The majority relied in part on its discussion in the *AAA* case of the retroactive repeal of §452 and the limited scope of the subsequently enacted §456, and added:

> The *American Automobile Association* case rested upon an additional ground which is also controlling here. Relying upon Automobile Club of Michigan v. Commissioner, 353 U.S. 180, the Court rejected the taxpayer's system as artificial since the advance payments related to services which were to be performed only upon customers' demands without relation to fixed dates in the future. The system employed here suffers from that very same vice, for the studio sought to defer its cash receipts on the basis of contracts which did not provide for lessons on fixed dates after the taxable year, but left such dates to be arranged from time to time by the instructor and his student. Under the contracts, the student could arrange for some or all of the additional lessons or could simply allow their rights under the contracts to lapse. But even though the student did not demand the remaining lessons, the contracts permitted the studio to insist upon payment in accordance with the obligations undertaken and to retain whatever prepayments were made without restriction as to use and without obligation of refund. At the end of each period, while the number of lessons taught had been meticulously reflected, the studio was uncertain whether none, some or all of the remaining lessons would be rendered. Clearly, services were rendered solely on demand in the fashion of the *American Automobile Association* and *Automobile Club of Michigan* cases.[1]
>
> Moreover, percentage royalties and sales commissions for lessons sold, which were paid as cash was received from students or from its note transactions with the bank, were deducted in the year paid even though the related items of income had been deferred, at least in part, to later periods. In view of all these circumstances, we hold the studio's accrual system vulnerable under §41 [1939 Code] and §446(b) [1954 Code] with respect to its deferral of prepaid income. Consequently, the Commissioner was fully justified in including payments in cash or by negotiable note in gross income for the year in which such payments were received. If these payments are includible in the year of receipt because their allocation to a later year does not clearly reflect income, the contract installments are likewise includible in gross income, as the United States now claims, in the year they become due and payable. For an accrual basis taxpayer "it is the *right* to receive and not the actual receipt that determines the inclusion of the amount in gross income," Spring City Co. v. Commissioner, 292 U.S. 182, 184; Commissioner v. Hansen, 360 U.S. 446, and here the right to receive these installments had become fixed at least at the time they were due and payable. [372 U.S. at 136-137.]

The dissenters said, in part:

> In the present case the difficulties which the Court perceived in *Automobile Club of Michigan* and *American Automobile Association* have been entirely eliminated in the accounting system which these taxpayers have consistently employed. The records kept on individual students accurately measured the amount of services rendered — and therefore the costs incurred by the taxpayer — under each individual contract during each taxable year. But, we are told, there is a fatal flaw in the taxpayers' accounts in this case too: The individual contracts did not provide "for lessons on fixed dates . . . , but left such dates to be arranged from time to time by the instructor and his student." Yet this "fixed date of performance" standard, it turns out, actually has nothing whatever to do with those aspects of the taxpayers' accounting system which the Court ultimately finds objectionable.

1 The treatment of "gains from cancellations" underlines this aspect of the case. These gains, representing amounts paid or promised in advance of lessons given, were recognized in those periods in which the taxpayers arbitrarily decided the contracts were to be deemed canceled. The studio made no attempt to report estimated cancellations in the year of receipt, choosing instead to defer these gains to periods bearing no economic relationship to the income recognized. Cf. Continental Tie & Lumber Co. v. United States, 286 U.S. 290.

There is nothing in the Court's opinion to indicate disapproval of the basic method by which income earned by the rendition of services was recorded. On the contrary, the taxpayers' system was admittedly wholly accurate in recording lessons given under each individual contract. It was only in connection with lessons which had not yet been taught that the taxpayers were "uncertain whether none, some or all" of the contractual services would be rendered, and the condemned "arbitrariness" therefore is limited solely to the method by which cancellations were recognized. It is, of course, true of all businesses in which services are not rendered simultaneously with payment that the number and amount of cancellations are necessarily unknown at the time advances are received. But surely it cannot be contended that a contract which specified the times at which lessons were to be given would make any more certain how many of the remaining lessons students would in fact demand. Indeed, the Court does not suggest that a schedule fixing the dates of all future lessons would, if embodied in each contract, suffice to make petitioners' accounting system "clearly reflect income."

Instead, the cure suggested by the Court for the defect which it finds in the accounting system used by these taxpayers is that estimated cancellations should be reported as income in the year advance payments are received. I agree that such estimates might more "clearly reflect income" than the system actually used by the taxpayers. But any such estimates would necessarily have to be based on precisely the type of statistical evaluations which the Court struck down in the *American Automobile Association* case. Whatever other artificialities the exigencies of revenue collection may require in the field of tax accounting, it has never before today been suggested that a consistent method of accrual accounting, valid for purposes of recognizing income, is not equally valid for purposes of deferring income. Yet in this case the Court says that the taxpayers, in recognizing income, should have used the very system of statistical estimates which, for income deferral purposes, the *American Automobile* decision held impermissible. [372 U.S. at 142-143.]

For the *Schlude* case on remand, see ¶63,307 P-H Memo T.C.; see also Behren, Supreme Court in Schlude Holds Prepaid Income Taxable on "Receipt"; Rationale Is Uncertain, 18 J. Taxation 194 (1963).

2. *The short, unhappy lives of §452 and §462.* As paragraph 9(b) of the American Accounting Association's "Accounting Principles and Taxable Income" (supra p. 776) indicates, accountants have frequently criticized the Treasury's attitude toward prepaid income and expenses reserves; indeed, these are probably the most important departures, in computing taxable income, from conventional accounting methods. It was, therefore, regarded as a great victory for "generally accepted accounting principles" when §§452 and 462 of the 1954 Code were enacted.

Section 452 permitted "prepaid income" to be spread over an appropriate number of future years. The term "prepaid income" was defined as "any amount (includible in gross income) which is received in connection with, and is directly attributable to, a liability [to render services, furnish goods or other property, or allow the use of property] which extends beyond the close of the taxable year in which such amount is received." §452(c).

Section 462 provided that in computing taxable income, "there shall be taken into account (in the discretion of the Secretary or his delegate) a reasonable addition to each reserve for estimated expenses to which this section applies." The Senate Report on the 1954 Code stated (pp. 306-307):

The Secretary or his delegate must be satisfied that the expenses can be estimated with reasonable accuracy. For example, if cash discounts are allowed customers for prompt payment, and the taxpayer can predict from experience the approximate percentage of the allowable discounts which will be taken (even though he cannot name the customers with certainty) he will be permitted a deduction in the year in which the sales are reported equal to the discounts which will be realized in the process of collecting the accounts. If repairs or replacements will have to be made under guaranty on products sold during the year, and the average cost of such repairs or replacements can be estimated with reasonable accuracy, the taxpayer may take as a deduction in the year of such sales a reasonable addition to a reserve for product guaranties. The balance in the reserve at the close of each taxable year must be adjusted to reflect the estimated liability of the taxpayer with respect to outstanding guaranties. Other

illustrative items for which such reserves might be set up in appropriate cases include sales returns and allowances, freight allowances, quantity discounts, vacation pay, and certain liabilities for self-insured injury and damage claims. The Secretary or his delegate may disallow additions to any reserve of this type if he finds that the costs and expenses for which provision is made are not reasonably supported by the taxpayer. . . .

The reserve method is not to be allowed for costs and expenses of a contingent or contested nature and as to which there is no reasonable certainty of their amount. Reserves created for general undetermined contingencies, indefinite possible future losses, expenses and losses not reasonably related to the taxable year, or for specific expenses and losses that are being contested or are in litigation, cannot ordinarily be estimated with reasonable accuracy and are not to be the basis for additions to reserves under this section.

When §§452 and 462 were enacted, it was estimated that the revenue loss from these and all other accounting provisions of the 1954 Code would be under $50 million. Less than a year later, the Treasury asked Congress to repeal §§452 and 462 on the ground that they would cause a serious revenue loss (as much as several billion dollars, according to some estimates) during the transitional period, when taxpayers began to defer prepaid income and to deduct estimated expenses, since during this period they would continue to deduct the actual costs of servicing old contracts.

In reporting out the bill to repeal §452 and §462, the Senate Finance Committee said of the problem of lost revenue in the year taxpayers shifted to a reserve method of providing for expenses:

As indicated above, your committee last year recognized this problem in the timing of deductions where a taxpayer converts to the expense reserve method and believed that [§462] met the problem by giving the Secretary of the Treasury discretion over not only the amount of estimated expense to be added to the reserve for each taxable year but also the kind of items which entered into the estimated reserve. With such limitations in the section, it was the opinion of your committee that any revenue loss which might occur would be well within the limits of last year's estimate. It would appear possible, for example, for the Secretary to require the spreading of the deductions for actual expenses incurred in the year of transition to the reserve method, over an extended period of years. . . . It apparently is the opinion of the Secretary of the Treasury, however, that the words "in the discretion of the Secretary or his delegate" only limit the amount of the allowable deductions and not the type of items which can be deducted. . . . The Secretary apparently is fearful of exercising the discretion which your committee intended him to have in this matter. He has expressed the view that some taxpayers may contest his decisions and that there may be prolonged litigation before the matter is ultimately decided.

It is because of the Secretary's fears and his desire to have a fresh review of section 462, relating to estimated expenses, and its counterpart section 452, relating to prepaid income, and because of the House action repealing these sections that your committee has reluctantly concluded to report out the House bill repealing these sections from the effective date of their enactment. Since the Secretary has not, by regulations, exercised the discretionary limitations which your committee delegated to him in the law, it is apparent that the loss in revenue under these provisions may be much larger than was anticipated last year.

The Senate Finance Committee also said:

Your committee desires to make its position clear that it expects to report out legislation dealing with prepaid income and reserves for estimated expenses at an early date. As indicated above, the existing rulings of the Treasury Department and the court decisions dealing with estimated expenses and prepaid income are now in such a state of confusion and uncertainty that in the opinion of your committee legislative action is required on these subjects. In addition, your committee believes that it is essential that the income tax laws be brought into harmony with generally accepted accounting principles. Moreover, your committee believes that the present status,

where some taxpayers are able to defer prepaid income while others are not, is inequitable and should not be allowed to continue. In order to eliminate this uncertainty and discrimination, definite rules must be written into the income tax law. For these reasons your committee plans to begin studies in the near future to devise proper substitutes for the sections now being repealed. [S. Rept. No. 372, 84th Cong., 1st Sess., reprinted in 1955-2 C.B. 858, 860-861.]

Despite this assurance by the committee, no general legislation has been enacted since §452 and §462 were repealed.

3. *The legislative sequel to the AAA case.* Following the decision in American Automobile Assn. v. United States, Congress enacted §456 to permit membership organizations to elect to spread prepaid dues over the period of their liability for the performance of services. The provision has much in common with §455 (prepaid subscription income), to which both the majority and the dissenters in the *AAA* case referred.

SCHUESSLER v. COMMISSIONER
230 F.2d 722 (5th Cir. 1956)

Before BORAH, TUTTLE and JONES, Circuit Judges.

TUTTLE, Circuit Judge.

This is a petition for review of a decision by the Tax Court disallowing a deduction in 1946 of an item of $13,300, representing a reserve set up by taxpayers while keeping their books on the accrual basis, to represent their estimated cost of carrying out a guarantee, given with each of the furnaces sold by them during the year, to turn the furnace on and off each year for five years.

The opinion of the Tax Court treats the matter as though ample proof was offered by the taxpayer (hereafter the husband will be called "taxpayer") to raise the legal issue and we find the record warrants this treatment. Taxpayer was in the gas furnace business in 1946, during which he sold 665 furnaces, each with a guarantee that he would turn the furnace on and off each year for five years. The fact that such service, if performed, would cost $2.00 per call was amply established. The taxpayer, himself a bookkeeper and accountant prior to entering this business, testified to his keeping his books on the accrual method and claimed that the only way his income could be accurately reported was by charging against the cost of furnaces sold in 1946 the reserve representing the amount which he became legally liable to expend in subsequent years in connection with the sales. The proof was clear that he actually sold the furnaces for $20.00 to $25.00 more than his competitors because of his guarantee, which they did not give.

We think it quite clear that petitioner's method of accounting comes much closer to giving a correct picture of his income than would a system in which he sold equipment in one year and received an inflated price because he obligated himself, in effect, to refund part of it in services later but was required to report the total receipts as income on the high level of the sales year and take deductions on the low level of the service years. The reasonableness of taxpayer's action, however, is not the test if it runs counter to requirements of the statute. We find that not only does it not offend any statutory requirement, but, in fact, we think it is in accord with the language and intent of the law. Clearly what is sought by this statute [§446(a) and (b)] is an accounting method that most acccurately reflects the taxpayer's income on an annual accounting basis.

The decisions of the Tax Court and of the several Courts of Appeals are not uniform on this subject, some circuits requiring a mathematical certainty as to the exact amount of the future expenditures that cannot be satisfied in the usual case. Other circuits, seemingly more concerned with the underlying principle of

charging to each year's income reasonably ascertainable future expenses necessary to earn or retain the income, have permitted the accrual of restricted items of future expenses. Two of this latter category are Harrold v. Commissioner, 192 F.2d 1002 (4th Cir. 1951), and Pacific Grape Products Co. v. Commissioner, 219 F.2d 862 (9th Cir. 1955).

In the *Harrold* case the taxpayer was permitted to deduct from its gross income in 1945 the estimated cost of back filling a tract of land which would be done under state law requirements in the year 1946. The Court there said:

> . . . when all the facts have occurred which determine that the taxpayer has incurred a liability in the tax year, and neither the fact nor the amount of the liability is contested, and the amount, although not definitely ascertained, is susceptible of estimate with reasonable accuracy in the tax year, deduction thereof from income may be taken by a taxpayer on an accrual basis (192 F.2d 1002, 1006.)

The *Pacific Grape Products* case is also, it seems to us, indistinguishable in principle from the case before us. There the taxpayer accrued the sales price of canned goods sold on December 31, and at the same time deducted the estimated cost of labeling and preparing the goods for shipping and brokerage fees to be paid the following year. The Tax Court, with six judges dissenting, accepted the Commissioner's view that the deductions should be disallowed. 17 T.C. 1097. The Court of Appeals reversed, saying:

> Not only do we have here a system of accounting which for years has been adopted and carried into effect by substantially all members of a large industry, but the system is one which appeals to us as so much in line with plain common sense that we are at a loss to understand what could have prompted the Commissioner to disapprove it. Contrary to his suggestion that petitioner's method did not reflect its true income it seems to us that the alterations demanded by the Commissioner would wholly distort that income.

The case of Beacon Publishing Co. v. Commissioner, 218 F.2d 697 (10th Cir. 1955), is considered by both parties here and was noted by the Tax Court as of especial significance. That case involved the treatment of prepaid income received by the Beacon Publishing Co. covering subscriptions to be furnished in subsequent years. The Tax Court in its decision here said:

> . . . This is essentially the same problem as the reporting of prepaid income in the year in which received for services to be performed in following years. The petitioner in fact, on brief, recognizes that the two problems are identical and cites Beacon Publishing Co. v. Commissioner, 10 Cir., 1955, 218 F.2d 697, in support of his argument that the reserve here in issue was a proper deduction in computing his income in 1946.

The Tax Court then simply declined to follow the Court in the *Beacon* case, preferring to adhere to its own views as expressed in Andrews v. Commissioner, 23 T.C. 1026. We prefer the reasoning as well as the conclusion reached by the Court in the Tenth Circuit. There the opinion correctly, we think, disposed of the "claim of right" theory advanced by the Commissioner and adopted by the Tax Court in this type of case.

Finally we think the enactment in 1954 of Section 462 of the Internal Revenue Code of 1954 and its subsequent repeal constitute no legislative history bearing on the construction of the provisions of the Internal Revenue Code of 1939.

The record below amply supports the contention of the taxpayer that there was a legal liability created in 1946, when the purchase price was paid for the gas furnaces, for the taxpayer to turn the furnaces on and off for the succeeding five years; that the cost of such service was reasonably established at a minimum of $2.00 per visit; and that the payment of $20.00 to $25.00 extra by the purchasers fully proved their intention to call upon the taxpayer each year for the

service. These facts authorized the setting up of a reserve out of the 1946 income to enable the taxpayer to meet these established charges in future years. The decision of the Tax Court is therefore in error and must be reversed.

Reversed with directions to enter judgment for the taxpayer.

NOTE

1. *Reserves for estimated expenses.* When a deduction for estimated expenses is denied, it is customary for the courts to rely on Brown v. Helvering, 291 U.S. 193 (1934), which involved a general insurance agent who was entitled to receive commissions on all insurance policies written by its sub-agents. The commissions were reported in the year the policies were written, and a deduction (estimated on the basis of past years) was taken for the commissions that, on the basis of experience, would probably have to be refunded to the companies in the event that some of the policies were canceled by the holders. The Supreme Court denied the deduction:

> In respect to no particular policy written within the year could it be known that it would be cancelled in a future year. Nor could it be known that a definite percentage of all the policies will be cancelled in the future years. Experience taught that there is a strong probability that many of the policies written during the taxable year will be so cancelled. But experience taught also that we are not dealing here with certainties. This is shown by the variations in the percentages in the several five-year periods of the aggregate of refunds to the aggregate of overriding commissions. [291 U.S. at 201.]

During the 1950's, the courts seemed disposed to find that Brown v. Helvering was not controlling in an increasing number of situations, of which *Schuessler* and *Beacon Publishing Co.* are examples. As to their present status, the Supreme Court in *Automobile Club of Michigan* said this in a footnote:

> Beacon Publishing Co. v. Commissioner, 218 F.2d 697, and Schuessler v. Commissioner, 230 F.2d 722, are distinguishable on their facts. In *Beacon,* performance of the subscription, in most instances, was, in part, necessarily deferred until the publication dates after the tax year. In *Schuessler,* performance of the service agreement required the taxpayer to furnish services at specified times in years subsequent to the tax year. In this case, substantially all services are performed only upon a member's demand and the taxpayer's performance was not related to fixed dates after the tax year. We express no opinion upon the correctness of the decisions in *Beacon* or *Schuessler.* [353 U.S. 180, 189 (1957).]

In American Automobile Assn. v. United States, the Court again mentioned the *Beacon* and *Schuessler* cases, saying that they "may be distinguished from the present case on the same grounds which made them distinguishable in Automobile Club of Michigan v. Commissioner."

On the same day that it decided the *AAA* case, the Supreme Court vacated a judgment in favor of the taxpayer in a case involving deductions by a public bus transportation company for its estimated liability on unsettled tort claims, and remanded the case "in light of American Automobile Association v. United States . . . and United States v. Consolidated Edison Co. [holding that an accrual basis taxpayer may not deduct amounts paid under protest in respect of disputed real estate taxes, see page 846 infra]." Milwaukee & Suburban Transport Corp. v. Commissioner, 366 U.S. 965 (1961). On remand (293 F.2d 628), the Court of Appeals affirmed the original pro-government decision in the Tax Court, citing without discussion the same cases cited by the Supreme Court. Certiorari was denied, 368 U.S. 976.

The Tax Court has expressed its view of the status of deductions for estimated expenses, in the light of the preceding cases, as follows:

> This is another of the plethora of cases coming before the courts in recent years involving the deferral of income or the accrual of expenses to cover the estimated cost

of rendering services in the future. We think the issue here is controlled by the recent decisions of the Supreme Court in Schlude v. Commissioner, 372 U.S. 128 (1963), American Automobile Assn. v. United States, 367 U.S. 687 (1961), and Commissioner v. Milwaukee & Suburban Transport Corp., 367 U.S. 906 (1961), which require a decision against the taxpayer herein. While it is true that the *Schlude* and *American Automobile* cases were concerned with the deferral of income rather than the deduction of estimated future expenses, the Court remanded the *Milwaukee & Suburban Transport* case, which did involve the deductibility of estimated expenses, "in the light" of the *American Automobile* case, and on remand the Court of Appeals for the Seventh Circuit vacated its prior decision permitting the deduction of anticipated damage claims and reinstated the decision of this Court denying such deduction on the authority of the *American Automobile* case. See Milwaukee & Suburban Transport Corporation v. Commissioner, 293 F.2d 628 (C.A.7, 1961). While it can be argued that there are technical distinctions in deferring prepaid income and deducting estimated future expenses in cases like this the net result is the same and we think the same principles of tax accounting and the Commissioner's authority should be applied to both techniques. As said in American Automobile Assn. v. United States, supra, the prepaid dues were credited to a reserve "as deferred or unearned income reflecting an estimated future service expense to members." . . .

Petitioner's reliance on such cases as Schuessler v. Commissioner, 230 F.2d 722 (C.A.5, 1956), reversing 24 T.C. 247 (1955), Pacific Grape Prod. Co. v. Commissioner, 219 F.2d 862 (C.A.9, 1955), reversing 17 T.C. 1097 (1952), and Denise Coal Co. v. Commissioner, 271 F.2d 930 (C.A.3, 1959), affirming in part and reversing in part 29 T.C. 528 (1957), is misplaced. Whether or not those cases are all distinguishable from the *American Automobile* and *Schlude* cases, they are all distinguishable from this case. In each of those cases the "operative facts" which gave rise to the future expenses had occurred in the year of accrual; in *Schuessler* the furnaces had been installed and there was a fixed obligation to turn them on and off; in *Pacific Grape Products* the fruit had been sold and there was a fixed obligation to pack and ship the merchandise to the customers; and in *Denise* the land had been stripped and there was a statutory obligation to rehabilitate the land. But here, as in the automobile club cases and the *Schlude* case, the operative facts which gave rise to the obligation, i.e., the demands by the subscribers for the service, had not occurred in the years of accrual. Where the operative facts giving rise to the future expenses have not occurred in the year of accrual, the estimated expenses cannot be deducted even though they can be estimated with reasonable certainty and even though prudent business requires that a reserve be set up. Brown v. Helvering, 291 U.S. 193 (1934). [Simplified Tax Records, Inc. v. Commissioner, 41 T.C. No. 9 (1963).]

2. *Vacation pay.* In I.T. 3956, 1949-1 C.B. 78, the Internal Revenue Service ruled that a taxpayer on the accrual basis could deduct its liability for vacation pay under a contract providing that any employee who worked 160 days during the year would get vacation pay in the following year, unless he left the employer's employ (except for illness, disability, furlough, or temporary lay-off) before the scheduled vacation period:

> After the end of a taxable year, the liability for vacations with pay (or pay in lieu thereof) may, with respect to some employees, be terminated if the employment relation is terminated prior to the scheduled vacation period. This circumstance, however, will not preclude the accrual of vacation pay at the end of the taxable year in which the services are performed, since, with respect to the individual employee at the end of such year, the employer would be justified in anticipating that the liability will be paid . . . or, with respect to the employees as a group, such circumstance would only make uncertain the ultimate amount of liability to the group.

After similar accruals were denied by several courts, however, see Seldon v. Commissioner, 214 F.2d 655 (6th Cir. 1954), the Internal Revenue Service repealed I.T. 3956, announcing that "no accrual of vacation pay can take place until the fact of liability to a specific person has been clearly established and the amount of the liability to each indi-

vidual is capable of computation with reasonable accuracy." Rev. Rul. 54-608, 1955-2 C.B. 8.

The effective date of Rev. Rul. 54-608 was postponed from time to time, initially by the Internal Revenue Service and later by legislation; under Public Law 88-153, 77 Stat. 272, its effective date was postponed to January 1, 1965, "so Congress will have an opportunity to consider the problem of the deduction of accrued vacation pay and other similar accrual-type deductions prior to the application of this Revenue Ruling 54-608 which provides stringent rules in this area." S. Rept. No. 488, 88th Cong., 1st Sess. See also Denver & Rio Grande Western Railroad Co. v. Commissioner, 38 T.C. 557, 570-576 (1962).

3. *Trading stamps.* A long-standing regulation, Regs. §1.451-4, permits taxpayers who issue trading stamps or coupons redeemable for merchandise to deduct an amount that, in the light of experience, will be required to redeem the stamps or coupons. Grolier Society, Inc. v. Commissioner, ¶53,304 P-H Memo T.C., involved a taxpayer who sold encyclopedias and issued to each buyer 100 coupons, each entitling the buyer to submit a question for research and reply. The court implied that the estimated cost of answering these questions could be accrued under the regulation dealing with trading stamps, but denied the deduction because the information called for by the regulation was not supplied.

Rev. 343 (1960); Austin, Surrey, Warren and Winokur, The Internal Revenue Code of 1954: Tax Accounting, 68 Harv. L. Rev. 257 (1954).

4. *The Use of Inventories*

Sections 471 and 472 of the 1954 Code, relating to the use of inventories, are derived, without substantive change, from §22(c) and (d) of the 1939 Code.

HOUSE DOCUMENT NO. 140
STATEMENT OF SECRETARY DILLON Re PRESIDENT'S TAX MESSAGE of APRIL 20, 1961

House Ways and Means Committee, 87th Cong., 1st Sess. (1961)

The President has directed the Internal Revenue Service to give increasing attention to inventory reporting as an area of tax avoidance, and to step up emphasis on both the verification of the amounts reported as inventories and the examination of methods used in arriving at their reported valuation.

The taxable income of a business is understated whenever the inventory at the end of the year is understated. The cost of goods sold deduction allowed is computed by adding to the beginning inventory the purchases for the year and subtracting from this total the ending inventory. For example the cost of goods sold might be as follows:

Beginning inventory	$ 40,000
Purchases during year	200,000
Total	$240,000
Ending inventory	60,000
Cost of goods sold	$180,000

If, however, the taxpayer in the above example reports that his ending inventory was only $50,000, the cost of goods sold deduction would become $190,000, result-

ing in an understatement of taxable income of $10,000. The computation of cost of goods sold and the understatement of it would be as follows:

Beginning inventory	$ 40,000
Purchases during year	200,000
Total	$240,000
Ending inventory	50,000
Cost of goods sold deduction	$190,000
Actual cost of goods sold	$180,000
Understatement of income	$ 10,000

To the extent that an understatement of the ending inventory continues in future years, the taxpayer will not have paid tax on the full amount of his income. At the minimum, the result is deferral of the time of paying the tax. In some cases, as the result of losses, sale of the business, or death of the taxpayer, this income may escape taxation entirely.

Understatement of the ending inventory may be accomplished by manipulation of the code provision permitting inventories to be valued at cost or market, whichever is lower.* The use of very low market values, of course, reduces the amount of the ending inventory, thereby reducing taxable income. In addition, the amount of the ending inventory may be understated by not including therein a proper count of all inventory items.

In order to assist in correcting abuses in the inventory area, taxpayers might be required to report in the tax return the cost of the closing inventory before any reductions to market. The taxpayer would then separately state the amount of any inventory valuation deduction. If market values are used for any items of inventory, the taxpayer would be required to explain on what basis the market value was determined and the relationship of recent purchases and sales to that market value. In addition, taxpayers might be required to state whether and by whom a physical count of the inventory was taken, whether such inventory was taken by management alone or by a certified public accountant, and the procedures followed to insure that all items of inventory were correctly counted.

Legislation is not needed to carry out the recommendation of the President in this area, since the above reporting requirements can be effected by administrative action including changes in the data required to be included on tax returns.

NOTE

1. *"Lower of cost or market."* For an extended discussion of the taxpayer's option to value inventories at lower of cost or market, rather than at cost, see Space Controls, Inc. v. Commissioner, 322 F.2d 144 (5th Cir. 1963).

5. *Installment and Deferred Payment Sales*

Section 453 of the 1954 Code, relating to installment sales, is derived, with minor substantive changes, from §44 of the 1939 Code.

REV. RUL. 234
1953-2 C.B. 29

Advice is requested regarding the Federal income tax consequences of an agreement between a publisher and a taxpayer,* who is not an author by profession, for the preparation and delivery of a literary composition by the taxpayer under the conditions described below.

The agreement between the taxpayer-author and the publisher in the instant case provides that the author will complete and deliver within a certain period of time a final manuscript of a literary composition, together with suitable material from which illustrations can be made. Simultaneously with the delivery of such manuscript and materials, the author has agreed to grant and assign to the publisher all rights of every kind in and to the composition, including the right to obtain statutory copyrights thereof and renewals or extensions of such copyrights in the name of the publisher. The agreement indicates the minimum and maximum number of words desired for the composition and the general subject to be covered thereby. The author represents and warrants that he will be the author and sole proprietor of the composition, that the composition will not have been previously published, and that it will not contain libelous or otherwise unlawful material.

The agreement also provides that the price to be paid for the rights in and to the composition is 120*x* dollars. On the date the manuscript is delivered, the purchaser will pay 20*x* dollars to the author and deliver to him four noninterest bearing promissory notes of 25*x* dollars each, maturing in each of 4 succeeding years. The agreement specifically provides that the author shall be an independent contractor and shall not act as the agent of the publisher. It also includes certain elections which permit the publisher to terminate the agreement in the event of a breach of contract by the author or his inability to complete the composition because of death or other disability. The author agrees not to make or permit the publication of any material, which may be considered to be in any material way in competition with his composition, until the expiration of a certain period of time after publication by the publisher.

At the time the contract was entered into, the author received a loan of 10*x* dollars from the publisher. This loan is to be repaid to the publisher on or before a fixed date which is prior to the date of delivery of the manuscript except that in the event of death or incapacity, repayment will be made only under certain specified conditions relating to the receipt of proceeds by the author or his estate from the subject matter of the literary composition.

The primary question to be determined is whether, under the terms of the agreement between the publisher and the author, the transaction constitutes a casual sale of personal property which may be returned on the installment basis under the provisions of [§453(b)].

* Former President Harry S. Truman. — Ed.

A literary composition is recognized as property in the Internal Revenue Code. See [§1221]. Such property is considered to be personal property. G.C.M. 236, C.B. VI-2, 27 (1927); I.T. 2735, C.B. XII-2, 131 (1933).

Under the provisions of [§453(b)] of the Internal Revenue Code, in the case of casual sales of personal property, if the selling price exceeds $1,000, and the initial payments received in cash or other property, other than evidences of indebtedness of the purchaser, during the taxable period of the sale, do not exceed 30 percent of the selling price, the gain realized from such sale may be reported on the installment basis.

Under the installment basis, there is reportable as income in any taxable year only that proportion of the installment payments actually received in that year which the gross profit realized or to be realized when payment is completed, bears to the total contract price. . . .

An executory contract to sell is to be distinguished from a sale of property. In the case of Dahlinger v. Commissioner, 51 Fed. (2d) 662, certiorari denied, 284 U.S. 673, involving the question of the year in which a sale was consummated, the United States Circuit Court of Appeals for the Third Circuit in affirming the decision of the Board of Tax Appeals, 20 B.T.A. 176, referred to the following statements applied by the Board of Tax Appeals to show the distinction between a contract to sell and a sale:

> A contract to sell goods is a contract whereby the seller agrees to transfer the property in goods to the buyer for a consideration called the price.
>
> A sale of goods is an agreement whereby the seller transfers the property in goods to the buyer for a consideration called the price. (Williston on Sales, vol. 1, sec. 1.)

Williston proceeds as follows:

> The distinction is often expressed by the terms "executory" and "executed" sales. Whether a bargain between parties is a contract to sell or an actual sale depends upon whether the property in the goods is transferred. If it is transferred, there is a sale, an executed sale, even though the price be not paid.

Based upon the above facts, it is held, as follows:

(1) The agreement entered into by and between the author and the publisher constitutes an executory contract to sell a manuscript at a future date. A sale of the manuscript will occur on the date the manuscript is delivered and assigned to the publisher by the author. Such sale will qualify as a casual sale of personalty on the installment basis within the purview of [§453(b)] of the Code.

(2) Except as provided in paragraph 3, below, the loan of 10*x* dollars received by the author on the effective date of the agreement will not be subject to Federal income tax.

(3) The loan received by the author and not theretofore repaid, will be includible in the author's gross income as ordinary income in the taxable year in which the agreement is terminated if the author fails to complete and deliver the manuscript on or before the agreed date by reason of his death or disability, and if the publisher elects to terminate the agreement, except that if such termination occurs after the death of the taxpayer the amount of the loan shall be includible in the gross income of the taxpayer's estate as ordinary income.

(4) The [taxable portion of the] payment of 20*x* dollars received by the author pursuant to the agreement upon the delivery and assignment of the manuscript . . . computed in accordance with the provisions of [§453(a)] of the Code, will be includible in gross income as ordinary income in the taxable year in which the manuscript is delivered and assigned to the publisher. The loan of 10*x* dollars which the publisher made to the author is not considered to be [a "payment"]

for the reason that, on the basis of the facts represented, it is determined to constitute a loan rather than an advance. The repayment thereof is independent of the delivery of the manuscript, for which a separate date was provided, and the loan is required to be repaid whether or not the manuscript is delivered. The only condition under which repayment is not required is the death or other disability of the author prior to delivery of the manuscript, but even in such case the manuscript, or, if not completed, the author's working papers with respect thereto, will serve as security for the loan since the author or, in the event of his death, his estate is required to repay the portion of the loan represented by any proceeds received from the subject matter of the composition involved.

(5) The promissory notes delivered to the author pursuant to the agreement upon the delivery of the manuscript will be "installment obligations," within the meaning of [§453(d)] of the Code.

(6) The taxable portion of payments received by the author in full satisfaction of the promissory notes so delivered to him, as computed in accordance with the provisions of [§453(a)] of the Code, will be includible in gross income as ordinary income in the taxable year in which such payments are received.

(7) If any of such promissory notes so delivered to the author are satisfied at other than face value or are sold or exchanged, the excess of the amount realized over the basis of such note will constitute ordinary income computable under the provisions of [§453(d)] of the Code, in the taxable year in which such amounts are realized.

(8) If any of such promissory notes so delivered to the author are distributed, transmitted, or disposed of otherwise than by sale or exchange, the excess of the fair market value of such note as of the time of such distribution, transmission, or disposition, over its basis, will constitute ordinary income computable under the provisions of [§453(d)] of the Code, in the taxable year in which such distribution, transmission, or disposition occurs. [In the case of a transmission of installment obligations at death, see §453(d)(3), enacted in 1954.]

(9) The cost of producing the manuscript will constitute the basis thereof for the purpose of computing the gain realized from the sale.

NOTE

1. *Installment sales by dealers.* Under §453(a), persons who regularly sell personal property on the installment plan may elect to report their profits as the payments come in, even though the property is included in inventory or sells for less than $1000 and even though the initial payments exceed 30 per cent of the sales price. But a dealer who elects to report income on the installment basis must do so for all installment sales during the year, while in the case of a "casual" sale of personal property the taxpayer has a separate option with respect to each transaction. For an interpretation of the phrase, "a person who regularly sells . . . on the installment plan," see Davenport Machine & Foundry Co. v. Commissioner, 18 T.C. 39 (1952); Consolidated Dry Goods Co. v. United States, 180 F. Supp. 878 (D. Mass. 1960) (non-acquiescence, 1960-2 C.B. 163); see also §453(e) ("revolving credit" plan qualifies for installment sale provisions).

For the problems of a dealer who switches to the installment method, see City Stores Co. v. Smith, 154 F. Supp. 348 (E.D. Pa. 1957); DeWind and Rubenstein, Tax Problems of Expanding Businesses, 1960 Tulane Tax Inst. 144.

2. *Real estate.* Note that the installment basis may also be elected for real estate, by both dealers and non-dealers, so long as the payments in the year of sale do not exceed 30 per cent of the selling price.

3. *Losses on installment sales.* Section 453(b)(1) provides that in the case of a sale that satisfies its requirements the income "may . . . be returned on the basis and in the manner prescribed in subsection (a)," i.e., income is to be reported on each installment payment in the same proportion "which the gross profit, realized or to be realized when pay-

ment is completed, bears to the total contract price." It has been held that this does not permit a loss on the sale to be spread over the payment period. Martin v. Commissioner, 61 F.2d 942 (2d Cir. 1932).

Tax Inst. 341; Sanders, Disposition of Installment Obligations, 1957 id. 755; Raum, The Tax Aspects of Revolving Credit: Application of the Installment Method of Reporting Income, 19 N.Y.U. Inst. on Fed. Taxation 1225 (1961).

ENNIS v. COMMISSIONER

17 T.C. 465 (1951) *

ARUNDELL, Judge: Respondent has increased petitioner's income for the calendar year 1945 by the sum of $10,871.33 on the ground that the petitioner, who reported her income on the cash receipts method, was required under [§§451(a), 1001(a) and 1001(b)], to include in her 1954 income the full amount of her one-half interest in the profit realized from the sale of the Deer Head Inn. . . . Respondent contends that since the sale is a completed transaction in 1945 the entire profit on the sale is taxable in that year.

We agree that in every practical way the sale was complete in 1945. In that year the vendee went into possession of the property and at the same time assumed all the burdens and benefits of ownership. The purchase price was definitely fixed and the vendee was under an unconditional obligation to pay it under the terms set forth in the contract. Nibley-Mimnaugh Lumber Co., 26 B.T.A. 978, affd. 70 F.2d 843; Union Pacific Railroad Co., 32 B.T.A. 383, affd. 86 F.2d 637.

It does not follow, however, that the entire purchase price in excess of the basis constituted gain taxable in the year 1945. Since petitioner reported her income on the cash receipts and disbursements basis she realized a gain from the sale of property only to the extent that the "amount realized" therefrom is in excess of her basis. [§1001(b)] of the Internal Revenue Code provides that the "amount realized" shall be "any money received plus the fair market value of the property (other than money) received."

Upon the sale petitioner received as a down payment a sum of cash not in excess of her basis for the property, plus the vendee's contractual obligation to pay the balance of the purchase price in deferred payments extending beyond the year in question. This contractual obligation cannot be considered an "amount realized" unless it is the equivalent of cash. In John B. Atkins, 9 B.T.A. 140, we stated: ". . . in the case of one reporting income on the cash receipts and disbursements basis only cash or its equivalent constitutes income." This basic rule has been consistently followed. . . .

In determining what obligations are the "equivalent of cash" the requirement has always been that the obligation, like money, be freely and easily negotiable so that it readily passes from hand to hand in commerce. See Dudley T. Humphrey, 32 B.T.A. 380, wherein we held that non-negotiable promissory notes are not the equivalent of cash and cf. S. L. Meyer, Executor, 23 B.T.A. 1201; Harold W. Johnston, 14 T.C. 560; C. W. Titus, 33 B.T.A. 928; Perry v. Commissioner, 152 F.2d 183. This principle was recently reiterated in the *Johnston* case wherein we held that a cash basis taxpayer realizes no income when he receives upon the sale of property a promise to pay contained in a contract of sale that

> merely requires future payments and no notes, mortgages, or other evidence of indebtedness such as commonly change hands in commerce, which could be recognized as the equivalent of cash to some extent, are given and accepted as part of the purchase price.

* See also Ennis' Estate v. Commissioner, 23 T.C. 801 (1955).

In the case before us the promise to pay was merely contractual; it was not embodied in a note or other evidence of indebtedness possessing the element of negotiability and freely transferable. It is true that the contract possessed many elements of a mortgage, Corpus Juris, vol. 66, sec. 1080, p. 128; Tiffany, Real Property, 3d ed., vol. 1, sec. 308, p. 535; . . . but this characteristic does not lend to the contract the necessary element of negotiability. Cf. Bernard Realty Co. v. United States, 188 F.2d 861.

We conclude, therefore, that the contractual obligation was not the "equivalent of cash," and the only "amount realized" by petitioner on the sale of the property in 1945 was the sum of cash received. Since this sum was not in excess of petitioner's basis for that property no gain was realized on the sale in 1945.

Decision will be entered under Rule 50.

TURNER, J., dissenting: I am unable to reconcile the conclusions reached in this case with the contrary ruling which has long been settled law in cases where a vendor of real estate, in addition to the simple individual liability to pay, receives as further security a mortgage on the property sold. While there are form and technical differences in the two types of transactions, they are for practical purposes substantially similar. In each instance, the vendee is regarded as the owner of the real estate, and in each instance, the land may be sold, devised, or encumbered by him, and on his death descends to his heirs subject only to the mortgage or land contract. In the case of land contracts, see on this point Bowen v. Lansing, 219 Mich. 117, 88 N.W. 384. The purpose of both the land contract and the mortgage is to secure payment of the balance remaining of the simple or personal obligation to pay. For a land contract case, see Walker v. Casgrain, 101 Mich. 604, 60 N.W. 291. It is true that in the land contract cases there is no transfer of legal title until full payment is made, but the vendor holds legal title in trust for the purchaser pending such full payment. . . . For other cases which seem to establish the similarity in over-all effect between mortgages and land contracts, see Harold R. Smith, 39 B.T.A. 892. . . . And finally, both mortgages and land contracts are regularly sold, traded and assigned. Probably the most noticeable difference between the two is geographic. In Michigan, for instance, the use of the land contract, rather than the mortgage, appears to be the method commonly followed in making real estate sales. We should where possible avoid one rule of law for one part of the country and a different rule for other sections.

Harold W. Johnston, supra, relied on by the Court herein, is in my opinion an entirely different case. There the property sold was corporate stock and the selling price had not even been and could not be fixed and determined in 1942, the taxable year. Furthermore, the discussion therein as to property received would, it seems to me, bring this case more nearly in line with the land mortgage cases than otherwise.

OPPER, J., agrees with this dissent.

C. W. TITUS, INC. v. COMMISSIONER

33 B.T.A. 928 (1936)

TRAMMELL: This case has been reconsidered in so far as it relates to the taxable gain for 1926 derived from the sale of oil and gas leases in that year. After reconsideration we think that we were in error.

The petitioner entered into a contract in writing with the Tidal Oil Co. on February 27, 1926, the pertinent portions of which are as follows:

THEREFORE, for and in consideration of the sum of one dollar ($1.00) and other good and valuable considerations in hand paid by second party (Tidal Oil Co.), the receipt

whereof is hereby acknowledged by first party, and the mutual covenants and agreements hereinafter contained, IT IS UNDERSTOOD AND AGREED by and between the parties hereto as follows: . . .

Upon the approval of said titles and the execution and delivery to second party of the assignments, conveyances, orders and other papers referred to in the preceding paragraph, second party will pay to first party, as consideration for said properties, the sum of two million dollars ($2,000,000), payable as follows:

$500,000.00, in cash, upon the approval of titles and delivery of the papers above referred to;
$500,000.00 on or before September 1, 1926;
$500,000.00 on or before March 1, 1927; and
$500,000.00 on or before September 1, 1927.

Titus agreed to furnish abstracts to the property described in Exhibits A, B, C, and D, that is, the leases, within 10 days from the date of the contract. Upon approval of titles by the attorneys for the Tidal Oil Co., Titus was to immediately execute and deliver proper assignments, together with orders on the pipe line companies which might have been running the oil from said properties, and such orders and other papers as might be required or might be necessary in order to obtain the approval of the Secretary of the Interior of the assignments covering the oil leases from the Osage Indian Tribe, and when these things had been done the purchaser agreed to make the payments. . . .

In the previous opinion [32 B.T.A. 1222] we held that a taxpayer keeping its books and records on the accrual basis is required to report the income represented by the deferred payments, regardless of the fair market value of the deferred payments. We also held that the petitioner had failed to show that the obligations in controversy had no fair market value or a fair market value less than the amount of the face thereof. We now think that we were in error in holding that the fact that the taxpayer kept its books on the accrual method of accounting was determinative of the issue, and also think we were in error in holding that there was no evidence that the deferred payments did not have a fair market value.

The regulations of the Commissioner, approved by the Secretary, under the Revenue Act of 1921 and all subsequent revenue acts have provided in the case of the sale of real estate on a deferred payment plan, not on the installment basis, where the obligations received by the vendor have no fair market value, that the payments in cash or other property having a fair market value shall be applied against and reduce the basis of the property sold and any excess of such basis shall be taxable to the extent of the excess, and that gain or loss is realized when the obligations are disposed of or satisfied, the amount being the difference between the reduced basis above mentioned and the amount realized therefor. [Regs. §1.453-6.] . . .

The Board has decided many cases of deferred payment sales of realty and casual sales of personal property without considering on what method the taxpayer kept its books. . . .

In view of the foregoing, it is our opinion that a taxpayer which keeps its books generally upon the accrual basis has the right to report and have its income computed upon the basis of the deferred payment plan not on the installment basis as provided in the regulations. In this case the respondent has raised no question as to this. The only real question is whether the deferred payments had a fair market value. The Commissioner contends that they did have. The question of the accrual basis was interjected by the Board and we now think that we were in error in doing so. . . .

In the case at bar the only instrument in writing evidencing the fact that the future payments were to be made was the executory or preliminary contract, for

the making of which the purchaser did not pay anything, and the obligation to make any payments did not arise until later during the taxable year when the petitioner had carried out the terms thereof. . . .

In the case of Charles C. Ruprecht, 16 B.T.A. 919, we held as follows:

> We do not consider, however, that the respondent's views with respect to the deferred payments are correct, for the reason that the obligation of the Standard Oil Co. to pay was not so evidenced that it could have been converted into cash, the only record thereof being in the deed of conveyance signed by the grantors. . . . In short, the obligation of the Standard Oil Co. amounted to nothing more than a mere noninterest-bearing account receivable.

We held in that case that the deferred payments to be made by the Standard Oil Co. did not have a fair market value and the Court of Appeals, in 49 Fed. (2d) 458, affirmed our decision. . . .

In the case of Beddell v. Commissioner, 30 Fed.(2d) 622, the court said:

> But if land or a chattel is sold, and title passes merely upon a promise to pay money at some future date, to speak of the promise as property exchanged for the title appears to us a strained use of language, when calculating profits under the income tax. Section 102(b) of the Act of 1918 provided for an exchange of property and made the profit depend upon "the amount of its (the property received) fair market value, if any" — a phrase which was amended in the law of 1921 . . . to "readily realizable market value." There is a difference between the two, but it is absurd to speak of a promise to pay a sum in the future as having a "market value," fair or unfair. Such rights are sold, if at all, only by seeking out a purchaser and higgling with him on the basis of the particular transaction. Even if we could treat the case as an exchange of property, the profit would be realized only when the promise was performed. . . .

. . .

In the case of Dudley T. Humphrey, 32 B.T.A. 280, there was evidence that the nonnegotiable promissory notes did not have a fair market value. This evidence consisted of the testimony of the petitioner, himself, to the effect that the notes received were nonnegotiable and, being nonnegotiable, did not have any fair market value. On the other hand, financial statements were introduced showing that the purchaser, that is, the maker of the notes, had net assets in excess of the amount of the notes even by using the book values of the securities owned by the purchaser, which had greatly increased in value. The basic evidence in the case as to the fair market value of the notes consisted of the fact that the notes were nonnegotiable, and, being so, had no fair market value. We said "A mere promise to pay in the future which is not accepted in payment, but only as an evidence of indebtedness, is not ordinarily the equivalent of cash," and the *Bedell* case supra, was cited and relied on. Here the contract itself obviously only represented the evidence of the indebtedness and was not, itself, accepted in payment for the property.

In none of the foregoing cases was there any evidence introduced directed to the question of the fair market value of the promise to pay, except in the case of Dudley T. Humphrey, supra, discussed above.

In all of the court decisions above discussed the courts took the position that, when evidence was introduced showing that the deferred payments were evidenced only by contract, where no notes, bonds, or other evidences of indebtedness other than the contract were given, such contract had no fair market value, and that the amounts of the deferred payments should be included in income when received. In the *Ruprecht* case, supra, the only evidence of the deferred payments was contained in the deed of conveyance. Based on this finding we held that the deferred payments did not have a fair market value. Our conclusion was based on the

fact that the vendor had nothing that he could take to anyone to sell; he had nothing except an account receivable. In this case, while the petitioner had a written contract, there was nothing in the contract itself to indicate when, if ever, the purchaser would become bound to make the payments. To show that the purchaser had become bound to make the payments would have required extrinsic evidence. There were certain things required to be done by the vendor under the terms of the contract before the delivery of the deed or before the vendor was obligated to accept it. Evidence of delivery and acceptance of the deed was a sine qua non to any liability. When this was established there would have been a prima facie obligation to make the full payment as provided in the contract, yet an assignee would have been entitled to know beyond a prima facie case that all the obligations of the purchaser had definitely arisen, that is, that all titles were good, all transfer orders were made, approval of the Secretary of the Interior secured as to the leases from Indian tribes, and other things required had been done. After the delivery of the deed there was still an accounting to be had between the vendor and vendee for all the oil produced since the execution of the contract, and other adjustments were required. In any event, the petitioner, itself, after the delivery of the deed, was possessed of nothing in writing to show that it had fully complied with the executory or preliminary contract to make it obligatory on the purchaser's part to make the payments, except possibly its books and records, which would show the account receivable, but the record is silent as to whether any liability was ever shown on the books. We think, therefore, that the principle of the *Ruprecht* case, supra, as well as the court decisions and other Board cases herein referred to, are applicable in this case. . . .

In order for the petitioner to be able to convert the promise to pay into cash it would have had to produce and deliver to a purchaser the evidence of liability to pay. Only a conditional or contingent liability is shown by the instrument itself. The real liability in this case could be shown only by oral testimony, and, while we have assumed from the record that the sale was consummated in 1926, there is no direct and conclusive evidence to that effect. An obligation to pay in the future which depends so largely on oral evidence to support it, in our opinion, can not be said to have a fair market value, aside from the reasoning of the courts and the Board as to written contracts, and in this case, even after the sale had been consummated, there was still an accounting to be had for oil produced since the making of the executory or preliminary contract. The purchaser would have had an offset for an undetermined amount after the delivery by petitioner of all papers required to be delivered until such time as petitioner fully settled on the basis of such accounting. This fact, in connection with all the facts and circumstances, convinces us of the lack of any fair market value of the deferred payments.

Upon reconsideration, therefore, it is our opinion that the petitioner had the right to include in its taxable income for 1926 only the cash received. Petitioner had the right to have his tax computed upon the basis of the deferred payment plan, not on the installment basis. We think we were in error in our previous decision and it is, therefore, modified in accordance with the opinion herein.

Judgment will be entered under Rule 50.

NOTE

1. *Titus today.* How does the transaction in *Titus* differ from the ordinary sale on open account, the income from which must be reported by the accrual basis taxpayer when the sale occurs? In Johnston v. Commissioner, 14 T.C. 560 (1950), the court made the following observations about the difference between the cash receipts and disbursements basis and the accrual basis:

An agreement, oral or written, of some kind is essential to a sale. If payment is made at the same time that the obligation to pay arises under the agreement, then the profit would be reported at that time no matter which method was being used. However, the situation is different when the contract merely requires future payments and no notes, mortgages, or other evidence of indebtedness such as commonly change hands in commerce, which could be recognized as the equivalent of cash to some extent, are given and accepted as a part of the purchase price. That kind of a simple contract creates accounts payable by the purchasers and accounts receivable by the sellers which those two taxpayers would accrue if they were using an accrual method of accounting in reporting their income. But such an agreement to pay the balance of the purchase price in the future has no tax significance to either purchaser or seller if he is using a cash system. [14 T.C. at 565.]

Can these remarks be reconciled with the treatment of the taxpayer in the *Titus* case? In Castner v. Commissioner, 30 T.C. 1061 (1958), the court held that *Titus* was in error in permitting an accrual basis taxpayer to report the gain on a casual sale of *personal* property on the "deferred payment plan not on the installment basis" of Regs. §1.453-6. In First Savings & Loan Assn. v. Commissioner, 40 T.C. 474 (1963), the court apparently took the further step of excluding accrual basis taxpayers from the use of Regs. §1.453-6 even for real property on the ground that they must treat the face value of an unconditional right to receive payment as money.

6. *Long-Term Construction Contracts*

ROLNIK, TAX PROBLEMS OF CONSTRUCTION CONTRACTORS *

9 New York University Institute on Federal Taxation 925, 925-929 (1951)

Accounting — General.

For United States income tax purposes, a contractor may report income on all contracts on the cash or accrual basis, although the cash basis is not permitted where it is necessary for the contractor to use inventories. In addition, on *long-term* contracts, the contractor may adopt either the completed contract basis or percentage of completion basis.

Long-term contracts are defined in [Regs. §1.451-3] as "building, installation, or construction contracts covering a period in excess of one year from the date of execution of the contract to the date on which the contract is finally completed and accepted." It must be borne in mind that the fact that a contract extends over two taxable years does not necessarily make it a long-term contract.

The contractor must be consistent in his method of reporting all his long-term contracts. In other words, the election may not be applied to selected long-term contracts, but must be to all. Furthermore, the contractor must keep his books in accordance with the basis adopted.

The election to use either the percentage of completion basis or the completed contract basis must be made at the time of filing the first return of the contractor. Any change in method of reporting income from long-term contracts may be made only after securing the consent of the Commissioner. . . .

Percentage of Completion Basis.

Under the percentage of completion basis, the gross income for any year is determined by apportioning thereto such part of the total contract price as the work

* Reprinted by permission.

completed that year bears to the total work to be performed under the contract. The Regulations require that the tax return be accompanied by certificates of architects or engineers showing the percentage of completion.

There should be deducted from the reported gross income, all expenditures made during the taxable year on the contract, account being taken of the materials and supplies on hand at the beginning and end of the taxable period for use in connection with the work performed under the contract but not yet applied.

On final completion of the contract, there will usually be a difference in each year's income due to over- or under-estimating the percentage of completion. Under prior Regulations, if upon completion of a contract it appeared that the taxable net income for any year or years had not been clearly reflected by the percentage of completion method, amended returns were permitted or required. This is no longer in the Regulations.

Completed Contract Basis.

The gross income on the completed contract basis is reported in the taxable year in which the contract is finally completed and accepted. All the costs and expenses applicable to the contract are deferred until the contract is completed. Not only the gain, but the loss is deferred until such time.

Where a contract covers more than one unit, for example a number of ships, the completed contract basis requires that the entire gross income be reported in the year the last unit is completed. If the contractor wishes to report the gross income on each unit as it is completed, he may not use the completed contract basis. A series of independent contracts may not be treated as a single contract.

Where a corporation, on a completed contract basis, is liquidated before the completion of a contract, the profit on the completed portion must be reported in the year of such liquidation, exactly as if the corporation were on the percentage of completion basis.

Importance of Date of Completion.

The date of completion is an important date. In the first place, it determines whether a contract is a long-term contract and, if so, determines whether the contractor may use either the percentage of completion basis or the completed contract basis. In the second place, it determines the year when the income on the completed contract basis is to be reported.

Substantial completion and acceptance is sufficient. Thus, a contract is deemed to be completed and accepted when the architect's certificate authorized final payment and the customer took possession, even though a small amount was withheld by the customer to cover adjustments due to minor defects, and he officially accepted the work in the following year. Where a constructed machine has to be assembled and tested, the date of completion and acceptance is deferred until such time, even though the contractor received payment and shipped the machine in the previous year. The guaranteed period of maintenance by the contractor does not delay the completion date.

Costs and Expenses.

As previously stated, on the percentage of completion basis or completed contract basis, there must be deducted from the gross income reported on a contract in the taxable year all the costs and expenses applicable to the contract gross income of that year. There is usually no problem with regard to the treatment of such overhead items as repairs, depreciation, rentals of equipment, bond premiums, insurance premiums, and casualty and other losses, which are directly applicable to the contract. It is still unsettled whether such items as general and

administrative expenses, interest, and taxes may be deducted in full in the year paid or incurred or be apportioned in part to uncompleted contracts at the end of each year. The Commissioner requires depreciation on items of equipment not used exclusively on any particular contracts, and salaries of officers and employees whose services are not definitely connected with the completion of any particular contracts, to be deducted in the year paid or incurred. However, in a number of cases, taxpayers were permitted to allocate interest, franchise taxes, travel, and office expenses to uncompleted contracts on an approximate estimate basis.

There must be taken into account any materials and supplies charged to the work under the contract but remaining on hand at the end of the year, as well as the value of all unfinished work. Inventories may be valued at cost or market, whichever is lower, as may be elected by the taxpayer, and must be consistently valued. Account must also be taken each year of the deferred charges applicable to future years, for example, unexpired insurance and prepaid rent. . . .

7. *Changes of Accounting Method*

Section 446(d), requiring the consent of the Treasury if the taxpayer wishes to change his method of accounting, is similar to Regs. 118, §39.41-2(c), 1939 Code.

Section 481, relating to transitional adjustments on a change of accounting method, has no counterpart in the 1939 Code.

PERELMAN v. COMMISSIONER

41 T.C. 243 (1963)

In the latter part of 1950, Howard H. Perelman and others formed a partnership to sell improved real estate. In 1951 and 1952, certain parcels of real estate were sold. In each case, the purchaser made a cash down payment and gave a land contract to evidence the remaining balance of the purchase price. The income from the foregoing sales was reported on the basis that the receipts therefrom did not constitute taxable income until the cost or adjusted basis of the property had first been recovered. For the taxable years 1951 through 1956, petitioners reported their income in the foregoing manner where a sale was made and a land contract was received.

Sometime in 1957, one of respondent's agents began an audit of the taxable years 1953, 1954 and 1955. After the audit, respondent took the position that where there was a sale of property and a land contract was received the gain therefrom should be reported in the year in which the sale was made. It was respondent's position that the contracts had a fair market value equal to their face value and consequently the entire amount of the gain should have been reported in the year in which the sale was made, rather than on a deferred basis. Deficiencies for the foregoing years were agreed to and paid by petitioners. Beginning with the taxable year 1957, petitioners began reporting the entire gain from sales where a land contract was received in the year in which the sale was made.

In 1957 and 1958, petitioners attached statements to their Federal income tax returns stating that they had received proceeds from sales made in 1951 and 1952

but had not included any portion of this income in the current years because the Internal Revenue Service had changed their method of accounting. In the notice of deficiency, respondent determined that petitioners omitted income from the 1951 sale which should have been reported in 1957 and omitted income from the 1952 sales which should have been reported in 1958.*

TRAIN, Judge: . . .

In their petition, petitioners alleged that the gain from the [1951 and 1952 sales] was not includible in their income for the respective years 1957 and 1958 because respondent had changed their method of accounting. On brief petitioners took somewhat of an alternative approach and contended that the gain from the respective properties should have been reported in 1951 and 1952 when the sales were made. Petitioners argue that they received, in the year of sale, cash and property equal to the total sales price of each piece of property and that this amount was in excess of the adjusted basis of each piece of property for determining gain. Therefore, petitioners contend that . . . the gain in question should have been reported in 1951 and 1952 rather than in 1957 and 1958.

Respondent contends that the gain from the three sales in question should be reported in 1957 and 1958 as determined in the notice of deficiency. To support his position, respondent contends that petitioners voluntarily changed their method of accounting in 1957. Respondent contends that from 1951 through 1956 petitioners reported on the cash basis and then changed to the accrual method in 1957 to avoid the payment of taxes on the income from 1951 and 1952 sales. In his opening statement, respondent stated that the changes he himself had made in the earlier years were merely "adjustments" and limited solely to the years involved. Respondent asserted that "the adjustments were such that the respondent felt that the land contracts had value and therefore under a cash basis of accounting, they are properly includable in income" in the year of sale. Respondent stated that, in any event, there had been no requirement that petitioners change their method of accounting. Respondent next contends that the courts have followed the rule that, where deferred payments are evidenced only by a contract, as in this case, and no other evidence of indebtedness, such as a note or bond, is given to the vendor, the amount of the deferred payments should be included in income only when the payment is received. Harold W. Johnson, 14 T.C. 560 (1950). Therefore, respondent contends the gain should be reported in 1957 and 1958. Respondent's final contention is that, in any event, petitioners have failed to prove the land contracts in question had a fair market value in 1951 and 1952.

We have concluded that respondent's contentions must be rejected.

In essence, respondent has taken the position that the changes he made for the years 1953, 1954 and 1955 were merely corrections of errors, whereas, in the later years petitioners voluntarily changed their method of accounting by taking the same action. Then, respondent apparently proceeds to accept the new method for one purpose, i.e., to tax petitioners on the gain from the Murray sale in 1957, and reject it for another, i.e., to include the income from the 1951 and 1952 sales in 1957 and 1958. This position is untenable.

Assuming, arguendo, that petitioners' method of accounting was changed, sections 446 and 481 of the 1954 Code are relevant.

As originally enacted, section 481(a) provided that where taxable income for any year is computed under a method of accounting different from the method under which income was computed for the preceding year, there shall be taken into account those adjustments determined to be necessary solely by reason of the change in order to prevent amounts from being duplicated or omitted. However,

* The statement of facts is taken from the Tax Court syllabus. — ED.

an exception was made for any adjustment in respect of any taxable year to which section 481 did not apply; that is, a year not covered by the 1954 Code. Subsequently, the Technical Amendments Act of 1958 retroactively amended section 481(a) to provide that no adjustment in respect of pre-1954 Code years would be taken into account "unless the adjustment is attributable to a change in the method of accounting initiated by the taxpayer."

If the petitioners' method of accounting were changed, the crucial inquiry, under section 481(a), is whether the taxpayers "initiated" [1] the change. It is readily apparent that they did not. Prior to 1957, petitioners' method of accounting for sales, where a land contract was received, was to report the gain on a deferred basis. Respondent changed this method and compelled petitioners to report the gain from this type of sale in the year in which it was made. Respondent's action in this respect was no mere suggestion that petitioners make a change. Cf. Irving Falk, 37 T.C. 1078 (1962) (on appeal C.A. 5, July 30, 1962). Respondent took the first step to set the change in motion and took overt steps to cause it to be made; therefore, we conclude that petitioners did not initiate the change. United States v. Lindner, 307 F.2d 262 (C.A. 10, 1962); cf. Fred P. Pursell, 38 T.C. 263 (1962), affd. per curiam 315 F.2d 629 (C.A. 3, 1963). Thereafter petitioners merely began using the new method at the first available opportunity — 1957.[2] It would be unreasonable to expect them to have done otherwise. Having made his decision, respondent must abide by it with all its attendant consequences. Since respondent "initiated" the change and any adjustments would be with respect to pre-1954 Code years (1951 and 1952), no adjustments are required by section 481(a). Consequently, respondent's determination for 1957 and 1958 cannot as [be?] sustained under section 481.

Respondent has not cited or discussed the applicability of section 446, but he appears to rely on section 446(e) inferentially. If petitioners had changed their method of accounting without first requesting the permission of the respondent, it is possible he could have insisted that they revert to their old method. However, respondent can find no support in section 446(e) for his determinations since he was the one who caused the change to be made.

Finally, if we assume, arguendo, that respondent is correct, and that the changes he made for the years 1953, 1954 and 1955 were merely "adjustments" or a correction of errors and not a change in petitioners' method of accounting, petitioners must still prevail. Certainly, if the change made by respondent in 1953-1955 was merely an adjustment or correction, then the identical change made by petitioners in 1957 and 1958 can only be characterized in similar fashion. When, in 1957 and 1958, petitioners began reporting the entire gain from sales, where a land contract was received, in the year in which the sale was made, the change was entirely con-

---

1 As used in section 481(a)(2), the word "initiate" has been interpreted to mean "to introduce by a first act; to make a beginning with; to originate; begin." Fred P. Pursell, 38 T.C. 263 (1962), affd. per curiam 315 F.2d 629 (C.A. 3, 1963); United States v. Lindner, 307 F.2d 262 (C.A. 10, 1962). Changes in methods of accounting initiated by the taxpayer include a change in method of accounting which he originates, by requesting permission of the Commissioner to change, and also cases where taxpayer shifts from one method of accounting to another without the Commissioner's permission. A change in the taxpayer's method of accounting required by a revenue agent upon examination of the taxpayer's return would not, however, be considered as initiated by the taxpayer. H. Rept. No. 775, 85th Cong., 1st Sess., p. 20 (1957), 1958-3 C.B. 830; S. Rept. No. 1983, 85th Cong., 2d Sess., p. 45 (1958), 1958-3 C.B. 966.

2 While it is true that petitioners stated in their returns that they were reporting on an "accrual basis," we are satisfied that they were only referring to the fact that they had changed their method of reporting gain from sales where a land contract was received. The use of the label "accrual basis" was, no doubt, due to the revenue agent's statement that petitioners were being placed on the accrual method of accounting. Respondent made no attempt, at the trial, to refute this view; although the examining agent was present at the trial, he did not testify.

sistent with the position respondent took for the prior years and the method was supported fully by the evidence of fair market value of the contracts in question.

The uncontradicted testimony of petitioners' expert witness, which we accept, was that the land contracts from the 1951 and 1952 sales had a fair market value equal to their face amount in the respective years in which they were received. Therefore, the income from the sales in 1951 and 1952 should have been reported in those years rather than in 1957 and 1958. John W. Commons, 20 T.C. 900 (1953); [§1001, §1002]. The fact that a taxpayer has not paid income tax on income in a previous period does not make it income in a subsequent period if it does not belong in that year. See Security Mills Co. v. Commissioner, 321 U.S. 281 (1944). . . .

We conclude that respondent's determinations for 1957 and 1958 were erroneous. Accordingly, we hold for the petitioners on this issue.

Reviewed by the Court.

NOTE

1. *The case law background of §481.* Before §481 was enacted in 1954, the Internal Revenue Service followed the practice of granting its consent to a change in accounting method (which was required by Regs. 118, §39.41-2(c)) only if the taxpayer agreed to appropriate transitional adjustments to prevent items from being taxed or deducted twice or from being omitted altogether. But a number of cases held that the Service's consent to a change of method was required only when the taxpayer wished to change from one *proper* method to another, and not on a change from an *improper* method to a proper one. Moreover, on such a change from an improper method, it was held that transitional adjustments were not necessary, at least not if the Service compelled the taxpayer to make the change. Commissioner v. Dwyer, 203 F.2d 522 (2d Cir. 1953), and cases there cited. In the case of a change from an improperly used cash method to an accrual method, consider the effect of failing to make adjustments in respect of (a) the collection in post-change years of accounts receivable that were not included in income in pre-change years, (b) the payment in post-change years of expenses incurred but not deducted in pre-change years, and (c) the existence at the beginning of the first accrual year of a merchandise inventory the cost of which was deducted in a prior cash basis year.

Section 481 was enacted in 1954 to require — whether the prior method of accounting was proper or not — the making of such transitional adjustments as are "necessary solely by reasons of the change in order to prevent amounts from being duplicated or omitted." Because the adjustments sometimes represent an accumulation of items that would have been taken into account over a long period of years had the old method not been changed or had the new method been used from the outset, §481(b) goes on to limit the tax burden in the year of the change to the amount of additional tax that would have been payable had the adjustments been taken into account in specified earlier years.

As the *Perelman* case indicates, §481 (as amended in 1958) requires adjustments to be made for pre-1954 years if they are attributable to a change of accounting method initiated by the taxpayer. As enacted in 1954, however, adjustments for pre-1954 years were not required regardless of who initiated the change, with the result that some taxpayers endeavored to change from the cash method to an accrual method in order to seize what appeared to be a once-in-a-lifetime opportunity of having their pre-1954 accounts receivable and inventories escape taxation. According to Prather v. Commissioner, 322 F.2d 931 (9th Cir. 1963), the Commissioner of Internal Revenue thereupon "started one of his most successful 'sit downs' in the history of American tax law" by refusing to approve applications for such changes until the adoption of the 1958 amendment to §481 discussed in the *Perelman* case.

2. *Adjustments to the pre-change years.* On the possibility of requiring the taxpayer in *Perelman* to pay additional taxes for 1951 and 1952, despite the running of the statute of limitations, see §1311, infra page 877. In Rev. Rul. 64-76, 1964-10 I.R.B. 15, the Internal Revenue Service announced that where action is taken under §481 to adjust post-1953 years, it would not attempt to apply §§1311-1315 "since the application of section

481 of the Code, by reason of the limitation provided for in section 481(a)(2) of the Code, is considered to preclude recourse to any such attempt."

3. *Consent to a change.* For the scope of the Commissioner's discretion under §446(e), requiring the taxpayer to obtain consent before changing his accounting method (or, more precisely, before computing taxable income under the new method), see Drazen v. Commissioner, 34 T.C. 1070 (1960) ("broad administrative discretion," not to be overturned unless the evidence clearly shows an abuse of discretion); St. Luke's Hospital, Inc. v. Commissioner, 35 T.C. 236 (1960) (re compliance with conditions).

4. *"Accounting method" vs. "adjustments."* The court in *Perelman* mentions, but does not discuss, the distinction between an "adjustment" or "correction of error" and a "change in accounting method." The Regulations provide that a change in accounting method includes "a change in the over-all method of accounting for gross income or deductions, or a change in the treatment of a material item," and gives several illustrations. Regs. §1.446-1(e)(2)(i) and (ii); see also Regs. §1.481-1(a)(1). See Commissioner v. O. Liquidating Corp., 292 F.2d 225 (3d Cir. 1961) (accrual basis taxpayer changed manner of treating dividends on insurance policies; held, a change of accounting method); Dorr-Oliver, Inc. v. Commissioner, 40 T.C. 50 (1963) (accrual basis taxpayer had been deducting vacation pay when paid; held, a change to accrual of vacation pay is a change in method of accounting); Beacon Publishing Co. v. Commissioner, 218 F.2d 697 (10th Cir. 1955) (accrual basis taxpayer did not change accounting method when it began to allocate prepaid subscription income to years of subscription rather than to year of receipt); Fruehauf Trailer Co. v. Commissioner, 42 T.C. No. 6 (1964) (practice of inventorying trailers taken in trade at $1 each constitutes a "method of accounting").

Recognizing the difficulty of distinguishing between changes in accounting method and adjustments of errors, the Internal Revenue Service announced in Rev. Proc. 64-16, 1964-9 I.R.B. 35, that it was prepared to enter into agreements under which a change in "accounting practice for tax purposes with respect to particular items of income or expense to an acceptable treatment of such items" would be approved, with transitional adjustments allocated over a 10-year period to eliminate distortions of tax and income. Section 481 is sidestepped by this procedure, since the agreement is to provide that neither the taxpayer not the Service will raise or concede the question of whether such a change is a change of "accounting method" within the meaning of §446 or §481.

Section B. Some Problems of Fluctuating Income

1. *Averaging*

Sections 1301-1305, moderating the tax rate on "averageable income," were enacted in 1964 in substitution for provisions (carried forward from the 1939 Code) that permitted a few categories of income to be "spread-back" for tax purposes.

Before 1964, the principal statutory provisions (aside from the special treatment of capital gains) for moderating the impact of the progressive rate structure on "bunched" income were §§1301-1305 of the 1954 Code, which provided in general that the tax on qualified income in the year of receipt could not exceed the tax that would have been payable if the income had been received in equal installments over a specified earlier period. Only a few categories of income qualified for this "spread-back" method of computing the tax: income from "an employment" (defined as an arrangement for the performance of personal services "to

effect a particular result") covering a period of 36 months or more; income from "an invention or artistic work" created by the taxpayer over a period of 24 months or more; "back pay" awards; and damages for patent infringement, breach of contract, and breach of fiduciary obligation. In the case of income from "an employment," the income in the taxable year had to constitute 80 per cent or more of the total compensation to be received for the services, and in the case of income from an invention or artistic work, the current year's receipts qualified for relief only if they constituted 80 per cent or more of the aggregate amount so far received in respect of the invention or artistic work; a "back pay" award, on the other hand, qualified only if it exceeded 15 per cent of the taxpayer's gross income in the year of receipt. In general, the relief granted by the pre-1964 provisions depended on the tax that would have been payable if the qualified amounts had been received over some earlier period, the length of which varied with the category of income received. In determining these hypothetical increases in taxes, it was necessary to recompute the medical expense and charitable deductions and the alternative tax on capital gains, to take account of loss carryovers, and to make some other adjustments that would follow automatically from a change in the earlier year's receipts. For some of the problems and limitations of the pre-1964 statutory provisions, see Harris, Spreading Fees Forward and Back, 18 N.Y.U. Inst. on Fed. Taxation 1231 (1960); for alternative proposals, see the articles by various authors, 1 Tax Revision Compendium (House Committee on Ways and Means, 1959) 579-677.

Responding to a recommendation in President Kennedy's 1963 Tax Message for the enactment of "one formula of general application to those with wide fluctuations in income" to replace "the narrowly confined and complex averaging provisions of present law," Congress in 1964 repealed §§1301-1305 of the 1964 Code* and replaced them with new provisions (also numbered §§1301-1305) of much wider applicability. The new provisions were described as follows by the Senate Finance Committee:

(*b*) *General reasons for provisions.* — A general averaging provision is needed to accord those whose incomes fluctuate widely from year to year the same treatment accorded those with relatively stable incomes. Because the individual income tax rates are progressive, over a period of years those whose incomes vary widely from year to year pay substantially more in income taxes than others with a comparable amount of total income but spread evenly over the years involved. This occurs because the progressive rates take a much larger proportion of the income in taxes from those whose incomes in some years are relatively high. The absence of any general averaging device has worked particular hardships on professions or types of work where incomes tend to fluctuate. This is true, for example, in the case of authors, professional artists, actors, and athletes as well as farmers, fishermen, attorneys, architects, and others.

The present averaging provisions have proved unsatisfactory, first because they are limited to a relatively small proportion of the situations where averaging is needed. Thus, while they presumably cover inventors and writers, they do not provide for actors, athletes, and in most cases do not provide for attorneys, architects, and others. Even in the case of inventors and authors, the present provision is inadequate because of the requirement that the income arise over at least a 24-month period and 80 percent or more of the income from the invention or work be concentrated in the current year in question. In practice, many cases involving authors and inventors where averaging is needed do not meet these specific requirements. This was made clear in testimony from authors and others.

* Old §1301 (income from "an employment") remains in effect for projects begun before Feb. 6, 1963; but a taxpayer who wishes to be governed by this provision must forego any benefits under new §§1301-1305. Another pre-1964 spread-back provision (§1306, relating to damages for antitrust violations) was retained intact.

The present averaging provisions also have proved unduly complicated in practice because of the requirement that the prior years' incomes and taxes must be recomputed as if the income had actually been received in those prior years. . . .

(c) *General explanation of provisions.* — In view of the considerations set forth above, the bill deletes all of the averaging provisions in present law referred to previously and substitutes instead an income averaging device available to individual taxpayers generally, substantially without regard to the source of the income. As indicated subsequently, however, in the case of the averaging device for compensation from an employment, the bill in certain cases permits the continuance of the application of this provision.

Under the averaging rule provided by the bill, once the amount of income to be averaged is determined — called averageable income in the bill — and assuming this amount is more than $3,000, the taxpayer is to compute a tentative tax on one-fifth of this amount. The tax on this one-fifth is determined by adding this one-fifth to 1⅓ times the average income received in the prior 4 years, plus the average capital gains income in this same 4-year period. The tax attributable to this one-fifth is then multiplied by 5 to determine the final tax on this income.

Averaging is available only where the "averageable income" exceeds $3,000 because, with the present progressive rate structure with tax brackets usually of $2,000 to $4,000, smaller amounts achieve little if any benefit from averaging. The device of including one-fifth of the averageable income in the tentative tax base, computing the tax attributable to this amount, and then multiplying this result by 5, achieves a result which is substantially similar (except when there are rate changes during the 5 years) to including one-fifth of the income eligible for averaging in the taxable income base of each of the prior 4 years and of the current year. The advantage of making the computation in this manner is that it is not necessary to recompute the tax for each of the 4 prior years in order to obtain this result.

The "averageable income" referred to here is the excess of the taxable income in the current or computation year — with certain adjustments — over 1⅓ times the average base period income. The average base period income is the average of the taxable income in the 4 prior years with certain adjustments specified below.

Averageable income is limited to that which is in excess of 1⅓ times average income in the base period for two basic reasons. First, in any new provision of this type, it is necessary to limit the number of cases to which the new provision will apply to a manageable level from the administrative standpoint. In other words, it was necessary initially, at least, to limit the volume of cases where averaging will be applied. Moreover, it is clear that the greatest need for averaging occurs where the fluctuation in income levels varies widely. An increase of more than one-third from the prior average income was selected to make the new averaging rule available in those cases where it is needed the most.

As indicated above, in computing the income subject to averaging, it is necessary to make some adjustments in both the income of the current, or computation year, and also in the income of the 4 base period years with which the current year's income is compared. The income of the computation year, referred to in the bill as the "adjusted taxable income" is the taxable income for that year decreased by: (1) Any capital gain net income for that year; (2) any income for that year attributable to gifts, bequests, devises, or inheritances received during that year or any of the four prior base period years;[1] (3) any excess of wagering gains in the year over wagering losses; and (4) certain amounts of income to which penalties apply with respect to owner-employees who are self-insured for pension plan purposes (sec. 72(m)(5)).

Long-term capital gains are excluded from the income subject to averaging in the computation year on the grounds that such income does not require averaging because of the fact that only 50 percent of the capital gain income is included in the tax base in any event. Moreover, without regard to the averaging provision, such income is subject to a maximum rate of 25 percent.

Averageable income also excludes income from gifts, devises, or inheritances where the

---

[1] Income attributable to gifts, bequests, devises, or inheritances between a husband and wife are not taken out of the income for the computation year if they file a joint return for the computation year or one of them makes a return in that year as a surviving spouse. Also not taken into account are amounts of less than $3,000 in computation year.

gifts, etc., have been received either in the computation year or in any of the four prior base period years, because such income does not arise from any additional efforts on the part of the taxpayer but merely represents a transfer to the taxpayer of income previously received by someone else. In addition, in the case of the transfer by gift of income producing properties between related parties, there would be some opportunity for manipulation if such income were not excluded from that which can be averaged. Income attributable to such property is excluded under the bill only where it is in excess of $3,000 in the computation year. Also, because it may be difficult to trace specific income to specific gifts, bequests, devises, or inheritances, the bill presumes that such property earns a 6-percent rate of return unless the taxpayer establishes to the satisfaction of the Treasury that some other amount of income is earned with respect to the property.

Net wagering gains are excluded from averageable income to prevent such income from receiving a preferred status. For similar reasons, penalty income of owner-employees in the case of self-insured pension plans is excluded.

It is also necessary to make some adjustments in the base period income with which the adjusted taxable income for the computation year is compared. Two of these adjustments are the same as those made in the computation year. Thus, capital gain net income for the base period year is excluded as is any income from gifts, bequests, devises, or inheritances where such property was initially received by the taxpayer in 1 of the 4 base period years.

A third adjustment made to the average base period income is to add back to such income any income excluded from the taxpayer's base in such year on the grounds that it was earned in a foreign country (the exclusion under sec. 911 of present law) or on the grounds that it was income from sources within a possession of the United States (sec. 931 of present law). The inclusion of such amounts in the base period is necessary so that the taxpayer will not become eligible for averaging merely on the grounds that during the 4-year base period, or a part of this period, he was in a foreign country and not subject to U.S. tax on his earned income. If such amounts are not included in the base period income comparable amounts earned in the United States in the computation year would be eligible for averaging.

(c)(i) *Example.* — For most taxpayers with little or none of the income which gives rise to the special exceptions described above the application of this averaging provision is relatively simple. This can be illustrated by an example of an unmarried taxpayer having an average base period income of $3,000 in the years 1961-64 and an adjusted taxable income of $44,000 in 1965. The taxpayer in this case is eligible for averaging since his "averageable income" exceeds $3,000. His averageable income in this case can be computed as follows:

1. Adjusted taxable income in computation year	$44,000
2. 133⅓ percent of average base period income ($3,000 × 133⅓ percent)	4,000
3. Averageable income	40,000

Since the averageable income is in excess of $3,000, the entire amount is subject to averaging.

Computation of tax:

(a) 133⅓ percent of average base income ($3,000 × 133⅓ percent)	$4,000
(b) Averageable income included in tentative tax base (⅕ of $40,000)	8,000
(c) Tentative taxable income	12,000
(d) Total tentative tax liability (1965 rates under bill)	2,830
(e) Tax on $4,000 not subject to averaging	690
(f) Tax liability on ⅕ of averageable income	2,140
(g) Tax on total averageable income ($2,140 × 5)	10,700
(h) Total final tax liability (tax on $4,000 not subject to averaging and $40,000 subject to averaging)	11,390
(i) Tax on $44,000 under 1965 rates without averaging	18,990

[S.Rept. No. 830, 88th Cong., 2d sess., pp. 139-143.]

In order to prevent a person who has just joined the labor force upon leaving school or college from averaging his earned income by reference to base period

years in which he was supported by his parents or others, §1303(c)(1) lays down the general rule that a taxpayer is not eligible to average his income if he (and his spouse, if he is married) furnished less than one-half of his support during any base period year. This general rule is then modified by three exceptions: (1) To avoid disqualifying a taxpayer who was in the labor force but was unemployed during part or all of the base period, §1303(c)(2)(A) excepts a person who is over 25 in the computation year if there have been at least four years since he was 21 when he was not a full-time student; (2) to protect a taxpayer who receives payment in the computation year for work performed during the base period, §1303(c)(2)(B) exempts from the general rule a taxpayer if more than one-half of his adjusted taxable income in the computation year is attributable to work performed in substantial part during two or more of the base period years; and (3) to protect a taxpayer whose spouse was not self-supporting during the base period, §1303(c) (2)(C) permits averaging the income on a joint return if not more than 25 per cent of the aggregate adjusted gross income is attributable to the spouse who was not self-supporting during the base period.

The new provisions contain a number of other qualifications, restrictions, and operating rules, governing such matters as the eligibility of persons who file a joint return in the computation year but separate returns in one or more of the base period years (or vice versa), the order in which averageable income and non-averageable income are to be taken into account in computing the tax in the computation year, etc.

2. *Loss Carryovers*

Section 172 of the 1954 Code, relating to operating loss carryovers, is based on §122 of the 1939 Code, with substantial modifications.

Section 1212 of the 1954 Code, relating to the carryover of capital losses, was derived from §117(e) of the 1939 Code, but was amended in 1964.

TREASURY DEPARTMENT AND JOINT COMMITTEE ON INTERNAL REVENUE TAXATION, BUSINESS LOSS OFFSETS *2-11 (1947)*

III. Purposes of Business-Loss Offsets

A. *Equity Considerations*

In the absence of the loss offsets, the business entity whose net income becomes negative in some periods is not permitted to deduct all the expenses of earning income. To this extent, the tax on net income becomes a tax on capital. The owners of such a firm are discriminated against, because higher taxes are levied on their net income than on the income of owners of businesses with stable income.

B. *Economic Considerations*

1. *To remove impediments to risk-taking*

Without loss offsets, investments in assets with less risk of loss are favored over those in which the risk may be greater. Thus, the absence of loss offsets will reduce the relative investment in risky assets and ventures. Investment in such assets and ventures may be particularly desirable in the economy. Ventures may be risky because they are new firms challenging established ones or introducing new products. If successful, they bring reduced prices in the industry they enter, or may

create employment in an entirely new industry. They may be faced with a period of hard sledding and losses in their early years. If losses in this period cannot be offset against income of future periods, the prospective return from the investment is reduced relative to the return connected with a safer haven for their funds.

2. *To increase the countercyclical effect of taxes*

Absence of loss offsets may also contribute to cyclical instability. In years of losses, expenditures will be held to a minimum. The making of these expenditures may be unprofitable when the firm bears their full cost but must pay a tax on the additional income they would bring in. Yet, they might profitably be made if the cost of the expenditure could reduce taxes through loss offsets. . . .

IV. The Offset of Business Losses

The desirability of increased loss offsets is evident from consideration of equity and economic effects, with administrative considerations a negative item. These major questions still remain: (1) In what direction should losses be offset? (2) For how long a period should they be offset? and (3) How should they be determined?

A. *The Direction In Which Losses Should Be Carried*

The carryforward permits losses of one year to be carried forward as a deduction from net income of future years. The carryback permits losses of one year to be carried back as a deduction from net income of past years. The choice, based upon the purpose of loss offsets, must be made between these two devices.

1. *Equity considerations*

The equity problem in the case of corporate income is to define and tax net income as correctly as possible over time so that stockholders in different companies will receive equal treatment. The equity goal clearly is not permitting all losses to be deducted from all income over a *corporation's* life. Since stockholders change, it would mean that some costs incurred and losses sustained by one group of stockholders would be deducted from income received by another group of stockholders. Under no definition of income would this be correct.

It should be recognized, moreover, that most "losses" are forward looking. Most dollars spent by a business enterprise are for the purpose of bringing in future, not past, income, and should, therefore, be deducted from future, not past, income. If all revenue and all expenses were allocated with perfect foresight, losses would arise only when the firm was making "capital" outlays to increase future income. Most "losses" would then be carried forward. A similar conclusion would hold if all expenditures were deducted when made. Carrying losses forward would result in a more correct statement of income than carrying them backward. Income would not be taxed until all capital was recovered.

Under the present concept of taxable income there are three major exceptions to this simple rule. Costs obviously of a capital nature must be spread over the "useful" life of the asset. Changes in the useful life of the asset can then give rise to obsolescence losses which are properly deducted from past, not future, income. A further qualification arises in connection with inventories. Purchases of goods are expensed only to the extent they are not on hand at the end of the year. Most methods of valuing inventories result in an overstatement of income when prices rise and an understatement when prices fall. Resulting inventory losses are directly related to the inventory previously arising. Bad debts, arising from sales of an earlier period, are related to the sales of that earlier period.

It should be noted that, since devices are available to correct most of these aberrations from the simple doctrine, these costs are insufficient grounds for es-

pousal of carrybacks. Increased depreciation, a different method of spreading capital costs, or the carryback of the unrecovered cost of depreciable assets, could adjust for obsolescence. Inventory reserves or last-in-first-out inventory valuations would substantially remove the possibility of inventory losses associated with past income. Accrual of potential bad-debt losses adjusts for this lagged expense.

It would appear, therefore, that the carryforward would be more equitable than the carryback, since it would generally result in a better determination of income. . . .

2. *Economic considerations*

a. *Stimulating new business enterprises.* The carryforward is obviously superior to the carryback in stimulating the entry of new business enterprises. Any initial losses the new enterprise sustains in order to enter an industry are really capital costs of earning future income. Only by means of a carryforward can they be offset against that income.

Moreover, so long as a carryback is permitted, even if a carryforward can also be made, the new enterprise would be at a disadvantage. If the entry of such an enterprise were followed by sharp competitive warfare which results in losses in the industry, the established company would be able to recoup a portion of its losses from the Government by way of the carryback, but the new enterprise could not. The latter would have to wait for future profits to recover a portion of its losses. Yet the prospect of future profits is made more uncertain because the Government would partially underwrite its competitors.

For the purpose of stimulating the entry of new business units, the carryforward seems clearly preferable to the carryback.

b. *Relative countercyclical effects.* Both carryforwards and carrybacks would have some countercyclical effect. Both would stimulate business expenditures somewhat in periods of losses (depressions) because the opportunity of offsetting such expenditures against taxable income would reduce the cost of the outlays.

The effect of a carryback would be more certain than that of a carryforward. The firm would be sure at the time of making the outlay that the carryback would reduce taxes already paid in prior years. A carryforward would reduce taxes only if profits were realized in future years. Because of the greater certainty of the tax effect, carrybacks might stimulate business expenditures during a period of losses somewhat more than carryforwards. Presumably, however, business expenditures are nearly always made with the expectation that they will result in later profits, and the difference as to certainty of tax benefit is probably not very significant. . . .

It appears that carrybacks may stimulate business expenditures during a depression to a slightly greater extent than carryforwards. It seems unlikely, however, that the difference between carrybacks and carryforwards in this respect will be very great, or that either carrybacks or carryforwards will have an important countercyclical effect.

3. *Administrative considerations*

The carryback is generally more difficult to handle administratively than the carryforward. Under the former, the returns of past years must be kept open. Even if they were closed, to be reopened only for purposes of a carryback, a problem would be presented. Compromises are a give-and-take proposition in which a result satisfactory to the Government and the taxpayer is reached. The final result might differ if at the time of making the compromise it were known that a carryback would arise. In many cases, therefore, compromises would be postponed, or an agreement reached which would not have been reached if future events were then known.

The carryforward, on the other hand, requires audit of losses which were pre-

viously passed over. If the carryforward period is long, either the statute of limitations must be extended or the rule adopted that a net operating loss deduction represents an election by the Government [taxpayer?] to waive the statute for the years in question. The audit of losses sustained a considerable period in the past is, of course, difficult.

B. *The Length of Time Over Which a Loss May Offset Income*

In terms of the purposes of loss offsets, there appears to be no theoretical limit to the length of time losses should be carried forward. However, business plans are made, generally, for a relatively short period. The desirable stimulus of loss offsets can be achieved by a period considerably shorter than, say, 10 years. Furthermore, the absence of a theoretical limit to the length of carryforward can be qualified. Future income cannot be clearly foreseen, and unduly long carryforwards might in some cases result in tax reductions that would do no good from the point of view of incentives. This would be the case where the profits of a depressed industry suddenly increased and went untaxed because of the carryforward of losses of years long past. An example of such a situation is the wartime increase in the earnings of railroads after the difficult period of the 1930's.[1] There are serious administrative objections, moreover, to lengthy carryforwards as has been indicated earlier. Some compromise must be made, along the lines of choosing a period which will offset the bulk of losses and yet be administratively feasible.

There are no data conclusively indicating the effectiveness of different periods for offsetting losses. . . .

Since the average business cycle does not appear to exceed about 8 years in length,[2] a five year period would be long enough to allow all losses attributable to general depressions to be applied against income of generally prosperous years. However, a 5-year period might not be long enough to meet the requirements of new firms and of firms whose profits fluctuate over a cycle longer than the general business cycle. . . .

C. *The Kind of Loss To Be Carried Over*

There are two sharply conflicting theories on the question of the kinds of losses and the kinds of income which should be used in calculating the loss offset. One approach is to determine them in the same way as taxable income is determined. This process excludes from the calculation such items as tax-exempt interest and 85 percent of intercorporate dividends which were not used in calculating taxable income or net loss for the purposes of the original tax. It is argued that because they were omitted in that connection they ought not to be used in calculating the loss which is to be carried over, or net income against which the loss is to be offset.

The opposing view starts with the presumption that a loss offset should not come into operation until a "true" loss has been sustained, i.e., until total net income is negative. According to this view, an operating loss is not a "true" loss if in the year in which it is incurred there is, for instance, income from tax-exempt

1 The net operating loss deductions of transportation and public utility corporations in 1940-42 alone were $236 million as compared with $231 million for the entire period 1922-1932. For no other industry group was there an absolute increase in the size of net operating loss deductions between these two periods. With a longer carryforward, the increase in operating loss deductions of transporation and public utility corporations would have been greater.

2 Alvin H. Hansen, Fiscal Policy and Business Cycles (1941), pp. 18-19. Other students focus attention on a cycle of only 40 to 50 months' duration. See, for example, Arthur F. Burns and Wesley C. Mitchell, Measuring Business Cycles (National Bureau of Economic Research, 1946), pp. 78, 401, 412.

securities which can absorb the "loss" in whole or in part. It is only the excess of deductions over total income, including income which is ordinarily excluded from the calculation of taxable income, that should be counted as a loss for the purpose of offsetting income of another period. As a corollary, it follows that in the year in which this "true" loss is applied, it should be counted against total net income accrued, not merely taxable income. In practice, this means that the taxpayer will have to show a deficit in taxable income in excess of the income which is ordinarily excluded from the calculation of taxable income before any benefit will be received.

While the present law is not a perfect application of either theory, it is drawn primarily in terms of the "true" loss idea.*

The existing law falls short of the total-income theory in that total income is understated by the omission of such exempt items as recoveries of certain bad debts, taxes, etc., certain forgiveness of indebtedness, receipts from life insurance policies, military pay and allowances, the surtax exemption for certain preferred-dividend payments of public utilities, and other similar exemptions. The total income used is overstated by the non-deduction of capital losses in excess of gains, and business expenses deemed extraordinary or unnecessary or otherwise not deductible.

Advocates of the taxable-income approach place primary emphasis upon the inconsistency of granting a concession to such items as interest from exempt securities, long-term capital gains, intercorporate dividends, and percentage depletion, in calculating annual taxable income, and not permitting the same concession in determining income over a longer period of time when such income fluctuates. As they point out, this leads to inequities as between taxpayers with fluctuating and stable incomes. Thus, where two mining companies, perhaps direct competitors, have equivalent production and income over a period of time, one will be denied percentage depletion whereas the other will obtain it. Similarly, where two corporations each receive the same amount of dividends from domestic corporations, one must include 100 percent of such dividends as taxable income, while the other need include only 15 percent. Advocates of the taxable-income approach believe that such discrimination cannot be reconciled with the previously stated purpose of the loss carryover which is to define and tax net income as correctly as possible over time so that different taxpayers will receive equal treatment.

Advocates of the total-income approach point out that the basic purpose of the loss offset — to prevent the taxation of capital as income — is satisfied by this method; that the cancellation of the tax exemption under the total-income theory does not result in the taxation of income at rates higher than the statutory one. Moreover, they hold that whether or not undesirable discrimination results from the total-income approach depends on the standard of comparison. If the taxpayer with tax-exempt income whose income fluctuates is compared with a taxpayer with no tax-exempt income, the law would still favor the former. . . .

NOTE

1. *Changes in the net operating loss deduction.* A number of changes in the operating loss deduction were made by the 1954 Code. In calculating the amount of the deduction, the "taxable income" approach discussed in the foregoing extract is accepted to a much greater degree than formerly, and adjustments are no longer required for tax-exempt interest, the excess of percentage over cost depletion, or the untaxed portion of dividends received. Another important change relates to §172(d)(4). The corresponding provision

* This is less true today, as a result of changes in 1954. — Ed.

of the 1939 Code, §122(d)(5), was construed to prevent the carryover of a loss incurred on the sale of property used in the taxpayer's trade or business (e.g., a farm or factory) unless he was in the business of selling such property. Sic v. Commissioner, 177 F.2d 469 (8th Cir. 1949), cert. denied, 339 U.S. 913 (1950); but see Goble v. Commissioner, 23 T.C. 593 (1954). As amended, §172(d)(4) permits the carryover of such a loss. It also permits the carryover of a casualty loss (e.g., from fire, drought, etc.).

The five-year carryforward period of pre-1954 law was not changed, but the carryback period was lengthened to two years by the 1954 Code and to three years by a 1958 amendment.

On the extent to which errors in computing taxable income in a prior year may be corrected (even after the statute of limitations has run) in determining the amount of the carryback to that of other years, see Springfield Street Railway Co. v. United States, 312 F.2d 754 (Ct. Cl. 1963).

For the use of an operating loss carryover by a successor corporation, and the related problem of acquisitions of "loss" corporations, see page 428 supra.

2. *Tentative refunds to taxpayers with operating losses.* In order to increase the usefulness of the §172 carryback, a taxpayer may file an application under §6411 for a tentative refund of the previous year's taxes. The application must in general be acted upon within ninety days, but errors disclosed by subsequent audit can be corrected. Moreover, under §6164 a corporation expecting a §172 carryback from its operations in the current year may obtain an extension of time for the payment of taxes for the previous year.

3. *Carryover of capital losses and other items.* A net capital loss may be carried forward by virtue of §1212; the carryover period is five years for corporations, but it is unlimited (as a result of a 1964 amendment) for other taxpayers. In a few instances, the effect of a ceiling on a specific deduction is mitigated by a provision for carrying forward the amount that is not currently deductible (e.g., §170(b)(2), relating to excess charitable contributions made by a corporation; §404(a)(1)(D), relating to excess payments to a qualified pension trust).

There are some items that can never be carried over. Among them are personal expenses (e.g., taxes and interest) and personal and dependency exemptions.

SECTION C. THE TAXABLE YEAR AS THE ACCOUNTING PERIOD

1. *Items in Dispute*

NORTH AMERICAN OIL CONSOLIDATED v. BURNET

286 U.S. 417 (1932)

MR. JUSTICE BRANDEIS delivered the opinion of the Court.

The question for decision is whether the sum of $171,979.22 received by the North American Oil Consolidated in 1917, was taxable to it as income of that year.

The money was paid to the company under the following circumstances. Among many properties operated by it in 1916 was a section of oil land, the legal title to which stood in the name of the United States. Prior to that year, the Government, also claiming the beneficial ownership, had instituted a suit to oust the company from possession; and on February 2, 1916, it secured the appointment of a receiver to operate the property, or supervise its operations, and to hold the net income thereof. The money paid to the company in 1917 represented the net profits which had been earned from that property in 1916 during the receivership.

The money was paid to the receiver as earned. After entry by the District Court in 1917 of the final decree dismissing the bill, the money was paid, in that year, by the receiver to the company. United States v. North American Oil Consolidated, 242 Fed. 723. The Government took an appeal (without supersedeas) to the Circuit Court of Appeals. In 1920, that Court affirmed the decree. 264 Fed. 336. In 1922, a further appeal to this Court was dismissed by stipulation. 258 U.S. 633.

The income earned from the property in 1916 had been entered on the books of the company as its income. It had not been included in its original return of income for 1916; but it was included in an amended return for that year which was filed in 1918. Upon auditing the company's income and profits tax returns for 1917, the Commissioner of Internal Revenue determined a deficiency based on other items. The company appealed to the Board of Tax Appeals. There, in 1927, the Commissioner prayed that the deficiency already claimed should be increased so as to include a tax on the amount paid by the receiver to the company in 1917. The Board held that the profits were taxable to the receiver as income of 1916; and hence made no finding whether the company's accounts were kept on the cash receipts and disbursements basis or on the accrual basis. 12 B.T.A. 68. The Circuit Court of Appeals held that the profits were taxable to the company as income of 1917, regardless of whether the company's returns were made on the cash or on the accrual basis. 50 F.(2d) 752. This Court granted a writ of certiorari. 284 U.S. 614.

It is conceded that the net profits earned by the property during the receivership constituted income. The company contends that they should have been reported by the receiver for taxation in 1916; that if not returnable by him, they should have been returned by the company for 1916, because they constitute income of the company accrued in that year; and that if not taxable as income of the company for 1916, they were taxable to it as income for 1922, since the litigation was not finally terminated in its favor until 1922.

First. The income earned in 1916 and impounded by the receiver in that year was not taxable to him, because he was the receiver of only a part of the properties operated by the company. Under Sec. 13(c) of the Revenue Act of 1916, receivers who "are operating the property or business of corporations" were obliged to make returns "of net income as and for such corporations," and "any income tax due" was to be "assessed and collected in the same manner as if assessed directly against the organization of whose business or properties they have custody and control." * The phraseology of this section was adopted without change in the Revenue Act of 1918, 40 Stat. 1057, 1081, c. 18, Sec. 239. The regulations of the Treasury Department have consistently construed these statutes as applying only to receivers in charge of the entire property or business of a corporation; and in all other cases have required the corporations themselves to report their income. Treas. Regs. 33, arts. 26, 209; Treas. Regs. 45, arts. 424, 622. That construction is clearly correct. The language of the section contemplates a substitution of the receiver for the corporation; and there can be such substitution only when the receiver is in complete control of the properties and business of the corporation. Moreover, there is no provision for the consolidation of the return of a receiver of part of a corporation's property or business with the return of the corporation itself. It may not be assumed that Congress intended to require the filing of two separate returns for the same year, each covering only a part of the corporate income, without making provision for consolidation so that the tax could be based upon the income as a whole.

* The current equivalent of this provision is §6012(b)(3). — Ed.

Second. The net profits were not taxable to the company as income of 1916. For the company was not required in 1916 to report as income an amount which it might never receive. See Burnet v. Logan, 283 U.S. 404, 413. Compare Lucas v. American Code Co., 280 U.S. 445, 452; Burnet v. Sanford & Brooks Co., 282 U.S. 359, 363. There was no constructive receipt of the profits by the company in that year, because at no time during the year was there a right in the company to demand that the receiver pay over the money. Throughout 1916 it was uncertain who would be declared entitled to the profits. It was not until 1917, when the District Court entered a final decree vacating the receivership and dismissing the bill, that the company became entitled to receive the money. Nor is it material, for the purposes of this case, whether the company's return was filed on the cash receipts and disbursements basis, or on the accrual basis. In neither event was it taxable in 1916 on account of income which it had not yet received and which it might never receive.

Third. The net profits earned by the property in 1916 were not income of the year 1922 — the year in which the litigation with the Government was finally terminated. They became income of the company in 1917, when it first became entitled to them and when it actually received them. If a taxpayer receives earnings under a claim of right and without restriction as to its disposition, he has received income which he is required to return, even though it may still be claimed that he is not entitled to retain the money, and even though he may still be adjudged liable to restore its equivalent. See Board v. Commissioner, 51 F.(2d) 73, 75, 76. Compare United States v. S. S. White Dental Mfg. Co., 274 U.S. 398, 403. If in 1922 the Government had prevailed, and the company had been obliged to refund the profits received in 1917, it would have been entitled to a deduction from the profits of 1922, not from those of any earlier year. Compare Lucas v. American Code Co., supra.

Affirmed.

NOTE

1. *Basis of Court's holding in North American Oil Consolidated v. Burnet.* Was it the dispute or the receivership that prevented the income from being taxable in 1916? If the former, why was the income taxable in 1917, when the dispute was still alive? If the latter, why shouldn't an accrual basis taxpayer be taxed on the basis of its *rights,* rather than its receipts? (There was no finding as to whether the taxpayer was on the cash or the accrual basis, but if this was relevant, the case could have gone back for a determination of this question.) Would the result have been different if in 1916 the court had denied the application for a receiver but had required the taxpayer to post a bond to secure payment of any judgment that might be entered? Could the taxpayer have protected itself from liability in 1917 by treating the receipt as a trust fund pending outcome of the appeal, e.g., by depositing it in a special account and labeling it as a trust fund on its books? Commissioner v. Alamitos Land Co., 112 F.2d 648 (9th Cir. 1940), cert. denied, 311 U.S. 679; Rev. Rul. 55-137, 1955-1 C.B. 215.

The receipt of the funds in 1917 means that both the taxpayer and the government will be alert to the possibility that they should be reported then. (If the $172,000 was not reported by the taxpayer, the government would be put on notice of its receipt by Schedule M of the corporate return.) If the Court had held that the funds were not taxable until 1922, would there be any formal way in which the government would become aware of the item if it was not reported by the taxpayer? Should disputed items, in other words, be reported not later than the year of receipt lest they be overlooked altogether?

2. *Can a "claim of right" be disclaimed?* The taxpayer, a motor carrier, contracted to transport government property at not more than the lowest rate charged by land-grant railroads between the same points. The taxpayer was advised by the government that because the land-grant rates were not available, it should charge at its regular tariff rates

and that the General Accounting Office, on a subsequent audit, would ascertain the correct charge and make demand for the overcharges. This practice was followed. On estimating that the land-grant rates were about 17 per cent below its regular rates, the taxpayer offered to renegotiate the contract on this basis, but the offer was rejected by the government. In computing its taxable income, the taxpayer deducted from gross operating revenues from the transportation of government property an amount of 17 per cent as a reserve for the refunding of overcharges. The amount actually refunded in later years was substantially less. It was held that the only amount that could be excluded from income in the year the transportation occurred, under the *North American Oil* case, was the amount actually repaid in the later years. Bates Motor Transport Lines, Inc. v. Commissioner, 200 F.2d 20 (7th Cir. 1952). Was the taxpayer taxed on more than it received under "a claim of right"?

The taxpayer in Fender Sales, Inc. v. Commissioner, ¶63,119 P-H Memo T.C., received a bonus from his employer (a wholly owned corporation) but returned it in the same calendar year because of the corporation's precarious financial condition. The court held that the bonus was not taxable to him: "where prior to the close of the taxable year there has been an adjustment of the contract or obligation and a repayment of a portion of the amount received, the tax liability is to be determined on the basis of the adjusted amount."

3. *Adjustment in year of repayment.* Note the statement at the end of the opinion about a deduction in the year of refund if the amount had been repaid by the taxpayer; see also United States v. Lewis, supra page 103. Section 1341 provides, in effect, that if the deduction exceeds $3000, the tax benefit to be derived therefrom shall not be less than the amount of tax attributable to the inclusion of the item in the earlier year. Would §1341 be applicable to the *Shannonhouse* case, supra page 535.

Why is an exception made in §1341(b)(2) for income from the sale of inventory items and stock in trade?

Section 1342 is the converse of §1341, permitting the taxpayer who took a deduction for an amount paid and must report a refund as income in the year of receipt to limit the tax in the latter year to the amount of tax saved in the year of the deduction. Unlike §1341, however, §1342 is available only in a highly special situation: a refund of an amount paid as a result of a patent infringement action where the decision was induced by fraud and later reversed.

4. *Reference.* Comment, Taxing Unsettled Income: The "Claim of Right" Test, 58 Yale L.J. 955 (1949).

COMMISSIONER v. BROOKLYN UNION GAS CO.

62 F.2d 505 (2d Cir. 1933)

Before MANTON, L. HAND, and SWAN, Circuit Judges.

SWAN, Circuit Judge.

The income tax in dispute is that of the Brooklyn Union Gas Company and its five subsidiary corporations for the taxable year 1922. The respondent and its subsidiaries were engaged in the manufacture, distribution, and sale of illuminating gas in Brooklyn and its environs. Beginning with the year 1916, some or all of these companies were continuously involved in rate litigation until the controversies were settled in their favor in 1922. Out of this litigation has arisen a dispute as to the amount of their taxable income for that year. Voluminous findings of fact are set out in the opinion of the Board in 22 B.T.A. 507, and we shall restate them only to the extent deemed necessary for an understanding of the issues here presented.

In the so-called Rate Cases No. 1 the New York Public Service Commission issued orders in May, 1916, directing four of the subsidiary companies to reduce their rates. Proceedings were immediately instituted in the state court attacking the reduced rates as confiscatory, and an interlocutory order was made staying execution of the commission's reduced rates and directing that moneys collected in excess thereof be impounded in a bank subject to further order of the court.

In July, 1919, the excess moneys so impounded were withdrawn by the companies, pursuant to court order, upon the giving of a bond for repayment in the event that the reduced rates should finally be sustained. In August, 1922, the commission abrogated, as of their original date, its orders reducing the rates. The Commissioner of Internal Revenue seeks to tax as income for 1922 the impounded moneys withdrawn in 1919.

In Rate Cases No. 2 the respondent and its subsidiaries began litigation in 1920 attacking the constitutionality of a New York statute known as the Eighty Cent Gas Law (Laws N.Y. 1906, c. 125). The United States District Court granted a temporary restraint against its enforcement and permitted collection of higher rates, requiring the excess to be impounded. Subsequently, in November, 1920 [269 Fed. 452 (D.C.)], an interlocutory order was entered finding the act confiscatory and permitting the impounded moneys to be withdrawn and future collections to be withheld from impounding upon substituting a bond or securities. A final decree in favor of the respondent was entered in May, 1921, and affirmed by the Supreme Court in March, 1922. Newton v. Brooklyn Union Gas Co., 258 U.S. 604. A final decree in favor of one of the subsidiaries, Newton Gas Company, was entered in October, 1921, and the appeal therefrom was dismissed by consent in 1923. 263 U.S. 726. Final decrees in favor of the other subsidiaries were entered in September, 1922, and not appealed. Prior to 1922 and pursuant to court decrees, either interlocutory or final, all moneys in excess of the statutory rate were either withheld or withdrawn from impoundment upon the giving of bonds, with the exception of some $673,000, which was withdrawn in 1922 after the litigation had ended. The Commissioner seeks to tax as 1922 income all moneys in excess of the statutory rate collected during 1920 and 1921.

The question presented is whether the excess moneys represented income to the respondent and its subsidiaries, reporting on the accrual basis, in the year when the rate litigation was finally terminated, as the Commissioner contends, on the ground that until then the right to such moneys was contingent. Rejecting this theory, the Board of Tax Appeals held that the excess moneys constituted income in the years when earned; that is, the years when the gas was furnished and the charges therefor were made against the consumers upon the companies' books. This resulted in allocating to income of years prior to 1922 some $8,600,000, thereby diminishing the tax deficiency which the Commissioner had determined for 1922. The appeal challenges this decision.

Were it not for the case of North American Oil Consol. v. Burnet [supra p. 836], we should unhesitatingly adopt the theory of the Board that the moneys in dispute were income in the year when the service was rendered. To that year was allocated the entire cost of manufacture and distribution of the gas, and to the same year should be attributed the whole price at which it was sold, if the taxpayer's profit on the transaction is to be accurately reflected by the accrual method of bookkeeping. The cases relating to compensation subsequently awarded to railroads for the years of federal control, upon which the Board relied, furnish a persuasive analogy. See Commissioner v. Old Dominion S.S. Co., 47 F.(2d) 148 (C.C.A. 2); Continental Tie & L. Co. v. United States, 286 U.S. 290; compare Uncasville Mfg. Co. v. Commissioner, 55 F.(2d) 893 (C.C.A. 2), cert. denied, 286 U.S. 545. But the *North American Oil* Case gives us pause. There a receiver was appointed to operate certain property pending the outcome of a suit brought to contest the taxpayer's title thereto. Net income produced from the receiver's operation of the property in 1916 was turned over to the taxpayer in 1917, upon the entry of a final decree dismissing the bill of complaint. The decree was appealed, and the litigation was not terminated until 1922. The taxpayer contended that the net profit should be allocated either to 1916 or 1922,

but the court held it to be income for the year 1917, when it was received. While this case casts doubt upon the correctness of the Board's theory that the excess moneys are to be allocated to the years, respectively, when the gas was sold, it strongly supports the decision that final termination of the litigation was not the critical moment. As the Supreme Court said, at page 424 of 286 U.S.:

> If a taxpayer receives earnings under a claim of right and without restriction as to its disposition, he has received income which he is required to return, even though it may still be claimed that he is not entitled to retain the money, and even though he may still be adjudged liable to restore its equivalent.

We think this is conclusive against the Commissioner's contention with respect to the excess moneys which prior to 1922 were withheld or withdrawn from impoundment upon bonds fixed by the court. Such money was income, being payment for service already rendered, and was received by the companies without restriction upon its use. It is true they were subject to a contingent liability to pay back an equivalent amount if the rate litigation ultimately went against them. This liability, however, imposed no restriction upon their use of the money actually in their hands. Nor did the fact that they gave bonds to get it add anything to the contingent liability they were under regardless of such bonds. Termination of the rate litigation merely determined their right to retain income already received. See Board v. Commissioner, 51 F.(2d) 73, 76 (C.C.A. 6). The money received prior thereto cannot be taxed as income of the year 1922.

This disposes of all the moneys involved in Rate Case No. 1 and of all the moneys involved in Rate Case No. 2, except the $673,000 which was withdrawn from impoundment in 1922. This sum represented charges in excess of the statutory rate for gas furnished in 1920 or 1921. As to this the *North American Oil* decision tends to support the Commissioner's contention that the money was income in the year when received. However, two differences in the facts are to be noted: First, the *North American Oil* Case involved only net income resulting from the receiver's operations. The taxpayer there was not required to charge the receiver's expenses to 1916 while crediting his receipts to 1917. Hence there was no such distortion of the taxpayer's income as would result from applying the same rule to the case at bar. Here the entire cost of furnishing gas was charged to the year when the service was rendered, but on the Commissioner's theory only a part of the price charged to and collected from the consumer would be credited as income to that year; the remainder would be credited to income in 1922 and without carrying into that year any part of the expense of earning such income. Obviously this would produce an unfair distortion of the taxpayer's actual profits in each of the years. Secondly, in the *North America Oil* Case no court order was entered in 1916 finding that the taxpayer was entitled to funds in the receiver's hands. As the Supreme Court pointed out (286 U.S. at page 423) there was no constructive receipt of the profits by the taxpayer in 1916, because at no time during that year had it a right to demand that the receiver pay over the money. In the case at bar, however, it was decided in November, 1920, that the statutory rate was confiscatory, and the respondent and its subsidiaries were declared to have a right to receive the impounded income without restriction, provided they filed bonds as security for their conditional liability to return a like sum. Their conditional right to get the impounded money could be turned into an absolute right at their own option. We do not think a taxpayer could alter at will the accrual of income by failing to exercise an option to receive it. A majority of the court believe that these differences in the facts are sufficient to distinguish the *North American Oil* Case, and that the order appealed from should be affirmed in toto. It is so ordered.

L. HAND, Circuit Judge (dissenting in part).

Even when the taxpayer has received the money, it is theoretically possible to treat the item as in suspense, until the right to it has been determined, or as an immediate receipt, with a corresponding deduction, if it is later repaid. But the second was authoritatively laid down in North American Oil Consol. v. Burnet, 286 U.S. 147, as applicable to accounts kept either on an accrual, or a cash, basis. This answers the main issue, and my only difference with my brothers is as to that part of the moneys impounded in Rate Cases No. 2, which was never withdrawn until the suits were determined. If the right to withdraw had been unconditional, perhaps we ought to treat this as though it were already in the coffers of the companies; it was equally available. Indeed, even if the companies had been required to give their individual bonds, these would in substance subject them to no other liability than they were under anyway. But the interlocutory decrees which allowed the withdrawal of $673,000, required them to deposit securities of their own, or the bonds of a surety company. It can scarcely be said that this made the moneys immediately available, like cash on deposit. The condition required them either to turn over equivalent property to the court, or to assume an obligation to the surety, which often demands security. I do not see how such moneys are any more received by the taxpayers, than if the court continued to impound them.

It is sometimes possible, when accounts are kept on an accrual basis, to ignore the conditional character of the right, but that is just what, as I read it, was denied in North American Oil Consol. v. Burnet, in a closely similar situation; the right unaccompanied by possession or its equivalent was too contingent. I agree that in fact the uncertainties were no greater then than those determining the recovery in the Federal Control Cases.* But the distinction between the liquidation of a determined right, and the determination of a disputed right, is familiar throughout the law, though for practical purposes one may be as incalculable as the other. It is reasonable to import this distinction, taken in so many other situations. The "title" to the moneys was in genuine dispute; indeed the company's last efforts had been unsuccessful. To treat the impounded sums as presently accruable appears to me, therefore, to ignore a well recognized classification. As to $673,000 of the moneys in the Rate Cases No. 2, I therefore dissent; otherwise I concur.

NOTE

1. *Accrual of unliquidated amount.* In Globe Corp. v. Commissioner, 20 T.C. 299 (1953), the court was concerned with the proper year for accruing an amount owing to the taxpayer under contracts with the United States for the manufacture of equipment. The contracts provided that in the event the specifications were changed by the United States, the contract prices would be adjusted on a fair and equitable basis by negotiations between the parties. The government ordered changes, in a way that would increase the cost, on certain work that was completed in 1945. The price adjustments were in the process of negotiation during that year; in 1946, an agreement was reached by which the contract prices were increased by about $181,000. The Tax Court upheld the taxpayer's refusal to accrue the additional amount until 1946:

* These cases, some of which are cited in the majority opinion, involved payments under the Transportation Act of 1920, which contained provisions to compensate railroads for losses resulting from government control during World War I. In Continental Tie & Lumber Co. v. United States, 286 U.S. 290 (1932), it was held that a railroad should have accrued in 1920 the amount due to it under the Act, although payment was not made until 1923, because the right to the payment was fixed when the Act took effect in 1920 and data then in the taxpayer's books would have enabled it to compute the amount which it was entitled to receive. — ED.

Until a definite amount was arrived at under the negotiations provided for in the contracts involved herein petitioner had only a claim on a quantum meruit basis for goods and services rendered which, while of value, was too uncertain in amount to accrue. [20 T.C. at 303.]

The court relied in part on Henry Hess Co. v. Commissioner, 16 T.C. 1363, where it had held that the taxpayer was not required to accrue a claim for just compensation arising from the requisition of property by the government until the amount due was fixed by judicial proceedings or otherwise:

> It is not enough to state that the Fifth Amendment to the Federal Constitution guarantees just compensation and thereby fixes taxpayer's right. To this it might, with equal assurance, be rejoined that under our system of jurisprudence and the law as adjudicated by all American courts, every litigant is guaranteed ultimate justice or "equal justice under law." These principles are basic in our system of government. So to state, however, does not devitalize the considerations leading to the holding in innumerable cases that before an amount can be accrued, not only must the right to receive the amount be fixed, but the amount must be reasonably ascertainable. [16 T.C. at 1373-1374.]

With *Globe Corp.*, supra, compare Food Machinery and Chemical Corp. v. United States, 286 F.2d 177 (Ct. Cl. 1960), cert. denied, 368 U.S. 918, where the court held that income derived from the termination of a war contract was accruable in the year of termination on the basis of a settlement with a government representative, although the rate of profit used in the settlement was subject to review by a governmental settlement board in a later year.

DIXIE PINE PRODUCTS CO. v. COMMISSIONER

320 U.S. 516 (1944)

MR. JUSTICE ROBERTS delivered the opinion of the Court.

The question presented concerns the propriety of the respondent's disallowance of a deduction from income which petitioner took in its federal income tax return for 1937.

In 1936 the Mississippi taxing authorities declared that a solvent used by petitioner in its business was gasoline within the meaning of a state law defining gasoline and laying a tax upon its receipt and use. Accordingly a tax was assessed against the petitioner with respect to the receipt and use of the solvent in 1936. Petitioner paid the tax, and, in the same year, brought suit against the Motor Vehicle Commissioner of Mississippi alleging that the solvent was not within the comprehension of the state law and that the Commissioner should be temporarily and permanently enjoined from future collections of tax in respect of it. The Commissioner's demurrer to the complaint was sustained but, on appeal, the Supreme Court of Mississippi decided that, on the pleadings, the solvent was not within the definition of gasoline contained in the state statute. After this decision petitioner denied that it owed, and ceased and refused to pay, any gasoline tax on solvent used by it.

In December, 1937, on advice of counsel, petitioner (which kept its books and filed its federal income tax returns on the accrual basis) made book entries accruing gasoline tax assessed by the Motor Vehicle Commissioner in 1937. The actual accrual entries were made sometime between January 1 and March 15, 1938, as of December 31, 1937, in the amount of approximately $21,000, and petitioner deducted this amount from income in making its 1937 federal income tax return, although the sum had not been, and never was, paid.

In December, 1938 petitioner and the Attorney General of Mississippi filed an agreed statement of facts in the state court suit, and, in the same month, the trial

judge entered a final decree perpetually enjoining the Motor Vehicle Commissioner from assessing gasoline tax on the solvent used by petitioner. This decree was subsequently affirmed by the Supreme Court of Mississippi. In its 1938 federal income tax return petitioner, by way of compensating entry, included the sum of $21,000 as income and as a recovery, in view of the Mississippi trial court's decree of December, 1938.

The sole question is whether the Commissioner was right in disallowing the deduction for the tax year 1937. The Board of Tax Appeals held that he was, and the court below affirmed its decision. We took the case because of a conceded conflict in principle with decisions in other circuits. . . .

The provisions of the Revenue Act of 1936 worked no significant change over earlier Acts respecting the permissible basis of calculating annual taxable income. The applicable principles of accounting on the accrual basis had been adduced and applied by the Board of Tax Appeals in numerous decisions. It has never been questioned that a taxpayer who accounts on the accrual basis may, and should, deduct from gross income a liability which really accrues in the taxable year. It has long been held that, in order truly to reflect the income of a given year, all the events must occur in that year which fix the amount and the fact of the taxpayer's liability for items of indebtedness deducted though not paid; and this cannot be the case where the liability is contingent and is contested by the taxpayer. Here the taxpayer was strenuously contesting liability in the courts and, at the same time, deducting the amount of the tax, on the theory that the state's exaction constituted a fixed and certain liability. This it could not do. It must, in the circumstances, await the event of the state court litigation and might claim a deduction only for the taxable year in which its liability for the tax was finally adjudicated.

To this effect are the decisions of the Board of Tax Appeals in numerous cases, and the instant decision was in line with earlier rulings as to proper tax accounting practice. Since the Board applied the correct rule of law, its determination that the item in question was not properly deducted on the accrual basis is entitled to the finality indicated by Dobson v. Helvering, 320 U.S. 489. The court below properly refused to disturb the Board's determination.

Affirmed.

NOTE

1. *Effect of prior transaction.* Security Flour Mills Co. v. Commissioner, 321 U.S. 281 (1944), involved a taxpayer who contested the constitutionality of the processing tax levied by the Agricultural Adjustment Act of 1933. The taxpayer brought suit to enjoin collection and the court ordered the amount of the tax to be paid into a depository pendente lite. In 1935 the taxpayer made deposits in the amount of about $93,000 and, in computing the prices to be charged its customers, it considered the tax as a cost of production. Some of the customers were advised, however, that the taxpayer would treat them "fairly" in the event the tax was held unconstitutional, although no enforceable obligations were assumed. In 1936 the tax was held unconstitutional and the court ordered the deposited funds to be returned to the taxpayer, though only after claims to the same funds had been interposed by certain customers and rejected by the court. In the years 1936-1938 the taxpayer refunded about $45,000 to certain of its customers, those whose goodwill it wished to cultivate. The taxpayer sought to deduct for the year 1935 the $45,000 paid out in 1936-1938 on the theory that income would be distorted if the gross sales price of its product was reported in 1935 and the refunds were deducted in later years. (An effort was also made to obtain a deduction for the full amount of the taxes, but this was not the taxpayer's primary contention, and the *Dixie Products Co.* case, decided while its case was pending before the Supreme Court, disposed of this issue.) The taxpayer relied on a proviso of §43 of the 1939 Code that deductions and credits were to be taken in the year

paid or accrued, depending on the taxpayer's method of accounting, "*unless* in order to clearly reflect the income the deductions or credits should be taken as of a different period." * The Supreme Court rejected this argument, saying:

> In short, the petitioner's position is that the Commissioner and the Board of Tax Appeals are authorized and required to make exceptions to the general rule of accounting by annual periods wherever, upon analysis of any transaction, it is found that it would be unjust or unfair not to isolate the transaction and treat it on the basis of the long term result. We think the position is not maintainable.
>
> The Revenue Act of 1921, in Secs. 214(a)(6) and 234(a)(4) authorized the Commissioner to allow the deduction of losses in a year other than that in which sustained when, in his opinion, that was necessary clearly to reflect income. The qualifying clause of Sec. 43 was first added as Sec. 200(d) of the Revenue Act of 1924. The reports of both House and Senate Committees concerning this change said: "The proposed bill extends that theory to all deductions and credits. The necessity for such a provision arises in cases in which a taxpayer pays in one year interest or rental payments or other items for a period of years. If he is forced to deduct the amount in the year in which paid, it may result in a distortion of his income which will cause him to pay either more or less taxes than he properly should." (1939-1 C.B. (Part 2) 249.)
>
> From these reports it is clear that the purpose of inserting the qualifying clause was to take care of fixed liabilities payable in fixed installments over a series of years. For example, a tenant would not be compelled to accrue, in the first year of a lease, the rental liability covering the entire term nor would he be permitted, if he saw fit to pay all the rent in advance, to deduct the whole payment as an expense of the current year. But we think it was not intended to upset the well-understood and consistently applied doctrine that cash receipts or matured accounts due on the one hand, and cash payments or accrued definite obligations on the other, should not be taken out of the annual accounting system and, for the benefit of the Government or the taxpayer, treated on a basis which is neither a cash basis nor an accrual basis, because so to do would, in a given instance, work a supposedly more equitable result to the Government or to the taxpayer. [321 U.S. at 285-286.]

If §1341 had been in effect for the taxable years in question in *Security Flour Mills*, would it have applied?

2. *The taxpayer who guesses wrong.* See Keller-Dorian Corp. v. Commissioner, 153 F.2d 1006 (2d Cir. 1946), involving a taxpayer who imported certain goods in the years 1936-1940 and paid customs duties to the United States on the basis of values approved by the customs authorities. Subsequently the goods were reappraised and additional amounts were paid as duties in 1941 and 1942 as a result of the reappraisals. The court held that the additional payments could not be deducted in 1941 and 1942. (Apparently the earlier years were closed by the statute of limitations.) It said:

> The Tax Court ruled that customs duties are taxes and must be treated for income tax purposes in the same manner as any other taxes; that since the petitioner reported on the accrual basis, it was obliged to accrue the duties in the taxable year in which the merchandise was imported, if all the facts had occurred in that year to fix the amount and the fact of the taxpayer's liability; and that the record did not show that such facts had not then occurred. We see no escape from this conclusion. The liability of an importer for customs duties accrues when the goods arrive at the port of entry. . . . The petitioner failed to show that the reappraisals which resulted in the additional customs duties were not required to correct errors in the original computations. This court has held that if the correct amount of a tax is ascertainable in the year when the liability accrues, even though it was not in fact then ascertained, the later correction of the error in computation does not entitle the taxpayer (on accrual basis) to take a deduction in the year when the additional tax is paid.

* The corresponding provision of the 1954 Code, §461(a), is worded somewhat differently, but, since §446(b) provides that the method of accounting must "clearly reflect income," presumably no substantive change was intended.

Uncasville Mfg. Co. v. Commissioner, 2 Cir., 55 F.2d 893, 895, certiorari denied 286 U.S. 545. . . . This principle appears to us conclusive of the case at bar. Since the record does not show why reappraisals were required in 1940 and 1941 we must assume that the customs officials acted lawfully in requiring them; that means, since there was no change in the statute, that a basis of computation was originally applied which the officials later discovered to have been erroneous. The *Uncasville* case establishes that such a legal error cannot be used by a taxpayer as a basis for saying that he could not have known the correct amount of the taxes (or customs duties) in the earlier years when they accrued. [153 F.2d at 1007.]

Could the taxpayer have accrued in 1941 and 1942 the amounts actually due if he paid smaller amounts in the hope that the lower values would be accepted by the customs officials?

See also Baltimore Transfer Co. v. Commissioner, 8 T.C. 1 (1947); Rev. Rul. 55-731, 1955-2 C.B. 254.

UNITED STATES v. CONSOLIDATED EDISON CO.

366 U.S. 380 (1961)

MR. JUSTICE WHITTAKER delivered the opinion of the Court.

Respondent brought this action in the United States District Court for the Southern District of New York to recover a claimed overpayment of federal income taxes for the year 1951. It keeps its books and files its returns on a calendar year-accrual basis. The case turns on the correct determination of the proper year of accrual and deduction of certain contested real estate taxes. Specifically, the question is whether the contested part of a real estate tax *accrued* (1) in the year it was assessed and, for the purpose — and as the only mode recognized by the local law — of avoiding seizure and sale of the property for the contested tax while the contest was pending, was "paid" by the taxpayer, or (2) in the year the contest was finally determined.

The District Court, following the holding of the Court of Claims in Consolidated Edison Co. v. United States [135 F. Supp. 881 (Ct. Cl. 1955), cert. denied, 351 U.S. 909], that such a "payment" of the tax "accrues the item even though payment is made under protest and even though litigation is started within the taxable year to obtain repayment," held, without opinion, that the contested part of the tax accrued in the year of the "payment." On appeal, the Court of Appeals, by a divided court, held that the contested part of the tax accrued in the year the contest was finally determined, and reversed the judgment. 279 F.2d 152. It reasoned that inasmuch as respondent was "keeping its books on the accrual basis," the contested part of the tax accrued "only when all events [had] occurred which determine[d] the fact and amount of the tax liability." Id., at 155. To resolve the conflict between the decision below and Consolidated Edison Co. v. United States, supra, we granted certiorari. 364 U.S. 890.

During the years involved — 1946 through 1950 — respondent owned numerous tracts of real estate in New York City which were subject to annual local property taxes. Under the New York law, the City Council annually fixes the tax rate, and the City Tax Commission annually fixes the property valuations. Thus the amount of the tax on each tract is determined by multiplying the valuation by the tax rate. The tax rate is not contestable, but a timely application (commonly called a "protest") may be made to the City Tax Commission to correct an erroneous valuation. Among other things, the protest must state the amount which the taxpayer "consider[s] was the full value of the property on January 25 [of the current] year" thus to establish the amount of the tax that is not contested. Upon exhaustion of this administrative procedure, a review of the Commission's determination may be had by a judicial proceeding, commonly called a certiorari pro-

ceeding, in the State Supreme Court, which is the taxpayer's sole and exclusive remedy. But the institution of such a suit does not stay or suspend the maturity of the tax bill, the accrual of 7% interest on it, nor the seizure and sale of the property to satisfy the tax lien. Thus, to obtain review, the taxpayer must either "pay" the tax or suffer the interest penalty and run the risk of seizure and sale of its property.

Though taxes for each of five years on hundreds of tracts are involved and the aggregate amount is very substantial, the parties very commendably stipulated in the District Court that the facts are sufficiently reflected, for the purposes of this suit, in the following simplified example:

In each of the years 1946 through 1950, respondent was notified of a tentative valuation which, at the established tax rate, would produce a tax of $100. Respondent then timely filed a bona fide protest (in respect of many, but not nearly all, of its tracts) stating a valuation which, at the established tax rate, would produce a tax of $85, and asking that the balance of the proposed valuation be stricken as excessive. After hearing, the Commission rejected the protest, and an assessment in the amount of $100 was made. Thereupon respondent, under protest and for the honestly stated purpose of avoiding the interest penalty and the seizure and sale of its property while it was contesting the Commission's valuation by certiorari proceedings in the state court, remitted to the city cash in an amount equal to the tax of $100, and immediately thereafter commenced a certiorari proceeding in the proper court, in which it again admitted liability for a tax in the amount of $85, but denied all liability for any tax in excess of that amount. In December 1951, the court, upon the consent of the parties to the action, entered its order in (each of) the certiorari proceedings fixing respondent's tax liability at $95, and thereupon the city forthwith returned $5 to respondent.

Although it was then engaged in a contest with the Commissioner in the Court of Claims over an identical question, namely, the proper income tax treatment to be accorded the $15 for each of the years 1938, 1939 and 1941 — which issue was decided by the Court of Claims in December 1955 in favor of the Government, Consolidated Edison Co. v. United States, supra — respondent, in terms of the illustrative example, accrued on its books and deducted on its federal income tax returns, for each of the years 1946 through 1950, the full $100; and in its return for the year 1951 — in which year the real estate tax liability was determined to be $95 — respondent failed to deduct the $10 from, and included the $5 in, its gross income for that year.[1]

Believing that this treatment of the $15 in 1951 was erroneous and resulted in its paying a lesser amount of federal income taxes in each of the years 1946 through 1950, and more in the year 1951, than it should have paid,[2] respondent filed in February 1955 its claim for refund of so much of its 1951 income taxes as resulted (1) from its failure to deduct the $10 of real estate tax that was deter-

[1] Respondent asserts that this treatment of the $15 in its 1951 federal income tax return was made under compulsion of the Commissioner's erroneous G.C.M. 25298, issued directly to it in 1947 (C.B. 1947-2, 39), saying, "a contested tax liability accrues not later than time of payment, notwithstanding continuation of contest. The accrual basis of accounting relates to the deductibility of unpaid items," and that the Commissioner insisted upon that treatment, despite his modification thereof in Mim. 6444 (C.B. 1949-2, 11), saying in pertinent part, that "payment of [a] contested tax liability as a prerequisite for appeal is not deductible under G.C.M. 25298."

[2] The economic consequences to the parties arise from the fact that corporate income tax rates (normal plus surtax) were increased from 38% in 1946 to 50¾% in 1951, and, in this particular instance, more revenue would be produced by taking the deduction in 1946-1950 than in 1951. The taxpayer recognizes that, if its position be sustained, the Commissioner will have one year after entry of final judgment herein to reaudit the taxpayer's 1946-1950 returns and to assess deficiencies based upon deduction of the $15 in those years, in accordance with the provisions of §§1311-1315 of the Internal Revenue Code of 1954.

mined, in that year, to be valid, and (2) from its inclusion in gross income of the $5 returned to it in that year. Upon rejection of that claim, respondent timely brought this action in the District Court to recover the refund claimed, and obtained the result already stated. . . .

Thus the very narrow issue here is whether the remittance admitted liability for, and constituted "payment" and "satisfaction" of, the contested part of the assessment and thereby rendered it accruable in the year of the remittance. Like the Court of Appeals, we think the respondent is right in its contention, and that $10 of the contested $15 of the tax accrued when liability in that amount was finally determined by the New York court in 1951, and that the $5, for which respondent was by that judgment held not liable, and which was returned to it by the city, was not income to respondent in 1951.

Although the Government attempts to distinguish the *Anderson, Dixie Pine* and *Security Mills* cases [269 U.S. 422; 320 U.S. 516; 321 U.S. 281] on the ground that "payment" of the contested taxes had not been made in those cases, it primarily relies on the decisions of the Court of Claims in Chestnut Securities Co. v. United States, 104 Ct. Cl. 489 and Consolidated Edison Co. v. United States, 133 Ct. Cl. 376.

The *Chestnut Securities* case turned on the question whether certain judicially contested state income taxes (for the years 1936-1938) accrued when they were paid in 1940, as claimed by the accrual-basis taxpayer, or when the final judgment upholding their validity was rendered in 1942, as contended by the Government. Squarely contrary to its contention here, the Government, relying on Security Mills Co. v. Commissioner, supra, there contended that "since the [taxpayer's] accounts were kept and its tax returns made on the accrual basis, it could not take its deduction for the taxes . . . paid to the State . . . until the year 1942, when its suit for their return was finally decided adversely to it." On the facts of that case, the Court of Claims held that "the Government [was] wrong" in that contention. Although, in full consonance with the *Security Mills* case, the Court of Claims said "[o]ne is not entitled to accrue a debt or other liability which is asserted against him but which he disputes and litigates, until the litigation is concluded," it went on to say "[b]ut if a liability is asserted against him and he pays it, though under protest, and though he promptly begins litigation to get the money back, the status of the liability is that it has been discharged by payment. It is hardly conceivable that a liability asserted against him, which he has discharged by payment, has not yet 'accrued' within the meaning of the tax laws and the terminology of accounting. Accrual, from the debtor's standpoint, precedes payment, and does not survive it." 104 Ct. Cl., at 494-495. And after pointing to this Court's use of the phrase "and failed to pay" in its holding in the *Security Mills* case that "Since [the taxpayer] denied liability for, and failed to pay, the tax during the taxable year 1935, it was not in a position in its tax accounting to treat the Government's claim as an accrued liability," the Court of Claims concluded: "In the instant case the taxpayer denied liability, but paid. We think it thereby 'accrued' the taxes and interest, if accrual is requisite at all, in the case of the debtor, when actual payment has occurred." 104 Ct. Cl., at 495.

The *Consolidated Edison* case involved the same parties, facts and questions as the present case, though in respect to earlier tax years. Although recognizing that this Court's opinions in Security Mills Co. v. Commissioner, supra, and Dixie Pine Products Co. v. Commissioner, supra, had "settled" the law to be "that a taxpayer may not accrue an expense when he is denying liability and refusing and contesting its payment," the Court of Claims rejected, as "not necessarily true," the taxpayer's argument "that there must therefore be an admission or absence of denial of liability before an item may be accrued, and that the pay-

ment of the liability within the taxable year has no effect on its accrual since payment was made under protest and litigation was immediately started to obtain a repayment" (133 Ct. Cl., at 382); and, purporting to follow, but seemingly departing from, its decision in the *Chestnut Securities* case, the Court concluded "that payment of an item *which is otherwise accruable in the taxable year* accrues the item even though payment is made under protest and even though litigation is started within the taxable year to obtain repayment." 133 Ct. Cl., at 383-384. (Emphasis added.) On that conclusion the Court rendered judgment for the Government.

Just what the Court meant by the phrase we have italicized was not explained, but it is evident that if the tax item was "otherwise accruable in the taxable year," payment — whether of a character that would constitute an admission of the asserted liability or a mere deposit to enable contest of the liability — certainly would not render the item nonaccruable; and if, in the absence of payment, the item was "otherwise accruable in the taxable year," payment would be immaterial, or at least unnecessary, to the question of accruability. It thus appears that the Court's judgment was contrary to its rule in that case, for, although it regarded the remittance as "payment" of the asserted tax liability, admittedly the contested part of the tax was not "*otherwise* accruable in the taxable year."

Disagreeing with the conclusion of the Court of Claims in the *Consolidated Edison* case, the Court of Appeals concluded, we think correctly, that the question of accruability of the tax — apart from the issue respecting "payment" and "satisfaction" — was governed by the "all events" test established by this Court in United States v. Anderson [269 U.S. at 441], as amplified and affirmed in Dixie Pine Co. v. Commissioner, supra, and reaffirmed as amplified in Security Mills Co. v. Commissioner, supra.

As to whether respondent's remittance of the full $100 to the city, in the circumstances of this case, constituted an admission of liability for, and a "payment" and "satisfaction" of, the contested $15 of the assessment, the Court of Appeals recognized that this Court's opinions in the *Anderson, Dixie Pine* and *Security Mills* cases refer to the fact that "payment" of the taxes sought to be deducted in those cases had not been made by the taxpayers, but it thought, and we agree, that those references were made only for the sake of complete accuracy to an important but, so far as those cases were concerned, a collateral matter, and not to the determinative considerations of those cases, which were the "all events" test as they state it.

"Payment" is not a talismanic word. It may have many meanings depending on the sense and context in which it is used. As correctly observed by the Court of Appeals, "A payment may constitute a capital expenditure, an exchange of assets, a prepaid expense, a *deposit,* or a current expense," and "[w]hen the exact nature of the payment is not immediately ascertainable because it depends on some future event, such as the outcome of litigation, its treatment for income tax purposes must await that event." 299 F.2d, at 156. (Emphasis added.)

Of course, an unconditional "payment" made by a taxpayer in apparent "satisfaction" of an asserted matured tax liability is, without more, plain and persuasive evidence, at least against the taxpayer, that "all the events [have] occur[red] which fixed the amount of the tax and determine the liability of the taxpayer to pay it," United States v. Anderson, supra, at 441, and that the item so paid and satisfied has accrued.

But where, as stipulated by the parties in this case, the remittance or "payment" did not admit, but specifically denied, liability for, and was not intended to satisfy, the contested $15 of the assessment, but was, in effect, a mere deposit, "in the nature of a cash bond for the payment of [so much, if any, of the contested] taxes

[as might] thereafter be found to be due" (Rosenman v. United States, 323 U.S. 658, 662, and see Lewyt Corp. v. Commissioner, 215 F.2d 518, 523 (C.A. 2d Cir.)), and was made for the sole purpose of staying — there being no other way to stay — an otherwise possible seizure and sale of the property for the contested tax while its validity was being honestly and diligently contested in the only way allowed by the law of the State, it will not do to say that the taxpayer has made an unconditional "payment" in apparent "satisfaction" of the contested part of an asserted matured tax liability, and thereby rendered it immediately accruable.

We therefore conclude that $10 of the contested $15 tax liability accrued not in the year of the remittance, but in 1951 when the New York court entered its final order determining that liability; and that the $5, for which respondent was held not liable by that judgment and which was returned to it by the city, was not income to respondent in 1951.

Affirmed.

NOTE

1. *Implications of Consolidated Edison.* If the outcome of the state court proceeding had been a refund of $20, how would the liability and refund be reflected on the federal tax return? What would have been the proper treatment of the payment of $100 in 1946 if the taxpayer had not filed a protest until 1947? Would this depend on whether it intended at the time of payment to file a timely protest? What if the taxpayer paid the amount assessed in 1946, intending to file a claim for refund only if a similarly situated taxpayer was successful in a pending suit?

2. *Legislative rejection of Consolidated Edison.* In 1964, Congress enacted §461(f) to overrule the *Consolidated Edison* case, the Senate Finance Committee explaining this action as follows:

> (a) *Present law.* — Prior to the decision in the *Consolidated Edison* case the Internal Revenue Service generally held that the payment of a contested tax liability resulted in the tax being considered as deductible even though the tax was still being vigorously denied and contested.[1] In the *Consolidated Edison* case decided in 1961 the Supreme Court held that a contested tax even when paid does not accrue as a deduction for income tax purposes until the contest is terminated. It was held that the tax was not deductible until after the contest was settled because all of the events which would determine whether or not the amount would ultimately have to be paid would not be determined until that time.
>
> (b) *General reasons for provision.* — Although your committee does not question the legal doctrine laid down by the Supreme Court in the *Consolidated Edison* case, it believes that it is unfortunate to deny taxpayers a deduction with respect to an item where the payment has actually been made, even though the liability is still being contested either as to amount or as to the item itself. The objective of the reporting of items of income and deduction under the internal revenue laws generally is to realistically and practically match receipts and disbursements attributable to specific taxable years. The internal revenue laws contain a number of adjustments designed to accomplish this result. Your committee believes that allowing the deduction of items in the year paid, even though they are still being contested in the courts or otherwise, more realistically matches these deductions up with the income to which they relate than would the postponement of the deduction, perhaps for several years, until the contest is settled. To the extent that deductions are allowed under this rule and then subsequently as a result of the contest the items were found not to be payable, adjustment can be made for this overstatement of the deduction by the inclusion of the overstatement in income in the year in which the amount of the liability is finally determined.
>
> (c) *General explanation of provision.* — In view of the above considerations, your committee has amended the provision of existing law which specifies the year for the taking

[1] This is the general rule laid down in *Chestnut Securities Co. v. United States* (62 F. Supp. 574 (1945)) which the Internal Revenue Service accepted in GCM 25298 (1947-2 CB 39).

of deductions or credits generally. The amendment provides that if a taxpayer contests an asserted liability, such as a tax assessment, but makes a payment in satisfaction of this liability and the contest with respect to the liability exists after the payment, then the item involved is to be allowed as a deduction or credit in the year of the payment. This is based upon the assumption that the deduction or credit in this case would have been allowed in the year of payment, or perhaps in an earlier year when it would have been accrued, had there been no contest.

The treatment provided here can be illustrated by an example. Assume that in 1965 a $100 liability is asserted against a business which it pays at that time but contests the liability in a court action. Assume further that in 1967 the court action is settled for $80. Under present law, before the enactment of this provision, the deduction of $80 would be allowed in 1967. Under your committee's action, the taxpayer could claim a $100 deduction in 1965 but then in 1967 would have to take $20 into income except as provided in section 111 of the code, relating to recovery of bad debts, prior taxes, and delinquency amounts.

In those cases where payment is not made until after the contest is settled, this does not prevent an accrual basis taxpayer from accruing the deduction or credit in an earlier year in which the contest is settled.

A similar amendment to that described above is also made to the Internal Revenue Code of 1939. [S. Rept. No. 830, 88th Cong., 2d sess., pp. 100-101.]

2. *The Use of Hindsight*

BURNET v. SANFORD & BROOKS CO.

282 U.S. 359 (1931)

MR. JUSTICE STONE delivered the opinion of the Court.

In this case certiorari was granted to review a judgment of the Court of Appeals for the Fourth Circuit, 35 F.(2d) 312, reversing an order of the Board of Tax Appeals, 11 B.T.A. 452, which had sustained the action of the Commissioner of Internal Revenue in making a deficiency assessment against respondent for income and profits taxes for the year 1920.

From 1913 to 1915, inclusive, respondent, a Delaware corporation engaged in business for profit, was acting for the Atlantic Dredging Company in carrying out a contract for dredging the Delaware River, entered into by that company with the United States. In making its income tax returns for the years 1913 to 1916, respondent added to gross income for each year the payments made under the contract that year, and deducted its expenses paid that year in performing the contract. The total expenses exceeded the payments received by $176,271.88. The tax returns for 1913, 1915, and 1916 showed net losses. That for 1914 showed net income.

In 1915 work under the contract was abandoned, and in 1916 suit was brought in the Court of Claims to recover for a breach of warranty of the character of the material to be dredged. Judgment for the claimant, 53 Ct. Cl. 490, was affirmed by this Court in 1920. United States v. Atlantic Dredging Co., 253 U.S. 1. It held that the recovery was upon the contract and was "compensatory of the cost of the work, of which the government got the benefit." From the total recovery, petitioner received in that year the sum of $192,577.59, which included the $176,271.88 by which its expenses under the contract had exceeded receipts from it, and accrued interest amounting to $16,305.71. Respondent having failed to include

these amounts as gross income in its tax returns for 1920, the Commissioner made the deficiency assessment here involved, based on the addition of both items to gross income for that year.

The Court of Appeals ruled that only the item of interest was properly included, holding, erroneously as the government contends, that the item of $176,271.88 was a return of losses suffered by respondent in earlier years and hence was wrongly assessed as income. Notwithstanding this conclusion, its judgment of reversal and the consequent elimination of this item from gross income for 1920 were made contingent upon the filing by respondent of amended returns for the years 1913 to 1916, from which were to be omitted the deductions of the related items of expenses paid in those years.* Respondent insists that as the Sixteenth Amendment and the Revenue Act of 1918, which was in force in 1920, plainly contemplate a tax only on net income or profits, any application of the statute which operates to impose a tax with respect to the present transaction, from which respondent received no profit, cannot be upheld.

If respondent's contention that only gain or profit may be taxed under the Sixteenth Amendment be accepted without qualification, see Eisner v. Macomber; Doyle v. Mitchell Brothers Co., 247 U.S. 179, the question remains whether the gain or profit which is the subject of the tax may be ascertained, as here, on the basis of fixed accounting periods, or whether, as is pressed upon us, it can only be net profit ascertained on the basis of particular transactions of the taxpayer when they are brought to a conclusion.

All the revenue acts which have been enacted since the adoption of the Sixteenth Amendment have uniformly assessed the tax on the basis of annual returns showing the net result of all the taxpayer's transactions during a fixed accounting period, either the calendar year, or, at the option of the taxpayer, the particular fiscal year which he may adopt. . . .

That the recovery made by respondent in 1920 was gross income for that year . . . cannot, we think, be doubted. The money received was derived from a contract entered into in the course of respondent's business operations for profit. While it equalled, and in a loose sense was a return of, expenditures made in performing the contract, still, as the Board of Tax Appeals found, the expenditures were made in defraying the expenses incurred in the prosecution of the work under the contract, for the purpose of earning profits. They were not capital investments, the cost of which, if converted, must first be restored from the proceeds before there is a capital gain taxable as income. See Doyle v. Mitchell Brothers Co., supra, page 185 of 247 U.S.

That such receipts from the conduct of a business enterprise are to be included in the taxpayer's return as a part of gross income, regardless of whether the particular transaction results in net profit, sufficiently appears from the quoted words of Section [61(a)] and from the character of the deductions allowed. Only by including these items of gross income in the 1920 return would it have been possible to ascertain respondent's net income for the period covered by the return, which is what the statute taxes. The excess of gross income over deductions did not any the less constitute net income for the taxable period because respondent, in an earlier period, suffered net losses in the conduct of its business which were in some measure attributable to expenditures made to produce the net income of the later period.

Bowers v. Kerbaugh-Empire Co., 271 U.S. 170, on which respondent relies, does not support its position. In that case the taxpayer, which had lost, in business, borrowed money, which was to be repaid in German marks, and which was later

* Cf. the "tax benefit" approach in the *Perry* case, supra page 75. — Ed.

repaid in depreciated currency, had neither made a profit on the transaction, nor received any money or property which could have been made subject to the tax.

But respondent insists that if the sum which it recovered is the income defined by the statute, still it is not income, taxation of which without apportionment is permitted by the Sixteenth Amendment, since the particular transaction from which it was derived did not result in any net gain or profit. But we do not think the amendment is to be so narrowly construed. A taxpayer may be in receipt of net income in one year and not in another. The net result of the two years, if combined in a single taxable period, might still be a loss; but it has never been supposed that that fact would relieve him from a tax on the first, or that it affords any reason for postponing the assessment of the tax until the end of a lifetime, or for some other indefinite period, to ascertain more precisely whether the final outcome of the period, or of a given transaction, will be a gain or a loss.

The Sixteenth Amendment was adopted to enable the government to raise revenue by taxation. It is the essence of any system of taxation that it should produce revenue ascertainable, and payable to the government, at regular intervals. Only by such a system is it practicable to produce a regular flow of income and apply methods of accounting, assessment, and collection capable of practical operation. It is not suggested that there has ever been any general scheme for taxing income on any other basis. The computation of income annually as the net result of all transactions within the year was a familiar practice, and taxes upon income so arrived at were not unknown, before the Sixteenth Amendment. See Bowers v. Kerbaugh-Empire Co., supra, page 174 of 271 U.S.; Pacific Insurance Co. v. Soule, 7 Wall. 433; Pollock v. Farmers' Loan & Trust Co., 158 U.S. 601, 630. It is not to be supposed that the amendment did not contemplate that Congress might make income so ascertained the basis of a scheme of taxation such as had been in actual operation within the United States before its adoption. While, conceivably, a different system might be devised by which the tax could be assessed, wholly or in part, on the basis of the finally ascertained results of particular transactions, Congress is not required by the amendment to adopt such a system in preference to the more familiar method, even if it were practicable. It would not necessarily obviate the kind of inequalities of which respondent complains. If losses from particular transactions were to be set off against gains in others, there would still be the practical necessity of computing the tax on the basis of annual or other fixed taxable periods, which might result in the taxpayer being required to pay a tax on income in one period exceeded by net losses in another.

Under the statutes and regulations in force in 1920, two methods were provided by which, to a limited extent, the expenses of a transaction incurred in one year might be offset by the amounts actually received from it in another. One was by returns on the accrual basis . . . The other was under Treasury Regulations [§1.451-3] . . . providing that in reporting the income derived from certain long term contracts, the taxpayer might either report all of the receipts and all of the expenditures made on account of a particular contract in the year in which the work was completed, or report in each year the percentage of the estimated profit corresponding to the percentage of the total estimated expenditures which was made in that year. . . .

The assessment was properly made under the statutes. Relief from their alleged burdensome operation which may not be secured under these provisions, can be afforded only by legislation, not by the courts.

Reversed.

NOTE

1. *Carryover of losses.* Note the Court's statement: "The computation of income annually as the net result of all transactions within the year was a familiar practice, and taxes upon income so arrived at were not unknown, before the Sixteenth Amendment." Could Congress require income to be computed on a monthly or weekly basis and deny any carryover of losses between such periods? See §6851(a), permitting the Internal Revenue Service to terminate a taxpayer's taxable year at any time, if collection of the tax is in jeopardy, and to require immediate payment of tax on the income of the period so terminated.

Statutory provision for the carryover of losses appeared for the first time in the Revenue Act of 1918, and only losses occurring subsequent to its enactment qualified. Would the taxpayer have been materially aided if §172 of the present Code had been in effect for the years in question?

2. *Unprofitable transactions.* Bowers v. Kerbaugh-Empire Co., distinguished by the Court, involved this situation: The taxpayer borrowed funds from a German bank prior to World War I. The lender transmitted marks to its New York representative, who converted the marks into dollars and advanced the dollars to the taxpayer. The taxpayer agreed to repay the loan in marks or in their equivalent in gold coin of the United States. As of March 31, 1915, the balance due was 3,216,445 marks. In 1921, the taxpayer paid off the balance (to the Alien Property Custodian, the successor in title to the lender) with dollars at the then rate of exchange, 2½ cents per mark, an amount far less than the value of the marks when borrowed. The difference between the amount in dollars received under the loan and the amount paid to discharge it was about $685,000. The borrowed funds had been lost by the taxpayer in the years 1913-1918. The Court held that the difference between the dollars received by the taxpayer and the amount paid in 1921 was not income:

> The transaction here in question did not result in gain from capital and labor, or from either of them, or in profit gained through the sale or conversion of capital. The essential facts set forth in the complaint are the loans in 1911, 1912, and 1913, the loss in 1913 to 1918 of the moneys borrowed, the excess of such losses over income by more than the item here in controversy, and payment in the equivalent of marks greatly depreciated in value. The result of the whole transaction was a loss. . . . When the loans were made and notes given, the assets and liabilities of defendant in error were increased alike. The loss of the money borrowed wiped out the increase of assets, but the liability remained. The assets were further diminished by payment of the debt. The loss was less than it would have been if marks had not declined in value; but the mere diminution of loss is not gain, profit, or income. [271 U.S. 170, 175 (1925).]

Does the *Sanford & Brooks Co.* case distinguish the *Kerbaugh-Empire Co.* case on the ground that the repayment of a loan for less than face value cannot produce income? See what was said of *Kerbaugh-Empire* in the *Kirby Lumber* case, supra page 89, and in Bradford v. Commissioner, supra page 89. See also Church's English Shoes, Ltd. v. Commissioner, 229 F.2d 957 (2d Cir. 1956); Magill, Taxable Income 245-254 (rev. ed. 1945).

HEALY v. COMMISSIONER

345 U.S. 278 (1953)

MR. CHIEF JUSTICE VINSON delivered the opinion of the Court.

The income tax liability of three individual taxpayers for a given year is here before the Court. Only a single question, common to all the cases, is involved. The Tax Court held a view favorable to the taxpayers. The Commissioner of Internal Revenue sought review before the appropriate Courts of Appeals. As to two of the taxpayers, the Court of Appeals for the Second Circuit reversed, while

the Court of Appeals for the Sixth Circuit took a contrary view of the law. We granted certiorari to resolve the conflict.

All controlling facts in the three situations are similar. Each taxpayer reports his income on the cash receipts and disbursements method. Each, in the respective years involved, received a salary from a closely held corporation in which he was both an officer and a stockholder. The full amount of salary so received was reported as income for the year received. Subsequently, after audit of the corporate returns, the Commissioner disallowed the deduction by the corporations of parts of the salaries as exceeding reasonable compensation. As a result, deficiencies in income taxes were determined against the corporations. The Commissioner also determined that the officers were liable as transferees under [§6901(a](1)], for the corporate deficiencies.* The receipt of excessive salary was the transfer upon which the transferee liability was predicated. As a result of either litigation or negotiation, various amounts became established as deficiencies of the corporations and as transferee liabilities of each of the three officers. In each case, the entire process of determining these amounts — from the start of the audit by agents of the Commissioner to the final establishment of the liabilities — occurred after the end of the year in which the salary was received and reported.

The question before the Court is whether part of the salary should be excluded from taxable income in the year of receipt since part was excessive salary and led to transferee liability for the unpaid taxes of the corporations. The taxpayers contend that an adjustment should be made in the year of original receipt of the salary; the Government that an adjustment should be made in the year of payment of the transferee liability.

One of the basic aspects of the federal income tax is that there be an annual accounting of income. Each item of income must be reported in the year in which it is properly reportable and in no other. For a cash basis taxpayer, as these three are, the correct year is the year in which received.

Not infrequently, an adverse claimant will contest the right of the recipient to retain money or property, either in the year of receipt or subsequently. In North American Oil Consolidated v. Burnet, 1932, 286 U.S. 417, we considered whether such uncertainty would result in an amount otherwise includible in income being deferred as reportable income beyond the annual period in which received. That decision established the claim of right doctrine "now deeply rooted in the federal tax system." The usual statement of the rule is that by Mr. Justice Brandeis in the *North American Oil* opinion:

> If a taxpayer receives earnings under a claim of right and without restrictions as to its disposition, he has received income which he is required to return, even though it may still be claimed that he is not entitled to retain the money, and even though he may still be adjudged liable to restore its equivalent. (286 U.S. at page 424.)

The phrase "claim of right" is a term known of old to lawyers. Its typical use has been in real property law in dealing with title by adverse possession, where the rule has been that title can be acquired by adverse possession only if the occupant claims that he has a right to be in possession as owner. The use of the term in the field of income taxation is analogous. There is a claim of right when funds are received and treated by a taxpayer as belonging to him. The fact that subsequently the claim is found to be invalid by a court does not change the fact that the claim did exist. A mistaken claim is nonetheless a claim, United States v. Lewis [supra p. 103].

However, we are told that the salaries were not received as belonging to the tax-

* On transferee liability, see page 929 infra. — Ed.

payers, but rather they were received by the taxpayers as "constructive trustees" for the benefit of the creditors of the corporation. Admittedly, receipts by a trustee expressly for the benefit of another are not income to the trustee in his individual capacity, for he "has received nothing . . . for his separate use and benefit," Eisner v. Macomber.

We do not believe that these taxpayers were trustees in the sense that the salaries were not received for their separate use and benefit. Under the equitable doctrine that the funds of a corporation are a trust fund for the benefit of creditors, a stockholder receiving funds without adequate consideration from an insolvent corporation may be held, in some jurisdictions, to hold the funds as a constructive trustee. So it was that these taxpayers were declared constructive trustees and were liable as transferees in equity.* A constructive trust is a fiction imposed as an equitable device for achieving justice. It lacks the attributes of a true trust, and is not based on any intention of the parties. Even though it has a retroactive existence in legal fiction, fiction cannot change the "readily realizable economic value" [1] and practical "use and benefit" [2] which these taxpayers enjoyed during a prior annual accounting period, antecedent to the declaration of the constructive trust.

We think it clear that the salaries were received under a claim of individual right — not under a claim of right as a trustee. Indeed one of the parties concedes, as is manifestly so, that the reporting of the salary on the income tax returns indicated that the income was held under a claim of individual right. The taxpayers argue that the salary was subject to a restriction on its use.[3] Since all the facts which ultimately gave rise to the transferee liability were in existence at the end of the taxable year, we are told those facts were a legal restriction on the use of the salary. Actually it could not have been said at the end of each of the years involved that the transferee liability would materialize. The Commissioner might not have audited one or all of these particular returns; the Commissioner might not have gone through the correct procedure or have produced enough admissible evidence to meet his burden of proving transferee liability;[4] or, through subsequent profitable operations, the corporations might have been able to have paid their taxes obviating the necessity of resort to the transferees.[5]

There is no need to attempt to list hypothetical situations not before us which put such restrictions on use as to prevent the receipt under claim of right from giving rise to taxable income. But a potential or dormant restriction, such as here involved, which depends upon the future application of rules of law to present facts, is not a "restriction on use" within the meaning of North American Oil v. Burnet, supra.

The inequities of treating an amount as income which eventually turns out not to be income are urged upon us. The Government concedes that each of these taxpayers is entitled to a deduction for a loss in the year of repayment of the

* Does the fact that part of the salaries were disallowed as deductions under §162 ipso facto establish that the recipients were constructive trustees, once it is established that the paying corporation was insolvent? — Ed.

1 Rutkin v. United States [supra p. 105].

2 Eisner v. Macomber [supra p. 56].

3 The rule announced in North American Oil v. Burnet, supra, requires a receipt without "restriction on use" as well as under a claim of right.

4 [Section 6902(a)] imposes upon the Commissioner the burden of proving transferee liability. This may be contrasted to the rule that normally the burden of proof is on the taxpayer contesting the determination of the Commissioner. I.R.C. [§7453]; Rule 32, Tax Court of United States.

5 Transferee liability is secondary to the primary liability of the transferor. To sustain transferee liability the Commissioner must prove that he is unable to collect the deficiency from the transferor. 9 Mertens, Law of Federal Income Taxation, §53.29.

amount earlier included in income. In some cases, this treatment will benefit the taxpayer; in others it will not. Factors such as the tax rates in the years involved and the brackets in which the income of the taxpayer falls will be controlling. A rule which required that the adjustment be made in the earlier year of receipt instead of the later year of repayment would generally be unfavorable to taxpayers, for the statute of limitations would frequently bar any adjustment of the tax liability for the earlier year. Congress has enacted an annual accounting system under which income is counted up at the end of each year. It would be disruptive of an orderly collection of the revenue to rule that the counting must be done over again to reflect events occurring after the year for which the count is made, and would violate the spirit of the annual accounting syestem. This basic principle cannot be changed simply because it is of advantage to a taxpayer or to the Government in a particular case that a different rule be followed.

The judgment of the Court of Appeals for the Second Circuit in No. 76, being consistent with this opinion, is affirmed, while the contrary judgment of the Court of Appeals for the Sixth Circuit in No. 138 is reversed. It is so ordered.

Judgment in No. 76 affirmed; judgment in No. 138 reversed.

Mr. Justice DOUGLAS dissents.

NOTE

1. *Other instances.* See also United States v. Lewis, supra page 103. In United States v. Lesoine, 203 F.2d 123 (9th Cir. 1953), it was held that stockholders were liable for a tax on dividends received in the year 1942, although they repaid the dividends to the corporation in the following year, upon discovery that surplus had been insufficient for the payment of dividends. Knight Newspapers, Inc. v. Commissioner, 143 F.2d 1007 (6th Cir. 1944), which was contrary, was not followed in the *Lesoine* case: it rested on the "constructive trust" theory rejected by the Supreme Court in the *Healy* case.

2. *Authority for deduction of "loss."* What is the statutory authorization for deducting the repayment as a "loss"? If reporting the salary in the year of the receipt had produced no tax (because the taxpayer had an oversupply of deductions), would he have had a loss in the year of repayment? See O'Meara v. Commissioner, 8 T.C. 622 (1947). See also Regs. §1.166-1(e), providing that claims (as for salary, rent, etc.) may be deducted as bad debts only if they have been "included in the return of income" for the taxable, or some previous, year. There is apparently no requirement that the inclusion in the return produce a tax.

3. *Effect of §1341.* As pointed out supra page 104, §1341 of the 1954 Code provides that if the deduction exceeds $3000, the tax benefit from the deduction shall not be less than the tax attributable to the item's inclusion in income in the earlier year. But there is no converse requirement that the value of the deduction may not *exceed* the tax cost of including the item. Perhaps the government will be less enthusiastic about the claim of right doctrine in the future.

FORT PITT BREWING CO. v. COMMISSIONER

210 F.2d 6 (3d. Cir. 1954), cert. denied, 347 U.S. 989

Before GOODRICH, STALEY and HASTIE, Circuit Judges.

By HASTIE, Circuit Judge:

We are asked to decide whether, in the particular circumstances of this case, [§446(b)] of the Internal Revenue Code justified the Commissioner of Internal Revenue in making "adjustments" of the Fort Pitt Brewing Company's gross income for 1942 and 1943, adding to income the amount of the net increase during each taxable year of the taxpayer's accounting "Reserve for Returnable Containers." . . .

Taxpayer, a Pennsylvania corporation, produces and sells large quantities of

malt and brewed beverages. It maintains its accounts on the accrual basis. It provides returnable containers — bottles, kegs and barrels — in which it packages and distributes its products. A regulation of the Pennsylvania Liquor Control Board requires a stipulated minimum deposit on all returnable original containers of gallon size or less in which brewed beverages are sold. All of the taxpayer's invoices contain the following stipulation:

Deposit for return of package is as follows: Barrels $8.00, Half Barrels $6.00, Quarter Barrels $4.00 and Eighth Barrels $1.00 each, Cartons of 2 Dozen Small Bottles 50¢, Case of 2 Dozen Small Bottles 75¢, Bottles short in cases returned will be charged at rate of 2¢ for small bottles. Purchaser buys only the beer delivered and billed. Bottles, Cases, Kegs, Etc. containing the products delivered therein are never sold but remain absolute property of Brewing Company. Deposit for return of packages repaid purchaser for number delivered only on return of packages to Brewing Company. Purchaser agrees to these conditions.

No time limit is specified for the return of containers. During 1942 taxpayer received deposits of almost $5,000,000 on containers. During 1943 the figure approached $6,000,000. Refunds in 1942 were nearly $100,000 less than deposits, and in 1943 over $200,000 less. A year by year picture of deposits, refunds and consequent bookkeeping accumulations is provided by the following table, with the taxable years italicized:

Fiscal Year Ended Oct. 31	Deposits Received	Deposits Refunded	Excess of Deposits Over Refunds	Balance in Reserve
1936 Balance				17,962.50
1937	842,464.25	832,179.75	10,284.50	28,247.00
1938	1,214,122.75	1,184,063.25	30,059.50	58,306.50
1939	2,381,485.50	2,335,750.65	45,734.85	104,041.35
1940	3,063,054.00	3,035,347.75	27,706.25	131,747.60
1941	3,998,938.27	3,910,821.23	88,117.04	219,864.64
1942	*4,822,919.50*	*4,739,947.90*	*82,971.60*	*302,836.24*
1943	*5,940,221.75*	*5,759,025.50*	*181,196.25*	*484,032.49*
1944	7,587,196.25	7,457,638.00	129,558.25	613,590.74
1945	7,500,625.50	7,400,878.25	99,747.25	713,337.99
1946	8,176,090.50	8,034,014.00	142,076.50	855,414.49
1947	9,824,681.00	9,601,216.32	223,464.68	1,078,879.17
1948	12,225,591.00	12,144,419.25	81,171.75	1,160,050.92
1949	12,260,618.50	12,364,799.00	(104,180.50)	1,055,870.42
1950	10,112,643.00	10,090,142.75	22,500.25	1,078,370.67
1951	8,401,717.25	8,455,950.25	(54,233.00)	1,024,137.67

The foregoing table is a summary of data carried in taxpayer's books as a "liability account" under the title "Reserve for Returnable Containers." At no time have any of these transactions or their economic consequences been permitted to enter into taxpayer's computation of its gross income. Yet, at no time did taxpayer in any way segregate money thus deposited from ordinary income or restrict its use in the ordinary course of its business.

In argument taxpayer has sought to picture this "Reserve" as something in the nature of a trust fund. But taxpayer itself never really regarded or dealt with these container deposits as a trust fund, or even as an actual reserve. As we already have said, taxpayer mingled such receipts with its general funds using them indiscriminately in its business. No reserve fund for repayment of deposits was set aside at the end of the year, or at any other time. A "Reserve" existed on paper in the taxpayer's books of account, but in no other way. For purposes of comparison it seems worth noting that even the conventional bank deposit creates only a simple

debt. Here the deposit for containers creates no more than a contractual obligation to repay the amount deposited, if and when the containers shall be returned.

But even though no trust is created, such a procedure of deposits and repayments is not designed for gain; yet, at times it may yield income. These characteristics are properly reflected in accounting and recognized in taxation. One familiar method of accounting for such transactions is based upon a conception of each cash deposit as security for the bailment of some article or articles, subject, however, to a mutual understanding that failure to return the property will result only in the discharge of the conditional obligation to repay the amount deposited. In this method of accounting, the distributed articles remain in the distributor's inventory, subject to depreciation, even though possession has been surrendered to someone else and return is uncertain. The amounts deposited are set up in a special account and regarded as wholly or partially offset by concomitant liability to make repayment. If this offset is only partial, the unobligated balance goes into current income. If the offset is total, no income is said to be realized at that time. It is at this point in accounting, the determination of the relationship between deposits and offsetting liability, that the difficulties in this case begin.

Where great numbers of articles are distributed in the course of trade to many persons, some will never be returned. Where the articles are destructible and in rather easily disposable containers it is obvious that a very considerable number will not be returned. It may be possible, largely on the basis of experience, to make a reasoned prediction of the percentage of the distributed articles which will not be returned. For this fraction of the deposits the theoretical offsetting repayment liability is not real. Accordingly, such offset will not be claimed when the fraction was determined in advance or at the end of each accounting period. Rather, the current account will show a minor fraction of the year's deposits with the offsetting liability, and this practically unobligated amount will be entered in the taxpayer's record of current income.

But in some situations it may not be feasible thus to approximate each year the percentage of current deposits which will never actually be required to meet repayment demands. So the taxpayer may elect to set up initially in its accounting for current deposits a theoretical 100 percent offsetting liability, with the result that there is no immediate determination of income, although in any given accounting period deposits may substantially exceed repayments. But if this is to be a bona fide and acceptable method of accounting it must be attended or followed by some fair and reasonably prompt determination or plan for determining at what time and in what amount any bookkeeping accumulation of actual deposits in excess of actual repayments shall be deemed to exceed future requirements for repayment and thus necessitate a transfer of the excess to surplus with attendant recognition of that sum as income.

The taxpayer here consistently from year to year maintained its accounts on the basis of a 100 percent offset of current deposits by a theoretical liability to make repayment for all containers. Yet, year by year its books revealed an increasing accumulation of an actual excess of deposits over repayments. This situation did not lead the taxpayer to adopt or propose any reasonable basis or time for a bookkeeping transfer of excess accumulations to an income category. Instead, taxpayer took and still defends the position that it may accumulate on its books indefinitely and without any restriction the excess of deposits over repayments. Thus an accounting procedure which, properly used, might legitimately have resulted in some postponement of accounting for sums as income until the amount thereof could be ascertained in fair approximation, has been misused to withhold the reporting of income indefinitely at the uncontrolled will and convenience of the taxpayer.

The impropriety of this procedure and the distorted picture of taxpayer's income it creates are the more glaring because of another accounting procedure which has been followed at the same time. We have already stated that all of taxpayer's containers, including those which were in the possession of the trade, were at all times carried in taxpayer's inventory. Moreover, each year in its accounting for income tax purposes taxpayer has claimed depreciation deductions on the cost of all of its containers at annual rates varying from 20 percent on bottles to 5 percent on barrels. This process necessarily results in a few years in an accounting recovery of substantially the entire cost of every container. The cost of containers, reserve for depreciation and undepreciated cost as shown in taxpayer's books are as follows:

Fiscal Year Ended October 31	Total Cost	Reserve for Depreciation	Undepreciated Cost
1936	$ 70,231.47	7,023.15	......
1937	100,928.47	9,260.66	91,667.81
1938	163,010.04	25,142.80	137,867.24
1939	258,362.95	51,334.14	207,028.81
1940	361,933.66	89,886.08	272,047.58
1941	481,391.01	144,891.32	336,499.69
1942	576,729.35	200,540.89	376,188.46
1943	666,368.03	254,981.61	411,386.36

It will be noted that in the taxable years alone the claimed container depreciation amounted to more than $100,000. Certainly, as the Tax Court found, some significant part of this annual depreciation must have represented loss and breakage of containers distributed to the trade. Yet, when it came to offsetting container deposits and preventing any part thereof from entering an income category, taxpayer claimed continuing full theoretical liability to pay for every container distributed since 1936. If a depreciation reserve for containers is maintained which recognizes and embraces some substantial loss and breakage of containers in the possession of the trade, certainly the so-called reserve for redemption of containers should be maintained, not at a theoretical maximum, but at a lesser figure similarly recognizing practical factors which reduce returns substantially below their theoretical maximum.

Here then is a clear and rather extreme case of accounting practice resulting in a substantial distortion of the picture of the taxpayer's income. The case plainly called for the exercise of the corrective function and powers of the Commissioner under the provisions of [§446(b)] and supplementary regulations. . . . It remains only to determine whether what the Commissioner did to correct this distorted picture was reasonable and proper.

We analyze and rationalize the Commissioner's action this way. It was clear to him that by 1942 a large part of the "reserve" in taxpayer's container deposit account was not supported by any real liability and, therefore, should be transferred to surplus and reported as income without further delay. The same was true of some fraction of the total additional deposits made in 1942 and 1943. In the Commissioner's view this aggregation of amounts to be added to income through 1943 equalled or exceeded the entire excess of current deposits over current repayments in 1942 and 1943 which the taxpayer sought to withhold from income and add to its container reserve. So the Commissioner telescoped corrective procedures by leaving the reserve as it stood at the end of 1941 and treating as taxable income the entire net increase of deposits in 1942 and 1943.

Perhaps these processes will be made clearer by actual calculation on an assumed, though not fanciful, basis. The Tax Court pointed out that from 1936 to

1951 it was the experience of the taxpayer that total repayments were 1.15 percent less than total deposits. On this theory, taxpayer itself suggests 1.15 percent of total pre-1942 deposits or a little more than $130,000 might be a proper transfer to surplus from pre-1942 accumulation. But this is only part of the picture. For, 1.15 percent of all deposits received in 1942 and 1943 must also be included to determine the total accumulation which on this theory would properly have been transferred to surplus and reported as income by the end of 1943. Thus augmented, the total of unreported income at the end of 1943 would be about $254,000 as compared with aggregate deficiencies of $264,000 actually assessed by the Commissioner for 1942 and 1943.

This $10,000 difference affords no substantial basis for complaint if we consider further that the use of 1.15 percent of total deposits to represent containers which never will be returned is rather favorable to the taxpayer. This is shown by the fact that at the end of 1943 more than 1½ percent of all containers distributed over the preceding years had not been returned.

The Tax Court said, in justification of the Commissioner's action,

> . . . it has not been shown that the amount added to income [i.e., the 1942 and 1943 excess deposits claimed as a "reserve"] will ever be required to discharge any . . . liability [for refunds].

In the light of the entire foregoing analysis we cannot characterize that conclusion as clearly wrong. If the Commissioner's determination was an imprecise approximation, the taxpayer who caused the difficulty by obviously improper accounting must at least show rather clearly that the Commissioner's result is unjust. This has not been shown here.

At the same time, it should be pointed out that the rather offhand device of simply requiring that any excess of deposits over refunds during the taxable year be reported as income cannot fairly be continued indefinitely, or very long, on no more showing than is in this record. Indeed, the point must be reached rather quickly where the bookkeeper reserve for past years is not unreasonably large, and thereafter a small percentage of deposits received during the taxable year itself will suffice without more to reflect the income derived during that year from dealings with containers. . . .

The judgment will be affirmed.

NOTE

1. *"Sale" of returnable containers.* If the taxpayer in the *Fort Pitt Brewing Co.* case had "sold" the containers to its customers (for the same amount as the "deposits") under an agreement to "repurchase" them at the customers' option, would the tax treatment be different? If so, how does one decide whether the amount collected from the customer is a "deposit" or a "purchase price"? Wichita Coca Cola Bottling Co. v. United States, 152 F.2d 6 (5th Cir. 1945), cert. denied, 327 U.S. 806 (1946); Nehi Beverage Co. v. Commissioner, 16 T.C. 1114 (1951); see also Rev. Rul. 60-243, 1960-2 C.B. 160 (Service will not consent to change from "deposit" to "sale and repurchase" method of accounting for returnable soft drink bottles because it does not "clearly reflect income"); Regs. §1.471-1.

If the taxpayer does not purport to sell the containers, and makes every effort to get its customers to return them, can the excess of deposits over the adjusted basis of the containers be treated as income arising on a "sale or exchange" of capital assets? As an "involuntary conversion" of property used in the trade or business and subject to depreciation within the meaning of §1231? See duPont & Co. v. United States, supra page 494.

2. *Other unclaimed items.* See also Boston Consolidated Gas Co. v. Commissioner, 128 F.2d 473 (1st Cir. 1942), holding that unclaimed customers' deposits were income to the taxpayer in the year it transferred a reserve for such deposits to surplus; Chicago, R.I., and P. Ry. Co. v. Commissioner, 47 F.2d 990 (7th Cir. 1931), holding similarly as to a

reserve for unclaimed overcharges. Why should such items be taxed as income in the year the taxpayer transfers the reserve to surplus? In the *Fort Pitt Brewing Co.* case, did the court include in income for 1942 and 1943 amounts that should have been included in earlier years? In Lehman v. Commissioner, ¶42,540 P-H Memo T.C., involving unclaimed dividends held by an investment banking firm for its customers, the Commissioner asserted that the amounts should be taxed as soon as the applicable statute of limitations barred an action by the customer against the taxpayer. While the court held that the running of the statute of limitations was not decisive, it upheld the Commissioner in taxing the items at that time in the absence of proof by the taxpayer that the statutory period was not a reasonable one for determining whether the amounts would be claimed by the customer. See also Policy Holders Agency, Inc. v. Commissioner, 41 T.C. No. 6 (1963) (unclaimed premium refunds held by accrual basis insurance agency for policy holders it could not locate held taxable income when credited to a "dividend stored account," not when this account was transferred, many years later, to surplus account).

How are excessive reserves for bad debts treated? Consider the possibility that a reserve for bad debts or for other contingencies may have to be taken into income when the taxpayer goes out of business or when a corporation liquidates. Rev. Rul. 57-482, 1957-2 C.B. 482; supra page 680.

DOBSON v. COMMISSIONER

320 U.S. 489 (1943), rehearing denied, 321 U.S. 231 (1944)

MR. JUSTICE JACKSON delivered the opinion of the Court.

These four cases were consolidated in the Court of Appeals. The facts of one will define the issue present in all.

The taxpayer, Collins, in 1929 purchased 300 shares of stock of the National City Bank of New York which carried certain beneficial interests in stock of the National City Company. The latter company was the seller and the transaction occurred in Minnesota. In 1930 Collins sold 100 shares, sustaining a deductible loss of $41,600.80, which was claimed on his return for that year and allowed. In 1931 he sold another 100 shares, sustaining a deductible loss of $28,163.78, which was claimed in his return and allowed. The remaining 100 shares he retained. He regarded the purchases and sales as closed and completed transactions.

In 1936 Collins learned that the stock had not been registered in compliance with the Minnesota Blue Sky Laws and learned of facts indicating that he had been induced to purchase by fraudulent representations. He filed suit against the seller alleging fraud and failure to register. He asked rescission of the entire transaction and offered to return the proceeds of the stock, or an equivalent number of shares plus such interest and dividends as he had received. In 1939 the suit was settled, on a basis which gave him a net recovery of $45,150.63, of which $23,296.45 was allocable to the stock sold in 1930 and $6,454.18 allocable to that sold in 1931. In his return for 1939 he did not report as income any part of the recovery. Throughout that year adjustment of his 1930 and 1931 tax liability was barred by the statute of limitations.

The Commissioner adjusted Collins' 1939 gross income by adding as ordinary gain the recovery attributable to the shares sold, but not that portion of it attributable to the shares unsold. The recovery upon the shares sold was not, however, sufficient to make good the taxpayer's original investment in them. And if the amounts recovered had been added to the proceeds received in 1930 and 1931 they would not have altered Collins' income tax liability for those years, for even if the entire deductions claimed on account of these losses had been disallowed, the returns would still have shown net losses.

Collins sought a redetermination by the Board of Tax Appeals, now the Tax Court. He contended that the recovery of 1939 was in the nature of a return of capital from which he realized no gain and no income either actually or con-

structively, and that he had received no tax benefit from the loss deductions. In the alternative he argued that if the recovery could be called income at all it was taxable as capital gain. The Commissioner insisted that the entire recovery was taxable as ordinary gain and that it was immaterial whether the taxpayer had obtained any tax benefits from the loss deduction reported in prior years. The Tax Court sustained the taxpayer's contention that he had realized no taxable gain from the recovery. . . .

The court below thought that the Tax Court's decision "evaded or ignored" the statute of limitation, the provision of the Regulations [§1.461-1(a)(3)] that "expenses, liabilities, or deficit of one year cannot be used to reduce the income of a subsequent year," and the principle that recognition of a capital loss presupposes some event of "realization" which closes the transaction for good. We do not agree. The Tax Court has not attempted to revise liability for earlier years closed by the statute of limitation, nor used any expense, liability, or deficit of a prior year to reduce the income of a subsequent year. It went to prior years only to determine the nature of the recovery, whether return of capital or income. Nor has the Tax Court reopened any closed transaction; it was compelled to determine the very question whether such a recognition of loss had in fact taken place in the prior year as would necessitate calling the recovery in the taxable year income rather than return of capital. Section 272(g) [see 1954 Code, §6214(b)] provides that:

> the Board in redetermining a deficiency in respect of any taxable year shall consider such facts with relation to the taxes for other taxable years as may be necessary correctly to redetermine the amount of such deficiency. . . .

The Tax Court's inquiry as to past years was authorized if "necessary correctly to redetermine" the deficiency. The Tax Court thought in this case that it was necessary; the Court of Appeals apparently thought it was not. This precipitates a question not raised by either counsel as to whether the court is empowered to revise the Tax Court's decision as "not in accordance with law" because of such a difference of opinion.

With the 1926 Revenue Act, Congress promulgated, and at all times since has maintained, a limitation on the power of courts to review Board of Tax Appeals (now the Tax Court) determinations. ". . . such courts shall have power to affirm or, if the decision of the Board is not in accordance with law, to modify or to reverse the decision of the Board . . ." [1954 Code, §7482(c)(1).] However, even a casual survey of decisions in tax cases, now over 5,000 in number, will demonstrate that courts including this Court have not paid the scrupulous deference to the tax laws' admonitions of finality which they have to similar provisions in statutes relating to other tribunals. After thirty years of income tax history the volume of tax litigation necessary merely for statutory interpretation would seem due to subside. That it shows no sign of diminution suggests that many decisions have no value as precedents because they determine only fact questions peculiar to particular cases. Of course frequent amendment of the statute causes continuing uncertainty and litigation, but all too often amendments are themselves made necessary by court decisions. Increase of potential tax litigation due to more taxpayers and higher rates lends new importance to observance of statutory limitations on review of tax decisions. No other branch of the law touches human activities at so many points. It can never be made simple, but we can try to avoid making it needlessly complex.

. . . Our modern income tax experience began with the Revenue Act of 1913. The World War soon brought high rates. The law was an innovation, its constitutional aspects were still being debated, interpretation was just beginning, and ad-

ministrators were inexperienced. The Act provided no administrative review of the Commissioner's determinations. It did not alter the procedure followed under the Civil War income tax by which an aggrieved taxpayer could pay under protest and then sue the Collector to test the correctness of the tax. The courts by force of this situation entertained all manner of tax questions, and precedents rapidly established a pattern of judicial thought and action whereby the assessments of income tax were reviewed without much restraint or limitation. Only after that practice became established did administrative review make its appearance in tax matters.

Administrative machinery to give consideration to the taxpayer's contentions existed in the Bureau of Internal Revenue from about 1918 but it was subordinate to the Commissioner. In 1923, the situation was brought to the attention of Congress by the Secretary of the Treasury, who proposed creation of a Board of Tax Appeals, within the Treasury Department, whose decision was to conclude Government and taxpayer on the question of assessment and leave the taxpayer to pay the tax and then test its validity by suit against the collector. Congress responded by creating the Board of Tax Appeals as "an independent agency in the executive branch of the Government." The Board was to give hearings and notice thereof and "make a report in writing of its findings of fact and decision in each case." But Congress dealt cautiously with finality for the Board's conclusions, going only so far as to provide that in later proceedings the findings should be "prima facie evidence of the facts therein stated." So the Board's decisions first came before the courts under a statute which left them free to go into both fact and law questions. Two years later Congress reviewed and commended the work of the new Board, increased salaries and lengthened the tenure of its members, provided for a direct appeal from the Board's decisions to the circuit courts of appeals or the Court of Appeals of the District of Columbia, and enacted the present provision limiting review to questions of law.

But this restriction upon judicial review of the Board's decisions came only after thirteen years of income tax experience had established a contrary habit. Precedents had accumulated in which courts had laid down many rules of taxation not based on statute but upon their ideas of right accounting or tax practice. It was difficult to shift to a new basis. This Court applied the limitation, but with less emphasis and less forceful resolution of borderline cases in favor of administrative finality than it has employed in reference to other administrative determinations.

That neglect of the congressional instruction is a fortuitous consequence of this evolution of the Tax Court rather than a deliberate or purposeful judicial policy is the more evident when we consider that every reason ever advanced in support of administrative finality applies to the Tax Court.

The court is independent, and its neutrality is not clouded by prosecuting duties. Its procedures assure fair hearings. Its deliberations are evidenced by careful opinions. All guides to judgment available to judges are habitually consulted and respected. It has established a tradition of freedom from bias and pressures. It deals with a subject that is highly specialized and so complex as to be the despair of judges. It is relatively better staffed for its task than is the judiciary. Its members not infrequently bring to their task long legislative or administrative experience in their subject. The volume of tax matters flowing through the Tax Court keeps its members abreast of changing statutes, regulations, and Bureau practices, informed as to the background of controversies and aware of the impact of their decisions on both Treasury and taxpayer. Individual cases are disposed of wholly on records publicly made, in adversary proceedings, and the court has no responsibility for previous handling. Tested by every theoretical and practical reason for administrative finality, no administrative decisions are entitled to higher

credit in the courts. Consideration of uniform and expeditious tax administrations require that they be given all credit to which they are entitled under the law.

Tax Court decisions are characterized by substantial uniformity. Appeals fan out into courts of appeal of ten circuits and the District of Columbia. This diversification of appellate authority inevitably produces conflict of decision, even if review is limited to questions of law. But conflicts are multiplied by treating as questions of law what really are disputes over proper accounting. The mere number of such questions and the mass of decisions they call forth become a menace to the certainty and good administration of the law.

To achieve uniformity by resolving such conflicts in the Supreme Court is at best slow, expensive, and unsatisfactory. Students of federal taxation agree that the tax system suffers from delay in getting the final word in judicial review, from retroactivity of the decision when it is obtained, and from the lack of a roundly tax-informed viewpoint of judges.

Perhaps the chief difficulty in consistent and uniform compliance with the congressional limitation upon the court review lies in the want of a certain standard for distinguishing "questions of law" from "questions of fact." This is the test Congress has directed, but its difficulties in practice are well known and have been subject of frequent comment. Its difficulty is reflected in our labeling some questions as "mixed questions of law and fact" and in a great number of opinions distinguishing "ultimate facts" from evidentiary facts.

It is difficult to lay down rules as to what should or should not be reviewed in tax cases except in terms so general that their effectiveness in a particular case will depend largely upon the attitude with which the case is approached. However, all that we have said of the finality of administrative determination in other fields is applicable to determinations of the Tax Court. Its decision, of course, must have "warrant in the record" and a reasonable basis in the law. But "the judicial function is exhausted when there is found to be a rational basis for the conclusions approved by the administrative body." Rochester Telephone Corp. v. United States, 307 U.S. 125, 146; . . .

The Government says that "the principal question in this case turns on the application of the settled principle that the single year is the unit of taxation." But the Tax Court was aware of this principle and in no way denied it. Whether an apparently integrated transaction shall be broken up into several separate steps and whether what apparently are several steps shall be synthesized into one whole transaction is frequently a necessary determination in deciding tax consequences. Where no statute or regulation controls, the Tax Court's selection of the course to follow is no more reviewable than any other question of fact. Of course we are not here considering the scope of review where constitutional questions are involved. The Tax Court analyzed the basis of the litigation which produced the recovery in this case and the obvious fact that "regarding the series of transactions as a whole, it is apparent that no gain was actually realized." It found that the taxpayer had realized no tax benefits from reporting the transaction in separate years. It said the question under these circumstances was whether the amount the taxpayer recovered in 1939 "constitutes taxable income, even though he realized no economic gain." It concluded that the item should be treated as a return of capital rather than as taxable income. There is no statute law to the contrary, and the administrative rulings in effect at the time tended to support the conclusion. It is true that the Board in a well considered opinion reviewed a number of court holdings, but it did so for the purpose of showing that they did not fetter its freedom to reach the decision it thought sound. With this we agree.

Viewing the problem from a different aspect, the Government urges in this Court that although the recovery is capital return, it is taxable in its entirety be-

cause taxpayer's basis for the property in question is zero. The argument relies upon [§1016(a)(1)], which provides for adjusting the basis of property for "expenditures, receipts, losses, or other items, properly chargeable to capital account." This provision, it is said, requires that the right to a deduction for a capital loss be treated as a return of capital. Consequently, by deducting in 1930 and 1931 the entire difference between the cost of his stock and the proceeds of the sales, taxpayer reduced his basis to zero. But the statute contains no such fixed rule as the Government would have us read into it. It does not specify the circumstances or manner in which adjustments of the basis are to be made, but merely provides that "Proper adjustment . . . shall in all cases be made" for the items named if "properly chargeable to capital account." What, in the circumstances of this case, was a proper adjustment of the basis was thus purely an accounting problem and therefore a question of fact for the Tax Court to determine. Evidently the Tax Court thought that the previous deductions were not altogether "properly chargeable to capital account" and that to treat them as an entire recoupment of the value of taxpayer's stock would not have been a "proper adjustment." We think there was substantial evidence to support such a conclusion.

The Government relies upon Burnet v. Sanford & Brooks Co., 282 U.S. 359, for the proposition that losses of one year may not offset receipts of another year. But the case suggested its own distinction: "While (the money received) equalled, and in a loose sense was a return of, expenditures made in performing the contract, still, as the Board of Tax Appeals found, the expenditures were made in defraying the expenses. . . . They were not capital investments, the cost of which, if converted, must first be restored from the proceeds before there is a capital gain taxable as income." 282 U.S. at 363-64. It is also worth noting that the Court affirmed the Board's decision, which had been upset by the circuit court of appeals, and answered, in part, the contention of the circuit court that certain regulations were applicable by saying, ". . . nor on the record do any facts appear tending to support the burden, resting on the taxpayer, of establishing that the Commissioner erred in failing to apply them." 282 U.S. at 366-67.

It is argued on behalf of the Commissioner that the Court should overrule the Board by applying to this question rules of law laid down in decisions on the analogous problem raised by recovery of bad debts charged off without tax benefit in prior years. The court below accepted the argument. However, instead of affording a reason for overruling the Tax Court, the history of the bad debt recovery question illustrates the mischief of overruling the Tax Court in matters of tax accounting. Courts were persuaded to rule as matter of law that bad debt recoveries constitute taxable income, regardless of tax benefit from the charge-off. The Tax Court had first made a similar holding, but had come to hold to the contrary. Substitution of the court's rule for that of the Tax Court led to such hardships and inequities that the Treasury appealed to Congress to extend relief.[1]

[1] Mr. Randolph Paul, Tax Adviser to the Secretary of the Treasury, in a statement to the House Committee on Ways and Means said: "The Secretary has pointed out that wartime rates make it imperative to eliminate as far as possible existing inequities which distort the tax burden of certain taxpayers. I should like to discuss the inequities which the Secretary mentioned, as well as a few additional hardships. . . .

"(c) *Recoveries of bad debts and taxes.*—If a taxpayer who has taken a bad debt deduction later receives payment of such debt, such payment must be included in his income even though he obtained no tax benefit from the deduction in the prior year. While this result is theoretically proper under our annual system of taxation, it may produce severe hardships in certain cases through a distortion of the taxpayer's real income. At the same time, any departure from our annual system of taxation always produces administrative difficulties which serve to impede the collection of taxes.

"It is believed that the hardships can be removed and the administrative difficulties kept to a minimum by excluding from income amounts received in payment of the debt to the extent

It did so. [§111, relating to recoveries of bad debts, etc.] The Government now argues that by extending legislative relief in bad debt cases Congress recognized that in the absence of specific exemption recoveries are taxable as income. We do not find that significance in the amendment. A specific statutory exception was necessary in bad debt cases only because the courts reversed the Tax Court and established as matter of law a "theoretically proper" rule which distorted the taxpayer's income. Congress would hardly expect the courts to repeat the same error in another class of cases, as we would do were we to affirm in this case.[2]

The Government also suggests that "If the tax benefit rule were judicially adopted the question would then arise of how it should be determined," and the difficulties of determining tax benefits, it says, create "an objection in itself to an attempt to adopt such a rule by judicial action." We are not adopting any rule of tax benefits. We only hold that no statute or regulation having the force of one and no principle of law compels the Tax Court to find taxable income in a transaction where as matter of fact it found no economic gain and no use of the transaction to gain tax benefit. The error of the court below consisted of treating as a rule of law what we think is only a question of proper tax accounting.

There is some difference in the facts of these cases. In two of them the Tax Court sustained deficiencies because it found that the deductions in prior years had offset gross income for those years and therefore concluded that the recoveries must to that extent be treated as taxable gain. The taxpayers object that this conclusion disregards certain exemptions and credits which would have been available to offset the increased gross income in the prior years, so that the deductions resulted in no tax savings. In determining whether the recoveries were taxable gain, however, the Tax Court was free to decide for itself what significance it would attach to the previous reduction of taxable income as contrasted with reduction of tax. The statute gives no inkling as to the correctness or incorrectness of the Tax Court's view, and we can find no compelling reason to substitute our judgment. In No. 47 the decision of the Tax Court was upheld by the court below, and in that case the judgment is affirmed. In Nos. 44, 45, and 46, the Court of Appeals reversed the Tax Court, and for the reasons stated its judgments in those cases are reversed.

Reversed.

NOTE

1. *The "tax benefit" doctrine.* In addition to Perry v. United States, supra page 103, see the formulations of the tax benefit doctrine in Helvering v. State-Planters Bank & Trust Co., 130 F.2d 44, 46 (4th Cir. 1942):

> It is to be noted that only where the bad debt has been charged off and allowed as a deduction is it to be included in income when collected. The taxpayer is thus given an option by the statute and, only where he exercises the option, is he required to account for the collection as income. Where he does exercise it, however, by charging

---

that the deduction on account of the debt in the prior year did not produce a tax benefit. The troublesome question whether a benefit resulted should be determined pursuant to regulations prescribed by the Commissioner with the approval of the Secretary. It is also suggested that this treatment be extended to refunds of taxes previously deducted." (Hearings before Committee on Ways and Means on Revenue Revision of 1942, 77th Cong., 2d Sess., Vol. I, 80, 87-88.)

[2] The question of whether a recovery is properly accounted for as income in the year received or should be related to a previous reported deduction without tax benefit is one with a long history and much conflict. It arises not only in case of recoveries of previously charged off bad debts and recoveries of the type we have here. It is also present in case of refund of taxes or cancellation of expenses or interest previously reported as accrued, adjustments of depreciation and depletion or amortization, and other similar situations.

off the debt as worthless in his return, he is bound by the election so made. . . . When he collects the debt thereafter he must account for the collection as income; for by electing to charge it off, he is precluded from treating it as capital or its collection as the restoration of capital and under the existing regulation impliedly consents that it be treated as income. When a debt has thus been charged off in one year and collected in a subsequent year, the fact that such charge off did or did not result in tax benefit, cannot be considered in connection with the taxability of its collection as income both because the taxability is determined by the charge off and not by the tax benefit accruing therefrom and because each taxable year must be regarded as an independent unit for income tax purposes.

See also Philadelphia National Bank v. Rothensies, 43 F. Supp. 923, 925 (E.D. Pa. 1942):

When a taxpayer claims and is allowed a bad debt against his taxable income there is no difficulty in finding an implied consent to be taxed in respect of future recovery of the bad debt, whether or not it is actually income. Whether this be called an implied agreement of waiver for valid consideration or an estoppel, is not of great importance.

If an item could have been, but was not, deducted with tax benefit, is a subsequent recovery taxable? In Ernsting's Estate v. Commissioner, ¶59,077 P-H Memo T.C., the court held that the taxpayer's basis for property that became worthless during the depression was zero, rather than its cost, even though he did not write it off on his tax return. Note the similarity between this result and the adjustment of the basis of depreciable property for "allowable" depreciation, whether deducted or not, under §1016(a)(2). Note also that excessive depreciation is not applied against the taxpayer's basis for the property if it produced no tax benefit (supra p. 457).

2. *What is the scope of "the" tax benefit doctrine?* Is the recovery taxable only to the extent of the tax actually saved in the earlier year, or is it taxable in full so long as the deduction was used in full, no matter how small the savings in tax? If the latter, is there any sound reason for requiring a tax benefit at all? Section 111, which covers many but not all of the tax benefit situations, allows the Commissioner to promulgate a method of applying the tax benefit doctrine to the recoveries that are within its scope. See Treas. Regs. §1.111-1, for some complexities that lurk in "the" tax benefit doctrine. In First National Bank v. Commissioner, 22 T.C. 209 (1954), it was held that the deduction of a bad debt produces tax benefit, so that a recovery may not be excluded under §111, if the deduction was *used* on the return to reduce taxable income, even though the taxpayer had other deductions or exemptions for the same year, not listed on the return, that could have been used instead. Eighteen months after the *Dobson* case was decided, the Treasury abandoned its view that the tax benefit doctrine was restricted to §111 items and amended the Regulations to embrace also "all other items subject to the rule of exclusion." The scope of the doctrine remains obscure.

Even if a deduction was of no tax benefit in the year it was taken, the taxpayer may have enjoyed a benefit in another year by reason of an operating loss or capital loss carryover. The broader the scope of these carryovers, and the longer the period to which they apply, the more frequently will a deduction produce tax benefit in some year.

3. *The Dobson case and judicial review of Tax Court decisions.* On the *Dobson* case's treatment of the proper scope of judicial review of the Tax Court, see Paul, Dobson v. Commissioner: The Strange Ways of Law and Fact, 57 Harv. L. Rev. 753 (1944). This doctrine led to an announcement by the Court of Appeals for the Second Circuit that it would affirm a Tax Court decision that would be reversed if made by a federal district court, Kirschenbaum v. Commissioner, 155 F.2d 23 (2d Cir. 1946). In 1948, Congress amended what is now §7482(a), to provide that Tax Court decisions shall be reviewed "in the same manner and to the same extent" as decisions of the federal district courts in civil cases tried without a jury. See Rice, Law, Fact, and Taxes: Review of Tax Court Decisions Under Section 1141 of the Internal Revenue Code, 51 Colum. L. Rev. 439 (1951). Even earlier, however, the Supreme Court's record on reviewing the Tax Court led Randolph Paul to remark: "For the time being the precise position of the Supreme Court on the *Dobson* issue cannot be determined by compass, the stars, or even the use of radar." Paul, The Place of the Courts in the Taxing Process, 39 Proc. of Nat. Tax Assoc. 462, 466 (1946).

3. *The Correction of Errors*

BENNET v. HELVERING

137 F.2d 537 (2d Cir. 1943)

Before L. HAND, AUGUSTUS N. HAND, and FRANK, Circuit Judges.

L. HAND, Circuit Judge.

The taxpayers — husband and wife — appeal from a decision of the Tax Court refusing to allow them a deduction from their income tax for the year 1935, based upon the conceded fact that in that year fifty shares of stock of which the husband was the owner became worthless. The amount of the loss is not disputed, and the case may be simplified without prejudice to the Treasury by saying that it involves only a single question of law: May a taxpayer, who has received property, which was taxable as income when received,* but on which he has innocently failed ever to pay any tax, deduct its loss in a later year when it becomes worthless? The Commissioner argued, and the Tax Court held, that the privilege of making such a deduction was a correlative of the payment of a tax upon the income when originally received; and that, since the husband had failed to pay any tax upon the shares at any time, he could not deduct the loss in the year when they became worthless.

The situation must be distinguished from that of a claim for refund either by action of indebitatus assumpsit (Bull v. United States, 295 U.S. 247), or by claim for refund (R. H. Stearns Co. v. United States, 291 U.S. 54; Stone v. White, 301 U.S. 532). In both of these the taxpayer asks a return of money paid by him on the assumption that the Treasury unjustly retains it; and for that reason his claim has been held to be subject to a set-off to the extent that he has escaped payment of an earlier tax which would have been in fact due, if the earlier assessment had been properly computed, even though that involves in effect a reassessment.† In the case at bar the taxpayers ask no relief; it is the Commissioner who seeks to assess them, and in so doing to deny them a deduction whose propriety is undeniable on the facts: the shares were received as part of the taxpayer's income, they became worthless in 1935. Such a loss is concededly within the statute unless some reason, which it does not express, takes it out. That reason must be sufficient to overcome the bar of the statute against reassessment of an income tax more than three years after the return has been filed. §275(a) [now §6501(a)]. In several decisions we have held that the fact that the taxpayer has in the past omitted an item of charge from his gross income and has therefore never paid any tax upon it, does not toll the statute. Salvage v. Commissioner, 2 Cir., 76 F.2d 112, affirmed Helvering v. Salvage, 297 U.S. 106; Commissioner v. Union Pacific R. Co., 2 Cir., 86 F.2d 637; Schmidlapp v. Commissioner, 2 Cir., 96 F.2d 680, 683. Of course, if the omission has been consciously made, the return is fraudulent, and the tax may be assessed at any later time. [§6501(c).] We can see no reason why an innocent mistake should deprive the taxpayer of protection; statutes of limitation are passed precisely to put an end to the reconsideration of what has been once heard and decided; they presuppose that the original decision may have been erroneous.

* As compensation for services. — ED.

† This is the doctrine of recoupment, the present status of which is considered in the *Electric Storage Battery Co.* case, infra page 872, and in the note which follows it. — ED.

Some courts have reached the opposite result by holding the taxpayer to the truth of what he declared in his first return, when the second tax is assessed: this, on principles of estoppel. Crane v. Commissioner, 1 Cir., 68 F.2d 640; Commissioner v. Farren, 10 Cir., 82 F.2d 141; Alamo National Bank v. Commissioner, 5 Cir., 95 F.2d 622; Doneghy v. Alexander, 10 Cir., 118 F.2d 521. The basic difficulty with this is that, although adopted in the name of equity, it does not do equity unless supplemented by what in the end comes to a reassessment of the first tax. It by no means follows that to cancel a deduction in a later year will restore the situation to what it would have been, if the tax had been assessed correctly in the first year and the deduction allowed in the second; on the contrary, it seldom, if ever, will do so. It is only in case one supplements the doctrine by limiting it to those cases in which the taxpayer gained by the omission in the first year as much as, or more than, what he will lose by cancelling the deduction in the second, that it will work out equitably, and then only on the assumption that it is inequitable in the circumstances to allow the defense of the statute of limitations. The courts which have adopted this theory, have not shown any disposition to engraft such a condition upon it; and if they had, any logical force it might have had would have disappeared, for it would emerge for what it is, if it is to be an equitable doctrine at all: i.e. an excuse for reopening the earlier assessment in the face of the statute. Strictly, this point does not come up in the case at bar, not having been raised before the Tax Court, as the Commissioner concedes. Helvering v. Salvage, supra. Nevertheless, it fits so closely upon the theory on which he relies, that it has been necessary to consider it.

That theory is, not that the taxpayer was here "estopped" as to any fact by his earlier return, but that if the earlier assessment were made upon one theory of law, the same theory must be consistently followed thereafter: to be specific, that if the taxpayer's earlier tax was assessed on the assumption that the receipt of the shares was not income — even if the taxpayer had no part in inducing that error — justice demands that that assumption shall be carried over into any future year in which the shares again figure in the taxpayer's return. Some decisions have so held; it is a kind of estoppel as to the law. In Comar Oil Co. v. Helvering, 8 Cir., 107 F.2d 709, for example, the Treasury was allowed to cancel a deduction on the ground that it had been already once allowed and could not be allowed a second time, although there was no pretence of any estoppel as to the facts, for the Commissioner had acted with full knowledge of them. In Dixie Margarine Co. v. Commissioner, 6 Cir., 115 F.2d 445, and Gooch Milling & Elevator Co. v. Commissioner, 8 Cir., 133 F.2d 131, the courts applied the same doctrine conversely. The taxpayer was allowed to assert an outlawed refund to cancel a corresponding item in a deficiency assessed against it in a later year. On the other hand, we have already three times refused to accept such a doctrine (Bigelow v. Bowers, 68 F.2d 839; Lembcke v. Commissioner, 126 F.2d 940; Schmidlapp v. Commissioner, supra, 96 F.2d 680); and so has the First Circuit, twice (Commissioner v. Saltonstall, 124 F.2d 110; Countway v. Commissioner, 127 F.2d 69). With deference it seems to us, not only to have all the vices of an estoppel as to the facts, but not to have even the excuse which that doctrine has: i.e. that in making his return a taxpayer does represent that it contains his complete gross income; something which the Commissioner cannot know. Were an assessment a judgment, there might be some basis for an estoppel of record in both situations: the estoppel as to the law depending upon how far questions of law are regarded as subject to the doctrine of res judicata. But estoppels by judgment have nothing to do with the equity of the particular case, and indeed often operate very harshly; and none of the decisions on this subject have ever suggested that the Commissioner's assessment cre-

ates an estoppel by judgment. They have been uniformly based upon some supposed equity.

It may appear plausible that, if the Treasury is to be allowed to reopen a barred assessment in order to interpose a set-off to a claim for refund, it should be allowed to do the same thing in order to assess a tax. That privilege in cases of refund was based altogether upon the historical descent of the action of indebitatus assumpsit, and it may be thought that history should not remain an excuse for denying equity. But there lies behind that history in this instance something more real than accident. When a person seeks to recover money which he has paid, it does not offend our sense of fair play that before he is allowed to unravel what he has done, he should submit to the reopening of any past related transactions between him and the person against whom he is moving. But in assessing a tax, the Treasury is not on the defensive; it has the affirmative, it must bring the case within the statute which imposes the liability. If in order to do so, it must reopen a past transaction between the taxpayer and itself, which the law has declared definitively closed, its position is equitably much weaker than in the case of a refund. Such distinctions depend, not upon logic, but upon conventions which make up the greater part of what we consider just and unjust; they are not for that reason the less imperative, rather the contrary. In what we have said we do not rely upon [§6214(b)] or question the jurisdiction of the Tax Court.

Order reversed; deficiency expunged.

NOTE

1. *Other no-estoppel cases.* The position of the Court of Appeals for the Second Circuit was later endorsed by the First Circuit in the *Ross* case, supra page 784; see also Commissioner v. Mellon, 184 F.2d 157 (3d Cir. 1950); Fahs v. Florida Machine & Foundry Co., supra page 634; Alsop v. Commissioner, supra page 197 (reaffirming, in an omitted part of opinion, the *Bennett* case); Maguire and Zimet, Hobson's Choice and Similar Practices in Federal Taxation, 48 Harv. L. Rev. 1281 (1935).

In the section on stock dividends (supra p. 690), we saw that one of the purposes of §307(a) was to restore a measure of consistency to the tax treatment of sales of both original and dividend shares after the Regulations governing the allocation of basis, upon which both Commissioner and taxpayer had frequently relied, were invalidated by the *Koshland* and *Gowran* cases. One of the problems was that a taxpayer might have previously availed himself of the old regulation by allocating part of the basis of the original shares to dividend shares, computing gain accordingly on the sale of his dividend shares. With the invalidation of the Regulations, he would be able to claim his original basis on a sale of the original shares, and, under cases like Bennet v. Helvering, there would apparently be no estoppel. The rules of §307(a) require consistency of treatment in these circumstances.

2. *Other approaches.* As the court points out in *Ross,* taxpayers have sometimes been held to a duty of consistency by other courts. For example, in Wichita Coca Cola Bottling Co. v. United States, 152 F.2d 6 (5th Cir. 1945), cert. denied, 327 U.S. 806 (1946), the taxpayer claimed that amounts received from customers for containers represented the sales price of the articles rather than deposits. Consequently, the taxpayer argued, the amounts should have been reported as income in earlier years. In fact, the amounts had been excluded from income in the earlier years on the ground that they were deposits, and the government took the position that income was realized when the deposit account was later transferred to surplus. (See again the *Fort Pitt Brewing Co.* case, supra p. 857.) The court held that having represented the amounts as deposits, the taxpayer could not later assert that they were not:

> To raise this duty of consistency in tax accounting we do not think a willful misrepresentation need be proven, or all the elements of a technical estoppel. It arises rather from the duty of disclosure which the law puts on the taxpayer, along with the

> duty of handling his accounting so it will fairly subject his income to taxation. Having, though mistakenly, so represented a transaction as to defer taxation on it to a later year he ought not, when the time for taxation under his view of it comes, to be allowed to assert the tax ought to have been levied in the former year if it is then too late so to levy it. [152 F.2d at 8.]

This was a refund case, so perhaps the Court of Appeals for the Second Circuit would have arrived at the same result, but the Fifth Circuit treated the doctrine as one of general application. Indeed, the Second Circuit itself, only three years before it decided the *Bennet* case, held that income was realized on the collection of an account receivable because it had been charged off, though erroneously, in an earlier year. Kahn v. Commissioner, 108 F.2d 748 (2d Cir. 1940). See also Ben Bimberg & Co. v. Helvering, 126 F.2d 412 (2d Cir. 1942), where Judge L. Hand, discussing the power of the Commissioner to tax as income a refund of a tax that was erroneously deducted in an earlier year, said:

> The taxpayer continues to insist upon retaining the profit of the deduction so long as he does not consent to a reopening of the assessment; and patently he is not entitled to both deduction and exemption. Nor should he be permitted to reopen it if he would, because that would give him an option to throw the item in whichever year would profit him more. [126 F.2d at 413.]

See, however, Streckfus Steamers, Inc. v. Commissioner, 19 T.C. 1 (1952), where a taxpayer on the accrual basis deducted (erroneously, under the *Dixie Pine Products Co.* case, supra p. 843) a state sales tax, which it was contesting and did not pay. The Commissioner sought to tax as income the amount deducted when, in a later year, the taxpayer was held not liable for the sales tax. The Tax Court held for the taxpayer.

3. *Estoppel against the government.* The assertion of estoppel against the government occurs primarily when there has been reliance on official advice. For this problem, see pages 919-920 infra. See also Vestal v. Commissioner, 152 F.2d 132 (D.C. Cir. 1945).

ROTHENSIES v. ELECTRIC STORAGE BATTERY CO.

329 U.S. 296 (1946)

MR. JUSTICE JACKSON delivered the opinion of the Court.

This case represents an effort, thus far successful, to obtain advantage by way of recoupment of a claim for tax refund long since barred by the statute of limitations. The facts of this singular situation are not in dispute. From April 1919 to April 1926 the Electric Storage Battery Company paid excise taxes on the sale of storage batteries in the belief, shared by the Government, that such sales were subject to tax. In July of 1926 the company asserted otherwise and filed a refund claim. It asked refund only of that part of the taxes which it had paid between 1922 and 1926. Refund of the taxes paid earlier which the company now seeks to recoup were then barred by the statute of limitations and no claim ever has been filed for their refund and no action ever was begun for their recovery. Suit was brought, however, against the Collector for refund of the taxes paid after July 1922; judgment therefor was obtained in the district court, Electric Storage Battery Co. v. McCaughn, 52 F.2d 205; 54 F.2d 814, and affirmed by the Circuit Court of Appeals, 3 Cir., 63 F.2d 715. The Government finally settled by refund of $1,395,515.35, of which $825,151.52 represented tax and the balance interest.

During the years that the refunded excise tax was being collected, the taxpayer deducted it from income before calculation of its income tax, thereby deriving substantial benefits. The Commissioner, therefore, treated the refund as income for 1935, the year in which it was received, and because of it assessed additional income and excess profits taxes which with interest thereon totaled $229,805.34. The taxpayer paid the deficiency, filed claim for refund, and after it was rejected sued the Collector. It contended that the refund from the Government was not income to the taxpayer but that if it were so considered taxpayer should be per-

mitted, as against the additional tax caused by its inclusion, to recoup the amount of the barred excise taxes which it had paid between 1919 and 1922. Both courts below correctly held that the refund was properly assessed as income. . . . Both have held, however, that the income tax liability for 1935 should be extinguished by recoupment of the 1919 to 1922 excise taxes. The gravity of this holding to the administration of the tax laws led us to grant certiorari.

It is not contended that there is any statutory warrant for allowing barred tax refund claims by way of recoupment or otherwise.[1] Authority for it is said to be found in case law and taxpayer relies chiefly on two decisions of this Court, Bull v. United States, 295 U.S. 247, and Stone v. White, 301 U.S. 532. The essence of the doctrine of recoupment is stated in the *Bull* case; "Recoupment is in the nature of a defense arising out of some feature of the transaction upon which the plaintiff's action is grounded." 295 U.S. 247, 262. It has never been thought to allow one transaction to be offset against another, but only to permit a transaction which is made subject of suit by a plaintiff to be examined in all its aspects, and judgment to be rendered that does justice in view of the one transaction as a whole.

The application of this general principle to concrete cases in both of the cited decisions is instructive as to the limited scope given to recoupment in tax litigation. In both cases a single transaction constituted the taxable event claimed upon and the one considered in recoupment. In both, the single transaction or taxable event had been subjected to two taxes on inconsistent legal theories, and what was mistakenly paid was recouped against what was correctly due. In Bull v. United States, the one taxable event was receipt by executors of a sum of money. An effort was made to tax it twice — once under the Income Tax Act as income to the estate after decedent's death and once under the Estate Tax Act as part of decedent's gross estate. This Court held that the amount of the tax collected on a wrong theory should be allowed in recoupment against an assessment under the correct theory.[2] In Stone v. White, likewise, both the claim and recoupment involved a single taxable event, which was receipt by an estate of income for a period. The trustees had paid the income tax on it but this Court held it was taxable to the beneficiary. Assessment against the beneficiary had meanwhile become barred. Then the trustees sued for a refund, which would inure to the beneficiary. The Court treated the transaction as a whole and allowed recoupment of the tax which the beneficiary should have paid against the tax the Government should not have collected from the trustees. Whatever may have been said indicating a broader scope to the doctrine of recoupment, these facts are the only ones in which it has been applied by this Court in tax cases.

The Government has argued that allowance of the claim of recoupment involved here would expand the holding in the *Bull* case. The Circuit Court of Appeals agreed that in the *Bull* case "The main claim and recoupment claim were more closely connected than they are here." Electric Storage Battery Co. v. Rothensies, 3 Cir., 152 F.2d 521, 524. But the court nevertheless allowed the claim be-

---

[1] Indeed, the applicable provisions of the [1939] Revenue Code seem to direct a result opposite to that asked by respondent. Section 3774 provides that "A refund of any portion of an internal-revenue tax (or any interest, penalty, additional amount, or addition to such tax) made after the enactment of this Act, shall be considered erroneous — (a) if made after the expiration of the period of limitation for filing claim therefor, unless within such period claim was filed; . . ." Section 3775(b) provides, "A credit of an overpayment in respect of any tax shall be void if a refund of such overpayment would be considered erroneous under section 3774." And cf. McEachern v. Rose, 302 U.S. 56.

[See §6514(a) of the 1954 Code.]

[2] But the Court emphasized that refund of the incorrect tax was not barred by the statute at the time the Government proceeded for collection of the correct tax.

Some courts have reached the opposite result by holding the taxpayer to the truth of what he declared in his first return, when the second tax is assessed: this, on principles of estoppel. Crane v. Commissioner, 1 Cir., 68 F.2d 640; Commissioner v. Farren, 10 Cir., 82 F.2d 141; Alamo National Bank v. Commissioner, 5 Cir., 95 F.2d 622; Doneghy v. Alexander, 10 Cir., 118 F.2d 521. The basic difficulty with this is that, although adopted in the name of equity, it does not do equity unless supplemented by what in the end comes to a reassessment of the first tax. It by no means follows that to cancel a deduction in a later year will restore the situation to what it would have been, if the tax had been assessed correctly in the first year and the deduction allowed in the second; on the contrary, it seldom, if ever, will do so. It is only in case one supplements the doctrine by limiting it to those cases in which the taxpayer gained by the omission in the first year as much as, or more than, what he will lose by cancelling the deduction in the second, that it will work out equitably, and then only on the assumption that it is inequitable in the circumstances to allow the defense of the statute of limitations. The courts which have adopted this theory, have not shown any disposition to engraft such a condition upon it; and if they had, any logical force it might have had would have disappeared, for it would emerge for what it is, if it is to be an equitable doctrine at all: i.e. an excuse for reopening the earlier assessment in the face of the statute. Strictly, this point does not come up in the case at bar, not having been raised before the Tax Court, as the Commissioner concedes. Helvering v. Salvage, supra. Nevertheless, it fits so closely upon the theory on which he relies, that it has been necessary to consider it.

That theory is, not that the taxpayer was here "estopped" as to any fact by his earlier return, but that if the earlier assessment were made upon one theory of law, the same theory must be consistently followed thereafter: to be specific, that if the taxpayer's earlier tax was assessed on the assumption that the receipt of the shares was not income — even if the taxpayer had no part in inducing that error — justice demands that that assumption shall be carried over into any future year in which the shares again figure in the taxpayer's return. Some decisions have so held; it is a kind of estoppel as to the law. In Comar Oil Co. v. Helvering, 8 Cir., 107 F.2d 709, for example, the Treasury was allowed to cancel a deduction on the ground that it had been already once allowed and could not be allowed a second time, although there was no pretence of any estoppel as to the facts, for the Commissioner had acted with full knowledge of them. In Dixie Margarine Co. v. Commissioner, 6 Cir., 115 F.2d 445, and Gooch Milling & Elevator Co. v. Commissioner, 8 Cir., 133 F.2d 131, the courts applied the same doctrine conversely. The taxpayer was allowed to assert an outlawed refund to cancel a corresponding item in a deficiency assessed against it in a later year. On the other hand, we have already three times refused to accept such a doctrine (Bigelow v. Bowers, 68 F.2d 839; Lembcke v. Commissioner, 126 F.2d 940; Schmidlapp v. Commissioner, supra, 96 F.2d 680); and so has the First Circuit, twice (Commissioner v. Saltonstall, 124 F.2d 110; Countway v. Commissioner, 127 F.2d 69). With deference it seems to us, not only to have all the vices of an estoppel as to the facts, but not to have even the excuse which that doctrine has: i.e. that in making his return a taxpayer does represent that it contains his complete gross income; something which the Commissioner cannot know. Were an assessment a judgment, there might be some basis for an estoppel of record in both situations: the estoppel as to the law depending upon how far questions of law are regarded as subject to the doctrine of res judicata. But estoppels by judgment have nothing to do with the equity of the particular case, and indeed often operate very harshly; and none of the decisions on this subject have ever suggested that the Commissioner's assessment cre-

ates an estoppel by judgment. They have been uniformly based upon some supposed equity.

It may appear plausible that, if the Treasury is to be allowed to reopen a barred assessment in order to interpose a set-off to a claim for refund, it should be allowed to do the same thing in order to assess a tax. That privilege in cases of refund was based altogether upon the historical descent of the action of indebitatus assumpsit, and it may be thought that history should not remain an excuse for denying equity. But there lies behind that history in this instance something more real than accident. When a person seeks to recover money which he has paid, it does not offend our sense of fair play that before he is allowed to unravel what he has done, he should submit to the reopening of any past related transactions between him and the person against whom he is moving. But in assessing a tax, the Treasury is not on the defensive; it has the affirmative, it must bring the case within the statute which imposes the liability. If in order to do so, it must reopen a past transaction between the taxpayer and itself, which the law has declared definitively closed, its position is equitably much weaker than in the case of a refund. Such distinctions depend, not upon logic, but upon conventions which make up the greater part of what we consider just and unjust; they are not for that reason the less imperative, rather the contrary. In what we have said we do not rely upon [§6214(b)] or question the jurisdiction of the Tax Court.

Order reversed; deficiency expunged.

NOTE

1. *Other no-estoppel cases.* The position of the Court of Appeals for the Second Circuit was later endorsed by the First Circuit in the *Ross* case, supra page 784; see also Commissioner v. Mellon, 184 F.2d 157 (3d Cir. 1950); Fahs v. Florida Machine & Foundry Co., supra page 634; Alsop v. Commissioner, supra page 197 (reaffirming, in an omitted part of opinion, the *Bennett* case); Maguire and Zimet, Hobson's Choice and Similar Practices in Federal Taxation, 48 Harv. L. Rev. 1281 (1935).

In the section on stock dividends (supra p. 690), we saw that one of the purposes of §307(a) was to restore a measure of consistency to the tax treatment of sales of both original and dividend shares after the Regulations governing the allocation of basis, upon which both Commissioner and taxpayer had frequently relied, were invalidated by the *Koshland* and *Gowran* cases. One of the problems was that a taxpayer might have previously availed himself of the old regulation by allocating part of the basis of the original shares to dividend shares, computing gain accordingly on the sale of his dividend shares. With the invalidation of the Regulations, he would be able to claim his original basis on a sale of the original shares, and, under cases like Bennet v. Helvering, there would apparently be no estoppel. The rules of §307(a) require consistency of treatment in these circumstances.

2. *Other approaches.* As the court points out in *Ross,* taxpayers have sometimes been held to a duty of consistency by other courts. For example, in Wichita Coca Cola Bottling Co. v. United States, 152 F.2d 6 (5th Cir. 1945), cert. denied, 327 U.S. 806 (1946), the taxpayer claimed that amounts received from customers for containers represented the sales price of the articles rather than deposits. Consequently, the taxpayer argued, the amounts should have been reported as income in earlier years. In fact, the amounts had been excluded from income in the earlier years on the ground that they were deposits, and the government took the position that income was realized when the deposit account was later transferred to surplus. (See again the *Fort Pitt Brewing Co.* case, supra p. 857.) The court held that having represented the amounts as deposits, the taxpayer could not later assert that they were not:

> To raise this duty of consistency in tax accounting we do not think a willful misrepresentation need be proven, or all the elements of a technical estoppel. It arises rather from the duty of disclosure which the law puts on the taxpayer, along with the

> duty of handling his accounting so it will fairly subject his income to taxation. Having, though mistakenly, so represented a transaction as to defer taxation on it to a later year he ought not, when the time for taxation under his view of it comes, to be allowed to assert the tax ought to have been levied in the former year if it is then too late so to levy it. [152 F.2d at 8.]

This was a refund case, so perhaps the Court of Appeals for the Second Circuit would have arrived at the same result, but the Fifth Circuit treated the doctrine as one of general application. Indeed, the Second Circuit itself, only three years before it decided the *Bennet* case, held that income was realized on the collection of an account receivable because it had been charged off, though erroneously, in an earlier year. Kahn v. Commissioner, 108 F.2d 748 (2d Cir. 1940). See also Ben Bimberg & Co. v. Helvering, 126 F.2d 412 (2d Cir. 1942), where Judge L. Hand, discussing the power of the Commissioner to tax as income a refund of a tax that was erroneously deducted in an earlier year, said:

> The taxpayer continues to insist upon retaining the profit of the deduction so long as he does not consent to a reopening of the assessment; and patently he is not entitled to both deduction and exemption. Nor should he be permitted to reopen it if he would, because that would give him an option to throw the item in whichever year would profit him more. [126 F.2d at 413.]

See, however, Streckfus Steamers, Inc. v. Commissioner, 19 T.C. 1 (1952), where a taxpayer on the accrual basis deducted (erroneously, under the *Dixie Pine Products Co.* case, supra p. 843) a state sales tax, which it was contesting and did not pay. The Commissioner sought to tax as income the amount deducted when, in a later year, the taxpayer was held not liable for the sales tax. The Tax Court held for the taxpayer.

3. *Estoppel against the government.* The assertion of estoppel against the government occurs primarily when there has been reliance on official advice. For this problem, see pages 919-920 infra. See also Vestal v. Commissioner, 152 F.2d 132 (D.C. Cir. 1945).

ROTHENSIES v. ELECTRIC STORAGE BATTERY CO.

329 U.S. 296 (1946)

MR. JUSTICE JACKSON delivered the opinion of the Court.

This case represents an effort, thus far successful, to obtain advantage by way of recoupment of a claim for tax refund long since barred by the statute of limitations. The facts of this singular situation are not in dispute. From April 1919 to April 1926 the Electric Storage Battery Company paid excise taxes on the sale of storage batteries in the belief, shared by the Government, that such sales were subject to tax. In July of 1926 the company asserted otherwise and filed a refund claim. It asked refund only of that part of the taxes which it had paid between 1922 and 1926. Refund of the taxes paid earlier which the company now seeks to recoup were then barred by the statute of limitations and no claim ever has been filed for their refund and no action ever was begun for their recovery. Suit was brought, however, against the Collector for refund of the taxes paid after July 1922; judgment therefor was obtained in the district court, Electric Storage Battery Co. v. McCaughn, 52 F.2d 205; 54 F.2d 814, and affirmed by the Circuit Court of Appeals, 3 Cir., 63 F.2d 715. The Government finally settled by refund of $1,395,515.35, of which $825,151.52 represented tax and the balance interest.

During the years that the refunded excise tax was being collected, the taxpayer deducted it from income before calculation of its income tax, thereby deriving substantial benefits. The Commissioner, therefore, treated the refund as income for 1935, the year in which it was received, and because of it assessed additional income and excess profits taxes which with interest thereon totaled $229,805.34. The taxpayer paid the deficiency, filed claim for refund, and after it was rejected sued the Collector. It contended that the refund from the Government was not income to the taxpayer but that if it were so considered taxpayer should be per-

mitted, as against the additional tax caused by its inclusion, to recoup the amount of the barred excise taxes which it had paid between 1919 and 1922. Both courts below correctly held that the refund was properly assessed as income. . . . Both have held, however, that the income tax liability for 1935 should be extinguished by recoupment of the 1919 to 1922 excise taxes. The gravity of this holding to the administration of the tax laws led us to grant certiorari.

It is not contended that there is any statutory warrant for allowing barred tax refund claims by way of recoupment or otherwise.[1] Authority for it is said to be found in case law and taxpayer relies chiefly on two decisions of this Court, Bull v. United States, 295 U.S. 247, and Stone v. White, 301 U.S. 532. The essence of the doctrine of recoupment is stated in the *Bull* case; "Recoupment is in the nature of a defense arising out of some feature of the transaction upon which the plaintiff's action is grounded." 295 U.S. 247, 262. It has never been thought to allow one transaction to be offset against another, but only to permit a transaction which is made subject of suit by a plaintiff to be examined in all its aspects, and judgment to be rendered that does justice in view of the one transaction as a whole.

The application of this general principle to concrete cases in both of the cited decisions is instructive as to the limited scope given to recoupment in tax litigation. In both cases a single transaction constituted the taxable event claimed upon and the one considered in recoupment. In both, the single transaction or taxable event had been subjected to two taxes on inconsistent legal theories, and what was mistakenly paid was recouped against what was correctly due. In Bull v. United States, the one taxable event was receipt by executors of a sum of money. An effort was made to tax it twice — once under the Income Tax Act as income to the estate after decedent's death and once under the Estate Tax Act as part of decedent's gross estate. This Court held that the amount of the tax collected on a wrong theory should be allowed in recoupment against an assessment under the correct theory.[2] In Stone v. White, likewise, both the claim and recoupment involved a single taxable event, which was receipt by an estate of income for a period. The trustees had paid the income tax on it but this Court held it was taxable to the beneficiary. Assessment against the beneficiary had meanwhile become barred. Then the trustees sued for a refund, which would inure to the beneficiary. The Court treated the transaction as a whole and allowed recoupment of the tax which the beneficiary should have paid against the tax the Government should not have collected from the trustees. Whatever may have been said indicating a broader scope to the doctrine of recoupment, these facts are the only ones in which it has been applied by this Court in tax cases.

The Government has argued that allowance of the claim of recoupment involved here would expand the holding in the *Bull* case. The Circuit Court of Appeals agreed that in the *Bull* case "The main claim and recoupment claim were more closely connected than they are here." Electric Storage Battery Co. v. Rothensies, 3 Cir., 152 F.2d 521, 524. But the court nevertheless allowed the claim be-

---

1 Indeed, the applicable provisions of the [1939] Revenue Code seem to direct a result opposite to that asked by respondent. Section 3774 provides that "A refund of any portion of an internal-revenue tax (or any interest, penalty, additional amount, or addition to such tax) made after the enactment of this Act, shall be considered erroneous — (a) if made after the expiration of the period of limitation for filing claim therefor, unless within such period claim was filed; . . ." Section 3775(b) provides, "A credit of an overpayment in respect of any tax shall be void if a refund of such overpayment would be considered erroneous under section 3774." And cf. McEachern v. Rose, 302 U.S. 56.

[See §6514(a) of the 1954 Code.]

2 But the Court emphasized that refund of the incorrect tax was not barred by the statute at the time the Government proceeded for collection of the correct tax.

cause it considered that this Court had introduced the doctrine of recoupment into tax law and that it was "based on concepts of fairness." 152 F.2d 521, 524. It said it saw no reason for narrowly construing the requirement that both claims originate in the same transaction. We think this misapprehends the limitations on the doctrine of recoupment as applied to tax law and it leads us to state more fully reasons for declining to expand the doctrine beyond the facts of the cited cases.

It probably would be all but intolerable, at least Congress has regarded it as ill-advised, to have an income tax system under which there never would come a day of final settlement and which required both the taxpayer and the Government to stand ready forever and a day to produce vouchers, prove events, establish values and recall details of all that goes into an income tax contest. Hence a statute of limitation is an almost indispensable element of fairness as well as of practical administration of an income tax policy. . . .

As statutes of limitation are applied in the field of taxation, the taxpayer sometimes gets advantages and at other times the Government gets them. Both hardships to the taxpayers and losses to the revenues may be pointed out.[3] They tempt the equity-minded judge to seek for ways of relief in individual cases.

But if we should approve a doctrine of recoupment of the breadth here applied we would seriously undermine the statute of limitations in tax matters. In many, if not most, cases of asserted deficiency the items which occasion it relate to past years closed by statute, at least as closely as does the item involved here. Cf. Hall v. United States, 43 F. Supp. 130. The same is true of items which form the basis of refund claims. Every assessment of deficiency and each claim for refund would invite a search of the taxpayer's entire tax history for items to recoup. This case provides evidence of the extent to which this would go. When this suit was brought in 1943, the claim pleaded as a recoupment was for taxes collected over twenty years before and for over sixteen years barred by the statute. That claims dead so long can be resurrected under this doctrine, is enough to show its menace to the statute of limitations — at least as to those taxpayers whose affairs by accident or design take such shape that they can avail themselves of recoupment remedies. Moreover, we have held that the Tax Court has no jurisdiction to consider recoupment. Gooch Milling and Elevator Co. v. Commissioner, 320 U.S. 418. Hence, the availability of the remedy would depend on diverting the litigation to the district courts.

We cannot approve such encroachments on the policy of the statute out of consideration for a taxpayer who for many years failed to file or prosecute its refund claim. If there are to be exceptions to the statute of limitations, it is for Congress rather than for the Courts to create and limit them.

The judgment below is reversed.

MR. JUSTICE MURPHY is of the opinion, in which MR. JUSTICE BLACK and MR. JUSTICE RUTLEDGE join, that the judgment below should be affirmed. He believes that the claims for refund of the illegal assessments exacted from 1919 to 1922 arise out of the same subject matter as was involved in the Government's demand

3 In American Light & Traction Co. v. Harrison, 7 Cir., 142 F.2d 639, the court did not allow recoupment to the Government. But judiciously, it said, "Although here a hardship on the Government results from the taxpayer's inconsistency, the correlative provisions of this same statute will, in the converse of the instant situation, work an equal hardship on the taxpayer." 142 F.2d 639, 643. Whether or not Sections 3774 and 3775(b), supra, note 1, be taken to compel the conclusion we reach in this case, the court's recognition that both parties to taxation are affected impartially, though perhaps harshly, by policy of repose has application here. It may easily be overlooked, when the unfairness of the Government's retaining incorrectly collected monies of respondent is stressed, that the statute of limitations is primarily an instrument of fairness.

for additional taxes for 1935, thereby making applicable the rule of Bull v. United States, 295 U.S. 247.

NOTE

1. *Recoupment today.* As Mr. Justice Jackson points out, the Supreme Court held in the *Gooch Milling and Elevator Co.* case that the Tax Court has no jurisdiction to allow recoupment. The Court based its decision on what is now §6214(b):

> The Tax Court in redetermining a deficiency . . . for any taxable year . . . shall consider such facts with relation to the taxes for other years as may be necessary correctly to redetermine the amount of such deficiency, but in so doing shall have no jurisdiction to determine whether or not the tax for any other taxable year has been overpaid or underpaid. [320 U.S. 418, 420 (1943).]

Refund cases in the district courts and Court of Claims were distinguished because they are "tribunals possessing general equity jurisdiction." With the doctrine limited to these courts, it may be that judicial resistance to its application may increase in order to prevent "forum-shopping." In Ford v. United States, 276 F.2d 17 (Ct. Cl. 1960), the taxpayers were allowed to use a higher basis for inherited stock, in computing gain or loss on its sale, than was used by the estate in computing its federal estate tax liability. The court said that the case "comes fairly close to satisfying the recoupment standards of the Supreme Court," but that "the teaching of *Rothensies* is that [recoupment] is not a flexible doctrine, but a doctrine strictly limited, and limited for good reason." One judge dissented, arguing that recoupment should have been applied to offset the estate's tax savings (which inured to the benefit of the taxpayers) against the refund to which they were entitled in the income tax case. Another dissenting judge would have required the taxpayers to use the same date-of-death value that was used by the estate on grounds of estoppel; failing that, he would have applied the doctrine of recoupment. See also United States v. Bowcut, 287 F.2d 654 (9th Cir. 1961) (recoupment applied); and note the resemblance of the result in the *Perry* case, supra page 103, to the result achieved by the doctrine of recoupment.

2. *Statutory barriers to recoupment.* In McEachern v. Rose, 302 U.S. 56 (1937), the government was not allowed to set off a barred deficiency against a proper refund. Under §§6401(a) and 6402(a), if the taxpayer paid the barred deficiency, the payment would have to be refunded; and the crediting of a refund against a barred deficiency in such circumstances is forbidden by §6514(b). The Court decided that recoupment by the government was barred by these statutory provisions. (Query: why was recoupment allowed to the government in Stone v. White, summarized in the *Electric Storage Battery Co.* case?) As to recoupment by the taxpayer, it should be noted that §6514(a) forbids crediting an overpayment that cannot be refunded because of the statute of limitations against a deficiency for a year that is still open. See footnotes 1 and 3 in the *Electric Storage Battery Co.* case.

CORY v. COMMISSIONER

261 F.2d 702 (2d Cir. 1958)

Before CLARK, Chief Judge, WATERMAN, Circuit Judge, and GALSTON, District Judge.

CLARK, Chief Judge.

On this review of a Tax Court decision finding a deficiency of $15,204.97 in their income tax for 1945, petitioners rely on the statute of limitations. Although the notice of deficiency was issued December 20, 1956 — more than ten years after the return was filed — the Tax Court found the assessment timely under I.R.C. 1954, §§1311-1314, which under stated conditions allow an additional one-year period for assessment of tax upon certain items of income. 29 T.C. 903. The petitioners now challenge this ruling.

In their 1944 return taxpayers had reported as long-term capital gains the receipt of $42,057.66 in royalty income from the autobiography, "Persons and Places" of the noted philosopher-poet George Santayana. All but $12,000 of these royalties, however, were held in escrow until the following year because of a dispute between taxpayers and a nephew of the author over title to the manuscript. Some years later, asserting that they received only $12,000 in 1944 and the remainder in 1945, petitioners claimed a tax refund. The Commissioner rejected their claim and also determined that the entire amount reported in the 1944 return was taxable as ordinary income, rather than long-term capital gain. In a decision finally entered on June 17, 1955, the Tax Court upheld the Commissioner's determination that the royalties were taxable as ordinary income, but ruled that petitioners received only $12,000 in 1944, as they contended. Petitioners sought review of this decision; but the Commissioner did not, and his time to do so expired on October 17, 1955. We affirmed the decision March 9, 1956, Cory v. C.I.R., 2 Cir., 230 F.2d 941, and certiorari was denied October 8, 1956, 352 U.S. 828. The Commissioner issued a notice of deficiency on December 20, 1956, for the $30,257.66 [1] royalties not reported for the year 1945.

Sections 1311-1314 of the Internal Revenue Code of 1954 follow the complicated form of expression which seems an occupational trait of revenue legislation. In summarized form they may be stated as allowing an additional year for assessment of a tax deficiency after a "determination" — defined in §1313(a)(1) as a decision of the Tax Court "which has become final" — correcting certain errors in tax returns. As applied to the present case the determination must be one which requires the exclusion from gross income of an item included in a return filed by the taxpayer which was erroneously excluded from the gross income of the taxpayer for another year. Further, there must be adopted in the determination a position maintained by the taxpayer which is inconsistent with the erroneous exclusion in question. The Tax Court has accepted the Commissioner's view that there was such a determination here which became final only on the denial of certiorari on October 8, 1956; and hence the notice of deficiency on December 20, 1956, was timely. The taxpayers deny that their position was ever "inconsistent," but say that in any event the court's determination as to them became final on October 17, 1955, when the Commissioner failed to file a cross-petition for review of the court's decision of June 17, 1955. Under this view the notice of deficiency would of course be too late.

Clearly these sections are applicable here. The Tax Court's determination that only $12,000 was received in 1944 excluded the remainder of the reported royalties from taxpayers' gross income for that year, and this sum should have been reported for the taxable year 1945. Moreover, the decision did adopt a position maintained by the taxpayer which was inconsistent with the erroneous omission of the royalties in 1945. It is true that petitioners' 1944 return disclosed in full all the relevant facts surrounding their receipt of the royalties. But the fact remains that in that return they took the position that the entire sum was received in 1944, whereas in the later claim for refund they urged that they did not obtain $30,257.66 of these royalties until 1945. This is sufficient to bring §§1311-1314 into play. Their language requires only inconsistency of position, not duplicity or deception by the taxpayer. For the sections operate equally against inconsistent positions of the Commissioner; their purpose is remedial, not punitive.

1 The $200 discrepancy in these figures seems to result from a payment of that amount for expenses of the publishers of "Persons and Places." The Tax Court included also a sum paid as escrow fee of $105.91. Taxpayers make no claim of error on these aspects of the determination.

On petitioners' further contention that §§1311-1314 do not cure the untimeliness of the Commissioner's assessment because the one-year period began to run on October 17, 1955, respondent must and does concede that the ruling that petitioners received only $12,000 in 1944 did become final on that date. For the Commissioner could not obtain review of that ruling unless he cross-petitioned for review. Helvering v. Pfeiffer, 302 U.S. 247, 250-251; Le Tulle v. Scofield, 308 U.S. 415, 421-422. Nevertheless, to break down a Tax Court decision for a single year into separate holdings and issues for decisional and assessment purposes would add to the confusion and complexity in operating under §§1311-1314. See Rosenthal v. C.I.R., 2 Cir., 205 F.2d 505, 512; Wilson v. C.I.R., 42 B.T.A. 1254. In this very case petitioners' construction of these sections would have compelled the Commissioner to institute a proceeding for the 1945 deficiency, while a modification of the Tax Court decision in the still pending prior action would have completely altered the parties' positions in the second proceeding. Accordingly, we hold that the real "determination" required by the statute was not had until judicial opinion was resolved into a final adjudication of the monetary assessments involved, and hence that the reassessment is timely under the statutes.

The final issue concerns the amount of additional income the Commissioner may attribute to 1945. The sections of the Code relevant here limit the reassessment to the increase or decrease in tax resulting "solely from the correct treatment of the item which was the subject of the error." §1314(a). This "item," petitioners contend, is not $30,257.66, the royalties petitioners mistakenly claimed they received in 1944, but at maximum half that sum, since on their 1944 return — because they treated the royalties as long-term capital gain — petitioners listed only half the amount of the royalties as gross income. In support of this position petitioners rely on numerous authorities interpreting [§6501(e)(1)(A)], a penalty section operable only in favor of the Government. Section [6501(e)(1)(A) extends] the statute of limitations where a taxpayer "omits from gross income an amount properly includible therein which is in excess of 25 per centum of the amount of gross income stated in the return." But §1312(3)(A) speaks only of "an item included in a return," not an amount includible in gross income. Accordingly, while the amount of error in the gross income which the taxpayers computed and reported in the 1944 return may be lower, the item included in that return which was the subject of the error is unquestionably the amount of royalties which they reported as received. Since they reported receipt of $42,363.57, even though they claimed that only half their gain was to be taken into account, the amount thus omitted from the 1945 return was $30,363.57, as the Tax Court has held.[2]

NOTE

1. *Scope of §§1311-1314.* Section 1312 sets out the "circumstances" in which an adjustment to the closed year is authorized. In *Cory*, the "circumstance" on which the government relied was that the determination for 1944 required the exclusion from gross income of an item included in a return filed by the taxpayer (for 1944) which was erroneously excluded or omitted from his return for the closed year (1945). See §1312(3)(A). Among the other "circumstances of adjustment" set out in §1312 are:

(a) A determination requiring the inclusion in gross income of an item that was erroneously included in the gross income of the taxpayer for another year. §1312(a)(1). If the court had gone the other way in *Amend*, supra page 780, this provision would have permitted the taxpayer to get a refund for the year in which the sales proceeds were reported by him, despite the running of the statute of limitations.

(b) A determination allowing a deduction that was erroneously allowed to the taxpayer for another year.

[2] Including the discrepancies referred to in note 1 supra.

(c) A determination of the basis of property, if certain types of errors occurred "in respect of any transaction on which such basis depends" with respect to the taxpayer or certain other persons. §1312(7). Consider the effect of this provision on the taxpayer in *Bennet,* supra page 869. If the 1924 transaction in Fahs v. Florida Machine & Foundry Co., supra page 634, had occurred in a year subject to adjustment under §1311,* would an adjustment be authorized as to Mr. Russell, Sr., by §1312(7)? If Mr. Russell's son sells his stock and claims a basis equal to its value when his father acquired it, would an adjustment against his father for the year of acquisition be authorized by §1312(7)?

2. *Maintenance of inconsistent position under §1311(b).* Ordinarily, an adjustment to a closed year is authorized only if the determination adopts a position maintained by the taxpayer (or the government, as the case may be) that is inconsistent with the error in the closed year. Note how this requirement was satisfied in the *Cory* case. If the taxpayer had reported the $42,000 in 1944 as ordinary income and had later claimed a refund *solely* on the ground that it was long-term capital gain, and a court had held that the royalties were taxable as ordinary income but that a refund was required because $30,000 was allocable to 1945, would the determination have "adopted . . . a position maintained by the taxpayer"? If in a bad debt case involving 1964 the government argues that the debt became worthless in 1963, and the court's findings consist solely of a statement that the debt did not become worthless in 1964, has the court "adopted . . . a position maintained by the taxpayer"? What if the court's opinion states that "there is persuasive evidence that the debt became worthless in 1963, but that is not before us"? If a court gives alternative grounds for a decision, has it "adopted" both of them? See Dobson v. United States, — F.2d — (Ct. Cl. 1964) (re "inconsistent" position); Yagoda v. Commissioner, — F.2d — (2d Cir. 1964).

If the adjustment is based on the errors described in §1312(3)(B) and §1312(4), inconsistency is not required, but another condition must be satisfied: roughly speaking, the closed year must have been open when the claim that resulted in the determination was first formally made. More specifically, if the determination requires the exclusion from gross income in 1965 of an item that was not included in the 1965 return, and the item should have been included in 1962, an adjustment for 1962 is authorized by §1312(3)(B) and §1311(b)(2) only if 1962 was an open year when the government first maintained by a notice of deficiency or before the Tax Court that the item was includible in 1965. Were it not for this requirement, the government could arbitrarily assign any omitted item to any open year, and then move for an adjustment to the closed year when the taxpayer succeeded in proving that the item did not belong in the year to which it was assigned. Conversely, if the determination disallows a deduction for 1965 which should have been allowed to the taxpayer in 1962, an adjustment is authorized by §1312(4) and §1311(b)(2)(B) only if 1962 was open when the taxpayer first maintained before the Treasury or Tax Court, in writing, that he was entitled to the deduction in 1965. Were it not for this requirement, a taxpayer who had overlooked a 1962 deduction could arbitrarily claim for the year in which he finally realized his error, and on losing in this claim, demand a refund for 1962. In effect, §1312(3)(B) and (4) simply preserves the status quo for 1962 while the 1965 battle is being fought, a result that could alternatively have been achieved by self-help at the outset through the filing of simultaneous refund claims (or the assertion of deficiencies, as the case may be) for both 1962 and 1965.

3. *Status of related taxpayers.* Note that a determination as to one taxpayer will often open the door to an adjustment under §1311 as to another taxpayer. A common example is the successful assertion of a deficiency against the grantor of a trust under §§671-677; if the same income was reported by the fiduciary or beneficiary, a refund is ordinarily authorized by §1312(1). The term "related taxpayer" is defined by §1313(c). Note that a corporation and its shareholders are not "related taxpayers," nor are corporations under common control; although there are many situations in which an item that was reported or deducted by one such person should have been reported or deducted by another, the correction of the error does not ordinarily open the door to a §1311 adjustment for the other taxpayer.

For an unsuccessful effort to require the husband of the taxpayer in Bradford v. Commissioner, supra page 89, to pay a tax for 1946 on the ground that the exclusion of the

* Sections 1311-1314 are not applicable to pre-1932 taxable years.

disputed $50,000 from the wife's return meant that it was properly includible in the husband's return, see Bradford v. Commissioner, 34 T.C. 1051 (1960).

4. *Extent of the adjustment.* When §1311 is applicable, an adjustment for the year of error is authorized by §1314 in the amount of "the increase or decrease in tax previously determined [for the year of error] which results *solely* from the correct" treatment of the item in question. I.e., the year of error is not reopened for the purpose of correcting unrelated errors, although items like the medical expense and charitable contribution deductions may have to be recalculated. The amount thus determined, with interest, is either refunded to the taxpayer or assessed and collected as a deficiency, as the case may be. As a result of a 1954 amendment, if the adjustment for the year of error creates, increases, or reduces an operating loss or capital loss for that year, other years to which the loss is carried over may also be adjusted.

Note that it may be better, for either the taxpayer or the government, to allow sleeping dogs to lie. In Gooch Milling and Elevator Co. v. United States, 78 F. Supp. 94 (Ct. Cl. 1948), for example, the taxpayer recovered $7935.58, with interest, under §1311 for the fiscal year ending June 30, 1935, because the government determined a deficiency of $6663.42 for the year ending June 30, 1936. If the deficiency had not been determined for 1936, the taxpayer could not have obtained a correction for 1935 because the statutory period for claiming a refund had expired. Conversely, the taxpayer who erroneously omitted property received as compensation from his income for the year of its receipt may be better off to employ a zero basis on a later sale of the property, since if he insists on its proper basis (thus reducing his capital gain in the year of sale), the government may be entitled under §1311 to recover a tax, with interest, on ordinary income for the earlier year.

5. *Relation of §1311 to estoppel and recoupment.* Note that estoppel, recoupment, and §1311 will never come into play unless a transaction or other event in one year is related to an error that occurred in another year. Many erroneous omissions, inclusions, and deductions will go entirely uncorrected, once the statute of limitations has run, because no later transaction will afford any basis for a claim of estoppel or recoupment or for an adjustment under §1311. Is there any reason why an erroneous deduction followed by a deduction of the same item in the proper year should be treated differently from an erroneous deduction standing alone? Or why an erroneous inclusion followed by a proper inclusion of the same item should lead to a correction that would not be permissible if the erroneous inclusion had no later counterpart?

As the court pointed out in the *Bennet* case, supra page 869, some courts apply the doctrine of estoppel to deny a loss on property erroneously omitted from income when received. But if the government can open the earlier year by way of an adjustment under §1311, is there any justification for estopping the taxpayer? Does the existence of §§1311-1314 imply that Congress has provided an exclusive remedy for the correction of errors committed in years closed by the statute of limitations? See Gooding v. United States, 326 F.2d 988 (Ct. Cl. 1964) (§§1311-1315 impliedly exclude recovery based on equitable recoupment).

UNITED STATES v. HOLLAND
348 U.S. 121 (1954)

MR. JUSTICE CLARK delivered the opinion of the Court.

Petitioners, husband and wife, stand convicted under [§7201] of an attempt to evade and defeat their income taxes for the year 1948. The prosecution was based on the net worth method of proof, also in issue in three companion cases and a number of other decisions here from the Courts of Appeals of nine circuits. During the past two decades this Court has been asked to review an increasing number of criminal cases in which proof of tax evasion rested on this theory. We have denied certiorari because the cases involved only questions of evidence and, in isolation, presented no important questions of law. In 1943 the Court did have occasion to pass upon an application of the net worth theory where the taxpayer had no records. United States v. Johnson, 319 U.S. 503.

In recent years, however, tax-evasion convictions obtained under the net worth theory have come here with increasing frequency and left impressions beyond those of the previously unrelated petitions. We concluded that the method involved something more than the ordinary use of circumstantial evidence in the usual criminal case. Its bearing, therefore, on the safeguards traditionally provided in the administration of criminal justice called for a consideration of the entire theory. At our last Term a number of cases arising from the Courts of Appeals brought to our attention the serious doubts of those courts regarding the implications of the net worth method. Accordingly, we granted certiorari in these four cases and have held others to await their decision.

In a typical net worth prosecution, the Government, having concluded that the taxpayer's records are inadequate as a basis for determining income tax liability, attempts to establish an "opening net worth" or total net value of the taxpayer's assets at the beginning of a given year. It then proves increases in the taxpayer's net worth for each succeeding year during the period under examination and calculates the difference between the adjusted net values of the taxpayer's assets at the beginning and end of each of the years involved. The taxpayer's nondeductible expenditures, including living expenses, are added to these increases, and if the resulting figure for any year is substantially greater than the taxable income reported by the taxpayer for that year, the Government claims the excess represents unreported taxable income. In addition, it asks the jury to infer willfulness from this understatement, when taken in connection with direct evidence of "conduct, the likely effect of which would be to mislead or to conceal." Spies v. United States, 317 U.S. 492, 499.

Before proceeding with a discussion of these cases, we believe it important to outline the general problems implicit in this type of litigation. In this consideration we assume, as we must in view of its widespread use, that the Government deems the net worth method useful in the enforcement of the criminal sanctions of our income tax laws. Nevertheless, careful study indicates that it is so fraught with danger for the innocent that the courts must closely scrutinize its use. . . .

1. Among the defenses often asserted is the taxpayer's claim that the net worth increase shown by the Government's statement is in reality not an increase at all because of the existence of substantial cash on hand at the starting point. This favorite defense asserts that the cache is made up of many years' savings which for various reasons were hidden and not expended until the prosecution period.

Obviously, the Government has great difficulty in refuting such a contention. However, taxpayers too encounter many obstacles in convincing the jury of the existence of such hoards. This is particularly so when the emergence of the hidden savings also uncovers a fraud on the taxpayer's creditors.

In this connection, the taxpayer frequently gives "leads" to the Government agents indicating the specific sources from which his cash on hand has come, such as prior earnings, stock transactions, real estate profits, inheritances, gifts, etc. Sometimes these "leads" point back to old transactions far removed from the prosecution period. Were the Government required to run down all such leads it would face grave investigative difficulties; still its failure to do so might jeopardize the position of the taxpayer.

2. As we have said, the method requires assumptions, among which is the equation of unexplained increases in net worth with unreported taxable income. Obviously such an assumption has many weaknesses. It may be that gifts, inheritances, loans and the like account for the newly acquired wealth. There is great danger that the jury may assume that once the Government has established the figures in its net worth computations, the crime of tax evasion automatically follows. The possibility of this increases where the jury, without guarding instructions, is allowed to take into the jury room the various charts summarizing the computations; bare figures have a way of acquiring an existence of their own, independent of the evidence which gave rise to them.

3. Although it may sound fair to say that the taxpayer can explain the "bulge" in his net worth, he may be entirely honest and yet unable to recount his financial history. In addition, such a rule would tend to shift the burden of proof. Were the taxpayer compelled to come forward with evidence, he might risk lending support to the Government's case by showing loose business methods or losing the jury through his apparent evasiveness. Of course, in other criminal prosecutions juries may disbelieve and convict the innocent. But the courts must minimize this danger.

4. When there are no books and records, willfulness may be inferred by the jury from that fact coupled with proof of an understatement of income. But when the Government uses the net worth method, and the books and records of the taxpayer appear correct on their face, an inference of willfulness from net worth increases alone might be unjustified, especially where the circumstances surrounding the deficiency are as consistent with innocent mistake as with willful violation. On the other hand, the very failure of the books to disclose a proved deficiency might indicate deliberate falsification.

5. In many cases of this type, the prosecution relies on the taxpayer's statements, made to revenue agents in the course of their investigation, to establish vital links in the Government's proof. But when a revenue agent confronts the taxpayer with an apparent deficiency, the latter may be more concerned with a quick settlement than an honest search for the truth. Moreover, the prosecution may pick and choose from the taxpayer's statement, relying on the favorable portion and throwing aside that which does not bolster its position. The problem of corroboration, dealt with in the companion cases of Smith v. United States, post, p. 147, and United States v. Calderon, post, p. 160, therefore becomes crucial.

6. The statute defines the offense here involved by individual years. While the Government may be able to prove with reasonable accuracy an increase in net worth over a period of years, it often has great difficulty in relating that income sufficiently to any specific prosecution year. While a steadily increasing net worth may justify an inference of additional earnings, unless that increase can be reasonably allocated to the appropriate tax year the taxpayer may be convicted on counts of which he is innocent.

While we cannot say that these pitfalls inherent in the net worth method foreclose its use, they do require the exercise of great care and restraint. . . . Trial courts should approach these cases in the full realization that the taxpayer may be ensnared in a system which, though difficult for the prosecution to utilize, is equally hard for the defendant to refute. Charges should be especially clear, including, in addition to the formal instructions, a summary of the nature of the net worth method, the assumptions on which it rests, and the inferences available both for and against the accused. Appellate courts should review the cases, bearing constantly in mind the difficulties that arise when circumstantial evidence as to guilt is the chief weapon of a method that is itself only an approximation. With these considerations as a guide, we turn to the facts.

The indictment returned against the Hollands embraced three counts. The first two charged Marion L. Holland, the husband, with attempted evasion of his income tax for the years 1946 and 1947. He was found not guilty by the jury on both of these counts. The third count charged Holland and his wife with attempted evasion in 1948 of the tax on $19,736.74 not reported by them in their joint return. The jury found both of them guilty. Mrs. Holland was fined $5,000, while her husband was sentenced to two years' imprisonment and fined $10,000.

The Government's opening net worth computation shows defendants with a net worth of $19,152.59 at the beginning of the indictment period. Shortly thereafter, defendants purchased a hotel, bar and restaurant, and began operating them as the Holland House. Within three years, during which they reported $31,265.92 in taxable income, their apparent net worth increased by $113,185.32. The Government's evidence indicated that, during 1948, the year for which defendants were convicted, their net worth increased by some $32,000, while the amount of taxable income reported by them totaled less than one-third that sum.

Use of Net Worth Method Where Books Are Apparently Adequate

As we have previously noted, this is not the first net worth case to reach this Court. In United States v. Johnson, supra, the Court affirmed a tax-evasion conviction on evidence showing that the taxpayer's expenditures had exceeded his "available declared resources." Since Johnson and his concealed establishments had destroyed the few records they had, the Government was forced to resort to the net worth method of proof. This Court approved on the ground that "to require more . . . would be tantamount to holding that skilful concealment is an invincible barrier to proof," 319 U.S., at 517-518. Petitioners ask that we restrict the *Johnson* case to situations where the taxpayer has kept no books. They claim that [§446(a) and (b)], expressly limiting the authority of the Government to deviate from the taxpayer's method of accounting, confines the net worth method to situations where the taxpayer has no books or where his books are inadequate. Despite some support for this view among the lower courts . . . , we conclude that this argument must fail. The provision that the "net income shall be computed . . . in accordance with the method of accounting regularly employed in keeping the books of such taxpayer," refers to methods such as the cash receipts or the accrual method, which allocate income and expenses between years. United States v. American Can Co., 280 U.S. 412, 419. The net worth technique, as used in this case, is not a method of accounting different from the one employed by defendants. It is not a method of accounting at all, except insofar as it calls upon taxpayers to account for their unexplained income. Petitioners' accounting system was appropriate for their business purposes; and, admittedly, the Government did not detect any specific false entries therein. Nevertheless, if we believe the Government's evidence, as the jury did, we must

conclude that the defendants' books were more consistent than truthful, and that many items of income had disappeared before they had even reached the recording stage. . . . To protect the revenue from those who do not "render true accounts," the Government must be free to use all legal evidence available to it in determining whether the story told by the taxpayer's books accurately reflects his financial history.

Establishing a Definite Opening Net Worth

We agree with petitioners that an essential condition in cases of this type is the establishment, with reasonable certainty, of an opening net worth, to serve as a starting point from which to calculate future increases in the taxpayer's assets. The importance of accuracy in this figure is immediately apparent, as the correctness of the result depends entirely upon the inclusion in this sum of all assets on hand at the outset. The Government's net worth statement included as assets at the starting point . . . $2,153.09 in cash. The Hollands claim that the Government failed to include in its opening net worth figure an accumulation of $113,000 in currency . . . which they owned at the beginning of the prosecution period. They asserted that the cash had been accumulated prior to the opening date, $104,000 of it before 1933, and the balance between 1933 and 1945. The had kept the money, they claimed, mostly in $100 bills and at various times in a canvas bag, a suitcase, and a metal box. They had never dipped into it until 1946, when it became the source of the apparent increase in wealth which the Government later found in the form of a home, a ranch, a hotel and other properties. This was the main issue presented to the jury. The Government did not introduce any direct evidence to dispute this claim. Rather it relied on the inference that anyone who had had $104,000 in cash would not have undergone the hardship and privation endured by the Hollands all during the late 20's and throughout the 30's. During this period they lost their café business; accumulated $35,000 in debts which were never paid; lost their household furniture because of an unpaid balance of $92.20; suffered a default judgment for $506.66; and were forced to separate for some eight years because it was to their "economical advantage." During the latter part of this period, Mrs. Holland was obliged to support herself and their son by working at a motion picture house in Denver while her husband was in Wyoming. The evidence further indicated that improvements to the hotel, and other assets acquired during the prosecution years, were bought in installments and with bills of small denominations, as if out of earnings rather than from an accumulation of $100 bills. The Government also negatived the possibility of petitioners' accumulating such a sum by checking Mr. Holland's income tax returns as far back as 1913, showing that the income declared in previous years was insufficient to enable defendants to save any appreciable amount of money. The jury resolved this question of the existence of a cache of cash against the Hollands, and we believe the verdict was fully supported. . . .

The Government's Investigation of Leads

So overwhelming, indeed, was the Government's proof on the issue of cash on hand that the Government agents did not bother to check petitioners' story that some of the cash represented proceeds from the sales of two cafés in the 20's; and that in 1933 an additional portion of this $113,000 in currency was obtained by exchanging some $12,000 in gold at a named bank. While sound administration of the criminal law requires that the net worth approach — a powerful method of proving otherwise undetectable offenses — should not be denied the Government, its failure to investigate leads furnished by the taxpayer might result in serious injustice. It is, of course, not for us to prescribe investigative procedures, but it

is within the province of the courts to pass upon the sufficiency of the evidence to convict. When the Government rests its case solely on the approximations and circumstantial inferences of a net worth computation, the cogency of its proof depends upon its effective negation of reasonable explanations by the taxpayer inconsistent with guilt. Such refutation might fail when the Government does not track down relevant leads furnished by the taxpayer — leads reasonably susceptible of being checked, which, if true, would establish the taxpayer's innocence. When the Government fails to show an investigation into the validity of such leads, the trial judge may consider them as true and the Government's case insufficient to go to the jury. This should aid in forestalling unjust prosecutions, and have the practical advantage of eliminating the dilemma, especially serious in this type of case, of the accused's being forced by the risk of an adverse verdict to come forward to substantiate leads which he had previously furnished the Government. It is a procedure entirely consistent with the position long espoused by the Government, that its duty is not to convict but to see that justice is done.

In this case, the Government's detailed investigation was a complete answer to the petitioners' explanations. Admitting that in cases of this kind it "would be desirable to track to its conclusion every conceivable line of inquiry," the Government centered its inquiry on the explanations of the Hollands and entered upon a detailed investigation of their lives covering several states and over a score of years. The jury could have believed that Mr. Holland had received moneys from the sale of cafés in the twenties and that he had turned in gold in 1933 and still it could reasonably have concluded that the Hollands lacked the claimed cache of currency in 1946, the crucial year. Even if these leads were assumed to be true, the Government's evidence was sufficient to convict. The distant incidents relied on by petitioners were so remote in time and in their connection with subsequent events proved by the Government that, whatever petitioners' net worth in 1933, it appears by convincing evidence that on January 1, 1946, they had only such assets as the Government credited to them in its opening net worth statement.

Net Worth Increases Must be Attributable to Taxable Income

Also requisite to the use of the net worth method is evidence supporting the inference that the defendant's net worth increases are attributable to currently taxable income.

The Government introduced evidence tending to show that although the business of the hotel apparently increased during the years in question, the reported profits fell to approximately one-quarter of the amount declared by the previous management in a comparable period; that the cash register tapes, on which the books were based, were destroyed by the petitioners; and that the books did not reflect the receipt of money later withdrawn from the hotel's cash register for the personal living expenses of the petitioners and for payments made for restaurant supplies. The unrecorded items in this latter category totaled over $12,500 for 1948. Thus there was ample evidence that not all the income from the hotel had been included in its books and records. In fact, the net worth increase claimed by the Government for 1948 could have come entirely from the unreported income of the hotel and still the hotel's total earnings for the year would have been only 73% of the sum reported by the previous owner for the comparable period in 1945.

But petitioners claim the Government failed to adduce adequate proof because it did not negative all the possible nontaxable sources of the alleged net worth increases — gifts, loans, inheritances, etc. We cannot agree. The Government's proof, in our view, carried with it the negations the petitioners urge. Increases in

net worth, standing alone, cannot be assumed to be attributable to currently taxable income. But proof of a likely source, from which the jury could reasonably find that the net worth increases sprang, is sufficient. In the *Johnson* case, where there was no direct evidence of the source of the taxpayer's income, this Court's conclusion that the taxpayer "had large, unreported income was reinforced by proof . . . that [for certain years his] private expenditures . . . exceeded his available declared resources." This was sufficient to support "the finding that he had some unreported income which was properly attributable to his earnings. . . ." United States v. Johnson, 319 U.S., at 517. There the taxpayer was the owner of an undisclosed business capable of producing taxable income; here the disclosed business of the petitioners was proven to be capable of producing much more income than was reported and in a quantity sufficient to account for the net worth increases. Any other rule would burden the Government with investigating the many possible nontaxable sources of income, each of which is as unlikely as it is difficult to disprove. This is not to say that the Government may disregard explanations of the defendant reasonably susceptible of being checked. But where relevant leads are not forthcoming, the Government is not required to negate every possible source of nontaxable income, a matter peculiarly within the knowledge of the defendant. . . .

The Burden of Proof Remains on the Government

Nor does this rule shift the burden of proof. The Government must still prove every element of the offense beyond a reasonable doubt though not to a mathematical certainty. The settled standards of the criminal law are applicable to net worth cases just as to prosecutions for other crimes. Once the Government has established its case, the defendant remains quiet at his peril. . . . The practical disadvantages to the taxpayer are lessened by the pressures on the Government to check and negate relevant leads.

[Discussion of willfulness and of charge to jury omitted.]

NOTE

1. *The net worth method: accuracy and burden of proof. Holland* was a criminal prosecution. Is the net worth method of calculating taxable income "so fraught with danger for the innocent that the courts must closely scrutinize its use" in civil cases also? When the Commissioner imposes a fraud penalty or seeks to lift the statute of limitations because of fraud (infra p. 952), he has the burden of proof in cases in the Tax Court, §7454(a), and it has been held that this is true even in a suit in the District Court for a refund, Ohlinger v. United States, 219 F.2d 310 (9th Cir. 1955). In a simple deficiency case, however, is the taxpayer's usual burden of proof altered by the fact that the deficiency was computed by the net worth method? In *Holland,* the Court said that "an essential condition in cases of this type is the establishment, with reasonable certainty, of an opening net worth, to serve as a starting point from which to calculate future increases in the taxpayer's assets." If the taxpayer in a simple deficiency case calls as a witness the Treasury agent who made the reconstruction of taxable income and obtains an admission that the taxpayer was credited with an opening net worth of zero because the agent's investigations disclosed no opening assets, would the taxpayer's burden of proof be sustained if the agent's investigation was found to be superficial? See, for example, Bodoglau v. Commissioner, 230 F.2d 336 (7th Cir. 1956), concerning a professional gambler who was credited with only $15.03 of cash in the bank and no undeposited cash at the opening of the net worth period; the Tax Court said that the Commissioner's position was "logical" (because at various times the taxpayer was short of money in dealing with creditors) but "unrealistic," 22 T.C. 912, 928 (1954), and credited him with undeposited cash of $100,000, against his claim of over $200,000.

The net worth method is being used increasingly in small cases. See Hasson v. Com

missioner, 239 F.2d 778 (6th Cir. 1956), where the deficiencies (as adjusted by the Tax Court) were only $800 for 1948 and 1949 and $1000 for 1950. Judge Stewart dissented, expressing "serious doubts about the use at all of a method so inexact to arrive at amounts so relatively small as are involved here." 239 F.2d at 784. See Stuart v. Commissioner, ¶51,279 P-H Memo T.C., involving a dispute over $282 in tax, where the taxpayer's cost of living was in dispute and one of the issues was whether he spent $23 for newspapers or "generally was able to borrow rather than to buy the single newspaper he customarily read."

For other expressions of skepticism about the accuracy of the net worth method, see Thomas v. Commissioner, 266 F.2d 297 (6th Cir. 1959); Polizzi v. Commissioner, 265 F.2d 498 (6th Cir. 1959).

2. *"Likely source."* In requiring "evidence supporting the inference that the defendant's net worth increases are attributable to currently taxable income," does the Court in the *Holland* case mean that there must be proof of a "likely source"? In United States v. Ford, 237 F.2d 57 (2d Cir. 1956), the government argued that the taxpayer, a policeman who was a member of a vice squad, had a "likely source" in that gambling was rampant in his district and he had "opportunities" to receive bribes. The court held that proof of a "likely source" was not necessary because the government established "unreported current receipts from *some* source" and sufficiently negatived the possibility that they came from a non-taxable source because it "thoroughly investigated the defendant's affairs and financial condition and yet failed to uncover any substantial nontaxable receipts."

In United States v. Massei, 355 U.S. 595 (1958), the court said that proof of a "likely source" is not indispensable in a net worth case: "should all possible sources of nontaxable income be negatived, there would be no necessity for proof of a likely source." Short of an admission by the taxpayer, how can the government prove that his net worth increase is not attributable to non-taxable gifts and bequests?

3. *Undeposited cash on opening date.* The problem of the taxpayer's opening undeposited cash is most troublesome, as the Court indicates in the *Holland* case. Claims of vast wealth held in tin boxes are easily fabricated, and yet the newspapers frequently report such caches in the most unlikely places. The use of the taxpayer's prior economic circumstances to discredit such tales is often persuasive, but there are, after all, misers who hoard cash and live like beggars. The taxpayer's prior tax returns are often used, as in *Holland,* to prove that he could not have accumulated a large amount of cash, but the earlier returns — rather than the later ones — may have been false. See Kashat v. Commissioner, 229 F.2d 282 (6th Cir. 1956), concerning a taxpayer who claimed that his mother, who lived in a small village in Iraq, had accumulated over $40,000 in an earthen crock buried in the basement and that after her death he brought much of this with him to the United States in two suitcases. The Tax Court found the taxpayer's story "bizarre" and "fictional." (The government had introduced a "mathematical computation" to show that the claimed amount would have filled only one suitcase, rather than two, as the taxpayer stated; but the report does not show if the dollars used for the experimental computation was as wrinkled and bulky as the dollars which the taxpayer claimed to have obtained in Baghdad by changing Iraqui dinars for dollars.) The Court of Appeals concluded that fraud was not sufficiently established:

> A narrative which in the light of circumstances in other and more backward lands, standards of living and incentives to frugality, differing from our own, less confidence in banks, and more informal procedures in the passing of estates, is not to be transformed by mere fiat, because of its strangeness to an experienced and enlightened American mind, into the clear and convincing evidence, that is the inescapable imperative to a finding of fraud. [229 F.2d at 286.]

On the other hand, with respect to the deficiencies themselves, as distinguished from the fraud penalties, the Court of Appeals held that the Tax Court was justified in finding that the taxpayer had not met his burden of proof. See also, on the question of undeposited cash, Gunn v. Commissioner, 247 F.2d 359 (8th Cir. 1957).

In Goddard v. Commissioner, ¶62,083 P-H Memo T.C., the taxpayer (a government employee) claimed that while he was a student at the Yale Law School, he married a wealthy widow fifty years older than he for a cash payment of over $200,000, which was

kept in the form of undeposited cash for many years in order to preserve the secrecy of an arrangement of which he was ashamed. The court cited some evidence to support his claim and other evidence tending to discredit it, and finally accepted the story:

> The fact that a graduate of the Yale University Law School would be working for the Government in a minor clerical office at a little over $4,000 a year after 39 years of employment would of itself indicate that petitioner had serious personality deficiencies. In our opinion he was a thoroughly disagreeable man to deal with, was overly suspicious and secretive, and was impatient of all authority. He appeared to be still affected by shame over entering into the mercenary transaction connected with his first marriage. In our opinion he sought and found solace for this shame in the secret possession of large amounts of cash. We have concluded that he was an eccentric miser, whose course of conduct would not be that of normal men.

The taxpayer's miserly, secretive, and eccentric personality was evidently accepted not only as support for his claim of undeposited cash, but also as an explanation of a course of conduct during the tax investigation that might, as to normal persons, have been regarded as a badge of fraud.

4. *Living expenses in net worth cases.* Note that the taxpayer's non-deductible expenditures must be added to the increase in his net worth to compute taxable income. The government is able to prove the amount paid for federal income tax, if any; the taxpayer's checks (or his bank's microfilmed records) may aid in reconstructing his living expenses; and sometimes local stores and night clubs are circularized for additional information. See United States v. Costello, 221 F.2d 668 (2d Cir. 1955), where purchases of $60,000-90,000 per year were established by these methods. But in many cases, the government contents itself with an assumed cost of living of $600 per exemption, plus such amounts as may have turned up on an examination of bank records. See McCarthy v. Commissioner, ¶57,194 P-H Memo T.C., where the Tax Court made a downward adjustment in the taxpayer's own statement of his living expenses, on the ground that he (an Internal Revenue agent) had exaggerated his expenses to suppress the fact "that he was a 'cheapskate' and 'skinflint.'"

5. *Reconstructing the income of members of a closely knit family.* How is the net worth method to be applied if assets are commingled by members of a family and cannot be assigned with certainty to the earnings of any one person? In Lias v. Commissioner, 235 F.2d 879 (4th Cir. 1956), the court upheld a "consolidated family net worth" method by which the funds used to finance the family's investments and expenditures were assigned by the government to the taxpayer's wife, brother, mother-in-law, and brothers-in-law to the extent that they had reported income on their returns, the entire balance being assigned to the taxpayer. The taxpayer testified, and his testimony was not credited by the Tax Court. If he had introduced no defense whatsoever, would he be defeated by the presumption of correctness attaching to the Commissioner's action? What if a similar procedure of assigning income was used with respect to the other members of the family, so that the entire unreported income was taxed to each member in turn?

6. *Net worth increases and the taxpayer's accounting method.* In the *Holland* case, the Court says that the net worth method "is not a method of accounting at all, except insofar as it calls upon taxpayers to account for their unexplained income." Does the method assume that the taxpayer's increase in net worth and cash expenditures are to be treated as income in the year in which they occur? If so, how is the method to be applied to a taxpayer on the accrual basis?

7. *"Excess cash expenditure" and "bank deposit" methods of reconstructing income.* Another indirect method of computing taxable income is to analyze the taxpayer's cash expenditures and compare them with his "cash available." Assume, for example, that the taxpayer's records and tax returns report gross receipts of $100,000, and that by examining bank records, interviewing customers, etc., the Internal Revenue Service agent ascertains that $90,000 of this amount was received in checks and that $10,000 was received in cash. Assume further that the checks were deposited by the taxpayer, but not the cash, that he drew checks payable to cash in the amount of $10,000 against these deposits, and that the remaining $80,000 was either saved or paid by check to suppliers or others. So far, the taxpayer's "cash available" is $20,000. If it is now discovered that he spent $50,000 in

cash (including an assumed amount for living expenses not paid by checks), the agent reports $30,000 as "unexplained cash," and assumes that it represents unreported income unless the taxpayer had undeposited cash at the beginning of the period under examination, or had some other non-taxable sources of cash, such as loans, gifts, sales of property for cash, withdrawals from other accounts, etc. For examples of this method, see Marcella v. Commissioner, 222 F.2d 878 (8th Cir. 1955); Cohen v. Commissioner, 176 F.2d 394 (10th Cir. 1949); Caserta v. Commissioner, 199 F.2d 905 (3d Cir. 1952).

Still another method is the "bank deposit" method, which assumes that the taxpayer's bank deposits represent taxable income unless a non-taxable source is shown. See United States v. Doyle, 234 F.2d 788 (7th Cir. 1956); Doll v. Glenn, 231 F.2d 186 (6th Cir. 1956).

Both the "excess cash expenditure" method and the "bank deposit" method require a determination of undeposited cash at the opening of the period, as well as an exclusion of non-taxable receipts, and in these respects they resemble the net worth method.

Rev. 431 (1955); Krasilovsky and Stein, An Evaluation of Net Worth Prosecution of Federal Income Tax Evaders, 7 Okla. L. Rev. 49 (1954); Morag, Some Economic Aspects of Two Administrative Methods of Estimating Taxable Income, 10 Nat. Tax J. 176 (1957).

BECHELLI v. HOFFERBERT

111 F. Supp. 631 (D. Md. 1953)

CHESTNUT, District Judge.

These two cases were tried together as they involved mainly similar questions. The plaintiffs in both suits are suing the Collector of Internal Revenue for alleged overpayment of personal income taxes for the years 1943, 1944 and 1945. After the plaintiffs had duly filed their income tax returns for the respective years the Commissioner of Internal Revenue in due course assessed deficiencies against each of the taxpayers for the respective years including a 5% penalty for alleged lack of due care in preserving bookkeeping records, and interest. . . .

The plaintiffs Bechelli and Giangrandi are naturalized citizens of former Italian nationality who have been engaged as partners in the business of conducting a comparatively small bar and restaurant in Baltimore City at or near 8 E. Preston Street, since 1934. . . . They were partners entitled to an equal division of the profits. The Commissioner determined that the partnership income had been understated for the three years in question respectively as follows:

For the year 1943	$5,130.02
For the year 1944	9,417.62
For the year 1945	764.37

Accordingly he determined deficiency assessments against Giangrandi and wife for understated income in the following amounts:

For the year 1943	$1,488.14
For the year 1944	920.31
For the year 1945	123.78

For Bechelli and wife the income deficiency was stated to be:

For the year 1943	$1,830.11
For the year 1944	1,868.67
For the year 1945	141.40

In all cases the Commissioner added a 5% penalty and interest. In considering the weight and effect of the evidence I accept the now well established rule in such cases that there is a presumption in favor of the correctness of the Commissioner's

determination and the burden of proof, by a preponderance of the evidence, is on the taxpayers to show the contrary.

The principal contention of counsel for the defendant Collector is that the bookkeeping records of the partnership were inadequate and insufficient to enable the Commissioner to determine the correct partnership income.

After hearing all the evidence in this case, including the testimony of Bechelli and Giangrandi and of their bookkeeper or accountant, and an examination of the exhibits in the case, including the partnership books, I conclude that the records of the partnership business as so kept were adequate as a matter of law and were reasonably and substantially correct in view of the nature of the business.

Bechelli and Giangrandi are not very literate or well educated persons but their bookkeeping was done for them by a Mr. Owens, a thoroughly credible witness, not an expert accountant but nevertheless familiar with proper bookkeeping methods from long experience as a clerk to the Deputy Comptroller of the B. and C. Railroad Company. He was a very long time and close friend of the partners and performed the service for them without pecuniary compensation, but was frequently at their place of business. The method of keeping the books was this. At the end of each day Giangrandi (or at times his chief employee in the business) prepared a written itemized statement showing the cash receipts of the day as taken from the tape on the cash register and an itemized statement of the expenses paid for the day for supplies for the bar or kitchen. This daily account of receipts and expenditures was given to Mr. Owens every two or three days and taken home by him and entered in the books for each day, at the end of the month for his own convenience. The daily sheets were not preserved but the receipts for the day and the expenses of the business, the latter separately classified, were recorded in permanent books which were offered in evidence. These books show that such an entry was made for each day of the month. Originally the daily receipts from the bar and from the kitchen were not separated but during the war years, when food rationing was in force, the bar receipts were entered separately from the kitchen receipts. The expenses were classified and separately entered for each day under different headings such as

bar expense, kitchen expense, salaries, miscellaneous supplies, laundry, rent, electricity and telephone, advertising and donations, fixtures and repairs, taxes, license fees, watchman service, miscellaneous.

The testimony of the witnesses satisfied me that the bookkeeping was honestly and fairly done and that the figures entered in the books for gross income and expenses were substantially correct. The critical test as to the sufficiency of the books on their face is whether they are sufficient to calculate the net income. If they are sufficient in this respect then the simpler the books the better. There is no prescribed detail as to just what books or how many must be kept. The question in each case must be determined on its particular facts and in view of the nature, volume and complexity of the business. Here the books as kept do show day by day receipts and expenses. If the figures are correct the books are sufficient to show the net income. Of course the books on their face are not conclusive of the proper figures and their inaccuracy, whether by inadvertence or fraud, can be shown by other evidence. In this case there is no such other evidence; nor is there any evidence even of reasonable suspicion as to the fairness and accuracy of the books as kept. It appears from the evidence of the Internal Revenue Agent who was instructed to examine the books and prepare his report to the Commissioner, that the particular investigation was based primarily on an anonymous letter suggesting that one of the partners, Giangrandi, had recently been buying a sub-

stantial amount of government bonds. When this was suggested to Giangrandi he at once without hesitation and with entire voluntary cooperation with the agent took him to his safe deposit box and showed all the investments that he had which the agent was frankly candid in saying were purchases well within the taxpayer's income. Nor is there any evidence of any other increase in net worth of either of the taxpayers. Both are men of comparatively modest property holdings consisting principally, as to Bechelli, of the ownership of the building in which the restaurant is conducted on the lower floors and, as to Giangrandi, his principal holdings consist of his dwelling and a few thousand dollars of bonds or stock accumulated by the partners respectively during their nearly twenty years of business activity. Nor is there any evidence tending to show large or unusual expenditures on their part. Still further their testimony as witnesses subject to examination and cross-examination very affirmatively tends to indicate that their business and their business records were honestly conducted and kept. They both seemed to me to be entirely credible witnesses.

The chief contention of government counsel as to the alleged inadequacy of the records is that the partnership did not preserve the daily cash register receipts or table checks to support the figures in the books after the entries had been made in the permanent book. Thus it is said that the books consisted only of a cash book and invoices. But in addition thereto the partnership did keep a bank account which was made available to and examined by the revenue agent. No criticism is based on it nor on the sufficiency or accuracy of the invoices for goods purchased. As the larger part of the purchases for the business consisted of whiskey, wine and beer for the bar there were, by virtue of various governmental regulations, records of all such purchases and there is no criticism of the accuracy or completeness of the invoices or expenditures for food and liquor. . . .

The only item which [the agent] undertook to revise was the receipts from the bar. These consisted of the sales of whiskey, wine and beer. The receipts from these three sources or bar revenues were not segregated in the books and I know of no requirement that they should have been. It was the theory of the Agent that the partnership must have made larger profits on the sale of whiskey than the books apparently indicated from the bar receipts. What the agent undertook to do, therefore, was to determine what percentage of the total bar receipts was attributable to the sale of whiskey. It is not contended that this percentage could be determined with real accuracy but the Agent estimated that 64.3% of the bar receipts were for whiskey. He reached this percentage by a comparison of the purchase invoices for all liquor in 1944 which he said showed that 64.3% of all liquor purchased was whiskey. He then assumed without further computation that the same percentage of whiskey was purchased for the bar in 1943 and 1945. And he further assumed that the percentage of whiskey sold at the bar should be the same as the percentage of all liquors bought for the bar in the one year. Having thus estimated the percentages of whiskey, wine and beer sold, he made a further division between whiskey sold in the package (by the bottle or case) and the amount of whiskey sold at the bar by the glass or drink. His computation then proceeded to estimate the gross profit that *should* have been received from the individual sales of the several classes of liquor by applying to each sale a so-called "mark-up" of sale price over cost price. For this mark-up price he assumed, based on information received from a circular issued by Seagram Distillers, that bar whiskey, that is whiskey sold by the drink served over the bar to an individual customer, should be marked up 144%. He further assumed the bottled whiskey should be marked up 26% and that beer should be marked up 100%, while wine and food should not be marked up over cost price at all.

Counsel for the plaintiffs dispute the propriety of the mark-up practice both

as to the amount and as to principle. I am satisfied, however, that where the taxpayer engaged in merchandising does not keep books which if true show the receipts from sales, there is good judicial authority to apply a proper percentage of mark-up for sale price over cost price. The percentage, of course, will vary with the particular business. Gamm v. Commissioner, 5 Cir., 39 F.2d 73; Harvey v. Early, 4 Cir., 189 F.2d 169; and numerous other cases in the Tax Court. But while the use of mark-up is correct in principle in particular cases, I am satisfied that the evidence in this case makes it inapplicable both in principle and in fact, and the figures that are ultimately obtained thereby are based on analyses and assumptions which are contrary to the actualities of the case as disclosed by the evidence. In the first place, it is not at all clear to me that the Agent's percentage figure of 64.3% for whiskey sold is a reliable figure even as a reasonably approximate estimate. Again it seems to have been the assumption that all the whiskey used at or in connection with the bar was paid for at certain minimum prices of not less than 35¢ per drink of a certain quantity. The evidence as to the activities of the business show that the Agent's estimates as to price and quantity were less than he figured. For instance, the evidence of the bartender was that many drinks were sold for 25¢ and not for 35¢ per established quantity and that for much of the time the quantity per drink was more than that estimated by the agent. Again the Agent assumed that beer was sold at 20¢ per glass while the testimony shows that it was sold at 15¢ per glass. Still further evidence was that during the war years the quality of employees for service was poor and there was much incidental loss in spillage, breakage and pilferage. It thus seems clear enough that the basis for revision of the partnership income as made by the Commissioner in this case is far more complex than the simple application of a mark-up of sale price over cost price to determine receipts where quantities of the goods sold are known but the books do not correctly show the actual receipts. In the instant case the revision made is more highly complex in that to determine the quantity sold requires a very detailed analysis of figures based on various assumptions and resulting in estimates only and is applied not to actual known gross quantities sold but only to one kind of one class of liquors sold. Counsel have not referred me to any case which seemingly justifies a revision of this complex character.

I conclude, therefore, both on the law and the facts that the partnership returns were adequate, sufficient and accurate. . . .

The Commissioner imposed a 5% penalty [§6653(a)] for the taxpayers' carelessness in bookkeeping records. It will be noted that this was not a fraud penalty and the government has not charged fraud at all in this case. Counsel for the government states that the 5% penalty was imposed for the failure to preserve inventories in sufficient detail and also because there were no capital or income accounts between the partners themselves. It is not contended that in fact either partner overdrew his half share of the profits. The failure to preserve supporting data such as table checks or particular bar receipts, if any were given, was naturally a matter of dissatisfaction to an expert accountant and it is obvious that if more care had been taken in this respect very probably these suits would have been avoided. I do not think the Commissioner acted arbitrarily or capriciously in imposing the 5% penalty for the reason stated. I have concluded that his action in this respect should not be disturbed. . . .

NOTE

Percentage mark-up and other ratio methods of reconstructing income. Despite its fate in this case, the percentage mark-up method is often used to compute taxable income. See Kurnick v. Commissioner, 232 F.2d 678 (6th Cir. 1956) (liquor store). For

other cases in which the Commissioner recomputed income on the theory that the taxpayer did as well as the average in his occupation or industry, see Roberts v. Commissioner, 176 F.2d 221 (9th Cir. 1949) (taxi driver's tips equal to 10 per cent of gross receipts); Cesanelli v. Commissioner, 8 T.C. 770 (1947) (waiter's tips equal 10 per cent of customers' bills; court rejected taxpayer claim that only 8 out of 10 customers tip, that customers do not tip on liquor, and that 5 per cent was average tip); Delsanter v. Commissioner, 28 T.C. 845 (1957) (gambling casino: average profit on off-track betting, 12 per cent of amount bet; average profit at dice table, 10 times salaries of staff manning the table, etc.).

See also D & H Bagel Bakery, Inc. v. Commissioner, ¶55,100 P-H Memo T.C. (retail bakery income reconstructed by applying average price per dozen bagels to number manufactured, computed by formula based on amount of flour purchased, with allowance for shrinkage from waste, personal consumption by employees, returns of stale merchandise, etc.); Jackson v. Commissioner, ¶53,240 P-H Memo T.C. (tax consultant's income reconstructed by applying average fee per return to total number of returns prepared by him); Cipollone's Sales & Service, Inc. v. Commissioner, ¶56,080 P-H Memo T.C. (income of used car dealer who sold for cash above invoice price reconstructed by ascertaining average amount of cash paid by some purchasers, and assuming this amount was received on every sale); Agnellino v. Commissioner, 302 F.2d 797 (3d Cir. 1962) (income of motel estimated by multiplying number of bed sheets rented from commerical laundry by average charge per room, on assumption that two sheets were used by each guest per night); MacCrowe's Estate v. Commissioner, 264 F.2d 621 (4th Cir. 1959) (reconstruction of abortionist's income by estimating number of abortions performed from number of morphine tablets purchased and multiplying by estimated average fee per case; held, "morphine method" too unreliable to serve as sole basis of decision).

CHAPTER 10

Tax Practice and Procedure

Section A. Procedure in the Internal Revenue Service *

1. *Deficiency Cases*

Selection of tax returns for examination. During the fiscal year 1963, the Internal Revenue Service received 66.5 million income tax returns, 6.1 million declarations of estimated tax, and 327 million information returns. The first administrative step with respect to the 66.5 million tax returns was mathematical verification; of 57.5 million individual returns which were verified, 2.4 million contained errors. About two thirds of these under-calculated the tax liability by a total of about $150 million; the other one third overstated the tax by about $70 million. Following this superficial examination by the Collection Division, the returns go to the Audit Division of the District Director's office, where they are classified: some are accepted as filed; others are assigned to examiners for office audit (the taxpayer being asked to bring or mail pertinent records to the internal revenue office) or for field audit (the examiner going to the taxpayer's office or home for a more detailed examination of his books and records).

The selection of returns for audit is obviously a critical point in the revenue process: although a return that is accepted as filed is not immune from re-examination until the period of limitations has run, it will almost certainly not be pulled out of its resting place unless the examination of a subsequent return or some other such development suggests such action.

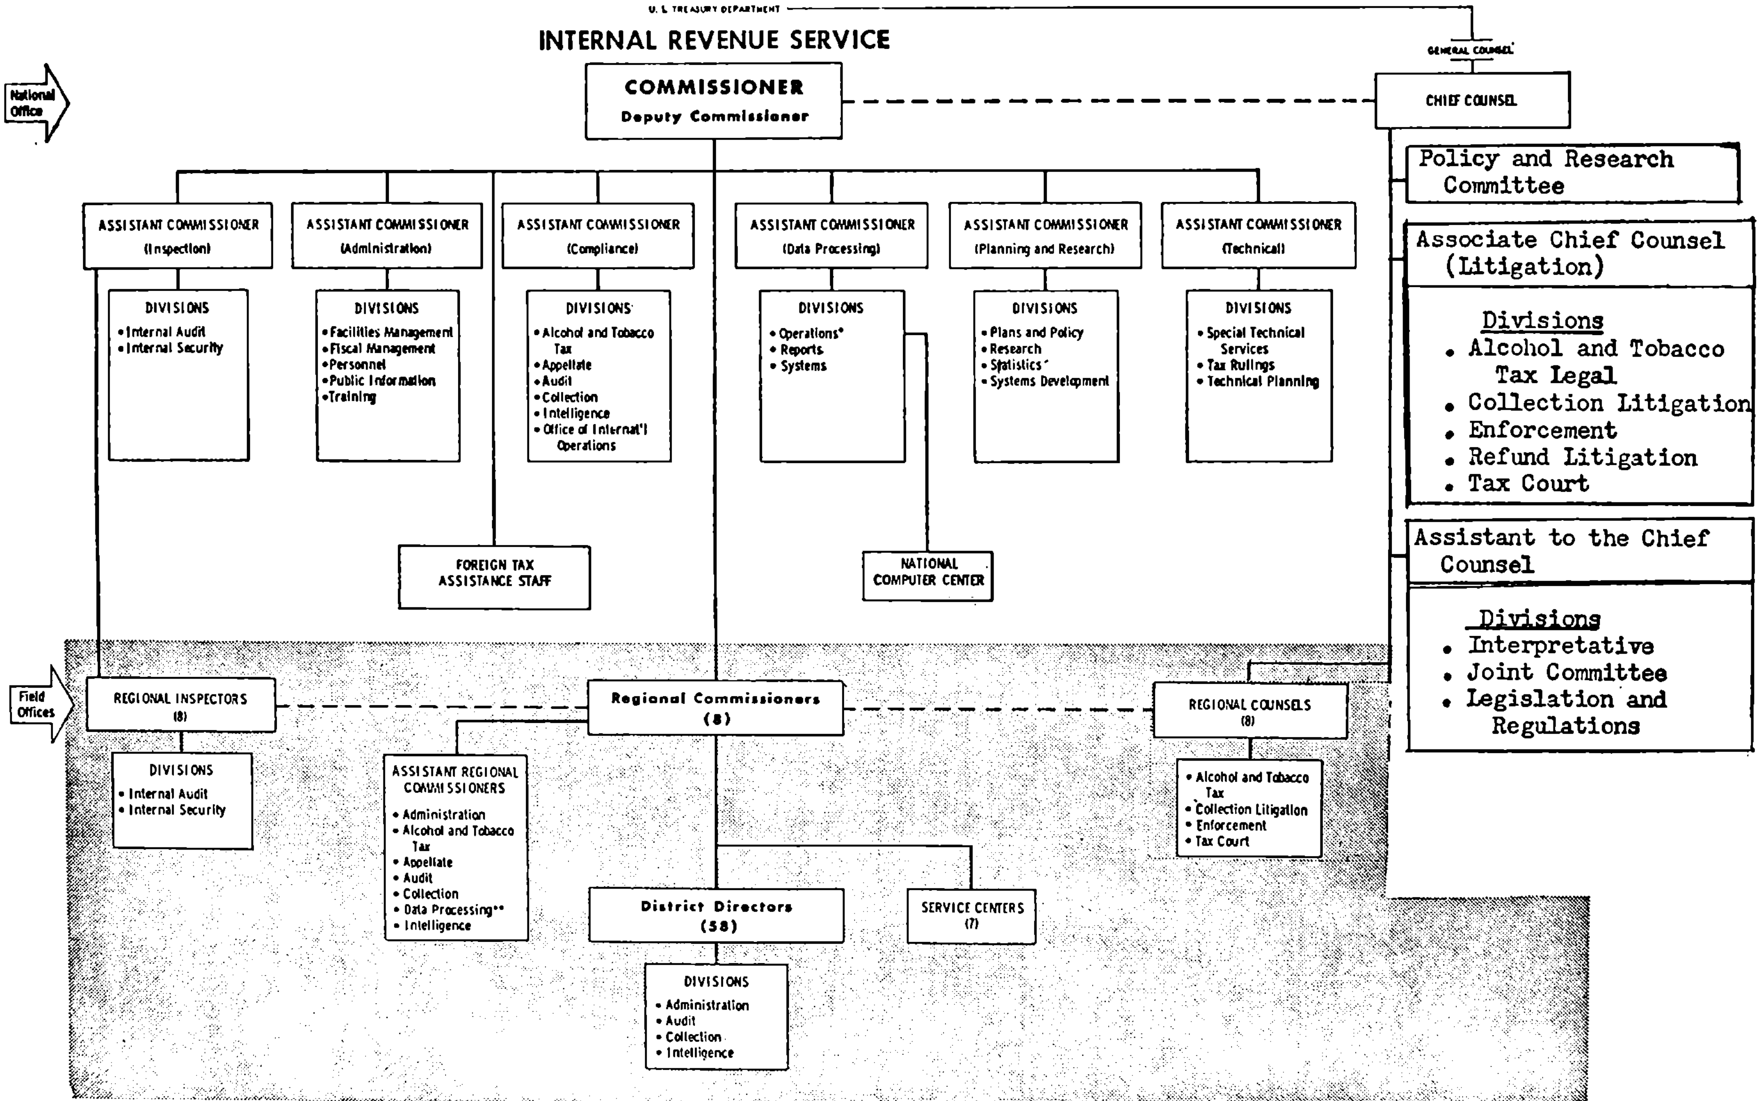
The Service, not surprisingly, does not announce publicly all the criteria determining whether returns will be subjected to audit or not. Returns reporting income above certain levels, altered from time to time in accordance with the agency's workload, are automatically assigned for audit. The returns of gamblers are apparently also "automatics," and it is said that the returns of physicians and of members of family partnerships have also been on the "automatic" list from time to time. The Service also uses various sampling techniques to assign returns for automatic audit. In addition to the "automatics," returns are assigned for audit because of obvious errors on their face (such as the deduction of a loss on the sale of the taxpayer's residence) or because certain items seem to call for investigation (such as traveling and entertainment expenses out of proportion to gross or net income).

Experienced classifiers develop an uncanny ability to pick out returns that will be "productive of revenue" if audited.† One author has said this about the selection of returns for examination:

---

* For an organizational chart of the Internal Revenue Service, see facing page.

† In Announcement 60-88, 1960-45 I.R.B. 29, the Internal Revenue Service denied the widely held belief that revenue agents are rated according to the amount of additional tax they propose for assessment ("production"), and instituted a new program of agent-evaluation designed to correct this misconception. See also Hearings on Treasury-Post Office Appropriations for 1964,



*Including National Computer Center, Martinsburg, W. Va.
**Not in all regions.

Internal Revenue Service Organization

Those returns which are likely to be productive of revenue are set aside for examination. What causes those returns to be selected? The fact that they contain items involving:

— reasonableness of compensation or depreciation;
— bad debts in what are seemingly unreasonable amount;
— various deductions not substantiated or sufficiently explained, such as casualty losses, medical expenses, legal expenses, deductions from salaries, traveling and entertainment expenses, and the like; . . .
— losses from worthless stocks or bonds claimed as ordinary instead of capital losses;
— sales of securities for nominal sums, indicating the possibility of worthlessness in prior years;
— corporate returns which seem to indicate improper accumulation of surplus;
— substantial items of cancellation of indebtedness;
— substantial expense accruals shown in the closing balance sheet which might require the application of the two and a half months' rule [§267(a)(2)].

Generally speaking, most of the items mentioned, will lead to examination only if the amounts involved are substantial. Whether they are substantial is a relative matter, and the amounts must be considered in relation to the other figures on the return.

Aside from the list of items mentioned, which could be expanded indefinitely, there are a few other common matters which should be noted:

— Deductions with three zeros, i.e., in round figures, in cases where the figures would not ordinarily come out this way. Such figures indicate that they are estimates, rather than actual figures.
— The lumping together of items of deduction may give rise to examination. For example, all taxes may be deducted in one sum without any breakdown. Not infrequently it has been found that federal income taxes are included in such a deduction.
— The omission of schedules or substantiation where called for by the return or instructions may give rise to examination. [Arac, How to Effect Settlements at Various Stages, 9 N.Y.U. Inst. on Fed. Taxation (1951) 525, 526-527.]

Information returns. In selecting returns for examination, the Audit Division is not confined to the four corners of the return itself. The 327 million information returns received in 1963, mentioned above, included over 200 million Forms W-2 (employer's statement of wages paid and tax withheld) and about 100 million Forms 1099 (information returns on payments of dividends, interest, and certain other items). (For more on these sources of information, see page 22 supra.) Partnership returns, reporting each partner's share of the firm's profit or loss, and fiduciary returns, reporting the amounts distributed or distributable to beneficiaries, also provide information to be keyed in with the partner's or beneficiary's tax return.

In point of fact, these sources may flood the Audit Division with more information than it can put to use, especially if the taxpayer moves about during the year or if his employer, stock broker, bank, and others use variations of his name (e.g., John T. Miller, J. T. Miller, John Tracy Miller, etc.) in reporting their payments to him. To conquer the formidable task of digesting so much paper, the Internal Revenue Service has adopted an automatic data processing system using magnetic tapes and a nation-wide master file of taxpayers ("Automatic Data Processing," or "ADP"); an essential element in ADP is the use of "taxpayer account numbers" so that John Miller and John T. Miller will be instantly recognizable as the same person, and at the same time will not be confused with any of the thousands of other John Millers who are abroad in the land. Taxpayer account numbers are coordinated with the social security numbering system and for individuals are the same as their social security numbers. The Service instituted its ADP program in

House Committee on Appropriations, 88th Cong., 1st Sess. 378-379 and 387-389, for descriptions by the Internal Revenue Service of its audit program; infra page 901.

1962 in the Atlanta region, and has been gradually extending it to other regions.* See Caplin, The Taxpayer-Identifying Number System: The Key to Modern Tax Administration, 49 A.B.A.J. 1161 (1963); Symposium on Implications of Electronic Data Processing for Tax Administration and Tax Policy, 14 Nat. Tax J. 209 (1961); Conference on Automatic Data Processing, 14 Tax Exec. 115 (1962); Barron, How We Audit from Magnetic Tape, 40 Taxes 83 (1962).

Other sources of information: tax investigations, informers, etc. In addition to information that comes to the Audit Division as a matter of course through formal channels, the Service often hears from disgruntled bookkeepers, embittered ex-wives, business rivals, and other volunteers, especially if the taxpayer has engaged in fraud. Section 7623 authorizes the payment of rewards to informers; during the fiscal year 1963, 4200 claims were received, and $460,000 was paid to 750 claimants. During the same period, the Service collected $12.7 million in taxes, penalties, and interest as a result of information from informers. See Regs. §301.7623-1 (procedure for claiming reward; amount not normally to exceed 10 per cent of taxes, penalties, and fines collected from wrongdoers); Katzberg v. United States, 36 F. Supp. 1023 (Ct. Cl. 1941) (award is discretionary with Treasury). See also United States ex rel. Roberts v. Western Pacific R. Co., 190 F.2d 243 (9th Cir. 1951) (qui tam actions, allowed when government has been defrauded, not permissible in tax cases in absence of official consent under §7401).

Another informal source of information is the press: revenue agents may be stimulated to ask questions on reading that a baby-sitter has stolen $10,000 from a cardboard carton in a physician's clothes closet, that a hotel has been raided for permitting its rooms to be used by prostitutes, or that a small storekeeper has engaged in a very large real estate transaction. Banks are required to report large or unusual deposits or withdrawals of cash; see 31 C.F.R. §102.1 (transactions of $2500 or more in denominations of $100 or higher; transactions of $10,000 or more regardless of denomination; any transaction which in the judgment of the financial institution exceeds the customary conduct of the person involved).

---

* In a statement before the House Committee on Appropriations in 1963, Commissioner Mortimer M. Caplin said of ADP:

"The public attention given to our automatic data-processing system, and our repeated suggestion that now is a good time for taxpayers to set their tax accounts straight, are producing effective results in voluntary disclosure of delinquencies.

"Let me tell you what has happened to illustrate this result. After this publicity about our automatic data-processing system, we began to get reports from district directors about taxpayers coming in to admit past delinquencies and seeking assistance in straightening out their tax affairs. We asked the district directors to send us periodic reports of these cases.

"In calendar year 1962, nearly 1,000 taxpayers voluntarily came forward with amended or delinquent returns attributing their disclosure to this publicity. On 450 of these, the districts did not report dollar value information, but on the remaining disclosures about $3 million in additional taxes was reported. Over half of the $3 million is from self-employed taxpayers, who are becoming increasingly aware of the potentiality of the automatic data-processing system for detecting failures to file. If this many are willing to step up and admit nonfiling, or other evasion, it is reasonable to suspect that many times that number have silently begun paying and reporting more accurately.

"This whole investment in automatic data-processing, besides being essential to efficient administration of the mounting tax return and information document workload, must be regarded as self-liquidating. The additional tax dollars which this system will produce will more than equal the additional cost. As a matter of fact, we expect it to produce considerably more." Hearings on Treasury-Post Office Appropriations for 1964, House Committee on Appropriations, 88th Cong., 1st Sess. 365.

The extent to which persons with extensive business or professional activities can succeed in escaping attention for many years is astonishing. See United States v. Doelker, 327 F.2d 343 (6th Cir. 1964) (certified public accountant with 12 to 14 employees, admitted to practice before Treasury in 1942, filed no tax returns for 12 years despite substantial income; her delinquency was discovered only when she applied for a renewal of her Treasury "card").

In examining a return, the Internal Revenue Service is armed with the power to take the testimony of the taxpayer and other persons having knowledge of the matters to be investigated (e.g., suppliers, customers, employees, banks, brokers, etc.), and to require them to produce their books and records. See §§7602-7606. So far as the taxpayer himself is concerned, the Service's inquisitorial power is limited by the unreasonable search and seizure clause of the Fourth Amendment and by the self-incrimination clause of the Fifth Amendment; and occasionally a taxpayer is able to prevent, or to limit the scope of, an investigation by virtue of §7605(b) (forbidding "unnecessary" investigations and permitting only one "inspection of a taxpayer's books of account" for each taxable year unless the Treasury gives him notice in writing that an additional inspection is "necessary"). The taxpayer's constitutional privileges do not enable him to prevent the Service from taking the testimony or inspecting the books of his customers, employees, bank, brokers, or others, however, and he may not even know that such a third-party investigation is under way. Most of the legal problems in tax investigations arise in fraud cases; and the growing body of law in this area is so intimately bound up with broad issues of constitutional law and criminal procedure as to resist separate examination, at least in brief. See Reisman v. Caplin, 375 U.S. 440 (1964) (procedure in enforcing administrative subpoenas); Colton v. United States, 306 F.2d 633 (2d Cir. 1962) (attorney-client privilege); Tillotson v. Boughner, 225 F. Supp. 45 (N.D. Ill. 1963) (attorney sending $215,500 to Treasury "conscience fund" on behalf of undisclosed taxpayer is subject to subpoena under §7602); Greene v. United States, 296 F.2d 841 (2d Cir. 1961) (no general duty to warn taxpayer of fraud investigation); United States v. Goodman, 190 F. Supp. 847 (N.D. Ill. 1961) (consent to search); United States v. Judson, 322 F.2d 460 (9th Cir. 1963) (subpoena directed to taxpayer's attorney quashed as to various documents, including net worth statements prepared by accountant for attorney's use); United States v. Kovel, 296 F.2d 918 (2d Cir. 1961) (attorney-client privilege); DeMasters v. Arend, 313 F.2d 79 (9th Cir. 1963) (examination of taxpayer's bank records); Reineman v. United States, 301 F.2d 267 (7th Cir. 1962) (assessment unlawful because based on unjustified re-examination of taxpayer's books); United States v. Powell, 325 F.2d 914 (3d Cir. 1963) (re-examination on ground of alleged fraud requires evidence); In re Leonardo, 208 F. Supp. 124 (N.D. Cal. 1962) (records obtained in violation of §7605(b) held not admissible in criminal proceeding); Wall v. Mitchell, 287 F.2d 31 (4th Cir. 1961) (use of subpoena for years barred by statute of limitations); page 118 supra (re "required records" doctrine); Note, The Inquisitorial Powers of the Federal Government in Third Party Tax Investigations, 41 Minn. L. Rev. 800 (1957); Orkin, The Attorney-Client Privilege in Tax Matters, 49 A.B.A.J. 794 (1963].

In the overwhelming majority of audits, of course, the taxpayer is entirely cooperative in making his records available. Except in fraud cases, and not always even then, there is seldom any advantage in seeking to withhold them.

Disposition of cases by Audit Division. If the examiner is satisfied that the return reports the proper amount of tax due, he will recommend that it be accepted as filed and, if this recommendation is approved by a reviewer, the taxpayer will be so notified. If, on the other hand, the examiner believes that an adjustment in favor of either the government or the taxpayer is required, he will inform the taxpayer of his findings and offer him an opportunity to execute an agreement form, ordinarily Form 870. The effect of this form (considered further infra p. 910) is often misunderstood. By signing it in a deficiency case, the taxpayer consents to the immediate assessment of the tax agreed upon, without the issuance of a 90-day letter. (This is the "notice of deficiency" described by §6212, usually called a "90-day letter" because it will be followed by an assessment of the

tax unless the taxpayer files a petition in the Tax Court within 90 days after the notice is mailed to him, as permitted by §6213.) Since the 90-day letter is the indispensable foundation for a petition to the Tax Court, a taxpayer waives his right to go to that court by executing Form 870. He does not, however, ordinarily lose his right to sue for a refund after paying the agreed deficiency. The Commissioner, for his part, waives the right to collect interest on the deficiency for the period commencing 30 days after Form 870 is executed and ending with the assessment itself. Since it may take some time to make the assessment, Form 870 protects the taxpayer against the running of interest during this period, though he need not pay the tax until it is assessed. It should be noted that the Commissioner does not waive his right to increase the deficiency should he later so determine, although if he does so the taxpayer's right to a 90-day letter and thus to file a petition with the Tax Court is reinstated. If an overassessment, rather than a deficiency, is found by the examiner, Form 870 authorizes the Service to proceed to make a refund without discussing the amount further with the taxpayer.

When the examiner explains his findings to the taxpayer, he may not wish to sign Form 870. In that event, the examiner will furnish the taxpayer with a brief written statement of the proposed adjustments and will advise him of his right to discuss the proposed adjustments in an informal conference with the examiner's group supervisor or, more frequently, with a member of a special conference staff in the Audit Division. In keeping with the purpose of the "informal conference," the examiner does not prepare a formal report nor is the taxpayer required to file a brief or other statement, lest positions become crystallized before the dispute has been fully discussed.

If after this informal conference the taxpayer accepts the examiner's conclusions (which may be modified as a result of the conference), he will have another opportunity to sign Form 870, and the examiner's report will be processed as previously described. If the taxpayer does not agree, the examiner prepares a report which (after review) is transmitted to the taxpayer with a so-called 30-day letter. Such a report and 30-day letter will also be sent to the taxpayer if he chose in the first instance to forego an informal conference.

The "30-day letter": protest to the Appellate Division. The 30-day letter sets in motion a somewhat more formal set of administrative maneuvers. Once more, the taxpayer is offered an opportunity to execute Form 870 or to pay the tax without waiting for an assessment. Alternatively, he may file a protest and request a conference with the Appellate Division.

The protest is a more or less elaborate statement of the taxpayer's objections to the proposed adjustments, together with a claim for any adjustments favorable to him that either were not previously discussed or were discussed and rejected. The conference is with the Appellate Division (formerly the "Appellate Staff" and, earlier, the "Technical Staff") of the Regional Commissioner's office, i.e., with a staff independent of the examiner previously dealt with.

If agreement is reached with the Appellate Division as a result of concessions by the taxpayer or the government or both, Form 870-AD is executed. This form is similar to Form 870, described above, but it purports to prevent the reopening of the case "in the absence of fraud, malfeasance, concealment or misrepresentation of material fact, or an important mistake in mathematical calculation." Whether it achieves this degree of finality is examined infra page 910. If no agreement is reached, the Service will issue the 90-day letter already described. During the 90-day period, the taxpayer may file a petition in the Tax Court; if he does so, assessment and collection of the tax will be stayed until the litigation is concluded, unless the government makes a "jeopardy assessment" (infra p. 928). Alterna-

tively, the taxpayer may pay the tax, either dropping the matter at this point or suing for a refund in a federal District Court or in the Court of Claims.

Sometimes the taxpayer who has received a 30-day letter will waive the opportunity to confer with the Appellate Division and ask that the 90-day letter be issued without conference. This may be done on the theory that he will have a better opportunity to settle the case after he has demonstrated his confidence by filing a petition in the Tax Court than while the matter is in a nondocketed status.

For the fiscal year 1963, the Appellate Division handled about 20,000 cases. Almost 12,000 were settled by agreement without issuance of a 90-day letter. Only 5500 resulted in Tax Court petitions, and less than 1000 of these cases went to trial.

The audit process: evaluation. During the fiscal year 1963, 3.5 million individual and 150,000 corporate income tax returns were examined. These examinations led to recommendations for $2.1 billion of additional tax and penalties and $150 million or refunds or credits.

In an effort to test the effectiveness of the audit process and to ascertain how many returns might be "productive of revenue" if audited, the Service in 1949 conducted an "Audit Control Program." The results of part of this program, an intensive examination of a sample of individual returns for 1948, were illuminating. The study indicated that one quarter of all individual returns for 1948 contained errors of $2 of tax or more, 90 per cent of which were in favor of the taxpayer. The percentage of erroneous returns, not surprisingly, steadily increased with income, with 72 per cent of returns reporting $100,000 of income or more containing errors. The average error on returns reporting $100,000 of income or more was over $2500. In the aggregate, individual tax liability was understated by about $1.4 billion, almost 10 per cent of the total liability actually reported on these individual returns. A substantial part of this liability, which if detected would be increased by interest and penalties, escaped discovery because of lack of manpower. See Farioletti, Some Results from the First Year's Audit Control Program of the Bureau of Internal Revenue, 5 Nat. Tax J. 65 (1952); Bureau of Internal Revenue, The Audit Control Program: A Summary of Preliminary Results. See also, on the question of "disappearing income," Holland and Kahn, Comparison of Personal and Taxable Income, in Joint Committee on the Economic Report, Federal Tax Policy for Economic Growth and Stability, 84th Cong., 1st Sess. 313 (1955).

The Audit Control Program also demonstrated that the expense of auditing tax returns is far below its yield: an examination of Forms 1040A for 1948 (adjusted income less than $5000, not more than $100 of which was from wages not subject to withholding and from dividends and interest) would have produced $9400 per year per examiner; and the potential yield rises steadily with the size of the returns being examined, with an examination of returns reporting $100,000 of income or more producing $197,000 of revenue per examiner per year. The Audit Control Program also increased the Service's knowledge of the type of errors made by various classes of taxpayers. The principal error on small returns, for example, was the claiming of unwarranted personal exemptions; this error was rarely found on large returns. Moreover, a taxpayer rarely incorrectly claimed or invented a wife or child, but erroneous deductions for parents and other relatives were common. Thus, out of 43 million small returns listing no dependent relatives (i.e., persons other than a spouse and children), only one out of 53 contained an exemption error; out of 6 million such returns listing dependent relatives, one out of five was erroneous. Errors on small returns would undoubtedly be far more numerous were it not for the optional standard deduction. Only one return out of 250 con-

tained an error in using the standard deduction (presumably such errors as the taking of personal deductions in addition to the standard deduction or errors in computing the standard deduction itself), but out of 9 million returns itemizing personal deductions (taxes, medical expenses, charitable contributions, and interest), 3 million were erroneous.

Economic and statutory changes since the 1949 Audit Control Program no doubt have made many of its specific findings obsolete. At this writing (1964), the Internal Revenue Service is about to make an intensive examination of 100,000 individual returns, selected by a scientific sampling method, to ascertain the types, size, and frequency of mistakes occurring currently, as a guide to its audit program. The Service has not announced whether the findings of this "Taxpayer Compliance Measurement Program" will be made public.

Obviously, intensive examination of returns is not the only remedy — or indeed the best — for many types of errors. In recognition of the frequency of error in dependency claims for dependent relatives, the returns for 1951 and later years have required the taxpayer claiming such exemptions to answer specific questions as to the amount of support contributed by him and by others and the gross income of the dependent. This step should bring home to the taxpayer the requirements for claiming a dependency exemption more effectively than the older return, which required only the relative's name, relationship, and address. Form 1040 was also revised to require an itemization of interest and dividend income, whereas previously a simple total was sufficient.

In his Tax Message of April 20, 1961, President Kennedy asked Congress to require withholding of tax at the source on payments of dividends and interest. In support of the proposal, the Internal Revenue Service estimated that $3.8 billion of dividends and interests were omitted from tax returns in 1959, of which $2.8 billion would have been subject to tax of about $0.9 billion. H.R. Doc. No. 140, 87th Cong., 1st Sess. 34 (1961); see pp. 142-166 for methodology of estimates.

Congress refused to authorize withholding, however, and instead strengthened the provisions for filing information returns by making it mandatory to report the payment of dividends and certain types of interest (primarily interest paid by banks, savings and loan associations, and insurance companies) of $10 or more, and by prescribing civil penalties for non-compliance. See §6042 (dividends) and §6049 (interest payments).

For taxpayers as a whole, information returns, withholding of tax, intelligible forms, and dispersion of instructions for completing the return are basic steps in enforcement. Another simple technique would be to provide in the Code that items like fellowships should be deducted, rather than excluded, from income; the use of a deduction requires the item to be revealed on the return, and thus facilitates the correction of errors, while a statutory exclusion means that the item will not be mentioned on the return, so that there is less chance that the Service will be aware that the taxpayer has misunderstood the scope of the statute. Improvement in such techniques for preventing or easily detecting simple errors would leave the Service's examiners with more time for auditing the complex returns, while scientific studies like the Taxpayer Compliance Measurement Program can sharpen the methods of identifying those returns in need of audit.

No matter how the Service may improve its criteria for selecting returns that will be "productive of income," however, there will remain knotty questions of policy in the assigning of a limited number of man-hours. If the large returns will produce the largest additional revenue per hour of examination, should agents be assigned exclusively to this work, at least until further studies show that neglect of the small returns has increased the errors in them? If physicians characteristically receive and omit larger amounts of cash fees than lawyers, should

the former group be subjected to automatic audit? If tracking down the errors of gamblers and bookmakers is more expensive per dollar of revenue produced than examining the returns of businessmen, how many of a limited group of agents should be assigned to "racketeer" duty? Would a wholly random selection of returns for audit produce a psychological effect upon taxpayers compensating in the long run for initially unrewarding results? In the same vein, would it be desirable that every taxpayer be subjected to at least one examination periodically? How does the audit of one taxpayer, or a group of taxpayers, affect others who hear of the audit? The findings of the 1949 Audit Control Program that are summarized above were based on the assumption that the representative sample disclosed the percentage of error across the board. This may be true for any one year's returns, but what will be the effect on the returns for next year, if, before they are filed, extensive audits have been conducted on last year's returns? Is a door-to-door canvass a desirable technique for detecting persons who fail to file or for frightening them into coming forward?* Will such methods earn the Service the hostility of law-abiding citizens? Are they compatible with democratic government?

An official statement in 1962 of the audit objectives of the Internal Revenue Service, by Commissioner Mortimer M. Caplin, made the following points, among others:

Some 97 percent of our total receipts come from self-reporting by American taxpayers, with the remainder from our direct enforcement activities. Our ability to collect revenue at a cost of less than one-half cent for every dollar raised rests largely on maintaining the highest possible level of voluntary compliance.

While vigorous direct enforcement is vital to attaining effective compliance, previous efforts of the Service were overly oriented toward direct enforcement dollars; and insufficient emphasis and resources had been allocated to encouraging more accurate self-assessment. . . .

In brief, while we are seeking vigorous enforcement and broader audit coverage, special efforts are being made to attain a higher degree of voluntary compliance — and in that way to raise more revenue at a lower cost.

On the other hand, if the new direction is pursued without limitation or reservation, the inevitable drop in direct enforcement statistics becomes so severe that, as a practical matter, it becomes unacceptable. With this in mind, we have recently taken steps to moderate the statistical impact of the new direction while carefully preserving the basic objectives and underlying philosophy.

For example, we have made it clear that the concept does not contemplate an inordinate expenditure of time on simple individual returns or excessive documentation of the examination of more complex returns. We are reexamining the examination mix to the end that low dollar-producing areas will be given adequate attention but will not drain an unwarranted proportion of our effort from areas which produce a high dollar return. With the same objective in mind, we are taking steps to increase the percentage of agent time devoted to examination as contrasted with nonproductive activities. . . .

QUOTAS

Under previous field practice, dollar and case quotas were often imposed on Revenue personnel in administering the tax laws. This led to abuses and resentment, both within and without the Service. Indeed, at my confirmation hearing before the Senate Finance Committee, this issue was raised, and I made clear my strong opposition to a quota approach in the examination of tax returns. Consequently, we have prohibited our group supervisors from maintaining any quota system, and have directed them to evaluate our

* See §7601(a), providing that the Secretary shall, to the extent he deems practicable, "cause officers or employees of the Treasury Department to proceed, from time to time, through each internal revenue district and inquire after and concerning all persons therein who may be liable to pay any internal revenue tax. . . ."

professional enforcement personnel on a much broader basis — overall performance, professional attitude, ability to identify and raise significant tax issues, courtesy, and manner of dealing with taxpayers, contribution to improving voluntary compliance.

We want our personnel to function as professionals and to be productive in the best sense of the word — that is, to make effective use of their time, not only in direct enforcement activities, but in the more important area of strengthening accurate self-assessment.

Quality Audit

We have recently completed a booklet, "Quality Audit Guidelines," to serve as an additional tool for our agents in making detailed audits in appropriate cases. This is not intended as a blanket program. Rather, the depth of an audit is left to the combined judgment of supervisors and agents. Agents obviously cannot undertake the type of audit made by CPA's. Nevertheless, they should be allowed sufficient time, in appropriate cases, to make an adequate tax audit to probe areas of error and tax avoidance and to contribute to better compliance in the future.

When, in the past, agents believed they were under the compulsion of a quota they often made superficial examinations to close cases quickly and to raise direct enforcement dollars. This often led to contempt by practitioners of the practices of the Service, and also to so-called baited returns — with deliberate and obvious errors inserted in returns to lead the agent to focus on those issues alone. As a result of our change in policy, we now have the difficult task of making it clear that quality audits are essentially judgment decisions and that they are not to be applied in all cases. Our quality audit guidelines should help in monitoring this concept, and we are involved in working with field personnel and with supervision at all levels to bring this into proper balance.

Audit Selection Pattern

In the past, the returns selected for audit were focused almost entirely on those estimated to be most productive of additional revenue. As a consequence, many categories of tax returns had little likelihood of ever being examined, even those which contained serious abuse potential. For example, tax-exempt organizations were rarely audited, giving rise to possible abuse which now is attracting public and congressional attention. An important part of our new audit selection program is aimed at the abuse areas and at some sampling of all categories of returns, to assure Americans at all income levels that they may be subject to an examination. Tax-exempt organizations, returns evidencing foreign transactions, returns with so-called hobby losses, etc., are now being given greater coverage and study. At the same time, as is indicated above, we are alert to the impact of this selection program on enforcement results and have taken actions to assure balance between the two objectives.

Abuse Areas

In addition to a broader audit program, we are generally concentrating on curbing areas of ostentatious tax abuse. This may not always be productive of the highest degree of direct enforcement dollars, but we believe it will have a salutary effect on taxpayers at large. By knowing that we are concerned and taking action against these abuses, taxpayers should have a greater degree of confidence in the efficiency and fairness of tax administration. Inventories, travel and entertainment deductions, hobby businesses, charitable gifts through works of art, and so-called charity parties, various security transactions and the like, are all within our efforts aimed at tax abuses.

Taxpayer Assistance and Education

Over recent years assistance to taxpayers in preparing returns and answering tax questions was held to a minimum. We have revitalized this program because the American taxpayer is entitled to this type of aid, and because it contributed to fairer tax administration and better reporting. In brief, with qualified personnel to give accurate answers to tax inquiries and to assist in return preparation, we believe we are getting improved compliance.

During fiscal 1962, taxpayer assistance was increased approximately 20 percent over the previous year. At the same time, we expanded our publication program to include "Mr.

Businessman's Kit" — a collection of forms and tax information which is being delivered to newly formed businesses. But these programs also are being monitored, to be sure that too many of our highest grade agents are not diverted from other important and productive activities.

We have expanded our programs in the public schools and in the colleges to present educational material for our younger people. Our materials have been sharply revised this year, and we are focusing not only on the mechanics of making out tax returns, but on the place of taxation in a democratic system and its significance to the welfare of our country. [Memorandum to Secretary of the Treasury, reprinted in Hearings, on Treasury-Post Office Appropriations for 1964, House Committee on Appropriations, 88th Cong., 1st Sess. 377-379.]

The flow of cases in the Internal Revenue Service and the courts. The tables on the two following pages reflect the flow of tax returns and cases in the Internal Revenue Service and the courts.

NOTE

1. *Relation of Treasury to administration of tax laws.* From time to time suggestions have been made that the task of administering the tax laws be placed in an agency independent of the Treasury Department, partly to immunize administration from the Treasury's views of fiscal policy. See Surrey, A Comment on the Proposal to Separate the Bureau of Internal Revenue from the Treasury Department, 8 Tax L. Rev. 155 (1953). As the *Dobson* case, supra page 862, points out, the Tax Court is the descendant of an office in the Bureau of Internal Revenue.

2. *References.* On audit procedures, see Murphy, Selection of Income Tax Returns for Audit, 12 Nat. Tax J. 232 (1959) (New York state procedures); Farnsworth & Chambers Co. v. Phinney, 178 F. Supp. 330 (S.D. Tex. 1959) (description of procedure in District Director's office).

On compliance, see Groves, Empirical Studies of Income-Tax Compliance, 11 Nat. Tax J. 291 (1958); Stocker and Ellickson, How Fully Do Farmers Report Their Incomes? 12 id. 116 (1959); Gardner, Sources of Farm Income Underreporting: Gross Receipts or Deductions? 12 id. 374; Adler, Taxpayer Compliance in Reporting Dividend Income in Wisconsin, 13 id. 86 (1960).

Taxation 95 (1963); Hobbet and Donaldson, Administrative Procedure in Federal Tax Cases: Opportunities and Bramblebush, 44 Marq. L. Rev. 312 (1961).

See generally Goodrich and Redman, Procedure Before the Internal Revenue Service (American Law Institute, 1957).

The 90-day letter: Brodsky, Adequacy of Notice of Deficiency, 18 N.Y.U. Inst. on Fed. Taxation 997 (1960).

2. *Refund Cases*

Most refunds result from excessive prepayments of the individual income tax, caused by overwithholding by employers (e.g., because a taxpayer failed to inform his employer of a new dependent, worked only part of the year, etc.) and by payments of estimated tax based on overestimates of income. For the fiscal year 1963, for example, refunds of excessive prepayment of tax by individuals amounted to nearly $5.4 billion. (Interest is not due on refunds, under §6611(e), if paid within 45 days of the date on which the return is due, ordinarily April 15.) These refunds are made more or less automatically, and when the returns involved are audited, some require readjustments in the government's favor. This may sometimes mean a revenue loss, if the taxpayer in question is insolvent or cannot be found, and in any event it is expensive to pursue the taxpayer for a refund of the refund.

Work Flow in the Internal Revenue Service and the Courts, Fiscal Years 1963 and 1962

Item	1963	1962
	Returns	
Tax returns filed, total	97,832,977	96,511,219
Individual income	63,679,166	62,487,325
Corporation income	1,291,039	1,231,738
Estate and gift	179,446	168,491
Employment	21,139,735	20,931,576
Excise	3,954,416	4,009,315
Other income	7,589,175	7,682,774
Income, Estate, and Gift Taxes		
Number of returns examined	3,673,939	3,279,670
Returns with adjustments proposed by audit divisions	2,339,658	2,267,735
Disposed of by audit divisions:		
Agreed, paid, or defaulted	2,102,069	2,068,170
Civil cases	Cases	
Total received in appellate divisions	18,326	15,804
Disposed of by appellate divisions:		
Agreed, paid, or defaulted	14,179	12,687
Courts of original jurisdiction:		
Tax Court:		
Total petitioned to Tax Court	5,376	4,749
Dismissed	266	228
Settled by stipulation	4,371	4,890
Settled by Tax Court decision	1,089	882
Decided by Tax Court but appealed	390	403
District courts and Court of Claims:		
Total filed in district courts and Court of Claims	1,407	1,364
Settled in district courts and Court of Claims	764	659
Decided by district courts and Court of Claims	486	505
Courts of appeals:		
Settled by courts of appeals decision	349	414
Favorable to Government	229	268
Favorable to taxpayers	78	113
Modified	42	33
Decided by courts of appeals but reviewed by Supreme Court	6	6
Supreme Court:		
Settled by Supreme Court decision	7	7
Fraud cases[1]		
Received for full-scale investigation in intelligence divisions	2,239	2,200
Disposed of by intelligence divisions:		
Prosecution recommended	994	955
Prosecution not recommended	1,228	1,166
Disposed of by Office of Chief Counsel:		
Prosecution not warranted	151	165
Department of Justice declined	77	77
Prosecutions	1,405	1,143

AMOUNTS OF REVENUE INVOLVED AT EACH LEVEL OF THE TAX SYSTEM, FISCAL YEARS 1963 AND 1962

[Millions of dollars]

Item	1963	1962
Internal revenue collections, total	105,925	99,441
Individual income taxes, total	52,988	50,650
Withholding	38,719	36,246
Other	14,269	14,403
Corporation income taxes	22,336	21,296
Estate and gift taxes	2,187	2,035
Employment taxes	15,004	12,708
Excise taxes	13,410	12,752
Income, Estate, and Gift Taxes		
Civil cases		
Additional tax and penalties in cases disposed of in audit divisions by agreement, payment, or default	1,147	1,042
Additional tax and penalties in cases disposed of in appellate divisions by agreement, payment, or default	179	146
Additional tax and penalties determined by settlement in Tax Court	81	63
Additional tax and penalties determined by Tax Court decision:		
Dismissed	4	4
Decision on merits	26	27
Additional tax and penalties in cases decided by Supreme Court and courts of appeals	9	12
Amount refunded to taxpayers as a result of refund suits	37	25
Fraud cases[1]		
Deficiencies and penalties in cases disposed of in intelligence divisions:		
Prosecution recommended	116	103
Prosecution not recommended	29	22

[1] Includes excise taxes.

Another time when an overpayment of tax may come to the attention of the Service is upon audit of the return. It has already been seen that the examiner may propose an overassessment instead of a deficiency. Or, when he disputes the year in which a particular item is deducted, he may propose a deficiency for one year and an overassessment for another. Likewise, in family partnership or *Clifford* trust cases, a proposed deficiency for one taxpayer may be accompanied by a proposed overassessment for a related taxpayer. The taxpayer may agree to the proposed overassessment, in which event he will receive a refund or credit. If he objects to the overassessment (either because he thinks it is too small or because it is linked to a deficiency that he does not accept), he may obtain an informal conference, at which the examiner's action may be either upheld or modified.

It is very important to note that there will be no 90-day letter, or opportunity to go to the Tax Court, on an overassessment. That court has jurisdiction only when a deficiency is asserted. To be sure, when a deficiency has been asserted, the Tax Court may redetermine the entire tax liability for that year and thus find that the taxpayer has overpaid. It cannot, however, take jurisdiction of a year for which no deficiency has been asserted. Thus, whenever the taxpayer feels that he

has overpaid by more than the overassessment proposed by the Service, his only recourse is a claim for refund and, if it is rejected or not acted upon, a suit in a United States District Court or in the Court of Claims. Moreover, just as the taxpayer may "agree" to a deficiency by signing Form 870, pay the resulting assessment, and then sue for a refund, so he may "accept" an overassessment on Form 870, receive the refund or credit so calculated, and then sue for any additional refund to which he may be entitled.

A tax refund claim may also arise because the taxpayer, after filing his return and paying the tax reported, finds on his own initiative that he miscalculated his liability. It will be necessary for him to file a claim for refund, since until such a claim has been rejected by the Service or has been before the Service for six months without action, he may not sue in the District Court or in the Court of Claims. Since the Tax Court, as already explained, has jurisdiction only when the Service asserts a deficiency, the taxpayer in the situation just described cannot go to the Tax Court.

Thus, whether the taxpayer is acting on his own initiative or is objecting to an overassessment as too niggardly, he must file a refund claim with the Service. Such a claim has a double aspect: It sets in motion administrative procedure (substantially the same as in deficiency cases) to consider the merits of the taxpayer's position; and it is the indispensable first step toward litigation.* The taxpayer with a possible refund claim must think carefully before he sets the Service in motion, since the return itself and possibly returns for other years as well, not just the refund claim, will come under scrutiny. It may be better to let sleeping dogs lie.

If a refund claim is to be filed, it must be drafted with a realization that it is a kind of pleading for any subsequent litigation and will, therefore, restrict the taxpayer in the issues that may be raised later. See §7422(a). In this respect, refund procedure is quite different from deficiency procedure. The taxpayer may resist a deficiency in the Tax Court on any ground he wishes, whether it has been argued in the Service or not. Indeed, when an examiner first proposes a deficiency, the taxpayer may request that the 90-day letter be issued without further ado and then file his petition in the Tax Court without having previously informed the Service why he thinks the deficiency is improper. In suing for a refund, however, he is confined by the limits he himself set out in the claim filed with the Service. See Sicanoff Vegetable Oil Corp. v. United States, 181 F. Supp. 265 (Ct. Cl. 1960), and cases there cited.

NOTE

1. *Deficiencies, refunds, and sleeping dogs.* Once a taxpayer gets into the Tax Court, the government may move in its answer or by an amended answer to increase the deficiency claimed in the 90-day letter, even though this involves the introduction of other issues; and the taxpayer may win on the deficiency asserted in the 90-day letter, but lose on the other items and thus find himself compelled to pay a deficiency larger than was originally claimed. Moreover, the government's answer or amended answer can raise additional issues after the statute of limitations for assessing a further deficiency for the year has run. See Raskob v. Commissioner, 37 B.T.A. 1283 (1938), where the 90-day letter claimed a deficiency of less than $16,000, and the government's answer increased the deficiency by more than $1,000,000.

In the District Court, however, while a taxpayer cannot recover a refund on one item if the government can establish there was an offsetting error for the same year in an equal or larger amount, there can be no money judgment against him unless the government

* On rare occasions, however, the taxpayer may be able to sue in the Court of Claims on an account stated without filing a claim for refund. See Note, 56 Harv. L. Rev. 115 (1942).

can still assess a deficiency. Thus, if the taxpayer who has a valid claim for refund waits until just before the expiration of the period of limitations, he may file his claim knowing that there is no longer enough time for the government to assess a deficiency. If there are other items as to which he may have underpaid for the year in question, they can be employed by the government as offsets (if they are resolved against the taxpayer), but they cannot be used for a money judgment against him. This technique might have been effective in Bush v. United States, 109 F. Supp. 254 (Ct. Cl. 1953), where a claim for refund in an apparently small amount was filed before the statute of limitations had run on the assessment of deficiencies, and where an audit brought on by the refund claim led to the assessment of deficiencies of about $1,600,000.

2. *Recovery of erroneous refunds.* Neither the allowance of a refund claim nor its payment bars the subsequent timely assertion of a deficiency. Burnet v. Porter, 283 U.S. 230 (1931). This is especially important in the case of administrative refunds resulting from an alleged overpayment by withheld taxes or amounts paid on estimates, where the refund is ordinarily made, as explained supra page 903, before audit of the return. Milleg v. Commissioner, 19 T.C. 395 (1952). Moreover, even though it may be too late to assess additional tax, an erroneous refund may be recovered by suit by the United States within two years after it was made or, in the case of a refund induced by fraud or material misrepresentation, within five years. §§7405 and 6532(b).

3. *References.* Pomeroy, Refund Claims: Litigation, 21 N.Y.U. Inst. on Fed. Taxation 129 (1963): Clark, Practical Considerations in Obtaining Rulings and in Filing Claims for Refund, 1957 Tulane Tax Inst. 257, 293; Stark, Claims for Refund of Federal Taxes, 41 Iowa L. Rev. 496 (1956).

3. *Finality in the Administrative Process*

a. STATUTES OF LIMITATIONS

If a return is not subjected to audit or if an examiner recommends that it be accepted as filed, the taxpayer will rarely hear anything more about it. Unless he enters into a closing agreement or compromise (rarely used procedures discussed infra), however, only the running of the statute of limitations will supply final protection against a re-examination of the return. To the effect that the statute of limitations in tax cases not only bars the remedy, but also extinguishes the liability (contrary to the usual rule applicable to limitations), see Diamond Gardner Corp. v. Commissioner, 38 T.C. 875, 879-881 (1962).

The principal statute of limitations is §6501(a), providing that the assessment must be made within three years after the return has been filed. No suit for collection of the tax without assessment may be commenced after this period has expired. To the three-year period provided by §6501(a), there are certain exceptions, of which the most important are:

(a) *Twenty-five per cent omission from gross income.* If the taxpayer omitted from gross income more than 25 per cent of the amount reported on the return, the period for assessment is extended to six years. §6501(e)(1). The 1954 Code provides a partial definition of the term "gross income" for the extended statute of limitations; for the difficulties under the 1939 Code with this term, which are partly obviated by the 1954 changes, see Richards, The Extended Statute of Limitations on Assessment, 12 Tax L. Rev. 297 (1957).

(b) *No return.* If the taxpayer failed to file a return (even though the omission was innocent), there is no period of limitations. §6501(c)(3). For the meaning of "return," see page 947 infra.

(c) *Fraud.* There is no statute of limitations on a taxable year for which the taxpayer filed a false or fraudulent return. §6501(c)(1); see Lowy v. Commissioner, 288 F.2d 517 (2d Cir. 1961) (fraud on one item opens the way to assessment

of a deficiency for all items). The fact that the taxpayer's civil liability (including liability for fraud penalties) is not barred by the statute of limitations if he files a false or fraudulent return should not be confused with the question of a statute of limitations on a criminal prosecution, for which the period of limitations is either six years (attempting to evade tax, assisting in preparation of false return, willful failure to pay tax or to file return, etc.) or three years (certain other offenses). §6531.

(d) *Waiver: Form 872.* If the taxpayer and Commissioner consent to an extension of the time before its expiration, the period will be extended as agreed. §6501(c)(4). Form 872 is ordinarily used for this purpose, and will often be proffered to the taxpayer when the statute of limitations is about to run if an audit is in progress or if decision on some matter is being held in abeyance pending litigation in another case. If the taxpayer refuses to consent to an extension of the time for assessment, the Service may make an assessment or a jeopardy assessment without waiting longer; see also Cincotta v. Commissioner, ¶60,045 P-H Memo T.C. (use of 90-day letter to extend statute of limitations on the taxpayer's failure to sign Form 872).

(e) *Request for prompt audit.* In some circumstances, a taxpayer who wishes to shorten the period of limitations (e.g., the executor of a decedent's estate who wants to have the estate's income tax liability determined before distributing its assets to the beneficiaries; a corporation that is about to liquidate) may ask for a "fast audit" under §6501(d), in which event any assessment must be made within 18 months after the request.

Once a tax has been assessed, the Internal Revenue Service has six years to collect it by distraint or suit. §6502(a).

See generally Levin, Civil Liability and the Statute of Limitations, 12 N.Y.U. Inst. on Fed. Taxation 891 (1954); Burns, Statute of Limitations in Fraud Cases, id. at 43; Emmanuel, The Effect of Waivers in Federal Income Tax Cases, 3 U. of Fla. L. Rev. 176, 184-191 (1950).

b. CLOSING AGREEMENTS

Section 7121 of the 1954 Code, relating to closing agreements, is substantially the same as §3760 of the 1939 Code.

Pursuant to §7121, the government will sometimes enter into a "closing agreement" to fix the taxpayer's liability for a past year or to determine the tax consequences of a specific item for a past or future year. Under §7121, such a closing agreement is "final and conclusive" except for fraud, malfeasance, or misrepresentation of a material fact. The Regulations, however, provide that an agreement with respect to a future period must also provide that it is subject "to any change in, or modification of, the law enacted subsequent to the date of the agreement." Regs. §301.7121-1(c). Presumably the reference to the "enactment" of a law means that a change in the applicable statutes will permit a re-examination, but not a change in judicial interpretation.

The Regulations state that a closing agreement may be entered into "in any case in which there appears to be an advantage in having the case permanently and conclusively closed, or if good and sufficient reasons are shown by the taxpayer for desiring a closing agreement and it is determined by the Commissioner that the United States will sustain no disadvantage through consummation of such an agreement." The current Regulations give only one example of an appropriate application for a closing agreement (to fix the basis under §1053 of

property acquired before March 1, 1913, in anticipation of a sale),* but an earlier announcement set out the following:

(a) Estates, where the fiduciary desires a closing agreement in order that he may be discharged by the court;
(b) Trusts, or receiverships, where the fiduciary desires a final determination before distribution is made;
(c) Corporations in process of liquidation or dissolution which desire closing agreements in order to wind up their affairs;
(d) Cases where, in connection with the taxpayer's financial affairs, creditors demand authentic evidence of the status of the taxpayer's tax liability;
(e) Cases where taxpayers desire to follow the consistent practice of closing their returns from year to year. [Mim. 6383, 1949-2 C.B. 100.]

While the closing agreement is theoretically a useful technique for both the taxpayer and the government, the finality which it produces leads to extreme caution by the officials who must pass on an application for a closing agreement. In the fiscal year 1962, for example, the Service disposed of only 9 applications relating to prospective transactions and 65 relating to completed transactions.

C. COMPROMISES

Section 7122 of the 1954 Code, relating to compromises, is substantially the same as §3761 of the 1939 Code.

Although nothing in §7122 requires it, compromises are used primarily in cases of doubtful ability to pay, whether the liability of the taxpayer is disputed or not. For examples of intra-office memoranda of the Internal Revenue Service recommending acceptance or rejection of offers in compromise, see Exhibits A and F, Rev. Rul. 117, 1953-1 C.B. 498, which illustrates the government's emphasis on the forced sale value of the taxpayer's assets. Exhibit F also contains a so-called "collateral agreement," under which the taxpayer offers to pay not only a fixed amount to compromise his tax liability, but also an additional amount contingent on his future income. By such a collateral agreement the taxpayer may also agree to give up some tax benefit, present or potential, to limit his salary from a controlled corporation, etc., as part consideration to the government for accepting the offer in compromise.

See Hamilton v. United States, 324 F.2d 960 (Ct. Cl. 1963) (formal requirements for compromise); United States v. McCue, 301 F.2d 452 (2d Cir. 1962) (re compromise of criminal liability).

In the fiscal year 1963, the Service accepted about 800 offers in compromise of liability for income, excess profits, estate and gift taxes, and about 1650 offers in such cases were rejected or withdrawn. The accepted offers totaled about $4 million against claimed liabilities of about $16 million. Accepted compromises are open to public inspection. Regs. §301.6103(a)-1(j).

d. FORM 870 AND OTHER SETTLEMENTS

Form 870 is used to "settle" a tax case when it is in the Audit Division of the District Director's Office. By executing this form (entitled "Waiver of Restrictions on Assessment and Collection of Deficiency in Tax and Acceptance of Overassessment") in a deficiency case, the taxpayer waives the restrictions of §6213(a), which means that he loses his right to contest the deficiency in the Tax Court and consents to an immediate assessment and collection of the agreed deficiency. See United States v. Price, 361 U.S. 304 (1960). (In an overassessment case, Form 870 authorizes the government to process the agreed overassessment, for refund or credit to the taxpayer. Presumably the government could make the refund or credit even if the taxpayer did not agree to it.) Form 870 also provides:

> The execution and filing of this form . . . will expedite the adjustment of your tax liability as indicated above. It is not, however, a final closing agreement under section 7121 of the Internal Revenue Code of 1954, and does not, therefore, preclude the assertion of a deficiency or a further deficiency in the manner provided by law should it subsequently be determined that additional tax is due, nor does it extend the statutory period of limitation for refund, assessment, or collection of the tax.

Both the government's procedural regulations and the cases hold that Form 870 is no more than a waiver by the taxpayer of the procedural right to contest the deficiency in the Tax Court, and that it does not prevent him from suing in the District Court or Court of Claims for a refund of the deficiency after it has been assessed and collected. Regs. §601.105(b)(4), 1955-2 C.B. 921, 930; Payson v. Commissioner, 166 F.2d 1008 (2d Cir. 1948); but see Cain v. United States, 255 F.2d 193 (8th Cir. 1958) (taxpayer barred by equitable estoppel from claiming a refund after executing Form 874, despite inclusion of provision — identical with reservation in Form 870 — that the government may assert a further deficiency). In practice, the execution of Form 870 ordinarily closes the case so far as the government is concerned, despite the reservation of the right to assert an additional deficiency.

If a tax case is "settled" with the Appellate Division, Form 870-AD is used, rather than Form 870. By executing Form 870-AD in a deficiency case, the taxpayer "offers" to waive the restrictions of §6213(a) and to consent to the assessment and collection of the agreed deficiency. The form goes on to provide:

> This offer is subject to acceptance by or on behalf of the Commissioner of Internal Revenue. It shall take effect as a waiver of restrictions on the date it is accepted. Unless and until it is accepted, it shall have no force or effect.
>
> If this proposal is accepted by or on behalf of the Commissioner, the case shall not be reopened in the absence of fraud, malfeasance, concealment or misrepresentation of material fact, an important mistake in mathematical calculation, or an excessive tentative allowance of a net operating loss carry-back; and no claim for refund shall be filed or prosecuted for the year(s) above stated other than for the amounts of overassessment shown above and amounts attributed to a claimed deduction for a net operating loss carry-back provided by law.
>
> NOTE. — The execution and filing of this offer will expedite the adjustment of your tax liability. It is not, however, a final closing agreement under section 7121 of the Internal Revenue Code of 1954, nor does it extend the statutory period of limitation for refund, assessment, or collection of the tax.

Note that Form 870-AD provides that "the case shall not be reopened" except for fraud, important mathematical mistake, etc., and that "no claim for refund shall be filed or prosecuted." The enforceability of these commitments has been frequently litigated. The case that follows is concerned with Form 870-TS, a

predecessor of the current form ("TS" meaning Technical Staff, the forerunner of the present Appellate Division). Form 870-TS also contained an agreement by the taxpayer to execute a closing agreement under §3760 of the 1939 Code (1954 Code, §7121), however, which is not included in Form 870-AD.

GUGGENHEIM v. UNITED STATES

77 F. Supp. 186 (Ct. Cl. 1948), cert. denied, 335 U.S. 908, rehearing denied, 336 U.S. 911 (1949)

Before JONES, Chief Justice, and HOWELL, MADDEN, WHITAKER, and LITTLETON, Judges.

LITTLETON, Judge.

Plaintiff sues to recover $10,093.11 income tax plus certain interest, alleged to have been overpaid for 1938 and 1939 by reason of the failure of the defendant to allow deductions for certain nontrade and nonbusiness expenses which were not allowable at the time plaintiff's returns were audited but which plaintiff claims are allowable now by reason of [§212]. The defense is not only on the merits but also on the ground of a settlement agreement entered into by the parties at the time deficiencies were determined for the two years.

Plaintiff filed returns for 1938 and 1939 which disclosed net income in the respective amounts of $40,509.41 and $87,245.93, and tax liability in the respective amounts of $6,050.36 and $24,103.08. In the return for 1938 plaintiff claimed deductions of $12,959.39 for hurricane loss to landscaped trees, $19,444.10 for insurance premiums paid, and $3,000 for legal fees paid; and in the return for 1939 claimed deductions of $4,552.62 for legal fees paid. After an examination by a revenue agent substantially all of the deductions mentioned were recommended for disallowance with a resulting deficiency for each year. Plaintiff protested the proposed disallowance and thereafter conferences were held with plaintiff's representatives. A further investigation was made by a revenue agent. As a result of these discussions, the representatives of the Commissioner agreed to recommend for allowance a deduction in the amount of $8,000 for the hurricane loss in lieu of the $12,959.39 claimed by plaintiff. Plaintiff abandoned his contention that the other deductions claimed were allowable. The Commissioner's representatives also agreed to make an adjustment in plaintiff's favor on account of certain dividends.* The result reached by the parties was an agreed net income for 1938 of $67,655.02 and for 1939 of $91,297.16.

Shortly thereafter, plaintiff's tax liability was recomputed for 1938 and 1939 on the income agreed to, showing deficiencies for each year. On May 5, 1941, the Commissioner's representative advised plaintiff that "your [plaintiff's] proposal for settlement" of the tax liability on the basis agreed upon had been accepted and enclosed a document, set out in finding 6,† which provided for a waiver of the statutory restrictions on the assessment and collection of the tax and also provided inter alia that upon execution by plaintiff and approval by the Commissioner

> the case shall not be reopened nor shall any claim for refund be filed or prosecuted respecting the taxes for the years above stated [1938 and 1939], in the absence of fraud,

* These adjustments apparently amounted to about $250 for 1938 and about $500 for 1939. — ED.

† The document was substantially the same as the current Form 870-AD (supra p. 910), except that the taxpayer also agreed "upon request of the Commissioner to execute at any time a final closing agreement as to the tax liability, on the foregoing basis, for said year(s) upon [under?] the provisions of [§7121]." — ED.

malfeasance, concealment or misrepresentation of material fact, or of an important mistake in mathematical calculations.

Plaintiff signed the formal agreement May 6, 1941, and it was formally accepted on behalf of the Commissioner on the same day (findings 7 and 8). The deficiencies agreed upon were paid by plaintiff on June 2, 1941.

On November 19, 1942,* after the enactment of the Revenue Act of 1942, which contained in Section 121 thereof provisions for the allowance of certain nonbusiness expenses as deductions [1954 Code, §212] and made such provisions retroactive for the years 1938 and 1939, plaintiff filed claims for refund for those years (findings 10 and 11), claiming that substantially the same deductions, except in the case of the hurricane loss, which had been disallowed by the Commissioner, should now be allowed. On December 29, 1943, the claims were disallowed by the Commissioner on the ground that the execution by plaintiff of the document, set out in finding 6, and its acceptance by the Commissioner precluded the allowance of the claims for refund (finding 12). This suit followed.

While the defendant is now contesting the allowance sought both on the ground of the deductibility of the items in question under [§212], and on the finality of the agreement executed by the parties, we find it unnecessary to consider the first defense since we are of the opinion that plaintiff is precluded under the second defense from maintaining suit on these claims. At the time this agreement was made and executed there was a substantial controversy between plaintiff and the Commissioner as to the former's correct tax liability for 1938 and 1939. Prior to the time the document was executed, the Commissioner had disallowed not only the items involved in this suit but also another substantial item. After protest by plaintiff and conferences both in Washington and New York City, and after at least two investigations had been made by a revenue agent, the parties reached an agreement as to plaintiff's correct net income under the law as it then existed. Whether the agreement was reached as a result of a compromise, or as a result of concessions by both parties, is not important. The conclusion is inescapable from the evidence that there was a meeting of minds as to the final disposition of the case. When that occurred, the Commissioner recomputed plaintiff's tax liability and transmitted to plaintiff the settlement document wherein was set out a deficiency for each of the years. In transmitting that document to plaintiff at that time, the Commissioner stated that he was accepting plaintiff's "proposal for settlement," and also referred to the document as an "agreement" when executed by plaintiff and approved on his behalf. In returning the document after execution, plaintiff likewise referred to it as an "agreement." See finding 7.

We are convinced from the facts that the document which plaintiff executed and the Commissioner accepted was not a mere waiver of restrictions on assessment and collection of a deficiency of tax on usual Form 870, as plaintiff seems to urge. That form was used as a starting point but important additions and alterations were made in it to incorporate the full terms of the agreement.† This was done "as a basis for closing the case." By that agreement the parties did much more than agree on the amount of plaintiff's tax liability, as is shown by the two paragraphs which were added to the stated form which they used as a vehicle to set up their agreement finally closing the case.

In language which we think is too clear to be misunderstood and which would be rendered meaningless if plaintiff's interpretation were to prevail, the agreement states:

* See §6511(a) for the period of limitations on the filing of a claim for refund. — Ed.

† The changes in effect converted Form 870 into Form 870-TS. — Ed.

If this proposal is accepted by or on behalf of the Commissioner, the case shall not be reopened nor shall any claim for refund be filed or prosecuted respecting the taxes for the years above stated, in the absence of fraud, malfeasance, concealment or misrepresentation of material fact, or of an important mistake in mathematical calculations.

There is no contention that there was any fraud, malfeasance, concealment, misrepresentation, or mistake in calculation. How this could be interpreted other than to preclude plaintiff from filing a claim for refund or prosecuting this suit is difficult to understand.

Plaintiff says, however, that the agreement is lacking in mutuality for the reason that the Commissioner was left free to reopen the case and assess further deficiencies. We do not so interpret the document. It is true, as will be noted from the document set out in finding 6, that on the prescribed Form 870 there was a provision which expressly stated that the execution of the agreement "does not . . . preclude the assertion of a further deficiency in the manner provided by law should it subsequently be determined that additional tax is due," but when the parties prepared and executed the agreement here involved that provision was stricken. A reasonable interpretation of the entire document is that what the parties sought to do was to close the case in such a manner that it could not be reopened either for a refund or for the assessment of deficiencies except in the case of fraud, malfeasance, etc. We see no reason for interpreting the document otherwise. That a closing agreement under [§7121] might have been entered into is not conclusive on the question whether the results which the parties desired to accomplish could not as well have been accomplished through the agreement which they here executed.

The case of Botany Worsted Mills v. United States, 278 U.S. 282, upon which plaintiff relies, involved an agreement of settlement which the Court held did not preclude the reopening of the case upon a claim for refund.* However, that case is easily distinguishable from the case at bar. In the *Botany Worsted* case the agreement was informal and oral in character and was agreed to only by subordinate officials in the Internal Revenue Bureau. There was no formal approval by or for the Commissioner. Many of the elements in the formal agreement involved in this case were lacking in that case. Moreover, we do not understand that case to hold, as plaintiff contends, that under no circumstances will a closing agreement be held binding unless executed in accordance with [§7121]. In discussing the finality of such agreements the Court said:

And, without determining whether such an agreement, though not binding in itself, may when executed become, *under some circumstances,* binding on the parties by estoppel, it suffices to say that here the findings disclose no adequate ground for any claim of estoppel by the United States. [Emphasis supplied.]

At the time the agreement in this case was executed the statute had not run on the collection of further deficiencies, but when the claims for refund were filed the statute had run. It would obviously be inequitable to allow the plaintiff to renounce the agreement when the Commissioner cannot be placed in the same

* In the *Botany Worsted Mills* case, the Supreme Court said that the existence of a statutory procedure for compromising tax liability (now §7122) precluded an alternative method of attaining finality. (The statutory provision for closing agreements, now §7121, was not enacted until several years after the years involved in the *Botany Mills* case.) The statute on compromises at that time required action by the Commissioner of Internal Revenue, with the advice and consent of the Secretary of the Treasury, and an opinion by the Solicitor of Internal Revenue; this formality, said the Court, demonstrated that Congress "did not intend to intrust the final settlement of such matters to the informal action of subordinate officials in the Bureau." Finding that the agreement was not binding on the government, the Court held that the taxpayer was also free to repudiate it. — Ed.

position he was when the agreement was executed. A clear case for the application of the doctrine of equitable estoppel exists and should be applied. . . .

Some support for plaintiff's position is found in Joyce v. Gentsch, 6 Cir., 141 F.2d 891, 895, where a similar Form 870 was involved and plaintiff was allowed to reopen the case. However, in that case the portion stricken from the form in this case was not stricken, and the Court in its opinion stated: "The right to assess a further deficiency was expressly reserved."

In Ross v. United States, Ct. Cl., 75 F. Supp. 725, we held that where a taxpayer files a petition with the Tax Court and a judgment thereon becomes final, he cannot thereafter file a claim for refund and obtain the benefit of the retroactive statute with which we are concerned even though the statute has not run on the filing of a claim for refund. In this case instead of filing a petition with the Tax Court, plaintiff waived his right to go to the Tax Court, consented to the assessment of the deficiencies, and in effect entered into an agreement which effected a finality similar to that which would have obtained had he gone to the Tax Court. . . .

Plaintiff is not entitled to recover and the petition is dismissed. It is so ordered.

HOWELL, MADDEN, and WHITAKER, Judges, and JONES, Chief Justice, concur.

NOTE

1. *Form 870 and estoppel.* What was the basis for the "equitable estoppel" that, in the opinion of the court, distinguished this case from the *Botany Worsted Mills* case? If the hurricane loss should have been totally disallowed, was it too late for the Commissioner to use this item as an offset in the refund action? If setting off the hurricane loss against the §212 deductions led to a net deficiency, could it be collected by the government? See page 906 supra.

See Daughette v. Patterson, 250 F.2d 753 (5th Cir. 1957), cert. denied, 356 U.S. 902, also holding a Form 870-TS binding on the ground of equitable estoppel. For another view of the estoppel argument, see Davis v. Commissioner, 29 T.C. 878 (1958):

> Among the elements necessary to the establishment of estoppel is a misrepresentation of fact on the part of the person sought to be estopped, a justified reliance upon that misrepresentation by the person to whom it is made, and a detriment sustained by the latter. We doubt that petitioner's undertaking in a document similar to Form 870-TS not to file or prosecute claims for refund, which was not legally binding on him and was known by respondent not to be an enforceable obligation, could be considered as a misrepresentation of fact upon which respondent could justifiably rely or did rely. We pass these elements, however, and address ourselves to the element of detriment on the part of respondent.
>
> The detriment shown in this proceeding is merely the running of the statute of limitations with regard to possible additional deficiencies relating to the years 1944 and 1945. We are not informed as to what those deficiencies, if any, might have been. It is true that some concessions were made by respondent in arriving at the agreed deficiencies set forth in the Form 870-TS, but we may not assume that they were made improvidently or without full legal and factual justification. No indication is given that any recoupments with regard to the claims for overpayment are urged by respondent, although . . . we have jurisdiction over . . . claims of recoupment even though relating to matters barred, so far as a determination of deficiency is concerned, by the statute of limitations.

Even if there is no affirmative showing of detriment to the Commissioner from a repudiation of a Form 870-AD, is there any reason of policy why an agreement that on its face binds both parties "in the absence of fraud, malfeasance, concealment or misrepresentation of material fact, or of an important mistake in mathematical calculations" should not do just that? If the taxpayer is free to repudiate the agreement, he obtains the tactical advantage of protection against an additional assessment (because of the Serv-

ice's policy not to renounce except for fraud, malfeasance, misrepresentation, or important mathematical error), while he awaits (for example) the outcome of other litigation, the discovery of favorable evidence, or the death of hostile witnesses before deciding whether to drop the matter or reopen it.

2. *Form 870 and closing agreements.* A closing agreement is binding "except upon a showing of fraud or malfeasance, or misrepresentation of a material fact." §7121. There is no express statutory ground for setting aside a compromise, §7122, though no doubt the same facts that would nullify a closing agreement would also nullify a compromise. A Form 870-AD agreement, however, by its own terms, can be set aside not only for fraud, malfeasance, or misrepresentation, but also for concealment or mathematical error. Does this mean that it is *not* an attempt to obtain the effect of a closing agreement or compromise without the formality prescribed by statute?

Under the 1939 Code, a closing agreement was effective only upon approval by the Secretary of the Treasury, the Under Secretary, or an Assistant Secretary; and a compromise required not only the approval of one of these exalted officials but also an opinion of the General Counsel of the Treasury. But the 1954 Code permits the Secretary to delegate his authority to enter into closing agreements and compromises, allows the General Counsel of the Treasury to delegate his power to file an opinion in compromise cases, and dispenses with the requirement of an opinion if the tax assessment to be compromised is less than $500. Should these changes lead to a reconsideration of the relation of the *Botany Worsted Mills* case to the enforceability of Form 870-AD? See Hamilton v. United States, 324 F.2d 960 (Ct. Cl. 1963) (Form 870-AD treated as binding compromise).

3. *Joyce v. Gentsch.* Joyce v. Gentsch, cited in the *Guggenheim* case, held that the taxpayer was not bound by a hybrid form: Form 870 was altered to forbid a claim for refund, but the clause stating that execution of the form does not "preclude the assertion of a further deficiency" was not stricken. Because the right to assert a further deficiency was reserved, the court said: "The waiver agreement was, therefore, entirely lacking in essential mutuality." Does it follow that because the Commissioner may assert a further deficiency (either because of such a reservation or because the agreement is not executed as a closing agreement or a compromise must be) the taxpayer is free to sue for a refund? Is there any reason why he may not waive his right to sue for a refund?

4. *Effect of Form 870 on running of interest on deficiencies.* In United States v. Goldstein, 189 F.2d 752 (1st Cir. 1951), it was held that whereas Form 870 stops the running of interest 30 days after it is executed by the taxpayer, Form 870-AD does not do so until 30 days after it has been acted on by the Commissioner. (In that case, about 15 months passed before such action was taken.) The court argued that Form 870-AD is by its terms an "offer" by the taxpayer, which does not become a "waiver" until action by the Commissioner, whereas Form 870 is itself a "waiver." Section 6601(d) provides that interest shall terminate 30 days after a "waiver." The court said that if the taxpayer wanted to protect himself against the Commissioner's leisurely manner he could have filed Form 870. Does the taxpayer have the right to file a Form 870 on his own motion whenever he believes that he has underpaid his tax, whether or not the Commissioner has raised the issue or asked for a waiver? See §6213(d).

5. *Other aspects of Form 870.* See also Steiner v. Nelson, 259 F.2d 853 (7th Cir. 1958) (form with typewritten addition requiring "acceptance" by Commissioner held ineffective in absence of acceptance); Holbrook v. United States, 284 F.2d 747 (9th Cir. 1960) (form effective without acceptance by Commissioner); Quigley v. Internal Revenue Service, 289 F.2d 878 (D.C. Cir. 1960) (form is a contract that can be set aside on grounds that permit other contracts between citizen and government to be set aside; no such grounds shown here); Blansett v. United States, 181 F. Supp. 637 (W.D. Mo. 1959) (form revocable until Commissioner makes assessment), rev'd on other grounds, 283 F.2d 474 (8th Cir. 1960).

e. TAXPAYERS' RULINGS

The Internal Revenue Service's policy regarding the issuance of rulings is described in Rev. Proc. 62-28, 1962-2 C.B. 496. The title "ruling" is given to a written statement, issued by the national office of the Internal Revenue Service in response to a taxpayer's inquiry, "which interprets and applies the tax laws to a specific set of facts." A "determination letter" is a similar statement by a District Director, in which "principles and precedents previously announced by the National Office" are applied to the particular facts. Rev. Proc. 62-28 goes on to allocate jurisdiction between the national and district offices, providing in general that the national office has exclusive jurisdiction over prospective transactions, novel issues, requests by trade associations and similar groups, industry-wide problems, and certain other matters.

In Rev. Proc. 62-32, 1962-2 C.B. 527, the Service repeated its long-standing refusal to issue rulings and determination letters on purely factual matters in advance of the filing of a return, and amplified this policy by listing the areas in which it will not issue advance rulings and those in which it will not "ordinarily" do so. The "no-ruling" areas include, among many others: whether an amount paid by an employer to an employee is a gift or compensation; whether meals and lodging are furnished for the employer's convenience; whether compensation paid is reasonable in amount within the meaning of §162; and whether the purpose in acquiring a corporation is evasion or avoidance of federal income taxes under §269. Areas in which rulings are possible, but not ordinarily granted, include: useful lives of depreciable assets; the market value of property; whether a corporation is "collapsible"; and whether real estate is held for investment or for sale to customers.

On the critical problem of the effect of a ruling, Rev. Rul. 62-28 states that a ruling (unless incorporated in a closing agreement) may be revoked or modified "at any time in the wise administration of the taxing statutes" and that such a change applies to all open years except to the extent that the Commissioner exercises his discretion under §7805(b) to limit its retroactive effect. The principles governing this exercise of discretion under §7805(b) are set out in Rev. Rul. 62-28, and include the following:

> Except in rare or unusual circumstances, the revocation or modification of a ruling will not be applied retroactively with respect to the taxpayer to whom the ruling was originally issued or to a taxpayer whose tax liability was directly involved in such ruling if (1) there has been no misstatement or omission of material facts, (2) the facts subsequently developed are not materially different from the facts on which the ruling was based, (3) there has been no change in the applicable law, (4) the ruling was originally issued with respect to a prospective or proposed transaction, and (5) the taxpayer directly involved in the ruling acted in good faith in reliance upon the ruling and the retroactive revocation would be to his detriment. To illustrate, the tax liability of each employee covered by a ruling relating to a pension plan of an employer is directly involved in such ruling. Also, the tax liability of each shareholder is directly involved in a ruling related to the reorganization of a corporation. However, the tax liability of members of an industry is not directly involved in a ruling issued to one of the members, and the position taken in a revocation or modification of a ruling to one member of an industry may be retroactively applied to other members of that industry. By the same reasoning, a tax practitioner may not obtain the nonretroactive application to one client of a modification or revocation of a ruling previously issued to another client. . . .
>
> With respect to Revenue Rulings published in the Internal Revenue Bulletin, taxpayers generally may rely upon such rulings in determining the rule applicable to their own transactions and need not request a specific ruling applying the principles of a pub-

lished Revenue Ruling to the facts of their particular cases where otherwise applicable. However, see . . . below. Revenue Rulings published in the Internal Revenue Bulletin ordinarily are not revoked or modified retroactively.

Since each Revenue Ruling represents the conclusion of the Service as to the application of the law to the entire state of facts involved, taxpayers, Service personnel, and others concerned are cautioned against reaching the same conclusion in other cases unless the facts and circumstances are substantially the same. Furthermore, they should consider the effect of subsequent legislation, regulations, court decisions, and Revenue Rulings.*

The effect of a determination letter is similar to that of a ruling, but only as to the taxpayer to whom it was issued. See Rev. Proc. 62-28, supra.

AUTOMOBILE CLUB OF MICHIGAN v. COMMISSIONER
353 U.S. 180 (1957)

MR. JUSTICE BRENNAN delivered the opinion of the Court.

In 1945, the Commissioner of Internal Revenue revoked his 1934 and 1938 rulings exempting the petitioner from federal income taxes, and retroactively applied the revocation to 1943 and 1944. . . . The Tax Court sustained the Commissioner's determinations, and the Court of Appeals for the Sixth Circuit affirmed. This Court granted certiorari.

The Commissioner had determined in 1934 that the petitioner was a "club" entitled to exemption under provisions of the internal revenue laws corresponding to [§501(c)(7)], notifying the petitioner that ". . . future returns, under the provisions of [§501(c)(7)] . . . will not be required so long as there is no change in your organization, your purposes or methods of doing business."† In 1938, the Commissioner confirmed this ruling in a letter stating: ". . . as it appears that there has been no change in your form of organization or activities which would affect your status the previous ruling of the Bureau holding you to be exempt from filing returns of income is affirmed. . . ." Accordingly the petitioner did not pay federal taxes from 1933 to 1945. The Commissioner revoked these rulings in 1945, however, and directed the petitioner to file returns for 1943 and subsequent years. Pursuant to this direction, the petitioner filed, under protest, corporate income and excess profits tax returns for 1943, 1944 and 1945.

The Commissioner's earlier rulings were grounded upon an erroneous interpretation of the term "club" in [§501(c)(7)] and thus were based upon a mistake of law. It is conceded that in 1943 and 1944 petitioner was not, in fact or in law, a "club" entitled to exemption within the meaning of [§501(c)(7)], and also that petitioner is subject to taxation for 1945 and subsequent years. It is nevertheless contended that the Commissioner had no power to apply the revocation retroactively to 1943 and 1944, and that, in any event, the assessment of taxes against petitioner for 1943 and 1944 was barred by the statute of limitations.

The petitioner argues that, in light of the 1934 and 1938 rulings, the Commissioner was equitably estopped from applying the revocation retroactively. This argument is without merit. The doctrine of equitable estoppel is not a bar to the correction by the Commissioner of a mistake of law. The decision in Stockstrom v. Commissioner, 190 F.2d 283 (D.C. Cir. 1951), to the extent that it holds to the contrary, is disapproved.

---

* A similar warning is to be found in the front of each Cumulative Bulletin. See, e.g., 1963-1 C.B. 3. For a different formulation, used in earlier years, see 1952-2 C.B. i. — ED.

† Before 1943, exempt organizations were not required to file returns. In 1943, a provision, which is now §6033, was enacted to require many exempt organizations to file annual information returns. — ED.

Petitioner's reliance on H.S.D. Co. v. Kavanagh, 191 F.2d 831, and Woodworth v. Kales, 26 F.2d 178, is misplaced because those cases did not involve correction of an erroneous ruling of law. Reliance on Lesavoy Foundation v. Commissioner, 238 F.2d 589, is also misplaced because there the court recognized the power in the Commissioner to correct a mistake of law, but held that in the circumstances of the case the Commissioner had exceeded the bounds of the discretion vested in him under [§7805(b)].

The Commissioner's action may not be disturbed unless, in the circumstances of this case, the Commissioner abused the discretion vested in him by [§7805(b)]. That section provides:

> *Retroactivity of Regulations or Rulings.* — The Secretary or his delegate may prescribe the extent, if any, to which any ruling or regulation relating to the internal revenue laws, shall be applied without retroactive effect.

The petitioner contends that this section forbids the Commissioner taking retroactive action. On the contrary, it is clear from the language of the section and its legislative history that Congress thereby confirmed the authority of the Commissioner to correct any ruling, regulation or Treasury decision retroactively, but empowered him, in his discretion, to limit retroactive application to the extent necessary to avoid inequitable results.

The petitioner, citing Helvering v. Reynolds Co., 306 U.S. 110, argues that resort by the Commissioner to [§7805(b)] was precluded in this case because the repeated re-enactments of [§501(c)(7)] gave the force of law to the provision of the Treasury regulations relating to that section. These regulations provided that when an organization had established its right to exemption it need not thereafter make a return of income or any further showing with respect to its status unless it changed the character of its operations or the purpose for which it was originally created. Helvering v. Reynolds Co. is inapplicable to this case. As stated by the Tax Court: "The regulations involved there [Helvering v. Reynolds Co.] . . . purported to determine what did or did not constitute gain or loss. The regulations here . . . in nowise purported to determine whether any organization was or was not exempt." These regulations did not provide the exemption or interpret [§501(c)(7)], but merely specified the necessary information required to be filed in order that the Commissioner might rule whether or not the taxpayer was entitled to exemption. This is thus not a case of ". . . administrative construction embodied in the regulation[s] . . ." which, by repeated re-enactment of [§501(c)(7)], ". . . Congress must be taken to have approved . . . and thereby to have given . . . the force of law." Helvering v. Reynolds Co., 306 U.S., at 114, 115.

We must, then, determine whether the retroactive action of the Commissioner was an abuse of discretion in the circumstances of this case. The action was the consequence of the reconsideration by the Commissioner, in 1943, of the correctness of the prior rulings exempting automobile clubs, initiated by [G.C.M. 23688, 1943 C.B. 283], interpreting [§501(c)(7)] to be inapplicable to such organizations. The Commissioner adopted the General Counsel's interpretation and proceeded to apply it, effective from 1943, indiscriminately to automobile clubs. We thus find no basis for disagreeing with the conclusion, reached by both the Tax Court and the Court of Appeals, that the Commissioner, having dealt with petitioner upon the same basis as other automobile clubs, did not abuse his discretion. Nor did the two-year delay in proceeding with the petitioner's case, in these circumstances, vitiate the Commissioner's action. . . .

[The Court also held that the statute of limitations did not run for 1943 and 1944 because the taxpayer failed to file income tax returns for those years, the

failure not being excused by the 1934 and 1938 rulings because "no action of the Commissioner can change or modify the conditions under which the United States consents to the running of the statute of limitations against it." The Court also held that information returns filed by the taxpayer for 1943 and 1944 under §6033 were not a satisfactory substitute for tax returns, so far as the statute of limitations is concerned. The Court's discussion of the final issue in the case, the proper method of accounting for membership dues paid in advance, is summarized supra page 795.]

Affirmed.

[Mr. Justice Burton and Mr. Justice Clark joined in the Court's opinion as to the revocation of the rulings and the statute of limitations question. Mr. Justice Harlan dissented on the statute of limitations question.]

NOTE

1. *Revocability of rulings.* The revocability of a ruling was litigated as early as 1928, in Couzens v. Commissioner, 11 B.T.A. 1040 (1928). This case concerned a group of minority shareholders of the Ford Motor Company, who were negotiating with Henry Ford, Sr., for a sale of their shares. They requested the Internal Revenue Service to rule on the March 1, 1913, value of their stock, which would be controlling (§1053) in determining their gain. (As indicated supra page 916, the Service usually will not rule on questions of value.) In 1919, after an extended investigation, the Service ruled that the 1913 value was $9500 per share, and the taxpayer sold his shares thereafter, reporting a profit of about $8.6 million. The Service later determined that the 1913 value of the stock was only $2634 per share, which increased the taxable profit to about $20.7 million, and assessed a deficiency on this basis. Part of the assessment was later abated, when the Service raised its determination of 1913 value to $3500 per share, and the taxpayer contested the balance of the assessment. The Tax Court held that the government was not bound by the 1919 ruling and made an independent determination of the stock's 1913 value. Ironically, it set a value of $10,000 per share, which was more favorable to the taxpayer than the Service's 1919 ruling. In a suit by another taxpayer involving the same ruling, the Commissioner was held to be bound by the ruling, or at least by an assessment made pursuant to it. Woodworth v. Kales, 26 F.2d 178 (6th Cir. 1928). Having obtained a refund on the theory that the government was bound by the ruling, however, the taxpayer brought a second suit to recover part of the tax originally paid pursuant to the ruling on the ground that the ruling was too favorable to the government. This suit was also successful. United States v. Kales, 314 U.S. 186 (1941). (The Court held that the judgment in the first suit, against the Collector of Internal Revenue, was not res adjudicata in a suit against the United States, see page 938 infra.) See also H.S.D. Co. v. Kavanagh, 191 F.2d 831 (6th Cir. 1951), holding that the Commissioner could not revoke a ruling that a pension trust was exempt from taxation, where the ruling was based on full knowledge of all the facts. Does the Supreme Court in the *Michigan Auto Club* case endorse the *Woodworth* and *H.S.D.* cases?

The *Lesavoy Foundation* case, distinguished by the Supreme Court in the *Michigan Auto Club* case, concerned the Commissioner's retroactive revocation of a certificate of tax exemption on the ground that the taxpayer had departed from its exempt purpose and was operating in the interest of the donor's business enterprises. The court found that the taxpayer had made a sufficient disclosure of the facts to the Commissioner before the certificate was issued and held that the Commissioner abused his discretion under §7805(b) in failing to make the revocation of the certificate nonretroactive. The court distinguished between rulings "of general application" and "individualized taxpayer's rulings," asserting that the former can be revoked retroactively, but apparently holding that the latter can be revoked only if the taxpayer is estopped "from relying on the ruling in good faith because he has concealed the facts, or because of some other fraud or misrepresentation." But the taxpayer's "reliance" on the ruling in *Lesavoy* seems similar to the taxpayer's action in the *Michigan Auto* case.

In Goodstein v. Commissioner, 267 F.2d 127 (1st Cir. 1959), the court held that *Lesavoy*

Foundation case was not applicable to a taxpayer who relied on an unpublished ruling issued to another taxpayer, at least when it was in conflict with the only published ruling in point. See also Knetsch v. United States, supra page 185 (last paragraph of majority opinion).

2. *Injury caused by erroneous ruling.* Does the Federal Tort Claims Act permit a taxpayer who has been damaged by an erroneous ruling or bad advice from the Internal Revenue Service to recover from the United States? See United States Code, Title 28, §1346(b) (sovereign immunity waived for injury or loss of property "caused by the negligent or wrongful act or omission of any employee of the Government while acting within the scope of his office or employment, under circumstances where the United States, if a private person, would be liable to the claimant in accordance with the law of the place where the act or omission occurred"), §2680(b) (no liability for exercise of discretionary function, even if discretion is abused), and §2680(c) (no liability for any claim "arising in respect of the assessment or collection of any tax"). See also Bershad v. Wood, 290 F.2d 71 (9th Cir. 1961) (District Director and staff not liable for wrongful acts in enforcing tax liens).

3. *Business transactions conditioned on favorable rulings.* The extent to which a ruling can ordinarily be relied on is attested by the frequency with which corporate agreements for sales of assets, liquidations, or reorganizations are conditioned on a favorable ruling by the Internal Revenue Service. The following terms of a contract for the sale of assets and liquidation of one of the contracting parties, specifying certain rulings as a prerequisite to performance by either party, are somewhat elaborate, but not atypical:

> 6.1 *Drilexco Tax Rulings.* Promptly after the date hereof, Drilexco shall make application for a ruling or rulings from the Internal Revenue Service substantially to the effect that (i) for purposes of Section 337 of the Internal Revenue Code, the date of adoption of the Plan will be the date on which the shareholders of Drilexco approve resolutions adopting the Plan; (ii) for federal income tax purposes no gain or loss will be recognized to Drilexco upon the receipt by Drilexco of the Purchase Price from the sale of the assets, properties and rights sold to Sinclair, other than assets excluded from the term "property" by Section 337(b) of the Internal Revenue Code, or upon the receipt by Drilexco of the proceeds from the sale of the Drilexco Production Payment, or upon the receipt by Drilexco of the proceeds of the sale of stock and assets under the Drilling Subsidiaries Agreement, provided that within the twelve-month period beginning on the date of the adoption of the Plan Drilexco shall have distributed to its shareholders all assets of Drilexco less assets reasonably retained to meet claims (including unascertained or contingent liabilities) and specifically set aside for that purpose; (iii) no gain or loss will be recognized to Drilexco upon the receipt of assets of certain Drilling Subsidiaries on account of their liquidation; (iv) amounts distributed to the shareholders of Drilexco in complete liquidation of Drilexco will be treated as in full payment for their stock under Section 331(a)(1) of the Internal Revenue Code; and (v) provided the stock of Drilexco is a capital asset in the hands of the shareholders, gain or loss will be recognized to said shareholders under Sections 1001 and 1002 of the Internal Revenue Code and such gain or loss will constitute capital gain or loss subject to the provisions and limitations of Chapter 1, Subchapter P of the Internal Revenue Code.
>
> 6.2 *First Ridge Tax Rulings.* Promptly after the date hereof First Ridge shall make application for a ruling or rulings from the Internal Revenue Service substantially to the effect that (i) the Drilexco Production Payment will be a depletable economic interest in oil, gas and other hydrocarbons in the hands of First Ridge; (ii) the proceeds received from the sale of the production attributable to the Drilexco Production Payment will be includible in the gross income of First Ridge, subject to the depletion allowance; (iii) in computing taxable income, First Ridge will be entitled to a deduction for cost depletion measured by its basis in the Drilexco Production Payment, being the amount to be paid by it therefor plus its costs incident to the acquisition; (iv) the amount of production and ad valorem taxes and other similar taxes, to the extent applicable to the Drilexco Production Payment, will be includible in the gross income of First Ridge; and (v) the taxes referred to as being

includible in the gross income of First Ridge as owner of the Drilexco Production Payment will be deductible by it in computing its taxable income.

6.3 *Provisions Applicable to Tax Ruling Applications.* Copies of the applications for tax rulings to be filed by the parties hereto shall be exchanged sufficiently in advance of filing to afford a reasonable opportunity for review and comment. The filing party in each case agrees (i) to use its best efforts to obtain a favorable ruling pursuant to its application, (ii) to keep the other party fully advised with respect to the progress thereof, and (iii) to furnish the other party copies of all communications to and from the Internal Revenue Service in connection therewith. Upon receipt of a tax ruling by a party, such party will (within three business days thereafter) forward a photostatic copy of same to the other party hereto. The transmittal of such ruling shall include a statement by the transmitting party whether such ruling is favorable and satisfies the ruling condition of this Section 6. In connection with this paragraph, it is agreed that a provision in a ruling obtained by Drilexco that (u) the applicability of Section 337 of the Internal Revenue Code is dependent on the inapplicability of the provisions of Section 337(c) of the Internal Revenue Code, (v) Drilexco must report the income from the properties up to Closing Date and pay income taxes thereon, (w) the ruling is inapplicable to items of the nature described in Revenue Ruling 61-214, Cumulative Bulletin 1961-2, 60, from which Drilexco derived full tax benefits through deductions in prior years, and that the portion of the proceeds allocable to such items, if any, will be treated as ordinary income, (x) the depreciation deduction for the taxable year of disposition of a depreciable asset is limited to the amount, if any, by which the adjusted basis of the asset at the beginning of the year exceeds the amount realized by Drilexco upon the sale or exchange of such asset (Revenue Ruling 62-92, C.B. 1962-1, 29), (y) the gain, if any, on the sale or distribution of depreciable personal property will be recognized to the extent provided in Section 1245 of the Internal Revenue Code or (z) no deduction is allowable to Drilexco under Section 265 of the Internal Revenue Code for state income taxes, expenses and interest allocable to gains not recognized under Section 337(a) (Revenue Ruling 60-236, C.B. 1960-2, 109), shall not prevent the ruling from being deemed a favorable and acceptable ruling hereunder. Neither Drilexco nor First Ridge shall be obligated to consummate the transactions contemplated hereby if a ruling is found to be unfavorable to it by its Tax Counsel referred to below.

By virtue of the above clause, the parties are not obligated to perform under the contract unless and until a favorable ruling is received. Sometimes a taxpayer is prepared to consummate a transaction subject to a divestment clause that will restore the status quo ante if a favorable ruling is not forthcoming by a specified date. In Rev. Rul. 59-309, 1959-2 C.B. 117, the Internal Revenue Service announced that it did not object to a provision in a newly established pension or profit-sharing plan requiring the employer's contribution to be returned in the event the Service ruled that the plan did not meet the "qualification" requirements of §401. In another ruling, however, the Service objected to a provision in a stock option plan fixing the price to be paid by employees for the stock at 95 per cent of the New York Stock Exchange quotation unless the Internal Revenue Service ruled that the quoted price was not its fair market value, in which event the price was to be 95 per cent of the value as determined by the Service: "The Commissioner need not comply with a provision which seeks to require the Treasury Department to assume the function of making determinations of fair market value for the purpose of fixing an option price, and since he could in no event make such a determination on the date of grant of an option, an agreement containing such a provision does not provide a price determinable at that time within the meaning of [Regs. §1.421-1(d)(2)]." Rev. Rul. 59-243, 1959-2 C.B. 123. In view of the Service's refusal to rule on the reasonableness of compensation, what would be the effect of an agreement by an employee to refund such part of his compensation as might be found to be unreasonable by the Internal Revenue Service or the courts? Note that declaratory judgments cannot be obtained in tax cases (infra p. 927); see also Commissioner v. Proctor, infra page 1012; Sugarman,

Drafting Clauses of Escape in Agreements with Uncertain Tax Consequences, 1960 So. Calif. Tax Inst. 131.

4. *Volume of rulings.* During the fiscal year 1962, the Internal Revenue Service "processed" about 26,000 requests for rulings and technical advice from taxpayers and about 1100 requests from its field offices in income and excess profits tax matters. The number of determination letters is not stated in the Commissioner's Annual Report for 1962, except as to employee benefit plans (about 10,000) and exempt organizations (about 6500).

5. *Publication of rulings.* Until 1953, it was the Service's practice to publish only a small selection of its rulings to taxpayers; a few more became public information because publicized by the taxpayers themselves or their advisers. In 1952, the report of the Subcommittee on Administration of the Internal Revenue Laws of the House Committee on Ways and Means (better known as the "King Committee") stated (p. 30):

> Much information supplied by taxpayers to the Bureau of Internal Revenue is kept confidential to avoid possible embarrassment or competitive disadvantage to the taxpayer. Consistent with this laudable policy, however, the Bureau should make public as many as possible of its administrative decisions. Their availability to public scrutiny should serve as a deterrent to favoritism and enable the public to satisfy itself as to the impartiality of tax administration. The Bureau recently opened to the public its offer-in-compromise files, and also the files of the Alcohol and Tobacco Tax Division relative to issuance of basic permits. At the instance of the subcommittee, the Bureau has adopted a new policy of publishing in permanent form all decisions and rulings involving points of law upon which the Bureau will thereafter rely as precedents.

The Service has announced that all rulings to taxpayers or their representatives and communications to its field offices involving "substantive tax law, procedures affecting taxpayers' rights or duties or industry regulation" "will be deemed to be of a character potentially publishable" (a pharase that seems to mean "will be published") with the following exceptions:

> (a) those involving questions specifically and clearly covered by statute or regulations;
>
> (b) those involving questions specifically covered by rulings, opinions, or court decisions previously published in the Bulletin;
>
> (c) those dealing with issues upon which court action is pending and publication would be prejudicial to the best interest of the Government;
>
> (d) those in which the facts involved are so unique or specific that the issue is not likely to arise again;
>
> (e) those which constitute determinations of fact rather than interpretations of law; . . .
>
> (h) those dealing with secret formulae or business practices;
>
> (i) those dealing with informers and informers' rewards; or
>
> (j) those which in the interest of a wise administration of the Revenue Service should not be published, but only if a memorandum stating the reasons therefor is attached to the file and the Commissioner approves the determination of nonpublication. [Rev. Rul. 2, 1953-1 C.B. 484; Rev. Rul. 212, 1953-2 C.B. 449.]

See also Rev. Proc. 55-1, 1955-2 C.B. 897, setting out a policy of publishing "internal practices and procedures" which "affect rights or duties of taxpayers."

This increase in published rulings makes more acute a problem already of significant proportions: since the Service has a policy of adhering to a ruling with respect to the taxpayer himself, should it not also be chary of revoking it as to other taxpayers who may have relied on it as much as the taxpayer who requested it? But the more solicitous the Service is of possible reliance on a ruling by other taxpayers, the more cautious it may be in issuing rulings; and since liberalizing the criteria for publication will increase the circle of taxpayers whose possible reliance the Service must take account of, there may be a decline in the use of this device for preventing or settling tax disputes.

In this connection, it might be noted that Rev. Rul. 2, supra, provides that the

Service's standards for determining what communications are to be referred to the Chief Counsel for review "will continue in effect," but that in applying these standards

> officials having responsibility for issuing such communications will give consideration to the added importance which may attach to such communication if published, especially with the view that rulings which may be cited as establishing legal principles should be so reviewed before issuance.

Section B. Collection of the Tax

All but a small fraction of all taxes are paid voluntarily (not necessarily willingly) by the taxpayer. Even the taxpayer who disputes liability, if he does not go to the Tax Court, ordinarily pays when the tax is assessed (or before), suing thereafter for a refund. And most taxpayers who litigate in the Tax Court pay promptly if they lose.

But sometimes it is necessary for the government to compel payment, and when this occasion arises, it has a variety of weapons. The most drastic is distraint — seizure and sale of personal and real property, pursuant to §6331(a) and (b). See Bull v. United States, 295 U.S. 247, 260 (1935):

> A tax is an exaction by the sovereign, and necessarily the sovereign has an enforceable claim against every one within the taxable class for the amount lawfully due from him. The statute prescribes the rules of taxation. Some machinery must be provided for applying the rule to the facts in each taxpayer's case, in order to ascertain the amount due. The chosen instrumentality for the purpose is an administrative agency whose action is called an assessment. The assessment may be a valuation of property subject to taxation, which valuation is to be multiplied by the statutory rate to ascertain the amount of tax. Or it may include the calculation and fix the amount of tax payable, and assessments of federal estate and income taxes are of this type. Once the tax is assessed, the taxpayer will owe the sovereign the amount when the date fixed by law for payment arrives. Default in meeting the obligation calls for some procedure whereby payment can be enforced. The statute might remit the government to an action at law wherein the taxpayer could offer such defense as he had. A judgment against him might be collected by the levy of an execution. But taxes are the lifeblood of goverment, and their prompt and certain availability an imperious need. Time out of mind, therefore, the sovereign has resorted to more drastic means of collection. The assessment is given the force of a judgment, and if the amount assessed is not paid when due, administrative officials may seize the debtor's property to satisfy the debt.
>
> In recognition of the fact that erroneous determinations and assessments will inevitably occur, the statutes, in a spirit of fairness, invariably afford the taxpayer an opportunity at some stage to have mistakes rectified. Often an administrative hearing is afforded before the assessment becomes final; or administrative machinery is provided whereby an erroneous collection may be refunded; in some instances both administrative relief and redress by an action against the sovereign in one of its courts are permitted methods of restitution of excessive or illegal exaction. Thus, the usual procedure for the recovery of debts is reversed in the field of taxation. Payment precedes defense, and the burden of proof, normally on the claimant, is shifted to the taxpayer. The assess-

ment supersedes the pleading, proof, and judgment necessary in an action at law, and has the force of such a judgment. The ordinary defendant stands in judgment only after a hearing. The taxpayer often is afforded his hearing after judgment and after payment, and his only redress for unjust administrative action is the right to claim restitution.

For historical background, see Tresolini, Administrative Tax Enforcement: Legal Concepts, 27 Temp. L.Q. 8 (1953); United States v. Manufacturers Trust Co., 198 F.2d 366 (2d Cir. 1952); United States v. Metropolitan Life Ins. Co., 130 F.2d 149 (2d Cir. 1942). The federal statute has its own set of exemptions (clothing and school books "necessary" for the taxpayer and his family; up to $250 worth of tools needed in the taxpayer's occupation; and, if the taxpayer is head of a family, up to $500 worth of fuel, furniture, personal effects, livestock, "arms for personal use," etc.), and state exemptions are not binding. §6334(a); see Jones v. Kemp, 144 F.2d 478 (10th Cir. 1944).

In lieu of distraint, the government may proceed by suit, either in a federal district court (see 28 U.S.C. 1396 for venue) or in a state court. See Anderson, Federal Tax Suits in State Courts, 26 Taxes 1144 (1948), disputing the propriety of state court actions.

The government is also provided with a tax lien, which can be enforced as an alternative method of collecting the tax. §§6231 and 7403. The priority of federal tax claims and tax liens is a very troubled subject. See United States v. Gilbert Associates, Inc., 345 U.S. 361 (1953); Meyer v. United States, 375 U.S. 233 (1963); Kennedy, The Relative Priority of the Federal Government: The Pernicious Career of the Inchoate and General Lien, 63 Yale L.J. 905 (1954).

For a narrative account of the efforts of the government to collect unpaid income taxes in a particular case, illustrating the use of various methods of discovering and reaching assets, see Noell v. Commissioner, 22 T.C. 1035 (1954).

A comprehensive survey of this field may be found in Plumb, Federal Tax Collection and Lien Problems, 13 Tax L. Rev. 247 and 459 (1958); see also A.B.A., Final Report of Committee on Federal Liens (1959); Sarner, Federal Tax Liens, 21 N.Y.U. Inst. on Fed. Taxation 1431 (1963); Note, Federal Priorities and Tax Liens, 63 Colum. L. Rev. 1259 (1963).

1. *Injunctions Against Collection*

Section 7421 of the 1954 Code, relating to injunctions against assessment and collection of tax, is substantially the same as §3653 of the 1939 Code.

ENOCHS v. WILLIAMS PACKING CO.
370 U.S. 1 (1961)

MR. CHIEF JUSTICE WARREN delivered the opinion of the Court.

Fearing that the District Director of Internal Revenue for Mississippi would attempt to collect allegedly past due social security and unemployment taxes for the years 1953, 1954 and 1955, respondent, in late 1957, brought suit in the District Court, maintaining that it was not liable for the exactions and seeking an injunction prohibiting their collection. The District Director, petitioner herein, made no objection to the issuance of a preliminary restraining order but resisted a permanent injunction, asserting that the provisions of §7421(a) of the Internal Revenue Code of 1954 barred any such injunctive proceeding. That section provides:

Except as provided in sections 6212(a) and (c), and 6213(a), no suit for the purpose of restraining the assessment or collection of any tax shall be maintained in any court.

The exception for Tax Court proceedings created by §§6212(a) and (c) and 6213 (a) was not applicable because that body is without jurisdiction over taxes of the sort here in issue. Nevertheless, on July 14, 1959, the court, relying upon Miller v. Standard Nut Margarine Co., 284 U.S. 498, permanently enjoined collection of the taxes on the ground that they were not, in fact, payable and because collection would destroy respondent's business. 176 F. Supp. 168. On June 14, 1961, the Court of Appeals for the Fifth Circuit affirmed, one judge dissenting. 291 F.2d 402. We granted certiorari to determine whether the case came within the scope of this Court's holding in *Nut Margarine* which indicated that §7421(a) was not, in the "special and extraordinary facts and circumstances" of that case, intended to apply. 368 U.S. 937.

Respondent corporation (hereinafter referred to as Williams) is engaged in the business of providing trawlers to fishermen who take shrimp, oysters and fish off the Louisiana and Mississippi coasts. It is the Government's position that these fishermen are the corporation's employees within the meaning of . . . §§3121 (d)(2) and 3306 (i) of the Internal Revenue Code of 1954. These sections specifically adopt the common-law test for ascertaining the existence of the employer-employee relationship. As stated in United States v. Silk, 331 U.S. 704, 716, "degrees of control, opportunities for profit or loss, investment in facilities, permanency of relation and skill required . . . are important for decision [under these statutes]." If, under the involved circumstances of this case, the fishermen were employees, respondent Williams is admittedly liable for social security and unemployment taxes for the years in question.

The following facts, material to the question of the existence of the employment relationship, were established. Williams provided its boats to captains which it selected; they employed their own crews and could fire them at will, but the relationship between respondent corporation and the fishermen was not ordinarily of short duration. The catch was generally sold to Williams which in turn resold it to the DeJean Packing Co., a partnership closely allied to Williams both by reason of integrated operation and substantially identical ownership. The proceeds, after the deduction of expenses, were divided among the captain, the crew and the boat. Williams received an additional share if it supplied the nets and rigging. It extended credit to the captains and made it possible for them to obtain credit elsewhere, and if a trip was unsuccessful and if the captain or crew members no longer continued to operate a boat, Williams absorbed the loss.

With respect to the existence of a recognized right of control by the employer, as might be expected, the testimony was in conflict. Petitioner introduced evidence to show that Williams could effectively refuse ice to boats and thus determine whether they would go out, that the boats' times of return were sometimes directed by the respondent corporation, that it could dictate the nature of the catch, and that permission was needed to sell the catch to someone other than respondent. And petitioner pointed out that both respondent and its fishermen had for other purposes represented that an employer-employee relationship existed. On the other hand, the District Court here found, and the respondent now asserts, that the corporation was wholly without any right of control.

Attempting to establish a basis for equitable jurisdiction, the corporation maintains that it will be thrown into bankruptcy if required to pay the entire assessment of $41,568.57. It is undisputed that Williams itself is without available

funds in this amount, but the Government suggests that respondent has denuded itself of assets in anticipation of its tax liability, that DeJean's assets should be considered as belonging to respondent, and that, in any event, the respondent corporation may pay the assessment for a single quarter and then sue for a refund.

The object of §7421(a) is to withdraw jurisdiction from the state and federal courts to entertain suits seeking injunctions prohibiting the collection of federal taxes. In Miller v. Standard Nut Margarine Co., supra, this Court was confronted with the question whether a manufacturer of "Southern Nut Product" could enjoin the collection of federal oleomargarine taxes on its goods. Prior to the assessment in issue three lower federal court cases had held that similar products were nontaxable and, by letter, the collector had informed the manufacturer that "Southern Nut Product" was not subject to the tax. This Court found that "[a] valid oleomargarine tax could by no legal possibility have been assessed against . . . [the manufacturer], and therefore the reasons underlying . . . [§7421(a)] apply, if at all, with little force." Noting that collection of the tax "would destroy its business, ruin it financially and inflict loss for which it would have no remedy at law," the Court held that an injunction could properly issue. Id., at 510-511. The courts below seem to have found that *Nut Margarine* decides that §7421(a) does not bar suit for an injunction against the collection of taxes not due if the legal remedy is inadequate. We cannot agree.

The enactment of the comparable Tax Injunction Act of 1937, 50 Stat. 738, now, as amended, 28 U.S.C. §1341, forbidding the federal courts to entertain suits to enjoin collection of state taxes "where a plain, speedy, and efficient remedy may be had at law or in equity in the courts of such State," throws light on the proper construction to be given §7421(a). It indicates that if Congress had desired to make the availability of the injunctive remedy against the collection of federal taxes not lawfully due depend upon the adequacy of the legal remedy, it would have said so explicitly. Its failure to do so shows that such a suit may not be entertained merely because collection would cause an irreparable injury, such as the ruination of the taxpayer's enterprise. This is not to say, of course, that inadequacy of the legal remedy need not be established if §7421(a) is inapplicable; indeed, the contrary rule is well established. See, e.g., Matthews v. Rodgers, 284 U.S. 521; Miller v. Standard Nut Margarine Co., supra; Dows v. Chicago, 11 Wall. 108. However, since we conclude that §7421(a) bars any suit for an injunction in this case, we need not determine whether the taxpayer would suffer irreparable injury if collection were effected.

The manifest purpose of §7421(a) is to permit the United States to assess and collect taxes alleged to be due without judicial intervention, and to require that the legal right to the disputed sums be determined in a suit for refund. In this manner the United States is assured of prompt collection of its lawful revenue. Nevertheless, if it is clear that under no circumstances could the Government ultimately prevail, the central purpose of the Act is inapplicable and, under the *Nut Margarine* case, the attempted collection may be enjoined if equity jurisdiction otherwise exists. In such a situation the exaction is merely in "the guise of a tax." Id., at 509.

We believe that the question of whether the Government has a chance of ultimately prevailing is to be determined on the basis of the information available to it at the time of suit. Only if it is then apparent that, under the most liberal view of the law and the facts, the United States cannot establish its claim, may the suit for an injunction be maintained. Otherwise, the District Court is without jurisdiction, and the complaint must be dismissed. To require more than good faith on the part of the Government would unduly interfere with a collat-

eral objective of the Act — protection of the collector from litigation pending a suit for refund. And to permit even the maintenance of a suit in which an injunction could issue only after the taxpayer's nonliability had been conclusively established might "in every practical sense operate to suspend collection of the . . . taxes until the litigation is ended." Great Lakes Dredge & Dock Co. v. Huffman, 319 U.S. 293, 299. Thus, in general, the Act prohibits suits for injunctions barring the collection of federal taxes when the collecting officers have made the assessment and claim that it is valid. Snyder v. Marks, 109 U.S. 189, 194.

The record before us clearly reveals that the Government's claim of liability was not without foundation. Therefore, we reverse the judgment of the Court of Appeals and remand the case to the District Court with directions to dismiss the complaint.

Reversed.

MR. JUSTICE FRANKFURTER took no part in the consideration or decision of this case.

NOTE

1. *Other cases applying §7421.* See also Farmer v. Rountree, 252 F.2d 490 (6th Cir. 1958), refusing to enjoin collection of two thirds of the taxpayer's income tax on the ground that this portion of appropriations is to carry out the military and foreign policy of the United States, allegedly in violation of international law; despite appellant's "extensive knowledge of the foreign relations and policies of the United States," the complaint concerns political issues confided to Congress and President, not to the courts. A similar result was reached in Mayer v. Wright, 251 F.2d 178 (9th Cir. 1958), where appellant objected to "payment of that part of his Federal income tax that is expended for past, present and possible future wars."

The cases under §7421(a) are collected in Communist Party, U.S.A. v. Moysey, 141 F. Supp. 332 (S.D.N.Y. 1956), refusing to enjoin collection of taxes under a jeopardy assessment, the complaint being based on political character of taxpayer, abuse of discretion, and denial of due process and equal protection.

In Campbell v. Guetersloh, 287 F.2d 878 (5th Cir. 1961), the court dissolved an injunction granted by the District Court to restrain use of the bank deposit method of computing taxable income, saying "[s]hort of specific violations of some statutory course of conduct . . . the Commissioner is free to make his investigation without instruction from the court as to what theory he is to use to reconstruct income of a taxpayer which his investigation leads him to believe has been incorrectly reported."

It has been held that §7421(a) does not deny the equitable remedy of injunction to a person whose property is threatened with seizure to pay someone else's tax. Thus the government can be restrained from seizing partnership property to pay the individual tax of one of the partners on the complaint of either partnership creditors or other partners. Adler v. Nicholas, 166 F.2d 674 (10th Cir. 1948); see also Shelton v. Gill, 202 F.2d 503 (4th Cir. 1953). Section 7421(b), however, forbids injunctions against assessment or collection in cases of transferee liability. Should equity intervene more freely where a transferee is involved than where the property of the taxpayer himself is about to be seized?

See Bershad v. Wood, 290 F.2d 714 (9th Cir. 1961) (government officials not personally liable for seizing property under mistaken apprehension it belonged to a taxpayer).

2. *Declaratory judgments in tax cases.* The Federal Declaratory Judgment Act was amended in 1935 to exclude federal tax controversies from its ambit. In Filipowicz v. Rothensies, 31 F. Supp. 716, 722 (E.D. Pa. 1940), the court said that this amendment "should be interpreted to deny a declaratory judgment to a petitioner only where the latter could not obtain an injunction" because of §7421(a), and added:

> In fact, such a rule would appear to be too restrictive inasmuch as there are cases where an equity court would refuse to grant an injunction because of the failure

to state the need for equitable relief, while such a prerequisite would not be necessary for a declaratory judgment.

For recent cases denying declaratory judgments, see Kyron Foundation v. Dunlap, 110 F. Supp. 428 (D.C. 1952), and Taylor v. Allan, 204 F.2d 485 (10th Cir. 1953); see also Pettengill v. United States, 205 F. Supp. 10 (D. Vt. 1962) (declaratory judgment granted to husband and wife, as tenants by the entirety, to remove lien where husband alone was delinquent taxpayer).

See Commissioner v. Proctor, infra page 1090 (refusal to give effect to a clause nullifying a gift if it was held subject to federal gift tax).

3. *Injunction if IRS fails to send 90-day letter.* Notwithstanding §7421(a), assessment and collection can be enjoined if the Commissioner fails to send the taxpayer a 90-day letter, §6213(a). This provision protects the taxpayer's right to go to the Tax Court without paying the tax. In keeping with this restriction, assessment and collection can be restrained until the 90-day period for filing a petition in the Tax Court has run and, if a petition is filed, until the Tax Court's decision has become final. For the use of jeopardy assessments to avoid this delay in collection, see infra.

4. *References.* Lipton, Enjoining Assessment or Collection of a Tax, 18 N.Y.U. Inst. on Fed. Taxation 957 (1960); Greener, The Injunction in Federal Tax Cases, 21 Tenn. L. Rev. 237 (1950).

2. *Jeopardy Assessments*

Section 6861(a) of the 1954 Code, relating to jeopardy assessments, is substantially the same as §273(a) of the 1939 Code.

Section 6863(b)(3), restricting sales of seized property in the case of a jeopardy assessment, is new.

As the extract from Bull v. United States, supra page 923, shows, taxes have traditionally been collected by summary methods, with the taxpayer who disputes liability being afforded a hearing only after collection. The Tax Court procedure for challenging a deficiency breaks with tradition by allowing the taxpayer to litigate before paying, the taxpayer's right to go to the Tax Court being protected by the prohibition in §6213(a) on the making of an assessment until a 90-day letter has been sent to him and, if he files a petition with the Tax Court, until its decision becomes final. But this restriction is in turn subject to an exception: §6861(a) provides that if the Treasury "believes that the assessment or collection of a deficiency . . . will be jeopardized by delay," the deficiency may be assessed forthwith. The taxpayer may then stay collection by filing a bond to insure ultimate payment. If a bond is not filed by the taxpayer, the government may proceed to collect the tax, subject to the restriction of §6863(b)(3) on the sale of seized property. A jeopardy assessment does not prevent the taxpayer from litigating in the Tax Court.

The jeopardy assessment is a drastic remedy, and it is used by the government primarily against taxpayers who are wasting or concealing their assets and in fraud cases. There is a tendency in these cases to overassess, in order to protect the government against any possible loss, and §6861(g) was enacted in 1953 to authorize the Secretary to abate the jeopardy assessment "if he finds that jeopardy does not exist."

The courts have been loath to re-examine the administrative officer's judgment that a delay in assessment or collection would be prejudicial to the revenue, and in Brown-Wheeler Co. v. Commissioner, 21 B.T.A. 755 (1930), the Tax Court said that §6861(a) "vests discretionary powers in the Commissioner over which we have no control." See also Homan Mfg. Co. v. Long, 242 F.2d 645 (7th Cir. 1957): "Under §6861 the government official has power to act when he *believes*

collection will be jeopardized by delay. His belief is justification for placing the statutory clamp on a taxpayer's assets." While judicial review would no doubt be possible if the official acted corruptly or if his action violated the constitutional guarantees of due process, there is in ordinary cases nothing the taxpayer can do to challenge a jeopardy assessment. For a due process argument, see United States v. Brodson, 241 F.2d 107 (7th Cir. 1957), reversing an order of the District Court which dismissed an indictment for tax evasion on the ground that a jeopardy assessment had made it impossible for the defendant to defend himself adequately. The district judge's action was based on the theory that the defendant required the aid of an accountant, income having been computed by the government by the net worth method, that he could not hire an accountant because the jeopardy assessment had blocked his assets, and that the court had no power to appoint an accountant. The Court of Appeals, in reinstating the indictment, did not exclude the possibility that a conviction would have to be reversed on due process grounds if a review of the trial indicated that in fact the defendant had been unable to make an adequate defense. (Query whether the argument would succeed in a civil case in which an accountant's aid would be helpful or necessary.) The District Court thereupon continued the criminal case pending determination of the taxpayer's civil liability, so that the funds seized or impounded by the jeopardy assessment could be used to finance defense of the criminal case if the assessment turned out to be excessive. United States v. Brodson, 155 F. Supp. 407 (E.D. Wis. 1957).

NOTE

1. *Closing the taxable year.* Another drastic device available to the Commissioner when he deems collection of the tax to be in jeopardy is to close the taxable year and demand immediate payment of the tax on the income so far earned during the current year plus the tax on the preceding year's income. In the case of a taxpayer filing on the calendar year basis, this would permit the Commissioner to demand payment on March 1 of the tax for the preceding year plus a tax on the earnings in January and February. See §6851.

2. *References.* Kaminsky, Administrative Law and Judicial Review of Jeopardy Assessments Under the Internal Revenue Code, 14 Tax L. Rev. 545 (1959); Gould, Jeopardy Assessments: When They May Be Levied and What to Do About Them, 18 N.Y.U. Inst. on Fed. Taxation 937 (1960).

3. *Transferee Liability*

Sections 6901 and 6902, relating to transferee liability, are derived, with minor changes, from §311 of the 1939 Code.

COMMISSIONER v. STERN

357 U.S. 39 (1958)

MR. JUSTICE BRENNAN delivered the opinion of the Court.

Respondent petitioned the Tax Court for redetermination of the liability assessed against her for her deceased husband's unpaid income tax deficiencies. The Tax Court held that, as beneficiary of proceeds of her husband's life insurance exceeding the amount of the deficiencies, the respondent was liable for the full amount of the deficiencies. The Court of Appeals reversed, 242 F.2d 322, holding that the respondent was not liable even to the extent of the amount of the cash surrender values of the policies, which was less than the amount of the deficiencies. We granted certiorari. 355 U.S. 810.

Dr. Milton J. Stern died a resident of Lexington, Kentucky, on June 12, 1949. Nearly six years later the Tax Court held that Dr. Stern had been deficient in his income taxes for the years 1944 through 1947 and was liable for the amount, including interest and penalities, of $32,777.51. Because the assets of the estate were insufficient to meet this liability, the Commissioner proceeded under [§6901] against respondent, Dr. Stern's widow, as the beneficiary of life insurance policies held by him. The proceeds and the cash surrender value of these policies at Dr. Stern's death totaled $47,282.02 and $27,259.68 respectively. The right to change the beneficiary and to draw down the cash surrender value of each policy had been retained until death by Dr. Stern. There were no findings that Dr. Stern paid any premiums with intent to defraud his creditors or that he was insolvent at any time prior to this death.

The Court of Appeals rested its decision upon two grounds: (1) that the respondent beneficiary was not a transferee within the meaning of [§6901], Tyson v. Commissioner, 212 F.2d 16; and (2) that in any event Kentucky statutes, Ky. R.S., 1948, §§297.140, 297.150, limit the beneficiary's liability to creditors of the deceased insured to the amount of the premiums paid by the insured in fraud of creditors, and consequently there was no liability since there was no evidence that Dr. Stern paid any premium in fraud of his creditors. Without intimating any view as to the correctness of the first holding of the Court of Appeals we find it unnecessary to decide whether the respondent was a transferee within the meaning of [§6901] [1] because we hold that the Kentucky statutes govern the question of the beneficiary's liability and create no liability of the respondent to the Government in the circumstances of this case.

First. Section [6901(a)] provides that "The liability, at law or in equity, of a transferee of property of a taxpayer, in respect of the tax . . . imposed upon the taxpayer by this chapter" shall be "assessed, collected, and paid in the same manner and subject to the same provisions and limitations as in the case of a deficiency in a tax imposed by this chapter. . . ." The decisions of the Court of Appeals and the Tax Court have been in conflict on the question whether the substantive liability enforced under [§6901(a)] is to be determined by state or federal law. Compare, e.g., Rowen v. Commissioner, 215 F.2d 641, and Botz v. Helvering, 134 F.2d 538, with United States v. Bess, 243 F.2d 675, and Stoumen v. Commissioner, 27 T.C. 1014. This Court has expressly left the question open. Phillips v. Commissioner, 283 U.S. 589, 602.

The courts have repeatedly recognized that [§6901] neither creates nor defines a substantive liability but provides merely a new procedure by which the Government may collect taxes. . . . Prior to the enactment of §280 of the Revenue Act of 1926, 44 Stat. 9, 61, the predecessor of [§6901], the rights of the Government as creditor, enforceable only by bringing a bill in equity or an action at law, depended upon state statutes or legal theories developed by the courts for the protection of private creditors, as in cases where the debtor had transferred his property to another. . . . Phillips v. Commissioner, supra, at 592, n.2; This procedure proved unduly cumbersome, however, in comparison with the summary administrative remedy allowed against the taxpayer himself, Rev. Stat.

[1] The Court of Appeals in this case followed its own prior decision in Tyson v. Commissioner, 212 F.2d 16, in holding that Mrs. Stern as beneficiary was not a "transferee" of any part of the proceeds within the meaning of [§6901]. Other Courts of Appeals have held that the beneficiary is a transferee only to the extent of the cash surrender value existing at the time of the insured's death. Rowen v. Commissioner, 215 F.2d 641; United States v. Bess, 243 F.2d 675. The Tax Court, on the other hand, has held that the beneficiary is the transferee of the entire proceeds. Stoumen v. Commissioner, 27 T.C. 1014.

§3187, as amended by the Revenue Act of 1924, 43 Stat. 343. The predecessor section of [§6901] was designed "to provide for the enforcement of such liability to the Government by the procedure provided in the act for the enforcement of tax deficiencies." S. Rep. No. 52, 69th Cong., 1st Sess. 30. "Without in any way changing the extent of such liability of the transferee under existing law, . . . [this section] enforces such liability . . . in the same manner as liability for a tax deficiency is enforced; that is, notice by the commissioner to the transferee and opportunity either to pay and sue for refund or else to proceed before the Board of Tax Appeals, with review by the courts. Such a proceeding is in lieu of the present equity proceeding. . . ." H.R. Conf. Rep. No. 356, 69th Cong., 1st Sess. 43-44. Therefore, since [§6901] is purely a procedural statute we must look to other sources for definition of the substantive liability. Since no federal statute defines such liability, we are left with a choice between federal decisional law and state law for its definition.

Second. The Government urges that, to further "uniformity of liability," we reject the applicability of Kentucky law in favor of having the federal courts fashion governing rules. Cf. Clearfield Trust Co. v. United States, 318 U.S. 363. But a federal decisional law in this field displacing state statutes as determinative of liability would be a sharp break with the past. Federal courts, in cases where the Government seeks to collect unpaid taxes from persons other than the defaulting taxpayer, have applied state statutes, . . . and the Government itself has urged reliance upon such statutes in similar cases, G.C.M. 2514, VI-2 Cum. Bull. 99; G.C.M. 3491, VII-1 Cum. Bull. 147. The Congress was aware of the use of state statutes when the enactment of the predecessor section to [§6901] was under consideration, for the Congress in disclaiming any intention "to define or change existing liability," S. Rep. No. 52, 69th Cong., 1st Sess. 30, identified "existing liability" as liability ensuing "[b]y reason of the trust fund doctrine and various State statutory provisions. . . ." H.R. Conf. Rep. No. 356, supra, at 43.

It is true that, in addition to reliance upon state statutes, the Government invoked principles judicially developed for the protection of private creditors, in cases where the debtor had transferred his property to another and been left insolvent. . . . In such cases the federal courts applied a "general law" which did not distinguish between federal and state decisional law. But the fact remains that the varying definitions of liability under state statutes resulted in an absence of uniformity of liability. Yet Congress, with knowledge that this was "existing law" at the time the predecessor section to [§6901] was enacted, has refrained from disturbing the prevailing practice. Uniformity is not always the federal policy. Under §70 of the Bankruptcy Act, for instance, state law is applied to determine what property of the bankrupt has been transferred in fraud of creditors. What is a good transfer in one jurisdiction might not be so in another.

Since Congress has not manifested a desire for uniformity of liability, we think that the creation of a federal decisional law would be inappropriate in these cases. In diversity cases, the federal courts must now apply state decisional law in defining state-created rights, obligations, and liabilities. Erie R. Co. v. Tompkins, 304 U.S. 64. They would, of course, do so in diversity actions brought by private creditors. Since the federal courts no longer formulate a body of federal decisional law for the larger field of creditors' rights in diversity cases, any such effort for the small field of actions by the Government as a creditor would be necessarily episodic. That effort is plainly not justified when there exists a flexible body of pertinent state law continuously being adapted to changing circum-

stances affecting all creditors. Accordingly we hold that, until Congress speaks to the contrary, the existence and extent of liability should be determined by state law.

Third. The Court of Appeals held in this case that under the applicable Kentucky law the beneficiary of a life insurance policy is not liable to the insured's creditors, at least where, as here, the premiums have not been paid in fraud of creditors, and that therefore no liability of the respondent exists under state law to any creditor, including the Government. The parties do not contest this construction of local law.

The Government, however, argues in its brief, "Just as in the situation where a tax lien has attached it is held that state law may not destroy that lien, so here, where a tax liability is imposed by Congress, the state may not provide exemptions." We agree that state law may not destroy a tax lien which has attached in the insured's life. We held today in United States v. Bess, 357 U.S. 51, that a New Jersey statute, similar to the Kentucky statutes, could not defeat the attachment in the insured's lifetime of a federal tax lien under §3670 against the cash surrender value of the policy, or prevent enforcement of the lien out of the proceeds received by the beneficiary on the insured's death. We might also agree that a State may not provide exemptions from a tax liability imposed by Congress. The fallacy in the Government's argument is in the premise that Congress has imposed a tax liability against the beneficiary. We have concluded that Congress has not seen fit to define that liability and that none exists except such as is imposed by state law. Thus there is no problem here of giving effect to state exemption provisions when federal law imposes such liability. The Government's substantive rights in this case are precisely those which other creditors would have under Kentucky law. The respondent is not liable to the Government because Kentucky law imposes no liability against respondent in favor of Dr. Stern's other creditors.

Affirmed.

MR. JUSTICE BLACK, whom THE CHIEF JUSTICE and MR. JUSTICE WHITTAKER join, dissenting.

We are concerned here with a suit against the United States to determine the liability of a party for federal income taxes. In my judgment it is a mistake to look to state law to decide that liability. The laws of the several States are bound to vary widely with respect to the responsibility of transferees for the obligations of their transferors. Therefore application of state law leads to the anomalous result that transferees will be liable for federal taxes in one State but not in another even though they stand in precisely the same position. I believe that such uneven application of what this Court has characterized as "a nationwide scheme of taxation," Burnet v. Harmel, 287 U.S. 103, 110, is thoroughly unwise and is not required by the Constitution, by Act of Congress, or by any compelling practical considerations.

In my view, liability for federal taxes should be determined by uniform principles of federal law, in the absence of the plainest congressional mandate to the contrary. Whereas here Congress has provided no standards which define the liability of a transferee for the taxes of his transferor the federal courts themselves should fashion a uniform body of controlling rules which fairly implement the collection of government revenues. . . . It can hardly be denied that uniformity in the imposition and collection of federal taxes has always been regarded as extremely desirable in this country. Indeed those who framed the Constitution deemed it so important that they expressly required that "all Duties, Imposts and Excises [levied by Congress] shall be uniform throughout the United States." Art. I, §8. Cf. Art. I, §§2, 9. Taxpayers should be treated equally

without regard to the fortuity of residence; and the additional complication and inconvenience in the administration of an already complex federal tax system which is certain to follow an attempt to apply the differing laws of 48 States to transferee liability ought to be avoided, if at all possible.

Here, Congress has never directed that the tax liability of a transferee be determined by state law. The legislative history of §280 of the Revenue Act of 1926 certainly falls far short of a congressional mandate to that effect. Prior to that Act the federal courts had applied general principles of equity to determine the liability of transferees for federal taxes, without regard to state law, except for a few instances where state statutes apparently were more favorable to the Commissioner. Both Senate and House Committees emphasized that §280 was simply a procedural provision not affecting the substantive liability of a transferee as it had been previously developed by the federal courts. S. Rep. No. 52, 69th Cong., 1st Sess. 30; H.R. Conf. Rep. No. 356, 69th Cong., 1st Sess. 43-44. And the House Conference Committee went on to express the hope that the newly created Board of Tax Appeals would gradually fashion a uniform body of principles to govern transferee liability. H.R. Conf. Rep. No. 356, supra, at 44. All this is hardly consistent with the notion that state law was to be decisive; if anything, it indicates precisely the contrary. It might be added that the Tax Court, measuring up to the expectations of the House Committee, has persistently endeavored to develop consistent standards to determine transferee liability despite the opposition of several Courts of Appeals. See, e.g., Muller v. Commissioner, 10 T.C. 678; Leary v. Commissioner, 18 T.C. 139; Bales v. Commissioner, 22 T.C. 355; Stoumen v. Commissioner, 27 T.C. 1014.

I would hold, as a matter of federal law, that where a transferee receives property from a taxpayer who is left with insufficient assets to pay his federal taxes the transferee is liable for those taxes to the extent he has not given fair consideration for the property received. This has been the rule applied by those courts which have heretofore determined transferee liability on the basis of federal law. See, e.g., Pearlman v. Commissioner, 153 F.2d 560; Updike v. United States, 8 F.2d 913; Stoumen v. Commissioner, 27 T.C. 1014. Such a rule has long-standing antecedents in the federal courts which may be traced back, in part, at least as far as the noted decision by Justice Story in Wood v. Drummer, 30 Fed. Cas. 435. It would operate to prevent tax evasion, and yet not impose an unfair burden on transferees.

Turning to the present case, I agree with the Court in United States v. Bess, 357 U.S. 51, that the cash surrender values of insurance policies, but not the proceeds, are property of the insured for purposes of the federal tax laws which pass to the beneficiary of the policy upon the insured's death. Here it appears that the insured had insufficient assets at the time of his death to satisfy his unpaid income taxes. Therefore I would hold the beneficiary of his policies, Mrs. Stern, responsible for the unpaid taxes to the extent of the cash surrender value of those policies just before he died.

NOTE

1. *Basis of transferee liability.* Transferee liability has already been encountered in several cases. Healy v. Commissioner, supra page 854; see also the *Court Holding Co.* and *Cumberland Public Service Co.* cases, supra pages 675, 676. Such liability is occasionally based upon a contract by which the transferee of assets (e.g., a successor corporation or partner) assumes the obligations of another taxpayer. More frequently, however, non-tax statutes for the benefit of creditors and equitable doctrines relating to fraudulent conveyances, "trust funds" for creditors, and the like are invoked. See, for example, Ginsberg v. Commissioner, 35 T.C. 1148 (1961) (gratuitous transfer of stock

to children). For more on the enforcement of the tax lien against life insurance, see Meyer v. United States, 375 U.S. 233 (1963).

See Healy v. Commissioner, supra page 856, note 5, stating that the secondary liability of a transferee requires proof by the government that it cannot collect from the transferor.

2. *Liability of fiduciaries for unpaid taxes.* Section 6901(a)(1)(B) permits the same strong-arm tactics against a fiduciary who distributes assets in his charge without first paying federal taxes, at least if he knows or should know of them. See Irving Trust Co. v. Commissioner, 40 B.T.A. 204 (1939). For the difference between transferee liability and fiduciary liability, see Grieb v. Commissioner, 36 T.C. 156 (1961).

See §6501(d), permitting a fiduciary to demand a prompt assessment of tax so as to facilitate distribution without fear of a later assessment, and note also the possibility of a closing agreement for this purpose, supra page 908.

3. *Shareholder suits.* Occasionally a stockholder has successfully sued his corporation to enjoin payment of a tax. A famous example is Pollock v. Farmers Loan & Trust Co., supra page 5; and see Stanton v. Baltic Mining Co., supra page 70. The device may prevent a voluntary payment of the tax by the corporation, but it will not prevent an assessment and collection by the government. See Reinecke v. Peacock, 3 F.2d 583 (7th Cir. 1924), dismissed for want of jurisdiction, 271 U.S. 643 (1926). If the stockholder's action succeeds in restraining a voluntary payment on the ground that the tax is not owing, however, will the corporation be in a better position on going to the Tax Court or on suing for a refund? If the outcome of the stockholder's suit is of no weight in a later deficiency or refund action, is there any reason why a court of equity should entertain such suits? How can the stockholder establish that there is a threatened loss to the corporation, in view of the availability to the corporation of the Tax Court and refund procedures?

SECTION C. TAX LITIGATION

A taxpayer who receives a 90-day letter may file a petition in the Tax Court and (unless a jeopardy assessment is made) defer payment of the tax until the litigation is concluded. In the alternative, he may pay the tax, file a claim for a refund, and sue in either the federal District Court or in the Court of Claims (if the claim is rejected or is held by the Internal Revenue Service without action for more than six months). If the taxpayer has waived the 90-day letter, by executing a Form 870 (supra p. 910), however, his only remedy is a claim for refund, followed by suit in the District Court or Court of Claims. And the taxpayer who paid a tax voluntarily and then wants a refund (e.g., because he has discovered an error in his return) is similarly confined to the refund route and may not litigate in the Tax Court.

For the taxpayer who has received a 90-day letter and is comparing the Tax Court as a forum with the District Court and Court of Claims, one or more of the following points may be controlling:

1. If he goes to the Tax Court, he need not pay the tax in advance.* If he wishes to pay (so as to avoid the interest cost if he loses, or because he is confident of success and wants a sure investment at 6 per cent interest), however, he will not lose his right to litigate in the Tax Court if he pays after receiving the 90-day letter. §6213(b)(3).

2. The various courts may have adopted divergent constructions of the Code, one of which is more favorable to the taxpayer than the others. Moreover, equitable doctrines, such as recoupment, may be applied by the District Court or Court of Claims, but not by the Tax Court. Supra page 875.

---

* In Flora v. United States, 357 U.S. 63 (1958), the Supreme Court held that a taxpayer must pay the full amount of a tax deficiency before challenging it by a suit for refund. During the next term, the Supreme Court took the unusual step of granting a rehearing. By a 5-to-4 vote, it then adhered to the original decision. 362 U.S. 145 (1960).

3. In the District Court, the taxpayer (or the government) may demand a trial by jury, which may (or may not) be an advantage. See Walston, The Use of Juries in Federal Civil Income Tax Cases, 39 Taxes 144 (1961); Damsky v. Zavatt, 289 F.2d 46 (2d Cir. 1961) (exhaustive historical review of jury trial in tax cases); Rinkey v. Knox, supra page 716 (use of jury in complex spin-off case); Cole v. Usry, 294 F.2d 426 (5th Cir. 1961) (scope of review in jury cases). Moreover, the District Court, whether the trial is by jury or not, may be more receptive to arguments based on local custom or tradition or on the taxpayer's reputation and standing in the community.

4. The taxpayer may appeal as of right from either the Tax Court or the District Court to the Court of Appeals, while the Court of Claims is reviewed only by the Supreme Court, and by certiorari.

5. A petition to the Tax Court permits a judgment against the taxpayer for a deficiency larger than was originally asserted for the year in question regardless of the statute of limitations. In the District Court, however, a barred deficiency may be used by the government only by way of set-off, not as an affirmative counterclaim. See pages 906-907 supra.

In most cases, there are no compelling reasons for choosing one forum rather than another, and economic and psychological resistance to paying the tax in advance often results in selecting the Tax Court. On June 30, 1962, there were about 9000 cases pending in the Tax Court, as against about 2700 in the District Courts and 500 in the Court of Claims.

See the comprehensive study of Ferguson, Jurisdictional Problems in Federal Tax Controversies, 48 Iowa L. Rev. 312 (1963); Flora v. United States, 362 U.S. 145 (1959) (extended review of legislative background of tax litigation in District Courts and Tax Court).

1. *Tax Court*

Time for filing petition. The requirement of §6213(a) that the petition to the Tax Court be filed within 90 days after the notice of deficiency is mailed is jurisdictional, and the period cannot be extended by the Tax Court for reasons of equity. Before the 1954 Code was enacted, there were a number of cases involving petitions whose delivery was delayed because of interruptions in normal mail service. See Weiss, When Is a Petition "Filed" in the Tax Court, 8 Tax L. Rev. 473 (1953). Section 7502 now provides that the date on which a petition sent by mail is postmarked shall be deemed to be the date of delivery if the petition is actually delivered later; and that if the petition is sent by registered mail, registration shall be prima facie evidence that it was delivered.

Status of the Tax Court. Section 7441 provides that the Board of Tax Appeals is "an independent agency in the Executive Branch of the Government" and that (commencing January 1, 1943) it "shall be known as the Tax Court of the United States." Is it a court or an administrative agency? The commentators have written more on this subject than the courts. Levenson, Effect of the Administrative Procedure Act on Decisions of the Tax Court," 2 Tax L. Rev. 103 (1946); Brown, The Nature of the Tax Court of the United States, 10 U. of Pitt. L. Rev. 298 (1949); Gribbon, Should the Judicial Character of the Tax Court Be Recognized? 24 Geo. Wash. L. Rev. 619 (1956). The principal practical issue was whether the Tax Court was subject to the Administrative Procedure Act, enacted in 1946, which sanctioned stricter judicial review than the *Dobson* case, supra page 862, but this question became moot when the enactment of §7482(a) modified the *Dobson* rule.

See also Kennedy Name Plate Co. v. Commissioner, 170 F.2d 196 (9th Cir. 1948); Stern v. Commissioner, 215 F.2d 701 (3d Cir. 1954) (Tax Court's "powers are

wholly judicial in character"); Lasky v. Commissioner, 235 F.2d 97 (9th Cir. 1956) (Tax Court is "not a court at all but merely an administrative agency"); Fairmont Aluminum Co. v. Commissioner, 22 T.C. 1377 (1954) ("Whatever label might be used to characterize this Court for various purposes, its proceedings are, and were intended by Congress to be, in every sense of the word, judicial").

Appellate review of Tax Court: the "inverted triangle." Decisions of the Tax Court are reviewed by the eleven Courts of Appeals. The Tax Court early adopted the position that if it was reversed by a Court of Appeals and was later faced with the same issue, it would "thoroughly reconsider the problem in the light of the reasoning of the reversing appellate court," but stick to its guns if not persuaded that it was wrong. Moreover, it follows this practice even if the later case will probably be appealed to the same appellate court by which it was previously reversed. In Lawrence v. Commissioner, 27 T.C. 713 (1957), it gave the following reasons for doing so:

> The Tax Court has always believed that Congress intended it to decide all cases uniformly, regardless of where, in its nationwide jurisdiction, they may arise, and that it could not perform its assigned functions properly were it to decide one case one way and another differently merely because appeals in such cases might go to different Courts of Appeals. Congress, in the case of the Tax Court, "inverted the triangle" so that from a single national jurisdiction, the Tax Court appeals would spread out among 11 Courts of Appeals, each for a different circuit or portion of the United States. Congress faced the problem in the beginning as to whether the Tax Court jurisdiction and approach was to be local or nationwide and made it nationwide. Congress expected the Tax Court to set precedents for the uniform application of the tax laws, insofar as it would be able to do that. . . .
>
> The Tax Court feels that it is adequately supported in this belief not only by the creating legislation and legislative history but by other circumstances as well. The Tax Court never knows, when it decides a case, where any subsequent appeal from that decision may go, or whether there will be an appeal. It usually, but not always, knows where the return of a taxpayer was filed and, therefore, the circuit to which an appeal could go, but the law permits the parties in all cases to appeal by mutual agreement to any Court of Appeals. Sec. 7482(b)(2), I.R.C. 1954. Furthermore, it frequently happens that a decision of the Tax Court is appealable to two or even more Courts of Appeals. A few examples will illustrate. A corporation, having stockholders scattered over the United States, makes a distribution to all. The Commissioner holds it taxable as a dividend from accumulated earnings. The stockholders join in a trial before the Tax Court which decides the issue as to all petitioning stockholders, contrary to a decision of Court of Appeals A, which reversed a prior Tax Court decision, but perhaps in line with an affirming decision of Court of Appeals B. . . . If it had rendered a separate different decision for those stockholders in Circuit A, what amount of accumulated earnings would remain for future distribution? Another situation was presented by the *Richmond Hosiery Mills.* That corporation filed its corporate returns for 3 years with the collector of internal revenue for the district of Georgia and for 1 intermediate year with the collector of internal revenue for the district of Tennessee. It received one notice of deficiency and filed a single petition in the Tax Court, each covering all 4 years. The Tax Court decided the case for all 4 years in a Memorandum Opinion and entered but one decision in the proceeding. The taxpayer took appeals to the Courts of Appeals for both the Fifth Circuit and the Sixth Circuit, in the former as to 3 of the years and in the latter as to a single year. . . . Or suppose partners live in different circuits. Are the decisions of the Tax Court as to them to vary accordingly?

But see Stacey Mfg. Co. v. Commissioner, 237 F.2d 605 (6th Cir. 1956) (Tax Court "is not lawfully privileged to disregard and refuse to follow, as the settled law of the circuit, an opinion of the court of appeals for that circuit"). For further discussion of this problem by the Tax Court, see Automobile Club of New York, Inc. v. Commissioner, 32 T.C. 906, 917, 923-926 (1959); see also Hear-

ings on Treasury-Post Office Department Appropriations, House Appropriations Committee, 84th Cong., 2d Sess. 461-465 (1956); Dwan, Administrative Review of Judicial Decisions: Treasury Practice, 46 Colum. L. Rev. 581, 591-594 (1946).

2. *District Courts and Court of Claims*

For many years, the taxpayer seeking a refund of federal income taxes has had a choice of forums: (a) suit against the Collector (now the District Director) of Internal Revenue who collected the tax, in the federal District Court of the defendant's residence; (b) suit against the United States in the Court of Claims; and (c) suit against the United States in the federal District Court of the plaintiff's residence. The United States could formerly be sued in the District Court only if the claim did not exceed $10,000 or if the Collector who collected the tax was dead or out of office, but these restrictions were eliminated in 1954. No matter which forum is selected, the taxpayer cannot maintain a suit unless he has filed a timely claim for refund with the Internal Revenue Service (supra p. 906) which either has been rejected or has been before the Service without action for six months or more. If the claim has been rejected, suit must be brought within two years after notice of its disallowance. §§7422 and 6532.

The suit against the Collector* was a procedural device created by the courts to avoid the impact of sovereign immunity to suit and "is today an anomalous relic of bygone modes of thought." George Moore Ice Cream Co. v. Rose, 289 U.S. 373, 382 (1933). Originally the Collector was protected against personal liability by the requirement that the taxpayer intending to claim a refund must pay under protest, so that the Collector would withhold the tax from the Treasury until the taxpayer's claim was settled; but for more than a century the Collector has been required to pay the tax over to the Treasury and has been protected against personal loss by what is now §2006 of 28 U.S.C., providing that any judgment shall be paid by the Treasury if the court certifies that probable cause existed or that the Collector acted under official orders.

Although the United States is thus the real party in interest, the suit against

* The "Collector" is now the "District Director," but the tradition of calling the personal action a suit "against the Collector" is so strong that the label has been preserved in this discussion.

the Collector has never been completely liberated from the judicial theory that it is a purely personal action, with a variety of curious results. At one time, for example, a suit against a collector was not res adjudicata in a later suit, for the same tax year, against the United States. See Woodworth v. Kales and Kales v. United States, supra page 919. This rule was changed by statute, now §7422 (c), in 1942. Another curiosity of the suit against the Collector was that it would fail if the tax had been paid not in cash, but by crediting an overpayment for another period, since the defendant Collector had not "collected" anything. This rule has also been altered, by §7422(d), enacted in 1949. There are other procedural quirks in the suit against the Collector, however, which have not been removed by statute. If the taxpayer sues the wrong Collector, he cannot amend his complaint to substitute the correct Collector or the United States after the statute of limitations has run, since the amendment is the equivalent of a new action. It is possible that a suit against a Collector is improper if the tax was due when collected and became an overpayment only by reason of subsequent events: e.g., a loss carryback, a retroactive change in the statute, etc. A Collector who is sued may set up a deficiency for the same year by way of offset, but a counterclaim against the taxpayer requires the intervention of the United States. For these and other aspects of the suit against the Collector, see Plumb, Tax Refund Suits Against Collectors of Internal Revenue, 60 Harv. L. Rev. 685 (1947) (partly outmoded by statutory changes); Hammond-Knowlton v. Hartford-Connecticut Trust Co., 89 F.2d 175 (2d Cir. 1937).

Two statutory changes in 1954 may reduce the number of suits against the Collector and thus mitigate in practice the anomolous consequences of the "personal" character of this procedural device. One change, already mentioned, was the elimination of the $10,000 limit on suits against the United States in the federal District Court; and the other was the extension of trial by jury to suits against the United States. Except for differences in venue and the assessment of costs, there no longer seems to be any reason for suing the Collector rather than the United States, though it is perhaps too early to assert flatly that there are no other residual differences between the two forms of action.

For a comprehensive study of the Court of Claims, see Pavenstedt, The United States Court of Claims as a Forum for Tax Cases, 15 Tax L. Rev. 1 and 201 (1959-1960).

3. *Res Judicata*

COMMISSIONER v. SUNNEN

333 U.S. 591 (1948)

MR. JUSTICE MURPHY delivered the opinion of the Court.

The problem of the federal income tax consequences of intra-family assignments of income is brought into focus again by this case.

The stipulated facts concern the taxable years 1937 to 1941, inclusive, and may be summarized as follows:

The respondent taxpayer was an inventor-patentee and the president of the Sunnen Products Company, a corporation engaged in the manufacture and sale of patented grinding machines and other tools. He held 89% or 1,780 out of a total of 2,000 shares of the outstanding stock of the corporation. His wife held 200 shares, the vice-president held 18 shares and two others connected with the corporation held one share each. The corporation's board of directors consisted of five members, including the taxpayer and his wife. This board was elected

annually by the stockholders. A vote of three directors was required to take binding action.

The taxpayer had entered into several non-exclusive agreements [in 1928 and certain later years] whereby the corporation was licensed to manufacture and sell various devices on which he had applied for patents. In return, the corporation agreed to pay to the taxpayer a royalty equal to 10% of the gross sales price of the devices. These agreements did not require the corporation to manufacture and sell any particular number of devices; nor did they specify a minimum amount of royalties. Each party had the right to cancel the licenses, without liability, by giving the other party written notice of either six months or a year. In the absence of cancellation, the agreements were to continue in force for ten years. The board of directors authorized the corporation to execute each of these contracts. No notices of cancellation were given. . . .

The taxpayer at various times assigned to his wife all his right, title and interest in the various license contracts. She was given exclusive title and power over the royalties accruing under these contracts. All the assignments were without consideration and were made as gifts to the wife, those occurring after 1932 being reported by the taxpayer for gift tax purposes. The corporation was notified of each assignment. . . .

Relying upon its own prior decision in Estate of Dodson v. Commissioner, 1 T.C. 416, the Tax Court held that, with one exception, all the royalties paid to the wife from 1937 to 1941 were part of the taxable income of the taxpayer. 6 T.C. 431. The one exception concerned the royalties of $4,881.35 paid in 1937 under the 1928 agreement. In an earlier proceeding in 1935, the Board of Tax Appeals dealt with the taxpayer's income tax liability for the years 1929-1931; it concluded that he was not taxable on the royalties paid to his wife during those years under the 1928 license agreement. This prior determination by the Board caused the Tax Court to apply the principle of res judicata to bar a different result as to the royalities paid pursuant to the same agreement during 1937.

The Tax Court's decision was affirmed in part and reversed in part by the Eighth Circuit Court of Appeals. 161 F.2d 171. Approval was given to the Tax Court's application of the res judicata doctrine to exclude from the taxpayer's income the $4,881.35 in royalties paid in 1937 under the 1928 agreement. But to the extent that the taxpayer had been held taxable on royalties paid to his wife during the taxable years of 1937-1941, the decision was reversed on the theory that such payments were not income to him. Because of that conclusion, the Circuit Court of Appeals found it unnecessary to decide the taxpayer's additional claim that the res judicata doctrine applied as well to the other royalties (those accruing apart from the 1928 agreement) paid in the taxable years. We then brought the case here on certiorari, the Commissioner alleging that the result below conflicts with prior decisions of this Court.

If the doctrine of res judicata is properly applicable so that all the royalty payments made during 1937-1941 are governed by the prior decision of the Board of Tax Appeals, the case may be disposed of without reaching the merits of the controversy. We accordingly cast our attention initially on that possibility, one that has been explored by the Tax Court and that has been fully argued by the parties before us.

It is first necessary to understand something of the recognized meaning and scope of res judicata, a doctrine judicial in origin. The general rule of res judicata applies to repetitious suits involving the same cause of action. It rests upon considerations of economy of judicial time and public policy favoring the establishment of certainty in legal relations. The rule provides that when a court of competent jurisdiction has entered a final judgment on the merits of a cause of

action, the parties to the suit and their privies are thereafter bound "not only as to every matter which was offered and received to sustain or defeat the claim or demand, but as to any other admissible matter which might have been offered for that purpose." Cromwell v. County of Sac, 94 U.S. 351, 352, 24 L. Ed. 195. The judgment puts an end to the cause of action, which cannot again be brought into litigation between the parties upon any ground whatever, absent fraud or some other factor invalidating the judgment. See von Moschzisker, "Res Judicata," 38 Yale L.J. 299; Restatement of the Law of Judgment, §§47, 48.

But where the second action between the same parties is upon a different cause of demand, the principle of res judicata is applied much more narrowly. In this situation, the judgment in the prior action operates as an estoppel, not as to matters which might have been litigated and determined, but "only as to those matters in issue or points controverted, upon the determination of which the finding or verdict was rendered." Cromwell v. County of Sac, supra, 353 of 94 U.S. . . . Since the cause of action involved in the second proceeding is not swallowed by the judgment in the prior suit, the parties are free to litigate points which were not at issue in the first proceeding, even though such points might have been tendered and decided at that time. But matters which were actually litigated and determined in the first proceeding cannot later be relitigated. Once a party has fought out a matter in litigation with the other party, he cannot later renew that duel. In this sense, res judicata is usually and more accurately referred to as estoppel by judgment, or collateral estoppel. See Restatement of the Law of Judgments, §§68, 69, 70; Scott, "Collateral Estoppel by Judgment," 56 Harv. L. Rev. 1.

These same concepts are applicable in the federal income tax field. Income taxes are levied on an annual basis. Each year is the origin of a new liability and of a separate cause of action. Thus if a claim of liability or non-liability relating to a particular tax year is litigated, a judgment on the merits is res judicata as to any subsequent proceeding involving the same claim and the same tax year. But if the later proceeding is concerned with a similar or unlike claim relating to a different tax year, the prior judgment acts as a collateral estoppel only as to those matters in the second proceeding which were actually presented and determined in the first suit. Collateral estoppel operates, in other words, to relieve the government and the taxpayer of "redundant litigation of the identical question of the statute's application to the taxpayer's status." Tait v. Western Md. R. Co., 289 U.S. 620, 624.

But collateral estoppel is a doctrine capable of being applied so as to avoid an undue disparity in the impact of income tax liability. A taxpayer may secure a judicial determination of a particular tax matter, a matter which may recur without substantial variation for some years thereafter. But a subsequent modification of the significant facts or a change or development in the controlling legal principles may make that determination obsolete or erroneous, at least for future purposes. If such a determination is then perpetuated each succeeding year as to the taxpayer involved in the original litigation, he is accorded a tax treatment different from that given to other taxpayers of the same class. As a result, there are inequalities in the administration of the revenue laws, discriminatory distinctions in tax liability, and a fertile basis for litigious confusion. Compare United States v. Stone & Downer Co., 274 U.S. 225, 235, 236. Such consequences, however, are neither necessitated nor justified by the principle of collateral estoppel. That principle is designed to prevent repetitious lawsuits over matters which have once been decided and which have remained substantially static, factually and legally. It is not meant to create vested rights in decisions that have

become obsolete or erroneous with time, thereby causing inequities among taxpayers.

And so where two cases involve income taxes in different taxable years, collateral estoppel must be used with its limitations carefully in mind so as to avoid injustice. It must be confined to situations where the matter raised in the second suit is identical in all respects with that decided in the first proceeding and where the controlling facts and applicable legal rules remain unchanged. Tait v. Western Md. R. Co., supra. If the legal matters determined in the earlier case differ from those raised in the second case, collateral estoppel has no bearing on the situation. See Travelers Ins. Co. v. Commissioner, 2 Cir., 161 F.2d 93. And where the situation is vitally altered between the time of the first judgment and the second, the prior determination is not conclusive. See State Farm Ins. Co. v. Duel, 324 U.S. 154, 162; Freeman on Judgments, 5th Ed. 1925, §713. As demonstrated by Blair v. Commissioner, 300 U.S. 5, 9, a judicial declaration intervening between the two proceedings may so change the legal atmosphere as to render the rule of collateral estoppel inapplicable. But the intervening decision need not necessarily be that of a state court, as it was in the *Blair* case. While such a state court decision may be considered as having changed the facts for federal tax litigation purposes, a modification or growth in legal principles as enunciated in intervening decisions of this Court may also effect a significant change in the situation. Tax inequality can result as readily from neglecting legal modulations by this Court as from disregarding factual changes wrought by state courts. In either event, the supervening decision cannot justly be ignored by blind reliance upon the rule of collateral estoppel. . . . It naturally follows that an interposed alteration in the pertinent statutory provisions or Treasury regulations can make the use of that rule unwarranted. Tait v. Western Md. R. Co., supra, 625 of 289 U.S.

Of course, where a question of fact essential to the judgment is actually litigated and determined in the first tax proceeding, the parties are bound by that determination in a subsequent proceeding even though the cause of action is different. See Evergreens v. Nunan, 2 Cir., 141 F.2d 927. And if the very same facts and no others are involved in the second case, a case relating to a different tax year, the prior judgment will be conclusive as to the same legal issues which appear, assuming no intervening doctrinal change. But if the relevant facts in the two cases are separable, even though they be similar or identical, collateral estoppel does not govern the legal issues which recur in the second case. Thus the second proceeding may involve an instrument or transaction identical with, but in a form separable from, the one dealt with in the first proceeding. In that situation, a court is free in the second proceeding to make an independent examination of the legal matters at issue. It may then reach a different result or, if consistency in decision is considered just and desirable, reliance may be placed upon the ordinary rule of stare decisis. Before a party can invoke the collateral estoppel doctrine in these circumstances, the legal matter raised in the second proceeding must involve the same set of events or documents and the same bundle of legal principles that contributed to the rendering of the first judgment. Tait v. Western Maryland R. Co., supra. And see Griswold, "Res Judicata in Federal Tax Cases," 46 Yale L.J. 1320; Paul and Zimet, "Res Judicata in Federal Taxation," appearing in Paul, Selected Studies in Federal Taxation, 2d series, 1938, p. 104.

It is readily apparent in this case that the royalty payments growing out of the license contracts which were not involved in the earlier action before the Board of Tax Appeals and which concerned different tax years are free from the effects of the collateral estoppel doctrine. That is true even though those contracts are identical in all important respects with the 1928 contract, the only one that was

before the Board, and even though the issue as to those contracts is the same as that raised by the 1928 contract. For income tax purposes, what is decided as to one contract is not conclusive as to any other contract which is not then in issue, however similar or identical it may be. In this respect, the instant case thus differs vitally from Tait v. Western Md. R. Co., supra, where the two proceedings involved the same instruments and the same surrounding facts.

A more difficult problem is posed as to the $4,881.35 in royalties paid to the taxpayer's wife in 1937 under the 1928 contract. Here there is complete identity of facts, issues and parties as between the earlier Board proceeding and the instant one. The Commissioner claims, however, that legal principles developed in various intervening decisions of this Court have made plain the error of the Board's conclusion in the earlier proceeding, thus creating a situation like that involved in Blair v. Commissioner, supra. This change in the legal picture is said to have been brought about by such cases as Helvering v. Clifford; Helvering v. Horst; Harrison v. Schaffner . . . It must therefore be determined whether this *Clifford-Horst* line of cases represents an intervening legal development which is pertinent to the problem raised by the assignment of the 1928 agreement and which makes manifest the error of the result reached in 1935 by the Board. If that is the situation, the doctrine of collateral estoppel becomes inapplicable. . . .

[After reviewing the *Clifford-Horst* line of cases, the Court concluded:]

The principles which have thus been recognized and developed by the *Clifford* and *Horst* cases, and those following them, are directly applicable to the transfer of patent license contracts between members of the same family. They are guide-posts for those who seek to determine in a particular instance whether such an assignor retains sufficient control over the assigned contracts or over the receipt of income by the assignee to make it fair to impose income tax liability on him.

Moreover, the clarification and growth of these principles through the *Clifford-Horst* line of cases constitute, in our opinion, a sufficient change in the legal climate to render inapplicable in the instant proceeding, the doctrine of collateral estoppel relative to the assignment of the 1928 contract. True, these cases did not originate the concept that an assignor is taxable if he retains control over the assigned property or power to defeat the receipt of income by the assignee. But they gave much added emphasis and substance to that concept, making it more suited to meet the "attenuated subtleties" created by taxpayers. So substantial was the amplification of this concept as to justify a reconsideration of earlier Tax Court decisions reached without the benefit of the expanded notions, decisions which are now sought to be perpetuated regardless of their present correctness. Thus in the earlier litigation in 1935, the Board of Tax Appeals was unable to bring to bear on the assignment of the 1928 contract the full breadth of the ideas enunciated in the *Clifford-Horst* series of cases. And, as we shall see, a proper application of the principles as there developed might well have produced a different result, such as was reached by the Tax Court in this case in regard to the assignments of the other contracts. Under those circumstances collateral estoppel should not have been used by the Tax Court in the instant proceeding to perpetuate the 1935 viewpoint of the assignment. . . .

The judgment below must therefore be reversed and the case remanded for such further proceedings as may be necessary in light of this opinion.

Reversed.

Mr. Justice FRANKFURTER and Mr. Justice JACKSON believe the judgment of the Tax Court is based on substantial evidence and is consistent with the law, and would affirm that judgment for reasons stated in Dobson v. Commissioner, 320 U.S. 489, and Commissioner v. Scottish American Co., 323 U.S. 119.

NOTE

1. *Other applications of Sunnen.* Lynch v. Commissioner, 20 T.C. 1052 (1953), involved the validity of a family partnership for the years 1944 and 1945. In 1941 the Tax Court had held that the same partnership was valid in a proceeding based on a deficiency determined for the year 1937. The court held in the second proceeding that the *Tower* and *Culbertson* cases, supra page 388, had rendered "obsolete the legal concept" upon which its earlier decision had been based, so that neither res judicata nor collateral estoppel was applicable. Four dissenting judges took the position that the earlier proceeding had found *as a fact* that the petitioner had made a valid gift of capital interests in the business to his children and that the parties in good faith intended to carry on the business as partners, and that *Sunnen* was inapplicable. See also Massaglia v. Commissioner, 286 F.2d 258 (10th Cir. 1961) (change of state law); United States v. International Bldg. Co., 345 U.S. 502 (1953) (consent judgment in Tax Court on basis of depreciable property; held, does not give rise to estoppel by judgment for another year).

SECTION D. INTEREST AND CIVIL PENALTIES

1. *Interest*

Section 6601 of the 1954 Code, relating to interest on deficiencies, is based, with some modifications, on §292 of the 1954 Code.

PRIESS v. UNITED STATES

42 F. Supp. 89 (E.D. Wash. 1941)

SCHWELLENBACH, District Judge.

In this action plaintiff asks judgment for the amount of interest paid by him under protest on the deficiency assessments levied against him on his income taxes for the years 1936-1939 inclusive. The facts are not in dispute. In paintiff's returns during each of these years he reported as income on his single premium life insurance annuities, with death benefit contract, 3% of the consideration paid for the annuity part of the insurance policies. These returns were made in conformity with the interpretation placed upon the Statute by the Internal Revenue Bureau (General Counsel Memorandum 6395). Thereafter, on January 8, 1940, defendant, through its Internal Revenue Bureau, adopted a new interpretation of Section 22(b)(2) of the Revenue Act of 1936 (General Counsel Memorandum 21716). Under this interpretation it was held that such single premium life insurance annuities, with death benefit contracts, were not annuity contracts but contracts for the payment of the interest or earnings on a certain fund. Under the new interpretation, plaintiff's income for tax purposes during each of the years mentioned was substantially increased. Thereafter, a deficiency assessment was imposed [§6211]. Included in such a deficiency as a part of the tax was interest at the rate of 6% per annum from the date prescribed for the payment of the tax to the date the deficiency was assessed. [§6601(a).] Plaintiff paid the principal of the deficiency without objection but he paid the interest portion of the deficiency under protest and this action is to compel the refunding of such interest.

It is conceded that, in making his returns and in paying his taxes during the period mentioned, plaintiff complied fully with the requirements of the defendant

and the defendant's interpretation of the Statute. Plaintiff's theory in this case is that, as to him, the collection of interest constituted a penalty. He makes this contention on the basis that he neither borrows nor lends money. He has retired from business. All of his funds are invested. He spends his income for personal living expenses, traveling expenses and donations to charity. He, therefore, argues that the retention of the money which he should have paid during each of the involved years was of no value to him and that, therefore, he should not be penalized by being compelled to pay for the use of it since he was without fault.

To this contention, defendant answers that this Court has no authority to render judgment on recovery of either taxes or interest collected in pursuance of an Act of Congress enacted in pursuance of its constitutional authority. Jackson Furniture Company v. McLaughlin, 9 Cir., 85 F.2d 606; United States v. Globe Indemnity Company, 2 Cir., 94 F.2d 576.

To my mind, this is a complete answer. The Statute is plain and unambiguous. . . .

Clearly, in the light of the Statute and the ruling of the Circuit Court of Appeals of the Ninth Circuit, Jackson Furniture Company v. McLaughlin, supra, it does not lie within my power to undo the action of the Commissioner in which he was following the plain, simple mandate of the Statute.

However, plaintiff makes a forceful and an appealing argument on the basis that he is being penalized when he was in fact innocent of wrongdoing. So forcible and so appealing is plaintiff's argument that I feel constrained to examine closely the question as to whether this is a penalty.

It is evident that the Congress, in providing interest on deficiency assessments, did not consider such interest to be a penalty. This is shown by the fact that, in two separate sections of the Act apart from the interest on deficiency section, the Congress provided for penalties. In [§6651(a)], there is provided the penalty for failure to file a return. In [§6653(a)], there are provided penalties for deficiencies due to negligence or intentional disregard of rules and regulations and for deficiencies due to fraud with intent to evade the tax. The legislative intent to distinguish between penalty and interest is clear.

Plaintiff, in his brief, states that he has been unable to find any cases dealing directly with this question. There are a number of cases which, on careful analysis, will be seen to deal with precisely the same question raised by the plaintiff here. These are cases involving the bankruptcy statute, 11 U.S.C.A. §93, subd j, which prohibits the allowance of debts to the United States or any state or subdivision thereof as a penalty or forfeiture. These cases involved the question of interest provisions in taxing statutes where the rate of interest was in excess of the legal rate allowed by the statutes of the state where the taxpayer lived. It was the contention in those cases that, since the legislature of the state had determined that money in that particular state was worth only a certain percent of interest for its use, that any taxing statute which required the payment of more than the statutory interest rate was not interest but was a penalty and, therefore, not allowable as a credit in the bankruptcy court. We should remember, at this point, that plaintiff contends that the use of the money was of no value to him and, therefore any charge for its use should be classed not as interest but as a penalty. Keeping this argument in mind, the pertinency of the bankruptcy cases is apparent. A number of the District Courts have upheld plaintiff's contention and have reduced the allowances to the amount of the statutory interest rate. . . .

However, in the case of Unemployment Reserves Commission of California v. Meilink, 116 F.2d 330, the Circuit Court of Appeals for the Ninth Circuit just a year ago passed upon this question fully and squarely. It based its decision on the decision of the Supreme Court of the United States in the case of United States v.

Childs, 266 U.S. 304. It quotes at length from the opinion in the *Childs* case. Included in such quotations are the following:

> Besides, the federal statute is precise, and it is made peremptory by the distinction between "penalty" and "interest," and if it may be conceded that the use of the latter word would not save it from condemnation if it were in effect the former, it cannot be conceded that 1 per cent. per month — 12 per cent. a year — gives it that illegal effect, certainly not against legislative declaration that is within the legislative power, there being no ambiguity to resolve. . . . The tax in this case is one on income; a burden imposed for the support of the government. Interest is put upon it and so denominated, distinguished from the 5 per cent. as penalty, clearly intended to compensate the delay in payment of the tax — the detriment of its nonpayment, to be continued during the time of its nonpayment — compensation, not punishment.

In his very carefully considered opinion in the *Unemployment Reserves Commission* case, Judge Wilbur reviews the decisions on the question in the various circuit courts of appeals and points out that only one circuit is at variance with the rule enunciated in United States v. Childs, supra. There can be no doubt but that the decision in this case must be controlled by the decision of the Supreme Court in United States v. Childs, supra, and of the Circuit Court of Appeals in Unemployment Reserves Commission of California v. Meilink, supra.

In the conclusion of his brief, plaintiff appeals strongly upon the basis of justice and fairness and, in effect, asks me to disregard the provision of the Statute. The answer to that argument is that if assessment of interest charge against this plaintiff is unfair, it is because he occupies a position which is occupied by such a small percentage of our population that Congress could not be expected to legislate specially for them. The number of persons in plaintiff's position for whom the use of money is of no value is negligible. Furthermore, the point which plaintiff overlooks is that interest is charged not only because of the value to the one who uses it but also as compensation to the one who has been deprived of the use of it.

The action must be dismissed.

2. *Addition for Late Filing or Failing to File*

Section 6651(a) of the 1954 Code, imposing a 25 per cent penalty for failure to file a return on the due date, is similar to §291(a) of the 1939 Code.

HAYWOOD LUMBER & MINING CO. v. COMMISSIONER

178 F.2d 769 (2d Cir. 1950)

SWAN, Circuit Judge.

The taxpayer is a personal holding company. The Commissioner determined deficiencies in personal holding company surtaxes for the years 1941 and 1942 and added thereto a 25 percent penalty, pursuant to [§6651(a)], for petitioner's failure to file personal holding company returns for those years.* The sole question presented to the Tax Court and likewise here is whether the taxpayer's failure to file personal holding company returns for the years in suit was "due to reason-

* A separate personal holding company return is no longer required. 1954 Code, §6501(f). — ED.

able cause and not due to willful neglect." [§6651(a).] The Tax Court held that it was not due to reasonable cause.

"Reasonable cause" has been defined by the Regulations to mean that the taxpayer exercised ordinary business care and prudence. [§301.6651-1(a)(3).] In the case at bar Mr. Sprague, the taxpayer's secretary-treasurer, requested a certified public accountant, Mr. Wolcott, who was competent to advise on tax matters, to prepare the proper corporate tax returns for the years 1941 and 1942. Sprague fully disclosed to Wolcott all necessary information about the corporation and Wolcott knew that the taxpayer was a personal holding company but "through inadvertence" did not inform Sprague of this fact nor submit to him a personal holding company surtax return. Sprague was aware of the personal holding company surtax statute but he had never studied its application and it did not occur to him that the petitioner was a personal holding company. He filed on behalf of the corporation only the returns prepared by Wolcott. Because Sprague did not "specifically inquire" of Wolcott "concerning the personal holding company status of petitioner" but "merely awaited passively for such tax advice as Wolcott might volunteer to give," the Tax Court held, one judge dissenting, that petitioner had not sustained the burden of proving that ordinary business care and prudence were exercised in failing to file the personal holding company surtax returns.

With this conclusion we disagree. When a corporate taxpayer selects a competent tax expert, supplies him with all necessary information, and requests him to prepare proper tax returns, we think the taxpayer has done all that ordinary business care and prudence can reasonably demand. Sprague had not "awaited passively for such tax advice" as Wolcott "might volunteer to give"; he affirmatively requested the preparation by his consultant of proper returns.[1] To require Mr. Sprague to inquire specifically about the personal holding company act nullifies the very purpose of consulting an expert. We doubt if anyone would suggest that a client who stated the facts of his case to his lawyer must, in order to show ordinary business care and prudence, inquire specifically about the applicability of various legal principles which may be relevant to the facts stated. The courts have recognized that reliance on the advice of counsel or of expert accountants, sought and received in good faith is "reasonable cause" for failing to file a tax return. We think those cases are correctly decided and in principle control the case at bar. The Tax Court relies on Hermax Co. v. Commissioner, 3 Cir., 175 F.2d 776, affirming 11 T.C. 442. There the accountant was not qualified to advise about tax matters and the corporation's president testified to no reason why he relied on him. Here the undisputed evidence showed that Wolcott had had over twenty years of extensive tax experience with a prominent accounting firm in Binghamton and had advised the petitioner on tax matters in previous years.

The respondent contends that where all responsibility for the preparation of tax returns is delegated to an agent, the taxpayer should be held to accept its agent's efforts cum onere and be chargeable with his negligence. That was the rationale suggested by this court in Berlin v. Commissioner, 59 F.2d 996, certiorari denied 287 U.S. 642. Further reflection convinces us that that proposition is not sound. The standard of care imposed by [§6651(a)] is personal to the taxpayer. To impute to the taxpayer the mistakes of his consultant would be to penalize him for consulting an expert; for if he must take the benefit of his counsel's or accountant's advice cum onere, then he must be held to a standard of care which is not his own and one which, in most cases, would be far higher than that exacted

1 Mr. Sprague testified as to his conversation with Mr. Wolcott: "I advised him, 'Here are the Hayward figures' — I had brought my books with me — 'if there have been any changes in the law we don't know about, you tell us and prepare the return.' "

of a layman. The cases which hold that advice sought and received in good faith from a competent adviser constitutes reasonable cause for failure to file the required return are inconsistent with the cum onere doctrine suggested in the *Berlin* case.

In Paymer v. Commissioner, 2 Cir., 150 F.2d 334, 337 we said that reasonable cause was a question of fact and "therefore presents no reviewable issue." This abbreviated statement does not state the whole principle, which is better expounded in Hatfried, Inc. v. Commissioner, 3 Cir., 162 F.2d 628, 635. As there pointed out, whether the elements which constitute "reasonable cause" are present is a question of fact, but what elements must be present to constitute "reasonable cause" is a question of law. The Tax Court erred in our opinion upon this question of law. Accordingly the decision must be modified to strike out the penalties in personal holding company surtax for the years 1941 and 1942 in the respective amounts of $567.77 and $923.83.

NOTE

1. *Expert advice as "reasonable cause."* What if the taxpayer goes to an expert and answers all questions accurately, but does not volunteer essential data because he does not understand its significance? See Tarbox Corp. v. Commissioner, 6 T.C. 35 (1946); Genesee Valley Gas Co. v. Commissioner, 180 F.2d 41 (D.C. Cir. 1950). In Commissioner v. American Assn. of Engineers Employment, Inc., 204 F.2d 19 (7th Cir. 1953), the taxpayer proved that it failed to file returns because an attorney with wide experience in federal taxation had advised in writing that it was an exempt organization. The opinion was not in evidence, nor did the taxpayer establish what information had been furnished to the attorney as a basis for his opinion. The Tax Court held that reasonable cause for the failure to file was shown, and the Court of Appeals affirmed, saying:

> The Tax Court could also assume that a reputable and experienced attorney who had a wide practice in the tax field, would not render an opinion, either written or verbal, on the question of the liability of a client for federal taxes without being in possession of the facts necessary to determine that question. [204 F.2d at 21.]

Note that an attorney might render an opinion on the basis of information furnished to him by a client without making an independent investigation, and the facts assumed by him might not be correct. What of advice from officials of the Internal Revenue Service?

Note that §6651(a) requires the taxpayer not only to negate "willful neglect" but also to show that his delinquency was due to "reasonable cause." In Rogers Hornsby v. Commissioner, 26 B.T.A. 591 (1932), the 25 per cent addition was imposed where the taxpayer prepared and executed the return before the due date, leaving it with his wife when he left for spring training to file on March 15, and she through forgetfulness filed it two months late: "The penalty may be avoided only if the tardy filing was due to a reasonable cause and not to willful neglect. Both conditions must exist. Here the only excuse is that one of the petitioners forgot to file them. This can scarcely be said to be a 'reasonable cause' for failing to perform such an important act."

For a comprehensive review of the cases, see Stevens Bros. Foundation, Inc. v. Commissioner, 39 T.C. 93 (1962).

2. *Meaning of "return."* What is a "return?" See O'Sullivan Rubber Co. v. Commissioner, 120 F.2d 845; Commissioner v. Lane-Wells Co., 321 U.S. 219 (1944). In Germantown Trust Co. v. Commissioner, 309 U.S. 304 (1940), the taxpayer filed the tax return prescribed for trusts, though it should have filed a corporate return because it was an "association" under §7701(a)(3). The form that was filed, however, supplied "all information necessary to the calculation of any tax which might be due." The Court held that this was a "return" so as to set the statute of limitations running. In Sanders v. Commissioner, 225 F.2d 629 (10th Cir. 1955), the penalty for failure to file a return was imposed, although the taxpayer filed "skeleton" returns containing his name and

address and the amount of tax due, but "no detailed information as to income or deductions." What of a gambler who reports $25,000 of income from "various sources," giving no other details except his name, address, marital status, and tax due? Supra page 117.

3. *Addition for Negligence*

Section 6653(a) of the 1954 Code, imposing a 5 per cent penalty for negligence or intentional disregard of rules and regulations, is similar to §293(a) of the 1939 Code.

RUSHING v. COMMISSIONER

¶52,117 P-H Memo T.C. (1952), aff'd, 214 F.2d 383 (5th Cir. 1954)

JOHNSON, Judge:

This proceeding involves deficiencies in income tax and penalties for the calendar years 1946, 1947 and 1948. . . .

FINDINGS OF FACT

Petitioner was in the oil field contracting business. His work consisted of servicing wells, constructing derricks, setting units, swabbing wells, pulling rods and tubing, and general construction work in the oil field. He employed from 10 to 40 people in this work.

Petitioner in each of the taxable years kept no formal books and records. His income tax returns were prepared by an accountant from information furnished by the taxpayer. The source of this information was cancelled checks and bank statements. Petitioner did not maintain separate bank accounts for his business or personal needs.

Prior to the preparation of his income tax returns, he grouped his checks in certain categories of expenses, such as travel, entertainment and repairs, and obtained total amounts therefrom. During the conferences with the internal revenue agent, petitioner regrouped these checks into other categories and obtained new totals. Later, at the hearing, he regrouped these checks for the third time and thus established the third set of expense figures. In each group of checks presented at the hearing allegedly representing expenses for travel, advertising and entertainment, there were checks made payable to cash, individuals, restaurants, liquor stores, drug stores, grocery stores, and clothing stores. Only in general terms and from his memory was petitioner able to give the number and names of persons entertained and the amounts of alleged expenses for gifts and advertising. . . .

OPINION

Petitioner, a taxpayer without legal knowledge or experience, was not represented by counsel in this proceeding. Before the hearing began, the court suggested to the petitioner that due to the large sum of money involved, the rules governing the admission of evidence, and the Court's inability to try the case for him, it might be advisable for him to be represented by counsel. The Court offered to delay the hearing, if the petitioner so desired, so that counsel might be obtained. The petitioner declined the offer and proceeded to try the case himself.

From the record it is evident that petitioner did not prepare his case; nor did

he present evidence by which we might determine the validity of his claims concerning his expenses. Aside from petitioner's testimony, which fails to substantiate his contentions, he only presented four exhibits. Each exhibit consisted of an envelope containing cancelled checks. Exhibit No. 1, entitled "1946 Travel $3,079.45," contains some 62 cancelled checks. Exhibit No. 2, entitled "Travel, Entertainment & Advertising -8-[1948] $3,768.83," contains 99 cancelled checks. Exhibit No. 3, entitled "Entertainment & Adv. $1,917.50," contains 62 cancelled checks. Exhibit No. 4, entitled "1946 Materials & Supplys [*sic*] $18,239.94," contains some 131 cancelled checks. As stated in the facts, each group of checks was made payable to various persons and business establishments. Petitioner admitted that some portion could have been used for personal expenses. He was unable, except in a general way, to account for any of these expenses.

We have carefully examined the checks and from them alone we can not allocate the expenses to the various expense accounts as suggested by the petitioner. Moreover, we can not adopt petitioner's contentions as to the total amounts expended for travel, advertising, entertainment, depreciation, repairs, materials and supplies, and office expenses. The adjustments as determined by the respondent must be sustained. . . .

Petitioner also alleges error in respondent's determination of penalties under [§6653(a)]. In regard to the negligence penalty under [§6653(a)], a finding that the return is incorrect, or that the taxpayer did not keep proper or complete records or that his calculations are confusing, is not enough to warrant the imposition of the penalty. Bennett v. Commissioner, 139 F.2d 961 affirming Memorandum Opinion of the Tax Court. We can not find on this record that petitioner intentionally disregarded the rules and regulations of the Commissioner. While petitioner's bookkeeping methods would seem to be open to a certain amount of criticism, this falls short of an intentional disregard of the regulations. The respondent's determination on this point is disapproved.

NOTE

1. *The penalty for negligence.* It would be a rash taxpayer who modeled his behavior on that of the petitioner in this case. In other cases, unsubstantiated or baseless estimates have been regarded as "negligence" and a failure to keep adequate records as "intentional disregard of rules and regulations" under [§6653(a)]. See the last paragraph of the *Bechelli* case, supra page 891. Are the Regulations prescribing the records to be kept, Regs. §1.6001-1(a), so vague that they cannot be "intentionally disregarded" except by a failure to keep any records at all? Are cancelled cehcks, bank statements, and a list of cash receipts and disbursements sufficient for a cash basis taxpayer? Are receipts, for payments in cash and/or by check, necessary? Are invoices essential? Must a person whose only income is a salary and who uses the optional standard deduction keep any records?

See Fischer v. United States, 212 F.2d 441 (10th Cir. 1954), involving a taxpayer who had written and published a booklet entitled "Mind Your Own Business," including among other things a recommended method for keeping records to avoid income tax difficulties. The booklet was held admissible in evidence, in a trial of the taxpayer for tax evasion, to prove willfulness on his part in understating income. Apparently he had relied on a lack of records to establish that his omissions were innocent.

2. *Negligence penalty and penalty for late filing or failure to file: cumulative.* The 5 per cent penalty for negligence may be imposed in addition to the 25 per cent penalty for failure to file or for a late filing. For an example, see Chimchirian v. Commissioner, 42 B.T.A. 1437, 1442 (1940), aff'd per curiam, 125 F.2d 746 (D.C. Cir. 1942).

3. *Declarations of estimated tax.* The rather complex pre-1954 rules on penalties for failure to file declarations of estimated tax and for substantial underestimates were eliminated by the 1954 Code, which substituted a 6 per cent addition to any "underpay-

ment" (as defined). §§6654 and 6655. In Commissioner v. Acker, 361 U.S. 87 (1959), the Supreme Court belatedly held that under the pre-1954 law the government was not entitled to impose both a penalty for failure to file a declaration of estimated tax and a penalty for a substantial underestimate (on the theory of a zero estimate). But two penalties were payable (pre-1954 Code) if the taxpayer filed a late estimate that was also too low. Stellor v. United States, 287 F.2d 588 (Ct. Cl. 1961).

4. *References.* Gordon, Income Tax Penalties, 5 Tax L. Rev. 121 (1950); Smith, What Are Adequate Records for the Preparation of Income Tax Returns, 11 N.Y.U. Inst. on Fed. Taxation 1235 (1953); Stanley, Penalties for Under-Estimating Personal Income Taxes, 1959 So. Calif. Tax Inst. 437.

JOURNAL CO. v. COMMISSIONER

46 B.T.A. 841 (1942)

[Under the Revenue Act of 1938, a corporation could credit against a so-called "tentative tax" $2\frac{1}{2}$ per cent of its "dividends paid credit," which included inter alia amounts paid to retire certain indebtedness. The regulations promulgated under this Act, however, provided that amounts paid to retire indebtedness that had been deducted or credited in computing the undistributed profits tax imposed by the Revenue Act of 1936 could not be credited a second time as part of the "dividends paid credit" of the 1938 Act. The taxpayer paid out certain amounts to retire indebtedness and was advised by counsel that although a credit therefor was denied by the Regulations, the Regulations were contrary to the statute and invalid. Accordingly, the taxpayer took the credit. The Commissioner asserted a deficiency, and added the 5 per cent penalty of [§6653(a)] on the ground that there had been an "intentional disregard of rules and regulations."

[After holding that the Regulation was valid and that the deficiency was properly asserted, the Board of Tax Appeals went on to consider the 5 per cent penalty:]

ARNOLD: . . . The second issue, affirmatively raised in the answer, is whether any part of the deficiency is due to petitioner's negligence, or intentional disregard of respondent's rules and regulations as provided in [§6653(a)]. Respondent rests his argument, not on any alleged negligence of the petitioner, but upon an alleged intentional disregard of rules and regulations. . . .

The issue turns upon the construction of the statutory phrase "intentional disregard of rules and regulations." The stipulated facts show that petitioner was fully cognizant of the statutory provisions [re "dividends paid credit"] and of respondent's interpretation thereof. Petitioner sought the advice of counsel as to what it should do under the circumstances then existing. Counsel advised that petitioner was entitled to the credit provided by [the statute] and that respondent's regulation was an invalid interpretation of the statute. Petitioner then had to decide which of two opposite constructions it would follow in making and filing its return. The stipulated facts indicate that petitioner gave careful consideration to the problem before electing to follow the advice of counsel. Its choice was made deliberately, with full knowledge that the administrative interpretation was contrariwise. Obviously, therefore, petitioner intentionally disregarded respondent's regulation.

The defense advanced is in the nature of confession and avoidance. Petitioner stipulates that it acted with knowledge but upon advice of counsel and directs attention to the division of opinion on this Board in Spokane Dry Goods Co. [43 B.T.A. 793] as proof of the soundness of its action and as justification for its belief that the respondent's regulation was invalid. Be that as it may, the statute speaks in mandatory language when it states that if

[any part of any underpayment . . . is due to negligence or intentional disregard of rules and regulations (but without intent to defraud), there shall be added to the tax an amount equal to 5 per cent of the underpayment.]

As hereinbefore demonstrated, petitioner *did* intentionally disregard the regulations, and, since this conclusion is inescapable under the stipulated facts, it is mandatory that the 5 percent addition be assessed, collected, and paid. . . .

We have examined the authorities cited without finding one dispositive of this issue. In Frank T. Heffelfinger, 32 B.T.A. 1232; affirmed on another point, 87 F.(2d) 991, we found as a fact that there was no intentional disregard of rules and regulations. Clearly the stipulated facts are susceptible of no such ultimate finding in this proceeding. Most of the cases cited dealt with the 5 percent addition for negligence. In the few cases where "intentional disregard of rules and regulations" was considered, the opinions coupled negligence with intentional disregard, see Lucian T. Wilcox, 44 B.T.A. 373; Gibbs & Hudson, Inc., 35 B.T.A. 205; and Oscar G. Joseph, 32 B.T.A. 1192. Negligence has neither been urged nor established in this proceeding, so none of the latter cases involved comparable situations.

Harsh though the conclusion may seem, the stipulated facts herein leave no recourse but to grant respondent's request for a 5 percent addition to the deficiency.

Decision will be entered under Rule 50.

NOTE

1. *Intentional disregard of rules and regulations.* This decision was reversed, 134 F.2d 165 (7th Cir. 1943), because the Supreme Court in the meantime had invalidated the challenged Regulation. Helvering v. Sabine Transportation Co., 318 U.S. 306 (1943). Is this the kind of "intentional disregard of rules and regulations" that should be penalized? Note that the effect of imposing the penalty in this kind of case is to place a premium on paying the tax in a doubtful case and suing for refund in the District Court or the Court of Claims. May the penalty be imposed if a deficiency is caused by an intentional challenge of the validity of a *statute,* if no rules and regulations have been promulgated? Does the term "rules" embrace every publicly announced Service ruling and interpretation?

The Senate version of the 1954 Code proposed to overrule this decision "if the taxpayer has reasonable grounds for believing the rule or regulations to be invalid and if he attaches to his return a statement sufficient to apprise" the government of his "grounds for believing them invalid." The provision was eliminated by the conference committee, no reasons being given.

2. *Test cases.* See Kellems v. United States, 97 F. Supp. 681 (D. Conn. 1951), involving a publicly announced refusal to comply with the income tax withholding provisions in order to test their constitutionality. The court imposed a penalty because the taxpayer did not consult an attorney before violating the Act and, so far as the record showed, did not even try to ascertain whether the constitutionality of the provisions had already been judicially sustained. The court's decision was in a refund action against the United States; in other counts, where the Collector of Internal Revenue was the defendant, a jury trial was had and it did not impose the penalty. The statute in question (§2707(a) of the 1939 Code, made applicable to the withholding of taxes by §§1627 and 1430 of the 1939 Code) was somewhat different from §6653(a), in that the penalty was imposed on any person "who willfully fails to . . . collect . . . and pay over the tax."

Section E. Fraud Penalties and Prosecutions

1. *Civil Fraud*

Section 6653(b) of the 1954 Code, imposing a 50 per cent penalty for fraud, is based on §293(b) of the 1939 Code.

HELVERING v. MITCHELL

303 U.S. 391 (1938)

Mr. Justice Brandeis delivered the opinion of the court. . . .

The question for decision is whether assessment [of the 50 per cent fraud penalty, §6653(b)] is barred by the acquittal of the defendant on an indictment under [§7201] for a willful attempt to evade and defeat the tax.

The Commissioner of Internal Revenue found that Charles E. Mitchell of New York had, in his income tax return for the year 1929, fraudulently deducted from admitted gross income an alleged loss of $2,872,305.50 from a purported sale of 18,300 shares of National City Bank stock to his wife; that he had fraudulently failed to return the sum of $666,666.67 received by him as a distribution from the management fund of the National City Company, of which he was chairman; and that these fraudulent acts were done with intent to evade the tax. On December 8, 1933, the Commissioner notified Mitchell that there was a deficiency in his tax return of $728,709.84 and, on account of the fraud, a 50 per cent addition thereto in the sum of $364,354.92.

Mitchell appealed to the Board of Tax Appeals, which sustained the Commissioner's determination. Mitchell v. Com'r, 32 B.T.A. 1093. Upon a petition for review, the Circuit Court of Appeals concluded that there was ample evidence to support the Board's findings that Mitchell had fraudulently made deduction of the loss and that he had fraudulently failed to return the amount received from the management fund; and that, despite the facts hereafter stated, the Board was free to find the facts according to the evidence. It accordingly affirmed the assessment of the deficiency of $728,709.84; but it reversed the Board's approval of the additional assessment of $364,354.92, because of the following facts:

Before the deficiency assessment was made Mitchell had been indicted in the federal court for Southern New York under [§7201], which provides:

> Any person who willfully attempts in any manner to evade or defeat any tax imposed by this title or the payment thereof shall, in addition to other penalties provided by law, be guilty of a felony and, upon conviction thereof, be fined not more than $10,000, or imprisoned not more than five years, or both, together with the costs of prosecution.

The first count charged that Mitchell "unlawfully, willfully, knowingly, feloniously, and fraudently did attempt to defeat and evade an income tax of, to wit, $728,709.84, upon his net income for 1929." He was tried on the indictment and acquitted on all counts. The item of $728,709.84 set out in the first count is the same item as that involved in the deficiency assessed; and both arose from the same transactions of Mitchell. But the addition of $364,354.92 by reason of fraud was not involved in the indictment.

The Circuit Court of Appeals held that the prior judgment of acquittal was not a bar under the doctrine of res judicata; and hence it affirmed the assessment of the $728,709.84. But it held that our decision in Coffey v. United States, 116 U.S. 436, and United States v. La Franca, 282 U.S. 568, required it "to treat the imposi-

tion of the penalty of 50 percent. *as barred by the prior acquittal of* Mitchell in the criminal action." Mitchell v. Com'r, 2 Cir., 89 F.2d 873, 878. Mitchell's petition for certiorari to review so much of the judgment as upheld the assessment of the deficiency of $728,709.84 was denied. The Commissioner's petition to review so much of the judgment as denied the 50 per centum in addition was granted, because of the importance in the administration of the revenue laws of the questions presented and alleged conflict in decisions.

First. Mitchell contends that the claim for the 50 per cent. is barred by the doctrine of res judicata. He asserts that all the facts and intents requisite to the imposition of the 50 per centum addition to the deficiency were put in issue and determined against the Government in the criminal trial, and that hence, under the doctrine of res judicata, the judgment of acquittal bars it from obtaining a second judgment based upon the same facts and intents. Since this proceeding to determine whether the amount claimed is payable as a tax is a proceeding different in its nature from the indictment for the crime of willfully attempting to evade the tax, the contention that the doctrine of estoppel by judgment applies rests wholly on the assertion that the issues here presented were litigated and determined in the criminal proceeding. Compare Tait v. Western Maryland Ry. Co., 289 U.S. 620.

The difference in degree of the burden of proof in criminal and civil cases precludes application of the doctrine of res judicata. The acquittal was "merely . . . an adjudication that the proof was not sufficient to overcome all reasonable doubt of the guilt of the accused." Lewis v. Frick, 233 U.S. 291, 302. It did not determine that Mitchell had not willfully attempted to evade the tax. That acquittal on a criminal charge is not a bar to a civil action by the Government, remedial in its nature arising out of the same facts on which the criminal proceeding was based has long been settled. . . . Where the objective of the subsequent action likewise is punishment, the acquittal is a bar, because to entertain the second proceeding for punishment would subject the defendant to double jeopardy; and double jeopardy is precluded by the Fifth Amendment whether the verdict was an acquittal or a conviction. Murphy v. United States, 272 U.S. 630.

The Government urges that application of the doctrine of res judicata is precluded also by the difference in the issues presented in the two cases; that although the indictment and this proceeding arise out of the same transactions and facts, the issues in them are not the same; that on the indictment the issue was whether Mitchell had "willfully" attempted to "evade or defeat" the tax; that whether he had done so "fraudulently" was not there an issue, . . . ; and that in this proceeding the issue is specifically whether the deficiency was "due to fraud." . . . Since there was not even an adjudication that Mitchell did not willfully attempt to evade or defeat the tax, it is not necessary to decide whether such an adjudication would be decisive also of this issue of fraud. Compare Hanby v. Commissioner, 4 Cir., 67 F.2d 125, 129.

Second. Mitchell contends that this proceeding is barred under the doctrine of double jeopardy because the 50 per centum addition of $364,354.92 is not a tax, but a criminal penalty intended as punishment for allegedly fraudulent acts. Unless this sanction was intended as punishment, so that the proceeding is essentially criminal, the double jeopardy clause provided for the defendant in criminal prosecutions is not applicable.

1. In assessing income taxes the Government relies primarily upon the disclosure by the taxpayer of the relevant facts. This disclosure it requires him to make in his annual return. To ensure full and honest disclosure, to discourage fraudulent attempts to evade the tax, Congress imposes sanctions. Such sanctions may confessedly be either criminal or civil. . . .

Congress may impose both a criminal and a civil sanction in respect to the same act or omission; for the double jeopardy clause prohibits merely punishing twice, or attempting a second time to punish criminally, for the same offense. The question for decision is thus whether [§6653 (b)] imposes a criminal sanction. That question is one of statutory construction. Compare Murphy v. United States, 272 U.S. 630, 632.

Remedial sanctions may be of varying types. One which is characteristically free of the punitive criminal element is revocation of a privilege voluntarily granted. Forfeiture of goods or their value and the payment of fixed or variable sums of money are other sanctions which have been recognized as enforceable by civil proceedings since the original revenue law of 1789. Act of July 31, 1789, c. 5, §36, 1 Stat. 29, 47. In spite of their comparative severity, such sanctions have been upheld against the contention that they are essentially criminal and subject to the procedural rules governing criminal prosecutions. . . .

2. The remedial character of sanctions imposing additions to a tax has been made clear by this Court in passing upon similar legislation. They are provided primarily as a safeguard for the protection of the revenue and to reimburse the Government for the heavy expense of investigation and the loss resulting from the taxpayer's fraud. In Stockwell v. United States, 13 Wall. 531, 547, 551, 20 L. Ed. 491, the Court said of a provision which added double the value of the goods:

> It must therefore be considered as remedial, as providing indemnity for loss. And it is not the less so because the liability of the wrongdoer is measured by double the value of the goods received, concealed, or purchased, instead of their single value. The act of abstracting goods illegally imported, receiving, concealing, or buying them, interposes difficulties in the way of a government seizure, and impairs, therefore, the value of the government right. It is, then, hardly accurate to say that the only loss the government can sustain from concealing the goods liable to seizure is their single value, or to assert that the liability imposed by the statute of double the value is arbitrary and without reference to indemnification. Double the value may not be more than complete indemnity. . . .
>
> The act of 1823 was, as we have seen, remedial in its nature. Its purpose was to secure full compensation for interference with the rights of the United States.

3. In [§§6502(a) and 6659], it is provided that collection of the 50 per centum addition, like that of the primary tax itself, may be made "by distraint" as well as "by a proceeding in court." If the section provided a criminal sanction, the provision for collection by distraint would make it unconstitutional. . . . That Congress provided a distinctly civil procedure for the collection of the additional 50 per centum indicates clearly that it intended a civil, not a criminal, sanction. Civil procedure is incompatible with the accepted rules and constitutional guaranties governing the trial of criminal prosecutions, and where civil procedure is prescribed for the enforcement of remedial sanctions, those rules and guaranties do not apply. Thus the determination of the facts upon which liability is based may be by an administrative agency instead of a jury, or if the prescribed proceeding is in the form of a civil suit, a verdict may be directed against the defendant; there is no burden upon the Government to prove its case beyond a reasonable doubt, and it may appeal from an adverse decision; furthermore, the defendant has no constitutional right to be confronted with the witnesses against him, or to refuse to testify; and finally, in the civil enforcement of a remedial sanction there can be no double jeopardy. . . .

Reversed.

MR. JUSTICE MCREYNOLDS is of opinion that the judgment of the Circuit Court of Appeals should be affirmed.

MR. JUSTICE CARDOZO and MR. JUSTICE REED took no part in the consideration or decision of this case.

MITCHELL v. COMMISSIONER

118 F.2d 308 (5th Cir. 1941)

Before SIBLEY, HOLMES, and McCORD, Circuit Judges.

SIBLEY, Circuit Judge.

The Board of Tax Appeals adjudged that William E. Mitchell should pay additional income taxes for the year 1930, though barred, and a penalty of fifty percent additional, because of fraud in the tax return with intent to evade the tax. Mitchell petitions for review upon the grounds that the particular facts found by the Board do not in law authorize the conclusion of fraud with intent to evade tax, and that there was no evidence of fraud, but only of mistake and negligence.

The pleadings before the Board involved the taxes of five years, but the Board found in favor of Mitchell as to all save the year 1930. The allegations were at first general, but on Mitchell's motion for particulars the Commissioner amended by quoting the untrue items in the returns and stating the amount in dollars of the falsity, and concluded "(w) That the petitioner at the time of filing said federal income tax returns . . . knew the same to be false and nevertheless filed them with the intent that they should be accepted as true and correct." Mitchell replied by expressly admitting the incorrectness alleged, but as to (w) "Denies that the petitioner at the time of filing said federal income tax returns knew the same to be false; but admits the petitioner filed said returns with intent that they should be accepted as true and correct." The single issue therefore specifically drawn was whether Mitchell when he filed the 1930 return knew or did not know it was untrue.

The burden of proof was upon the Commissioner. Internal Revenue Code [§7454]; Griffiths v. Commissioner, 7 Cir., 50 F.2d 782. To sustain it he swore as witnesses Mitchell, and P. H. Nabors who had prepared the return. Mitchell denied positively and with indignation that he knew the return was in any respect untrue; he had no books of account, but turned his papers and files over to Nabors whom he regarded as reliable and competent, and accepted the returns he prepared for all the years in question without checking the computations or doubting their correctness. Nabors also testified positively that he alone prepared the return, and what mistakes were made were his own, that he had no request from Mitchell to distort facts and would not have done that if asked to; that the mistakes made were wholly unintended and unknown, and that Mitchell did not check his computations so far as he knew. The returns, all of which for the years in question were made out by Nabors, were really complicated and he made many mistakes in them both for and against Mitchell. Stocks of the corporations for which Mitchell was working had been bought by him at different prices in forty-six purchases over ten years, there had been several stock dividends and reorganizations which complicated the costs, and there were about eighty-eight different sales. Mitchell was an engineer and not an accountant. Nabors had a high school education and business and clerical experience but also was not an accountant. Very large mistakes were made later in an audit by a capable revenue agent; and an accountant employed by Mitchell whose work the Commissioner approved and adopted also went astray, as the Board itself found, and it corrected his results in Mitchell's favor. The particular error or falsity on which alone the Board condemned the 1930 return was that Nabors attributed a large part of the stock sold in 1930 to a block of 5,000 shares, acquired at a relatively high cost, after having in previous years attributed nearly 5,000 shares to that

same stock purchase. Nabors admits that this was done, admits that he knew he could not treat the same stock as sold twice, and is unable to remember how he figured that there was so much of that block left, but he testifies that it was an honest mistake. There is no evidence that Mitchell figured on it or paid any attention to the question at all, though he knew that Nabors was attributing stock sales to the stocks having the highest costs. Mitchell's character and standing are found to be high. Similar errors which appeared in prior returns and subsequent ones might have been some evidence of a dishonest plan, but they have all been pronounced innocent except in this one instance. If, therefore, these similar errors tend to prove anything it would not be fraud but innocent mistake in this instance also.

The Board made elaborate fact findings but did not find the fact directly put in issue by the pleadings — that Mitchell knew the return was false.* The general conclusion that there was fraud with intent to evade tax is explained in an opinion by the majority which seems to us to indicate that they really held that Mitchell and Nabors were grossly careless and for that reason Mitchell ought not to be absolved. To that effect we quote, 40 B.T.A. 447:

> Both petitioner and Nabors, who prepared the 1930 return for petitioner, admitted in their testimony at the hearing that they knew they had no right to use the cost basis of the same block of stock twice; they admitted that by the use of any reasonable degree of diligence they could have ascertained that most of the cost basis of the 5,000-share block had been used up in 1928 and 1929. They gave no reasonable explanation as to why they used the cost basis of the same 5,000-share block of stock twice. . . . We do not think petitioner can be guilty of such careless indifference to the basis of cost of shares of stock which he was selling and to a correct return and the oath to which he subscribed and now expect to be absolved from the consequence of his acts.

The opinion stresses Nabors' inability to explain how he came to use in 1930 the cost basis of stock mostly used up in the returns of former years, despite his testimony that it was unintentional error not deliberately made, and then proceeds: "The substance of petitioner's explanation is that he relied upon the correctness of the computations made by Nabors and that it did not occur to him to question their accuracy. In the light of all the facts in the record, we find ourselves unable to accept this explanation." The Board had found it to be a fact that: "Before signing the returns petitioner would go over the completed returns in a general way with Nabors, but he never checked the clerical computations and details which had been computed by Nabors." We cannot tell whether the Board means to say that Mitchell's negligence in not questioning Nabors' results and not checking his computations was the ground for refusing to accept his explanation, or whether they believed Mitchell knew the return was false and never-

---

* The taxpayer reported about $110,000 of income for 1930; the understatement caused by using the erroneous basis was about $210,000. The Board of Tax Appeals, in refusing to accept the taxpayer's explanation, pointed out that there was another overstatement of basis in 1931 (resulting in an understatement of income of about $225,000), although that year was not before it, and that with a cost basis of about $390,000 for the securities in question the taxpayer deducted almost $940,000 in the period 1925-1931. The Board said, 40 B.T.A. 424, 448 (1939): "The Commissioner does not have to establish his determination of fraud 'beyond a reasonable doubt.' All that he is required to do is to make proof of his fraud charges by a preponderance of the evidence which is clear and convincing. In re Locust Building Co., 299 Fed. 756. In the instant case he has proved *clearly* that in filing his income tax return for 1930 petitioner used in large part all over again as his basis of cost for Commonwealth shares sold in that year the cost basis of shares which had been largely used up in the prior years of 1928 and 1929, he has proved that petitioner knew that he had no right to do this, and that the use of such unauthorized basis of cost was largely responsible for an understatement of income for 1930 of $209,040.34. This, in the absence of any satisfactory explanation by petitioner, is convincing proof to us that petitioner's income tax return for 1930 was false and fraudulent with intent to evade tax." — Ed.

theless filed it as true, as the Commissioner had alleged. Negligence, whether slight or great, is not equivalent to the fraud with intent to evade tax named in the statute. The fraud meant is actual, intentional wrongdoing, and the intent required is the specific purpose to evade a tax believed to be owing. Mere negligence does not establish either. Griffiths v. Commissioner, 7 Cir., 50 F.2d 782. We think there ought to be a fact-finding that Mitchell in making this return knew or did not know its probable falsity, and that he intended to evade a tax or did not. If Mitchell, though negligent, acted in good faith and with honest intent, and it is thought that Nabors did not, but that Nabors' bad faith can be visited on Mitchell, the exact facts again ought to be found that the legal application of them may be considered. Another question that has occurred to us, but has not been argued, is how far the Commissioner is bound by the testimony of his own witness Nabors, Nabors not being a party.

We remand the case to the Board for further fact-findings above indicated and for a redetermination, reopening it for additional evidence if either side has any to offer.

Reversed and remanded.

NOTE

1. *The Mitchell case on remand.* On remand, the Board of Tax Appeals made the following disposition of the *Mitchell* case:

> In compliance with the court's order that we should make "further fact-findings as indicated in the opinion of this Court," we have carefully read the opinion of the court and have reexamined the entire record of evidence. After this reexamination, we find ourselves unable to make any material changes in the findings of evidentiary fact upon which our ultimate findings were based, that "Petitioner's income tax return for the year 1930 was false and fraudulent with intent to evade tax and part of the deficiency for that year is due to fraud with intent to evade tax."
>
> As we have already stated, we construe the court's opinion to hold that as a matter of law the evidentiary facts which we have found in our prior report are not sufficient in law to sustain our ultimate finding that there was fraud for the year 1930. . . .
>
> Therefore, in respectful compliance with the opinion of the court and its mandate, we adhere to all of our findings of fact contained in William E. Mitchell, except the last sentence thereof, which was the ultimate finding of fact as to the year 1930 and has been quoted above. We strike out that sentence and the findings of fact which it contains and substitute in lieu thereof the following findings: "In the preparation of petitioner's income tax return for the year 1930, P. H. Nabors who prepared it for him was grossly careless in using as the cost basis of 22,050 shares of Commonwealth stock sold the cost basis of 5,000 shares of Southeastern stock which petitioner had acquired at a high cost in 1927 and substantially all of which had been used in the preparation of petitioner's income tax returns for the years 1928 and 1929 as the basis of cost of stock sold by petitioner in those years. Nabors, by the use of a slight degree of diligence, could have discovered the error and could have avoided it. The petitioner, in signing and swearing to his 1930 income tax return as being correct, was grossly negligent in doing so. He might have, by the exercise of a slight degree of care and diligence, discovered the above mentioned error which led to a large overstatement of the cost of the shares of stock which petitioner sold and a consequent large understatement of his income for 1930. Notwithstanding their gross carelessness in these respects, neither Nabors nor Mitchell had actual knowledge that petitioner's income tax return for 1930 was false."
>
> Therefore on these revised findings of fact and following the opinion of the court in Mitchell v. Commissioner, we conclude that petitioner's income tax return filed for the year 1930 was not false or fraudulent with intent to evade tax and the statute of limitations has barred the deficiency and penalty determined by the Com-

missioner for the year 1930. This results in a holding for petitioner that there is no deficiency for the year 1930 because it is barred by the statute of limitations. Naturally, if there is no deficiency, there can be no penalty. [45 B.T.A. at 825-826.]

2. *Meaning of* "fraud." It is not easy to generalize about what constitutes fraud so as to justify the 50 per cent penalty imposed by §6653(b). Most fraud cases involve systematic or substantial omissions from gross income or wholly fictitious deductions or dependency claims, especially where records are not kept by the taxpayer or are falsified or destroyed. Deficiencies caused by dividends disguised as salary, improper allocations between personal and business expenses, "expensing" items that should be capitalized, depreciation and bad debt deductions, and other items involving the exercise of judgment are seldom the basis for a fraud penalty, unless the intent to evade tax is almost inescapable. Similarily, the fraud penalty is seldom asserted and even less frequently upheld in cases where the deficiency results from a transaction that complies with the letter but not with the spirit of the law. Thus, although in the *Court Holding Co.* case (supra page 675) the Tax Court held that the sale of the property was in substance a sale by the corporation, and that the legal formalities of a liquidation and sale by the stockholders were used "only in the attempt to make the transaction appear to be other than what it was" (2 T.C. 531, 538 (1943)), it refused to find fraud. On the other hand, the *Charles E. Mitchell* case, supra page 952, upheld the fraud penalty where the deficiency resulted from the deduction of loss on a purported sale of securities to the taxpayer's wife (before §267(a) and (b) was enacted), although there was an abundance of paperwork in consummating the transaction. The facts are set out in the opinion of the Board of Tax Appeals, 32 B.T.A. 1093 (1935), and are summarized by the Court of Appeals, 89 F.2d 873 (2d Cir. 1937). In two somewhat comparable cases, the Board of Tax Appeals not only found no fraud but held there was no deficiency. Porter v. Commissioner, 36 B.T.A. 475 (1937); Mellon v. Commissioner, 36 B.T.A. 977, 1048 (1937) (with dissent, id. at 1083).

See Powell v. Granquist, 252 F.2d 56 (9th Cir. 1958) (fraud penalty was properly imposed on a taxpayer who refused to file returns because "he did not believe in the way the government was wasting money"); Muste v. Commissioner, 35 T.C. 913 (1961) (pacifist refused to pay federal income tax because of conscientious objection to war expenditures; held, failure to file returns was not due to "reasonable cause" and 5 per cent penalty applies; but fraud penalty was improperly imposed because taxpayer, who notified government of his refusal to file returns, was not guilty of "bad faith, intentional wrongdoing, sinister motive, or intent to mislead or deceive").

3. *Burden of proof.* In Paddock v. United States, 280 F.2d 563 (2d Cir. 1960), it was held that the government has the burden of proof on the issue of fraud when a taxpayer sues in the District Court for a refund, as well as in deficiency cases in the Tax Court.

The Tax Court holds that a plea of guilty or a conviction in a criminal case is evidence to be weighed in a civil fraud case, but that it is not conclusive. Vassallo v. Commissioner, 23 T.C. 656 (1955); but see Lefkowitz v. Tomlinson, 11 A.F.T.R.2d 617 (S.D. Fla. 1962) (criminal conviction conclusive in later civil fraud case).

If the original tax return has been lost or destroyed by the government and a copy is not available, can a fraud case be based on a net worth computation coupled with a "reconstruction" of the return by working back from the amount of tax actually paid? For discussion of this problem, see Putman v. United States, 301 F.2d 751 (6th Cir. 1962) ("reverse computation," based on assumption that standard deduction was taken and that exemptions were limited to number apparently allowable, not permissible as a means of establishing the contents of the missing return in a fraud case, though it would be appropriate in establishing a deficiency).

4. *References.* Nessen, The Line Between Negligence and Civil Fraud: The Operation of Two Penalty Provisions against Underpaying Taxpayers, 20 N.Y.U. Inst. on Fed. Taxation 1117 (1962); Cutler, Procedures in Civil Fraud Cases, 1960 Tulane Tax Inst. 200.

2. *Criminal Fraud*

Section 7201 of the 1954 Code, relating to a willful attempt to evade or defeat a tax, is identical with §145(b) of the 1939 Code.

Section 7203, relating to a willful failure to pay a tax, file returns, keep records, or supply information, is substantially the same as §145(a) of the 1939 Code.

Section 7206 is based on §§3809(a), 3793(b), 3793(a), 3321(a), and 3762, but the punishment and certain other aspects of earlier law have been changed.

Section 7207, relating to false returns or statements, is based on §3616(a) of the 1939 Code, but with changes.

SPIES v. UNITED STATES
317 U.S. 492 (1943)

MR. JUSTICE JACKSON delivered the opinion of the Court.

Petitioner has been convicted of attempting to defeat and evade income tax, in violation of [§7201]. The Circuit Court of Appeals found the assignment of error directed to the charge to the jury the only one of importance enough to notice. The charge followed the interpretation put upon this section of the statute in O'Brien v. United States, 51 F.2d 193 (C.C.A. 7), and United States v. Miro, 60 F.2d 58 (C.C.A. 2), which followed it. The Circuit Court of Appeals affirmed, stating that "we must continue so to construe the section until the Supreme Court decides otherwise." 128 F.2d 743. One Judge said that as a new matter he would decide otherwise and expressed approval of the dissent in the *O'Brien* case. As the construction of the section raises an important question of federal law not passed on by this Court, we granted certiorari.

Petitioner admitted at the opening of the trial that he had sufficient income during the year in question to place him under a statutory duty to file a return and to pay a tax, and that he failed to do either. The evidence during nearly two weeks of trial was directed principally toward establishing the exact amount of the tax and the manner of receiving and handling income and accounting, which the Government contends shows an intent to evade or defeat the tax. Petitioner's testimony related to his good character, his physical illness at the time the return became due, and lack of willfulness in his defaults, chiefly because of a psychological disturbance, amounting to something more than worry but something less than insanity.

Section [7203] makes, among other things, willful failure to pay a tax or make a return by one having petitioner's income at the time or times required by law a misdemeanor. Section [7201] makes a willful attempt in any manner to evade or defeat any tax such as his a felony. Petitioner was not indicted for either misdemeanor. The indictment contained a single count setting forth the felony charge of willfully attempting to defeat and evade the tax, and recited willful failure to file a return and willful failure to pay the tax as the means to the felonious end.

The petitioner requested an instruction that "You may not find the defendant guilty of a willful attempt to defeat and evade the income tax, if you find only that he had willfully failed to make a return of taxable income and has willfully failed to pay the tax on that income." This was refused, and the Court charged that "If you find that the defendant had a net income for 1936 upon which some income tax was due, and I believe that is conceded, if you find that the defendant willfully failed to file an income tax return for that year, if you find that the de-

fendant willfully failed to pay the tax due on his income for that year, you may, if you find that the facts and circumstances warrant it find that the defendant willfully attempted to evade or defeat the tax." The court refused a request to instruct that an affirmative act was necessary to constitute a willful attempt, and charged that "Attempt means to try to do or accomplish. In order to find an attempt it is not necessary to find affirmative steps to accomplish the prohibited purpose. An attempt may be found on the basis of inactivity or on refraining to act, as well."

It is the Government's contention that a willful failure to file a return, together with a willful failure to pay the tax, may, without more, constitute an attempt to defeat or evade a tax within [§7201]. Petitioner claims that such proof establishes only two misdemeanors under [§7203], and that it takes more than the sum of two such misdemeanors to make the felony under [§7201]. The legislative history of the section contains nothing helpful on the question here at issue, and we must find the answer from the section itself and its context in the revenue laws.

The United States has relied for the collection of its income tax largely upon the taxpayer's own disclosures rather than upon a system of withholding the tax from him by those from whom income may be received. This system can function successfully only if those within and near taxable income keep and render true accounts. In many ways, taxpayers' neglect or deceit may prejudice the orderly and punctual administration of the system as well as the revenues themselves. Congress has imposed a variety of sanctions for the protection of the system and the revenues. The relation of the offense of which this petitioner has been convicted to other and lesser revenue offenses appears more clearly from its position in this structure of sanctions.

The penalties imposed by Congress to enforce the tax laws embrace both civil and criminal sanctions. The former consist of additions to the tax upon determinations of fact made by an administrative agency and with no burden on the Government to prove its case beyond a reasonable doubt. The latter consist of penal offenses enforced by the criminal process in the familiar manner. Invocation of one does not exclude resort to the other. Helvering v. Mitchell, 303 U.S. 391.

The failure in a duty to make a timely return, unless it is shown that such failure is due to reasonable cause and not due to willful neglect, is punishable by an addition to the tax of 5 to 25 per cent thereof, depending on the duration of the default. [§6651(a).] But a duty may exist even when there is no tax liability to serve as a base for application of a percentage delinquency penalty; the default may relate to matters not identifiable with tax for a particular period; and the offense may be more grievious than a case for civil penalty. Hence the willful failure to make a return, keep records, or supply information when required, is made a misdemeanor, without regard to existence of a tax liability. [§7203.] Punctuality is important to the fiscal system, and these are sanctions to assure punctual as well as faithful performance of these duties.

Sanctions to insure payment of the tax are even more varied to meet the variety of causes of default. It is the right as well as the interest of the taxpayer to limit his admission of liability to the amount he actually owes. But the law is complicated, accounting treatment of various items raises problems of great complexity, and innocent errors are numerous, as appears from the number who make overpayments. It is not the purpose of the law to penalize frank difference of opinion or innocent errors made despite the exercise of reasonable care. Such errors are corrected by the assessment of the deficiency of tax and its collection with interest for the delay. [§§6601(a) and 6654(a).] If any part of the deficiency is due to

negligence or intentional disregard of rules and regulations, but without intent to defraud, five per cent of such deficiency is added thereto; and if any part of any deficiency is due to fraud with intent to evade tax, the addition is 50 per cent thereof. [§6653(a) and (b).] Willful failure to pay the tax when due is punishable as a misdemeanor. [§7203.] The climax of this variety of sanctions is the serious and inclusive felony defined to consist of willful attempt in any manner to evade or defeat the tax. [§7201.] The question here is whether there is a distinction between the acts necessary to make out the felony and those which may make out the misdemeanor.

A felony may, and frequently does, include lesser offenses in combination either with each other or with other elements. We think it clear that this felony may include one or several of the other offenses against the revenue laws. But it would be unusual and we would not readily assume that Congress by the felony defined in [§7201] meant no more than the same derelictions it had just defined in [§7203] as a misdemeanor. Such an interpretation becomes even more difficult to accept when we consider this felony as the capstone of a system of sanctions which singly or in combination were calculated to induce prompt and forthright fulfillment of every duty under the income tax law and to provide a penalty suitable to every degree of delinquency.

The difference between willful failure to pay a tax when due, which is made a misdemeanor, and willful attempt to defeat and evade one, which is made a felony, is not easy to detect or define. Both must be willful, and willful, as we have said, is a word of many meanings, its construction often being influenced by its context. United States v. Murdock, 290 U.S. 389. It may well mean something more as applied to nonpayment of a tax than when applied to failure to make a return. Mere voluntary and purposeful, as distinguished from accidental, omission to make a timely return might meet the test of willfulness. But in view of our traditional aversion to imprisonment for debt, we would not without the clearest manifestation of Congressional intent assume that mere knowing and intentional default in payment of a tax, where there had been no willful failure to disclose the liability, is intended to constitute a criminal offense of any degree. We would expect willfulness in such a case to include some element of evil motive and want of justification in view of all the financial circumstances of the taxpayer.

Had [§7203] not included willful failure to pay a tax, it would have defined as misdemeanors generally a failure to observe statutory duties to make timely returns, keep records, or supply information — duties imposed to facilitate administration of the Act even if, because of insufficient net income, there were no duty to pay a tax. It would then be a permissible and perhaps an appropriate construction of [§7201] that it made felonies of the same willful omissions when there was the added element of duty to pay a tax. The definition of such nonpayment as a misdemeanor, we think, argues strongly against such an interpretation.

The difference between the two offenses, it seems to us, is found in the affirmative action implied from the term "attempt," as used in the felony subsection. It is not necessary to involve this subject with the complexities of the common-law "attempt." The attempt made criminal by this statute does not consist of conduct that would culminate in a more serious crime but for some impossibility of completion or interruption or frustration. This is an independent crime, complete in its most serious form when the attempt is complete, and nothing is added to its criminality by success or consummation, as would be the case, say, of attempted murder. Although the attempt succeed in evading tax, there is no criminal offense of that kind, and the prosecution can be only for the attempt. We

think that in employing the terminology of attempt to embrace the gravest of offenses against the revenues, Congress intended some willful commission in addition to the willful omissions that make up the list of misdemeanors. Willful but passive neglect of the statutory duty may constitute the lesser offense, but to combine with it a willful and positive attempt to evade tax in any manner or to defeat it by any means lifts the offense to the degree of felony.

Congress did not define or limit the methods by which a willful attempt to defeat and evade might be accomplished and perhaps did not define lest its effort to do so result in some unexpected limitation. Nor would we by definition constrict the scope of the Congressional provision that it may be accomplished "in any manner." By way of illustration, and not by way of limitation, we would think affirmative willful attempt may be inferred from conduct such as keeping a double set of books, making false entries or alterations, or false invoices or documents, destruction of books or records, concealment of assets or covering up sources of income, handling of one's affairs to avoid making the records usual in transactions of the kind, and any conduct, the likely effect of which would be to mislead or to conceal. If the tax-evasion motive plays any part in such conduct the offense may be made out even though the conduct may also serve other purposes such as concealment of other crime.

In this case there are several items of evidence apart from the default in filing the return and paying the tax which the Government claims will support an inference of willful attempt to evade or defeat the tax. These go to establish that petitioner insisted that certain income be paid to him in cash, transferred it to his own bank by armored car, deposited it, not in his own name but in the names of others of his family, and kept inadequate and misleading records. Petitioner claims other motives animated him in these matters. We intimate no opinion. Such inferences are for the jury. If on proper submission the jury found these acts, taken together with willful failure to file a return and willful failure to pay the tax, to constitute a willful attempt to evade or defeat the tax, we would consider conviction of a felony sustainable. But we think a defendant is entitled to a charge which will point out the necessity for such an inference of willful attempt to defeat or evade the tax from some proof in the case other than that necessary to make out the misdemeanors; and if the evidence fails to afford such an inference, the defendant should be acquitted.

The Government argues against this construction, contending that the milder punishment of a misdemeanor and the benefits of a short statute of limitation* should not be extended to violators of the income tax laws such as political grafters, gamblers, racketeers, and gangsters. We doubt that this construction will handicap prosecution for felony of such flagrant violators. Few of them, we think, in their efforts to escape tax, stop with mere omission of the duties put upon them by the statute, but if such there be, they are entitled to be convicted only of the offense which they have committed.

Reversed.

NOTE

1. *Implications of Spies case.* In the case of a taxpayer who files no tax return, can the required "affirmative willful attempt" to evade be found in his intentional failure to keep adequate business records? If the taxpayer files a return and a net worth computation or other indirect reconstruction indicates that his income was substantially

* The period of limitations under §3748 of the 1939 Code was six years for prosecutions for willful evasion of tax but only three years for willful failure to file a return or to pay a tax; §6531 of the 1954 Code, however, provides a six-year period for both criminal offenses. — Ed.

greater than the amount reported by him, is the disparity sufficient to warrant a criminal prosecution, or must some "badge of fraud" be established?

Relying on *Spies*, a court has upset a conviction under §7201 of a person engaged in the business of preparing tax returns for other persons, his misconduct consisting of preparing returns but failing to file them in order to keep the taxpayer's payments. United States v. Mesheski, 286 F.2d 345 (7th Cir. 1961).

2. *The Spies case and civil fraud.* First Trust & Savings Bank v. United States, 206 F.2d 97 (8th Cir. 1953), involved a taxpayer who pleaded guilty and was fined on a charge of willfully failing to file a return under §7203. A 50 per cent civil fraud penalty was assessed, but the Court of Appeals held that a willful failure to file a return was not sufficient to permit an assessment under §6653(b), although it would justify the 25 per cent addition of §6651(a). Relying on the *Spies* case, the court, one judge dissenting, said:

> The distinction between the lesser and the graver derelictions which govern the larger and the smaller civil additions to tax is of exactly the same character as that found by the Supreme Court [in the *Spies* case] in respect to the criminal penalties. Manifestly willful failure to file returns may have the same effect on the collection of the revenue as an attempt to evade a tax. But Congress makes the difference on the civil side as it does on the criminal side, between the taxpayer whose deficiencies of tax are due to (or caused by) his affirmative commission of fraud and the one whose deficiencies are due to willful omission to make return. That omission justifies the addition of 5 per cent up to 25 per cent of the deficiencies found against the taxpayer but does not afford any basis for the addition of 50 per cent to his deficiencies. Only the commission of acts of fraud with intent to evade tax to which "the deficiencies are due" (or which bring about the deficiencies) affords a basis for the 50 per cent addition to tax. [206 F.2d at 100-101.]

The House version of the 1954 Code made a felony of willful failure to file a tax return, but the Senate refused to agree, and the Code as enacted preserves the distinction of the *Spies* case and the 1939 Code.

UNITED STATES v. DURANT

324 F.2d 859 (7th Cir. 1963)

Before HASTINGS, Chief Judge, and SCHNACKENBERG and CASTLE, Circuit Judges.

SCHNACKENBERG, Circuit Judge.

Lyndon A. Durant, defendant, having been indicted under §7201 and charged in three counts with willfully attempting to defeat and evade a part of income tax due and owing by him and his wife to the United States of America, for the calendar years 1954, 1955, 1956, the deficiency totaling $142,714.40, pleaded not guilty and was tried by the court without a jury.

The court having denied defendant's motions for judgment of acquittal at the close of the government's case and at the close of all the evidence, defendant was found guilty on each count and judgment was entered accordingly. Defendant was sentenced to the custody of the attorney general for a period of 60 days on each count, the sentences to run concurrently, and fined $15,000 and costs. From said judgment defendant appealed to this court.

According to the stipulated proof, unreported income totalling $212,328.97 upon which the tax deficiency for the three years is computed, was derived from corporate expenditures of United Manufacturing Company, an Illinois corporation, Chicago, Illinois, made for the personal benefit of taxpayer. The immediate beneficiaries of these expenditures, other than defendant personally, are identified in the stipulations. These expenditures numbered 2572 and involved the issuance of 686 corporate checks. They were charged chiefly to corporate expense accounts for travel, automobile, entertainment and selling, and also to

freight, office expense, engineering, contributions, professional services, factory expense, office equipment, dues and subscriptions, rent and advertising. . . .

None of these items was charged to the personal account of taxpayer, which was carried on the corporate books under the title "L. A. Durant." It appears that this account had been maintained since the incorporation of United and even prior thereto during the period 1943 to 1946, when the business was operated as a sole proprietorship. During the entire prosecution period 1954-1956, this account was charged only three times for a total of $2,700.26 with purchases from the vendors who supplied the 2572 stipulated items involving the amount of the income not reported by defendant upon which this case rests. The government points out that, while there is evidence that defendant from time to time had given instructions on charging items to this account, there is no evidence cited to us that he ever gave explicit instructions to any corporate employee how to charge any of the 2572 items in issue. We have found none.

The government's position is that defendant knew that these items would not be charged to his account in the absence of instructions from him, that he intended they should be charged to corporate expense accounts, that he knew they constituted income to him and that he willfully suppressed this additional income to him in his joint income tax returns. The trial court so found, and the government submits its findings are amply supported by the evidence.

On the other hand, defendant insists that he had assumed that all items paid by the corporation for his personal benefit were being charged to his personal account. Although he testified that he could not recall telling anyone specifically to make a charge to his personal account, he testified that, if he made any withdrawals from the corporation, it was his understanding that he would have to repay them.

H. L. Oettinger, an experienced accountant, in 1946 was hired by defendant as overseer of the office. He had the responsibility of seeing that the distribution of expenses was proper. To him defendant delegated the administrative end of the business. In July of 1951 Walter B. Taibleson, a certified public accountant, became comptroller of United. He prepared tax returns for the years 1951 through 1955.

According to Frances Croson, the accounts payable clerk, two routines were used for handling bills. Generally they were received, analyzed and classified for distribution to the proper account and paid by check on a weekly basis, with the assistance of a National Cash Register office machine. The alternative routine was to expedite particular items on an individualized basis, in which case the checks were typed out as needed, and distributed once a month to various corporate accounts. These so-called "typed checks" had a detachable bottom portion for purposes of recording the expenditure as to payee, nature of purchase, classification, etc. Carl Olson, purchasing agent, received the bulk of the purchase bills for purpose of noting the proper account distribution. Other bills went to the specific persons to whom addressed or who were responsible for a particular account.

On classification questions, according to Miss Croson, in 1950 more bills without any indication as to distribution began coming through to her; that, prior to that the number of bills without any indication as to distribution was negligible; that some of the bills came to her and some to Oettinger, who would hand them to her; that, in the beginning, she would ask Oettinger how such bills would be distributed, and he invariably replied, "Use your best judgment"; that she never discussed procedures with defendant. During 1948, the bills generally came to her already bearing a notation of the proper account distribution. When items such as Marshall Field, Saks Fifth Avenue and Bonwit Teller, became

larger and more numerous, she asked Oettinger, who told her to "handle them as best you can" and she distributed them as similar items had been handled before. Defendant, and Oettinger also, would ask her to make out "typed checks" to various persons, but neither ever told her how to charge them.

Occasionally it was defendant's practice to give bills to Taibleson or to Oettinger for payment, but not to indicate how such bills should be charged. However, defendant did at times give instructions to charge himself personally or to a corporate project called "Caravan," based at Denver, which was engaged in development of electronic devices in connection with drilling of wells. In the absence of any such indication, the practice was to charge an expenditure to a corporate expense account.

As to many of the indictment items, defendant instructed his employees personally either to issue a check and return it to him; to issue a check in payment of a bill, where the only documentation of such bill was defendant's oral direction; to draw petty cash and give the funds to him; or to purchase merchandise for him to be disposed of at his personal direction or shipped where he designated. Defendant never did explain to employees that such items all of which were herein stipulated as personal, were not business expenses but were personal to him.

Defendant also took blank checks with him on trips out of the city and, according to custom, needed no one's authority to do this. On occasion, he returned the bottom half of the check to the bookkeeping department. Of those items in evidence of such a nature, in only two instances did he indicate the purpose on the voucher portion as shown in the following two paragraphs. In all other instances he made no indication of the purpose for which the check was written. If Durant did not furnish this bottom half, or voucher portion, not only was there no way of knowing the purpose for which it was drawn, but the company was unaware it was issued until it cleared the bank. . . .

In 1951, agent Zivin examined United's and defendant's returns for 1949 and 1950. He made no third-party investigation of certain unsubstantiated expenses disallowed to the corporation, and also could not readily determine from the corporate books which were items of expenditure made for the benefit of defendant. He reviewed these items several times with Oettinger and Durant to determine their true nature. In December 1951, in a final conference Zivin so stated to Oettinger and defendant, with a warning that this practice had to be stopped, to which defendant replied, that if it had been done it was a mistake and that the items should have been charged to his personal account.

Zivin's itemized report of the corporation's personal and unsubstantiated expenses which he charged to defendant showed the following totals:

L. A. Durant

	Personal	No Substantiation
1949	$ 3,055.50	$47,400.00
1950	39,534.71	74,342.86

Zivin charged both categories to defendant as dividends. Sworn protests were filed in which defendant alleged that, with the exception of nine items, all disallowed expenses were exclusively devoted to official corporate expense by defendant.

The case was reassigned to revenue agent Wagar, who consulted Zivin's reports and examined the years 1951, 1952 and 1953. Without any third-party investigation, Wagar prepared reports dated April 26, 1954, proposing certain adjustments covering the years 1949 through 1953, and disallowing to the corporation

certain of the expenses claimed and charging to defendant as dividends certain amounts for each year. Before submitting his report, Wagar discussed with defendant the practice of taking corporate tax deductions for personal expenditures and said this practice was improper. Defendant did not explain how they came to be charged to corporate expense accounts. Wagar's report contained an itemized listing of corporate expense items determined to be personal in nature. Defendant discussed with the comptroller, Taibleson, the selling and travel expenses disallowed by Wagar.

The proposed assessments were settled by agreements for payments of additional corporate and personal taxes, totaling about $600,000.

Thereafter, defendant's personal expenditures continued to be paid by and charged to the corporation. During 1954, 1955 and 1956, $79,104.95 in personal items was actually disbursed to vendors who had been identified with dividend items charged to defendant in the prior audits. Defendant admitted that he made no changes in the accounts payable routine.

Defendant himself testified that in 1951 or 1952 he met with Agent Zivin and that, on some unfixed date in 1954, he had a conversation with Agent Wagar. He admitted that there was a discussion with Zivin about personal items that the corporation had paid for. He "assumed" that he knew what the discussion with Zivin "was all about."

He testified that he read and signed a protest against Zivin's ruling, prepared by his lawyers.

We first dispose of the contention of defendant that, if he had an intent to repay United Manufacturing Company for personal expenses paid by it on his behalf, the fact that they were not charged to his personal account has no effect, but they are loans. He cites Estate of Helene Simmons, 26 T.C. 409 (1956), Carl L. White, 17 T.C. 1562 (1952), and Walter Freeman, 16 T.C.M. 71 (1957).

In the case at bar, the district court found that the record is clear that at no time were the payments in question ever considered as loans by the parties. The corporation did not carry them on its books as notes or accounts receivable; no notes or other evidence of loans were ever executed by the defendant; no interest was ever paid to the corporation by the defendant; no maturity or repayment date was set; no repayment was made; defendant never advised any of the responsible subordinates that the payments were to be treated as loans and charged to his personal account; in fact, no action was taken by either the defendant or the corporation which would indicate that the payments were loans.

The district court found that the payments made by the corporation in the taxable years for defendant's benefit were income to defendant, which was known to defendant. This finding is supported by the uncontradicted evidence in the record, most of it stipulated.

Accordingly we hold that the payments by the corporation for the benefit of defendant were not loans by it to defendant, but were income. . . .

Defendant submits that the most that can be inferred from the evidence in this case is a certain amount of laxity, but his counsel urges that any amount of laxity does not constitute the requisite willfulness.

As an abstract proposition, we would agree that no amount of laxity in and of itself constitutes willfulness. However, in the case at bar, we believe that the district court properly recognized the additional factors revealed by the records, tending to prove a willful intent: (a) defendant knew the corporation was paying his expenses, (b) the payments were not considered loans by the parties, (c) defendant knew the corporate payments were income to him; and therefore properly found that defendant willfully failed to include them in his returns.

As we have indicated, the events following the prior audits for 1949-1953 served

to clearly warn defendant of his duty to report as his personal income the charges of indebtedness incurred by him and paid by the corporation. Moreover, his failure to indicate on many of the expenditure vouchers any notation indicating appropriate classifications leading to a proper charge to him personally, also tends to support the finding of willfulness.

His continuous failure to see that the warnings of Zivin and Wagar were heeded might reasonably be expected to result in a continuation of the practice of charging his personal obligations to the corporation.

We are not concerned here with any ethical question as to the propriety of defendant's benefactions to various ladies. No requirement of federal tax laws bars such nurture of cordial relations with them. Yet the court, as the trier of the facts, had a right to consider the repeated charges to the corporation for gifts by defendant to feminine acquaintances despite the previous warnings, and to find that he had deliberately and willfully continued to permit the making of such improper charges. By the sequence of events, the continuation of that practice, which in prior years may have resulted from defendant's negligence, in the years 1954, 1955 and 1956 became deliberate and willful.

Whether defendant willfully attempted to defeat and evade taxes in this case presented a question for the trier of the facts. There was substantial evidence before the court to support the result which it reached. The credibility of defendant as a witness and the weight to be given to his testimony were peculiarly within the knowledge of the court, which had an opportunity to observe his demeanor while testifying. On appeal, we are forced to hold, as we do, that there was sufficient evidence viewed in the light most favorable to sustain the court's finding, to prove the charge upon which defendant was tried. Blauner v. United States, 8 Cir., 293 F.2d 723, 725 (1961); United States v. Dudley, 2 Cir., 260 F.2d 439, 440 (1958); United States v. Tutino, 2 Cir., 269 F.2d 488, 490 (1959). Cf. Wolfe v. United States, 6 Cir., 261 F.2d 158, 160 (1958).

For these reasons, the judgment from which defendant has appealed is affirmed.

Judgment affirmed.

NOTE

1. *Fraudulent corporate return.* Could the defendant have been convicted on the same evidence of violating the same statutory provision (§7201) by causing the corporation to file a fraudulent return? See §7343 (term "person" as used in §7201 includes an officer or employee of a corporation who "is under a duty to perform the act in respect of which the violation occurs"); Blauner v. United States, cited in the *Durant* case (conviction of corporate officer under §7201 upheld because he was "responsible" for corporate tax return although he did not sign it); United States v. Haskell, 327 F.2d 281 (2d Cir. 1964) (conspiracy between corporate officer and key employee to evade corporate and personal income taxes).

2. *Willful failure to pay tax.* If the taxpayer files a proper return, but fails to pay the tax because he prefers to spend his money on wine, women, and song — or to use it in a foundering business venture — is he guilty of a violation of §7203 (willful failure to pay taxes at the time required by law)? In United States v. Palermo, 259 F.2d 872 (3d Cir. 1958), the court applied the *Spies* requirement of "a specific wrongful intent — an evil motive" as distinguished from "mere laxity, careless disregard of the duty imposed by law, or even gross negligence" in reversing a conviction based, inter alia, on these facts:

> At a time when he [the taxpayer] owed some $6,000 for income tax for the years 1948 and 1949 he bought a $25,000 property in Ventnor City, New Jersey, making a $10,800 cash payment thereon at the settlement, April 28, 1950. On May 19, 1954, when he owed a large amount of income tax going back to 1949, including all the

1953 tax, he purchased a new $5,020.21 automobile, a Cadillac DeVille, paying $1,520.21 in cash and financing the balance. On February 16, 1955, he purchased a new $5,547.63 Cadillac Eldorado for which he paid $1,549.50 in cash and traded in another car for the balance. At this time he owed a large amount of income tax for years going back to 1949, including all the 1953 tax, and his 1954 tax was almost due. On or about January 6, 1956, defendant paid $6,080 for a sumptuous wedding banquet for his daughter, even though at the time he owed income tax amounting to some $14,000 for the years 1949 to 1954, inclusive, with the 1955 tax still to be paid. There were 472 guests at the banquet. Included in the cost of the banquet were $2,030 for liquor and $1,000 for Duke Ellington's orchestra. [157 F. Supp., 580 (E.D. Pa. 1957).]

The government seldom prosecutes the taxpayer who files a proper and timely return for failure to pay, possibly because this area is haunted by the specter of imprisonment for debt.

If the taxpayer not only fails to pay his taxes, but impedes the government's collection procedures by concealing assets, etc., the requirement in the *Spies* and *Palermo* cases of "an evil motive" is more easily satisfied. Indeed, in the face of such tactics, the government may not be content with charging the taxpayer with a misdemeanor under §7203, and may instead charge him with committing a felony under §7201, which speaks of a willful attempt "to evade or defeat any tax . . . or the payment thereof." In Cohen v. United States, 297 F.2d 760 (9th Cir. 1962), a taxpayer who had been convicted under §7201 of filing false returns for 1946-1948 was convicted under the same statute of willfully attempting to evade payment of taxes for the same years (by concealing assets, using dummies to effect his transactions, etc.). The court held that the second prosecution, which was based on events occurring after the first conviction, did not put the taxpayer in double jeopardy.

3. *Other criminal offenses applicable to tax delinquencies.* Section 7201 (willful attempt to evade) and §7203 (willful failure to file return, supply information, or pay tax) are only two of the weapons in the government's arsenal. In addition to the other offenses set out in the Internal Revenue Code (§§7201-7215), there are also provisions of the Criminal Code that must be taken into account, including §1001 (false statements), §371 (conspiracy), and §1621 (perjury). The language of these provisions overlaps in a confusing fashion, giving rise to many troublesome questions, including the extent to which the field is pre-empted by a particular provision, the statute of limitations to be applied, and the right of a defendant who is charged under one provision to be convicted of a "lesser included offense." See United States v. Beacon Brass Co., 344 U.S. 43 (1952) (statute of limitations where taxpayer was charged under §7201 and had made a false statement during the investigation that constituted a violation of §1001, Criminal Code); Achilli v. United States, 353 U.S. 373 (1957) (prosecution under §7201; held, not barred by existence of §7207); United States v. Rayor, 204 F. Supp. 486 (S.D. Cal. 1962) (false statement is punishable under §7206(1) even if not material, although materiality is essential under Criminal Code §1001); United States v. McCue, 301 F.2d 452 (2d Cir. 1962) (§1001 of Criminal Code applicable to false oral statements made by taxpayer in course of investigation); Berra v. United States, 351 U.S. 131 (1956) (prosecution under §7201; held, no need to instruct jury re §7207); Janko v. United States, 281 F.2d 156 (8th Cir. 1960) (extensive discussion of "lesser included offense" issue) (reversed on other grounds, 336 U.S. 716); Grunewald v. United States, 353 U.S. 396 (1957) (conspiracy).

4. *Investigation and trial of tax fraud cases.* In addition to the materials cited supra page 897 on the subject of tax investigations, see Campbell v. Eastland, 307 F.2d 479 (5th Cir. 1962) (application for discovery by taxpayer-plaintiff in refund action while he was a potential defendant in fraud prosecution); United States v. Fancher, 195 F. Supp. 448 (D. Conn. 1961) (discovery in fraud prosecution); Palermo v. United States, 360 U.S. 343 (1959) (application of "Jencks Act" to revenue agents' reports); Burke v. United States, 279 F.2d 824 (8th Cir. 1960) (same).

5. *Illegal income and the Fifth Amendment.* On the relation of the privilege against self-incrimination to the reporting of illegal income, see page 117 supra.

6. *Voluntary disclosure of tax fraud.* Until 1952, the Treasury Department followed a policy of not recommending prosecution of taxpayers who made a "voluntary dis-

closure" of tax fraud. At one time, an admission was "voluntary" in the eyes of the Treasury if the taxpayer acted before he knew he was under investigation; later, he had to act before an investigation was in fact under way. Although the promise of immunity was not judicially enforceable, United States v. Lustig, 163 F.2d 85 (2d Cir. 1947), cert. denied, 332 U.S. 775, it was in fact observed in practice; and it was widely believed that evidence could be suppressed on the taxpayer's motion if furnished in circumstances constituting a voluntary disclosure as defined by the Treasury's announced policy. There were a number of cases in which the taxpayer claimed, and the agent denied, the making of an oral disclosure, however, and always present was the possibility of collusion by an agent in pre-dating a memorandum setting out a voluntary disclosure. See Shotwell Mfg. Co. v. United States, 371 U.S. 341 (1963), holding that a dishonest disclosure did not meet the administrative requirements and that evidence so furnished could be properly used by the government; the dissent, at 368n, cites the relevant announcements.

In 1952, the voluntary disclosure policy was abandoned by the Treasury Department, with the following announcement:

> While it has been the long-established policy of the Treasury Department to refrain from recommending criminal prosecution where taxpayers make voluntary disclosure of intentional tax evasion prior to the initiation of an investigation by the Bureau of Internal Revenue, it has been concluded that such policy will no longer be followed. Litigation in the courts in recent years has illustrated the controversial nature of the question as to what constitutes a true voluntary disclosure in fact. In the administration of the policy it has been difficult and at times impossible to ascertain whether the disclosure was made because the taxpayer realized he was under investigation or whether the disclosure was in fact voluntary and in reliance on the immunity held out by the policy.
>
> The intensified enforcement activities of the Bureau's special tax fraud drive and racket squads throughout the country are ferreting out the willful tax evaders, and resulting in recovery of the additional taxes and penalties due the Government. It is the policy of the Treasury Department to recommend criminal prosecution in every case where the facts and circumstances warrant that action.

The A.B.A.'s Section of Taxation has recommended several times that a formal voluntary disclosure policy be reinstituted. See A.B.A., Section of Taxation, Bulletin, Oct. 1961, p. 32. See also Advisory Group on Administration of Internal Revenue Service, Report to House Ways and Means Committee (subcommittee on Internal Revenue Taxation) (1957) 70-71; Hearings, Subcommittee of House Ways and Means Committee, 82d Cong., 2d Sess., Jan. 22-25, 1952, passim.

In the absence of a formal "no prosecution" policy, the Internal Revenue Service and the Department of Justice presumably take a voluntary disclosure into consideration along with all other circumstances in deciding whether to prosecute, since a confession before investigation may weigh favorably with a jury. Pointing out in 1962 that the advent of electronic data processing may flush out some previously unknown tax evaders, the Commissioner of Internal Revenue advised delinquent taxpayers to put their houses in order by filing returns currently, and added that "the Service will carefully consider and weigh [a voluntary disclosure of past delinquency], along with all other facts and circumstances in deciding whether to recommend prosecution." Note, 16 J. Taxation 104 (1962).

7. *Is tax fraud immoral?* Is it "immoral" or an indication of "moral turpitude" to evade federal income taxes? See Jordan v. De George, 341 U.S. 223 (evasion of liquor taxes involves moral turpitude, warranting deportation of alien); Kahn v. Barber, 253 F.2d 547 (9th Cir. 1958) (accord, as to income tax evasion); In re Nunan, 211 N.Y.S.2d 633 (attorney sentenced to 5 years' imprisonment for federal tax evasion; held, action constitutes "professional misconduct" warranting, in view of otherwise good record, one year's suspension from practice); Furnish v. Board of Medical Examiners, 308 Pac. 2d 924 (Calif. 1957) (physician; suspended one year). See also Cahn, The Moral Decision (1955) 164ff; Wilson, The Cold War and the Income Tax: A Protest (1963).

SECTION F. THE LAWYER'S ROLE

RANDOLPH PAUL, THE LAWYER AS A TAX ADVISER

*25 Rocky Mountain Law Review 412 (1953)**

Analysis of the ethical problems of lawyers as tax advisers has many of the fascinating and challenging qualities associated with exploration of a moral and legal frontier. One gets quickly to the borderlands of knowledge of the subject. I would guess that a fairly general ignorance upon the subject is partly in the realm of philosophy and partly a matter of application. Until recently very few tax lawyers have given much thought to the ethics that should govern the practice of their profession. Moreover, tax law as a specialized field of practice is still in its comparative infancy. There is no venerable tradition to compel the adherence of the tax bar to fixed rules of behavior, and there are very few illustrious examples in a short past to guide the lawyer's conduct. There has hardly been time to evolve a new creed to fit a rapidly developing group of ethical problems. Technical problems of the most baffling character have monopolized the capacities of tax practitioners who have used all their energies in trying to keep pace with the multiplying intellectual complexities of a vast modern product of the law. Tax counselors have therefore lacked opportunity to develop a solid core of philosophy to serve as chart and compass when they encounter the ethical problems constantly arising to plague them in the daily round of their exacting work.

The ethical problems arising in the life of tax practitioners are not simple, copybook problems. It is not possible, in ex-President Hoover's analogy, to make the rules controlling their conduct in practice "as clear as the Ten Commandments." Most tax practitioners will not countenance fraudulent conduct in any crude sense of that term. To a suggestion that a taxpayer may evade taxes by omissions or false understatements of income in his return, by deceptive overstatements of items of deduction, by fictitious entries in books of account, or by concealing assets from the revenue collector, most tax advisers will quickly make the blunt reply that they will not participate in a transaction involving such elementary misconduct. This type of situation rarely presents a serious problem for tax counsel. He knows that he should not have even an advisory part in any transaction involving methods of tax evasion which plainly cross the line of legality. His moral instincts and training forbid participation; in addition, he

* Reprinted by permission.

knows very well that participation will sooner or later end in disaster for his professional career. Tax evasion in this brutal sense of the term "evasion" is a risky game that cannot be won. As Chief Justice Vinson once tersely remarked when he was Secretary of the Treasury: "There is no future in it."

As a matter of fact, the morals of most clients are far above the level which would sanction unmitigated fraud of this variety, even if they were convinced that it would go undetected. Moreover, they are unwilling to take the risks involved in plainly fraudulent conduct, nor do they often present to their tax advisers proposals involving wilful attempts to evade or defeat tax liability. The ethical problems presented to tax advisers are of a more subtle character. Borderline questions are presented which usually have enough potential argument in their favor to furnish some basis for rationalization leading to a decision to act in the apparent immediate financial interest of the taxpayer.

Advising As To Potential Tax

Analysis of the ethical responsibilities of tax advisers may profitably start at the earliest point in the adviser's contact with transactions involving potential tax liability. . . .

A taxpayer may desire to reduce the tax liability implicit in an existing distribution of wealth among the members of his family or to avoid unnecessary income or gift tax in connection with a divorce settlement. No prudent businessman enters into an important business transaction without consultation with his tax attorney before he crosses the Rubicon. The businessman may wish to avoid some hidden pitfall, or more affirmatively he may wish to reduce to the lowest legal minimum the taxes which may result from a business transaction into which he is about to enter. . . .

If a tax attorney is to handle this type of work capably, and the later work of representing clients before the Treasury and the courts in connection with transactions involving attempts to minimize tax, he must first organize his philosophy on the subject of tax avoidance. A coherent philosophy is vital to a consistent and effective attitude. Some tax attorneys have a vaguely uncomfortable feeling, which does not always reach the point of consciousness, that there is something "mildly unethical" in the desire of taxpayers to minimize tax liability, and that it is at least a venial sin to give consideration to the tax consequences of future transactions. This is not so. The standards of tax law are external standards, except in those instances in which the statute itself indicates that "purpose or state of mind determines the incidence" of the tax. "Moral predilections must not be allowed to influence our minds in settling legal distinctions." [1] There is no moral turpitude and nothing sinister in arranging one's affairs so as to keep taxes as low as possible. As Judge Learned Hand has emphatically said: "Everybody does so, rich or poor; and all do right, for nobody owes any public duty to pay more than the law demands: taxes are enforced exactions, not voluntary contributions. To demand more in the name of morals is mere cant." . . .[2]

Justise Holmes expressed a personal attitude toward taxes when he said: "I like to pay taxes. With them I buy civilization." [3] His judicial attitude toward

1 Holmes, The Common Law 148 (1881).

2 Commissioner v. Newman, 159 F.2d 848, 850-51 (2d Cir. 1947), cert. denied, 331 U.S. 859 (1947). Judge Learned Hand dissented in this case, but the disagreement related to other matters involving the construction of a trust instrument. . . .

3 Frankfurter, Mr. Justice Holmes and the Supreme Court 42 (1938). See also Holmes dissenting in Compania General De Tabacos De Filipinas v. Collector, 275 U.S. 87, 100 (1927); New York ex rel. Cohn v. Graves, 300 U.S. 308, 313 (1937); Frankfurter, dissenting, in Texas v. Florida, 306 U.S. 398, 431 (1939).

tax avoidance was a horse of a different color. "When the law draws a line," he said, "a case is on one side of it or the other, and if on the safe side it is none the worse legally that a party has availed himself to the full of what the law permits." [4] On another occasion Justice Holmes added the thought: "The fact that it desired to evade the law, as it is called, is immaterial, because the very meaning of a line in the law is that you intentionally may go as close to it as you can if you do not pass it. . . . It is a matter of proximity and degree as to which minds will differ. . . ." [5] . . .

I do not mean to give blanket sanction to the many tax avoidance schemes that are constantly being presented to tax advisers. Above all things, a tax attorney must be an indefatigable skeptic; he must discount everything he hears and reads. The market place abounds with unsound avoidance schemes which will not stand the test of objective analysis and litigation. The escaped tax, a favorite topic of conversation at the best clubs and the most sumptuous pleasure resorts, expands with repetition into fantastic legends. But clients want opinions with happy endings, and he smiles best who smiles last. It is wiser to state misgivings at the beginning than to have to acknowledge them ungracefully at the end. The tax adviser has, therefore, to spend a large part of his time advising against schemes of this character. I sometimes think that the most important word in his vocabulary is "No;" certainly he must frequently use this word more emphatically when it will be an unwelcome answer to a valuable client, and even when he knows that the client may shop for a more welcome answer in other offices which are more interested in pleasing clients than they are in rendering sound opinions. . . .

The tax lawyer should put aside private disagreements with Congressional and Treasury policies [when advising clients]. His own notions of policy, and his personal view of what the law should be, are irrelevant. The job entrusted to him by his client is to use all his learning and ability to protect his client's rights, not to help in the process of promoting a better tax system. The tax lawyer need not accept his client's economic and social opinions, but the client is paying for technical attention and undivided concentration upon his affairs. He is equally entitled to performance unfettered by his attorney's economic and social predilections.

It may be added that in tax cases the protection of a client's rights is a sufficient job for most lawyers. It is not always easy to determine the policy of tax statutes, and the private views of the lawyer may be at variance with Congressional policy. Even though the tax adviser is in violent disagreement, the client is entitled to an objective expression of views as to that policy.

These are the principles which guide me when I discuss with clients tax questions involving the minimization of tax liabilty. I do not hesitate to advise the client fully and frankly in choosing among "the oddities in tax consequences" [6] that emerge from different methods of accomplishing the same ultimate result. I will do all I can to help the client reduce his tax liability to the lowest possible legal level or save him from a greater tax liability than his transaction needs to carry. This sometimes requires a substantial modification of an originally proposed transaction and a consideration by the client of the question whether the modified transaction will sufficiently serve his business purposes. Modifications must have substance, and the client may decide that the price he has to pay is more than the projected tax saving is worth. On the other hand, he may be willing to do what is required to place the transaction on the safe side of the line

[4] Bullen v. Wisconsin, 240 U.S. 625, 630 (1916). . . .

[6] United States v. Cumberland Public Service Co. [supra page 676].

drawn by the statute. He is entitled to counsel which makes the outlines of his choice clear to him.

These problems frequently arise in the lives of tax attorneys when their clients seek to take advantage of the capital gain rate of tax, or when their purpose is to minimize the impact of taxation upon the family by a bona fide distribution of property to wife and children. When this happens to me, I take, as I see it, a statute the policy of which I do not personally favor; I even accept the policy of statutes which I have opposed. This is true, for example, of the stock option provision [§421], the family partnership provision [§704(e)], and the percentage depletion provision [§613]. In advising in connection with provisions of this kind, I try to be strictly on guard against overinterpreting relief provisions; but I see no reason why in my role as tax adviser I should set myself up against Congress as the arbiter of tax policy. My assignment is simply to be careful that the client does not overstep the line of policy drawn in the statute as Congress has passed it and as the Treasury and the courts have refined that line in their interpretive regulations and decisions.

Guided by these principles I feel that I am justified in recommending to a client that he transfer some of his property to a trust for the benefit of members of his family with the object of minimizing the family tax burden. The client may express a natural desire to retain as much control over the property as he can without sacrifice of the objective of shifting the tax on the income from the transferred property. As I see it, my task is to help the client without letting him venture any further than necessary into unsafe territory. In doing so I will feel no moral qualms. The problem does not involve ethical issues. My client's objective is legitimate. I often resolve some legal doubts in favor of the Government so that the client has a reasonable margin of safety. This too is my duty, but I would be derelict in the performance of my responsibility if I failed, because of moral scruples or because of disagreement with the policy of the statute, to guide the client as far as he can safely go in the direction of his desire.

Keeping to the concrete, I may sanction a plan under which a corporation with a history of recent losses acquires a profitable business so that the profits and losses of the two businesses will offset one another. When I am consulted in such a matter, my assignment is to appraise conservatively the effect of [§269], which deals with this subject, but which may not apply to the particular facts of the case presented to me. In advising with respect to the transaction my sole concern should be whether the desired result can be safely achieved. It does not concern me that as a matter of policy it might have been better if Congress had passed a more comprehensive statute eliminating this tax saving opportunity.* I frequently have to make a calculation of the risks involved in going forward with a proposed business deal. If I am not prepared to devote my undivided loyalty to the objective of gaining for the client every advantage offered by the law as it is written, I should tell him at the outset to go to some other lawyer whose allegiance to his interest will be less fractional.

Of course there are limits as to how far a tax attorney may honorably go in advising clients as to the tax effect of future transactions. He should not yield to a temptation sometimes presented when his client consults him with respect to the tax effect of a desired course of action. The suggestion may be that the contracts and other papers expressing the transaction disguise its real character so that a revenue agent will miss its tax impact when it is later presented as a consummated transaction. I hope that it is almost superfluous for me to express

---

* Mr. Paul's article was written before the enactment of §382, which deals more comprehensively with this problem. — Ed.

a lack of sympathy with all techniques designed to camouflage contemplated transactions in such a way as to conceal those parts of them which may provide the basis for an assertion of tax liability. The Government is a silent partner in all business transactions and is entitled to a fair view of those transactions so that it may assert its claim of interest. One may go further by saying unequivocally that attempts at misrepresentation border on fraudulent conduct. At least it is conduct unbecoming a tax attorney.

It is easy to give illustrations of prevailing techniques of misrepresentation. One favorite device is to put a transaction into two contracts, one of which is to be shown to the Government's representatives, and the other of which is to be kept secret. This happened once in my experience in connection with a sale of stock to a buyer for about $5 million. Since the buyer had an option on the stock of about $3 million, it was obvious that $2 million was being paid for an agreement not to compete. A payment for this covenant would have been ordinary income and not capital gain [supra page 574]. The seller insisted that this transaction be put in two documents, one which would recite the sale of stock for $5 million, and the other of which would provide against competition without mentioning any consideration. I felt obliged to refuse to be an adviser in this transaction. As a result, my client, who had reluctantly agreed because of anxiety to procure the stock, went to another attorney who was willing to let the client do what the seller wished. The client never came to me with his subsequent problems.

The ingenuity of fertile-minded clients and fringe tax advisers has devised many dubious methods of tax avoidance. The president of a family corporation may ask his lawyer if it is all right to minimize corporate tax liability by making his wife vice-president of the corporation and payng her a substantal salary, even though she performs no services whatever for the corporation. Some businessmen, in an attempt to become members of what Life calls "the expense account aristocracy," may seek arrangements under which they receive a substantial fixed allowance for miscellaneous entertainment and promotional expenses greatly exceeding the amount they expect to spend for those expenses. The argument is usually made that others in the same business engage in similar practices. It is hardly necessary to say that this is no argument at all, yet it is one which appeals to some clients.

Representing the Client

We come now to a more difficult problem area. In the law generally the antagonists in controversies are private citizens. Here a lawyer's duty to his client is paramount and exclusive. The client has put a special trust in his lawyer; the lawyer owes the client a sacred duty. "The office of attorney does not permit, much less does it demand of him for any client, violation of law or any manner of fraud or chicane. He must obey his own conscience and not that of his client." But a lawyer's devotion to the interest of his client must be entire and unadulterated. The lawyer owes his client "warm zeal in the maintenance and defense of his rights and the exertion of his utmost learning and ability." [7] He is not

[7] Canons of Professional Ethics, Canon 15. It has been suggested that lawyers are dedicated to a code of ethics which transcends the code of law. Hellerstein, Ethical Problems of Tax Practitioners, 8 Tax L. Rev. 1, 5 (1952). Mr. Hellerstein quotes James, The Professional Ideals of the Lawyer 4 (1925), who in turn quotes Henry Wade Rogers as saying: "A lawyer is unworthy of membership in the profession who would regulate his conduct solely according to what the law permits rather than what morality and honor require." But what about the lawyer's duty to secure for his client what the law permits? Should not his conduct be regulated by that requirement?

representing himself, but is acting vicariously. He must treat his client better than he treats other people. This may, indeed, as Charles P. Curtis has suggested,[8] involve lower standards of conduct toward outsiders than toward his client. No attorney in general practice can be intellectually impartial or maintain complete equilibrium of judgment; he is a partisan advocate. His first rule of conduct must be to protect to the full extent of his ability the position he is engaged to maintain.

In tax law the adversary of the taxpayer is his own, and the tax adviser's own, Government. The tax lawyer is licensed to practice before the bar of the Treasury which is his opponent. It is sometimes urged that a taxpayer's citizen relationship to his Government is not comparable to that of a plaintiff or a defendant to his adversary in an ordinary law suit and that the citizen owes his Government and his neighbors the duty of paying his share of taxes as required by law. It follows, according to this argument, that tax lawyers, as ministers of law, cannot countenance or be accessory to an escape by taxpayers of their duty to their Government. The conclusion of the argument is that the tax practitioner has a "dual responsibility." He must serve two masters. He must be loyal to his client, but he is also duty bound to the Government to see that his client does not "avoid his just share of the tax burden except by positive command of law. . . ." Almost invariably the proponents of this argument quote Holmes' aphorism: "Men must turn square corners when they deal with the government."

The argument mentioned also develops the point that the responsibility of the tax lawyer in connection with the preparation of returns and in the conduct of a case within the Treasury lodges in certain additional circumstances which are peculiar to tax controversies. To a considerable extent Government representatives depend upon facts presented to them by the taxpayer. While the Government has every power to inspect taxpayers' records and examine the taxpayer and others who have knowledge of transactions needing scrutiny, this power is in many respects more theoretical than real. In the normal case even the revenue agent who makes an examination of the taxpayer's records cannot examine every item in those records; if he did, he would never finish his job. He must to some extent depend upon the taxpayer or the taxpayer's lawyer or accountant to make the relevant data or facts available. This control over the facts of a controversy by the taxpayer sometimes makes deception an easy matter for the tax attorney who is willing to take advantage of the Government.

Moreover, the lawyer of accepted reputation soon comes to find, and should be particularly conscious of the fact, that Government representatives sometimes rely to a marked degree upon his integrity. On occasion they accept without minute examination or meticulous scrutiny statements of facts presented to them by an attorney they trust. They may assume that statements presented comprise all the facts. In doing so they are to some degree depending upon the tax adviser's sense of candor and fairness. This tendency on the part of some Government representatives puts a load of special responsibility upon the tax adviser. Some clients are willing, sometimes innocently and sometimes deliberately, to trade upon their lawyer's good reputation. Lawyers whose word is their bond have a special obligation to be diligent in their analysis of the facts involved in tax controversies and scrupulously careful that their factual presentations to Government representatives fairly reflect the truth.

I have also heard the additional argument that since the success of the income, estate and gift taxes depends in such large degree upon the co-operation of taxpayers, an understanding by them of the revenue necessities of the country is in-

---

[8] Curtis, The Ethics of Advocacy, 4 Stan. L. Rev. 1, 5 (1951).

evitably required. Certainly it is true that the American federal tax system cannot rely solely upon enforcement; the maintenance of a co-operative public attitude is of the utmost importance to the success of that system. Between 80 million and 90 million returns pour annually into the Bureau of Internal Revenue. The Bureau employs only about 20,000 revenue agents, deputy collectors, and auditors. These Bureau representatives manage to examine approximately 4 million returns each year, or less than one of every 20 filed. In that process each Bureau representative examines an average of 200 returns a year.* Even a superficial examination ordinarily involves checking many details reported on the return, conferences with the taxpayer, an examination of his personal records or books of account, and the preparation of a report on the examination made.

The more thorough examinations required in more complicated cases may entail such further activities as checking the taxpayer's business inventory, verifying his travel and entertainment expenses, interrogating business associates and parties to transactions with the taxpayer, and many other time-consuming activities. To be even reasonably sure that the taxpayer has not failed to report taxable income, or that he has not overstated his allowable deductions, the examining agent must check bank records, stockbroker records, and many other sources of information. No revenue agent can, or does, conduct 200 thorough examinations per year. Only a few taxpayers ever undergo a complete examination; as to the rest, there can be little more than a token, or spot-check, enforcement.

If tax advisers have special responsibilities of the sort described, the Treasury Department has been far from prodigal about their articulation. The Act of July 7, 1884 [23 Stat. 258] gives to the Secretary of the Treasury the right to prescribe rules and regulations governing the recognition of attorneys and agents representing claimants before his Department. He may require that attorneys practicing before his Department show that they are of "good character and in good repute," and that they are "possessed of the necessary qualifications" to enable them to render valuable service and are otherwise "competent to advise and assist" claimants in the preparation of their cases. Under Treasury Department Circular 230 every enrolled person must conduct his practice "in an ethical and professional manner," and it is his duty "to observe the canons of ethics as adopted by the American Bar Association." Agents other than attorneys must observe the ethical standards of the accounting profession. When they accept a Treasury card evidencing their right to practice before the Bureau of Internal Revenue, enrolled attorneys also agree to obey a number of commands set forth in Circular 230, among which are the following:

§10.22 Information to be furnished. — (a) To the Internal Revenue Service generally. — No enrolled attorney or agent shall neglect or refuse to submit records or information in any matter before the Internal Revenue Service, upon proper and lawful request by a duly authorized officer or employee of the Internal Revenue Service, unless the information or testimony is privileged or such attorney or agent has reasonable grounds to believe and does believe that the said demand is of doubtful legality; and no such attorney or agent shall interfere, or attempt to interfere, with any proper and lawful efforts by the Internal Revenue Service or its officers or employees to obtain information relative to any matter before the Internal Revenue Service. . . .

§10.23 Knowledge of client's omission. — Each enrolled attorney or agent who knows that a client has not complied with the law, or has made an error in or omission from any return, document, affidavit, or other paper which the client is required by law to execute in connection with any matter administered by the Internal Revenue Service, shall advise the client promptly of the fact of such noncompliance, error, or omission.

* These statistics reflected the Internal Revenue Service's workload as of 1950-1952, but the order of magnitude has not changed significantly since then. — Ed.

§10.24 Diligence as to accuracy. — (a) In general. — Each enrolled attorney or agent shall exercise due diligence in preparing or assisting in the preparation of, approving, and filing returns, documents, affidavits, and other papers relating to Internal Revenue Service matters.

(b) Representations to service. — Each enrolled attorney or agent shall exercise due diligence to determine the correctness of representations made by him to the Internal Revenue Service.

(c) Representations to clients. — Each enrolled attorney or agent shall exercise due diligence to determine the correctness of representations made by him to clients with reference to any matter administered by the Internal Revenue Service.*

Do the above quoted requirements, in combination with the assumptions implicit in the structure of the American revenue system and the established procedures for the disposition of tax disputes short of resort to the courts, provide a standard of conduct different from that which binds the general practitioner representing clients in private litigations? Do they place the tax adviser in a position of "dual responsibility," which dilutes the supreme duty he owes to his client? Do the stated rules and assumptions demand more meticulous conduct than is required of attorneys when they try cases in the Tax Court or other courts having jurisdiction of tax cases? Many, of whom I am one, have asserted that they do. Yet the answer to these questions is far from clear, and strict analysis requires admissions of doubts. This is not to deprecate the need of a high standard of ethics in the practice of tax law. The question is whether the standards applicable to the conduct of attorneys representing clients before the Bureau of Internal Revenue vary from those which are applicable to attorneys engaged in general practice, and place upon the former a responsibility on certain occasions to put the interest of the Treasury in a position paramount to the interest of their clients.

Those who urge a double standard of ethics have cited examples in their discussion of the ethics of tax practice. It is always healthy to test general propositions by getting down to concrete cases. In [a symposium on Ethical Problems of Tax Practitioners, published in 8 Tax L. Rev. 1 (1952)], Mr. Hellerstein mentioned the case of Mr. Brown, an officer of a small closely held corporation, who wanted to imitate the conduct of his neighbor, Jones, "a fine upstanding citizen." Jones, who made generous contributions to deductible charities, told Brown that he had his personal automobile, which he never used in the business, purchased, owned, serviced and insured by his corporation.

In the same symposium Thomas N. Tarleau presented two further questions. One involved depreciation on property inherited by the taxpayer which, he told his adviser, had been converted to a business use shortly after its inheritance ten years before the taxable year. The property had been rented or held out for rent for a considerable period, and it was possible to show a substantial value on the date of conversion. The Treasury representative before whom the case was being argued on protest seemed to be convinced, and asked for some supporting information. In the course of assembling this information the lawyer learned for the first time that while the real estate was still held by the taxpayer, the building actually had been torn down prior to the taxable year. The question was whether the taxpayer's lawyer was required to suggest to the agent that the depreciation should be disallowed.

In another question presented by Mr. Tarleau, a taxpayer consulted his lawyer about the deductibility of certain European traveling expenses incurred on a trip made for the purpose of purchasing merchandise to be resold in the taxpayer's

* Provisions of Department Circular 230 as of January 1, 1964, have been substituted for the 1952 provisions quoted by Mr. Paul. — Ed.

business. The items of expense for steamship and railroad fares, and the hotel charges and like items, appeared to be reasonable in amount. However, the lawyer's investigation uncovered the fact that the taxpayer's wife, who had no connection whatsoever with the business, had accompanied the taxpayer on the trip. The charges covered her transportation and hotel expenses. The question submitted was whether the lawyer was required to disclose to the Treasury agent that part of the traveling expenses was for the taxpayer's wife.

I doubt if any reputable tax practitioner would have any trouble with these cases. He would promptly tell Mr. Brown that the conduct of his neighbor, Jones, was highly questionable. He would unhesitantly advise the Bureau that the building had been torn down in a year previous to the taxable year and admit that his client was entitled to no depreciation whatever. Under the circumstances stated he would refuse to sanction the deduction of the wife's expenses on the European trip.

But, unfortunately, these cases do not help very much in the disposition of the question under discussion. I would guess that most reputable tax attorneys would not undertake to defend the proposed conduct of these taxpayers before the Tax Court or any other court. I would also be doubtful whether most attorneys in general practice would be willing to represent clients whose position on the facts was so indefensible as it was in these cases. The cases therefore furnish no basis for any firm rule that a tax adviser in appearing before the Bureau assumes some load of responsibility to the Government which is not present when he represents a client in private litigation.

We may perhaps find the answer to our question in some more difficult examples. Mr. Hellerstein submitted a question involving the settlor of a trust, the income of which his tax lawyer was fearful might be taxable to him under the *Clifford* doctrine and regulations. However, the issue was in doubt. He also submitted a question involving interest payments on notes held pro rata by the stockholders of a corporation which might be attacked under the so-called "thin incorporation" doctrine. In these two cases it was clear that the Bureau would decide the issue adversely to the client if the facts were brought to the Bureau's attention, though it was not clear what the result would be if the question went to litigation. Should the tax practitioner insist upon a full disclosure, advising the client to set forth in his return all the facts relating to the *Clifford* question? Should he advise the corporation to call attention in its return to the circumstances of "thin incorporation," so that the issue would not be overlooked by the Bureau? Or should the tax adviser resolve these questions in the taxpayer's favor and advise him not to flag them in the return?

These questions are not easily answered. Mr. Hellerstein concluded that most tax practitioners would not advise disclosure, but would go along hoping "with some anxiety, but with no feeling of guilt, that the revenue agent would miss the item." "It is the ethic of the profession," Mr. Hellerstein regretfully concluded, that "the tax practitioner does not regard it as his duty to recommend full and fair disclosure of the facts as to items questionable in law."

This may be true as to the particular illustrations given. The *Clifford* doctrine is a thicket of obscurity, and there is no yardstick for the measurement of the "thin incorporation" doctrine. There are, however, cases in which there is a clear duty of disclosure which most tax attorneys would respect. For instance, in spite of the *Textile Mills* decision and the applicable regulation, there remains some chance that legitimate lobbying expenses are deductible.* Yet I think most

* Textile Mills Securities Corp. v. Commissioner, 314 U.S. 326 (1941). For later developments, see pages 283-284 supra. — ED.

tax attorneys would refuse to sanction the deduction of lobbying expenses in a return without a complete segregation of the deduction so that it would automatically come to the attention of the revenue agent. At the other end of the spectrum, in some areas of the tax law the Bureau of Internal Revenue has adopted a policy of persistent litigation of questions which have been repeatedly decided favorably to taxpayers by the Tax Court and by the Courts of Appeal in several circuits. Here the average tax attorney would, I think, advise a client that he need not flag an item in his return because his position was supported by a number of authoritative and carefully reasoned court opinions. Between these two poles many borderline problems constantly arise to plague tax advisers.

Similar problems confront the tax adviser in the presentation of the taxpayer's position within the Bureau of Internal Revenue on protest or before the Appellate Staff. Of course, a tax lawyer should respond truthfully to questions asked by Government representatives about the facts of the case he is presenting; "in his intercourse with those in authority . . . touching the performance of their functions, he is bound to exhibit truth, frankness, and integrity." As Circular 230 indicates, he "must exercise due diligence in preparing financial statements for clients and in certifying to the correctness of the same." He should not "neglect or refuse to produce records or affidavits in any matter before the Treasury Department upon proper and lawful demand," unless he has reasonable grounds to believe, and does believe, that the demand is of doubtful legality. He should not interfere with any proper and lawful efforts of the Bureau to procure information Government representatives believe to be relevant to the Government's side of the case. He must exercise due diligence "in preparing or assisting in the preparation of, approving, and filing returns, documents, affidavits, and other papers relating to Treasury Department matters."

We have gone so far as to require a tax adviser to inform Government representatives as to points of fact which completely dispose of the taxpayer's case. We have also suggested the obligation upon tax attorneys to supply truthful answers to all questions asked by the Government representatives. I certainly agree generally with Mr. Tarleau that tax advisers should "engage in open-handed dealing," and "avoid anything suggesting concealment or trickery." But are they obliged "to reveal every fundamental fact which is pertinent to the issue under consideration?" What if the Government representatives fail to make a specific request for certain information in the possession of the tax attorney which is harmful to, but not dispositive of, a taxpayer's case? To what extent is the tax attorney obliged to volunteer information at such a time? Must he turn over every item of information in his possession irrespective of the effect of doing so upon his client's case? If the answer to this question should be in the affirmative, I am sure that we have found a substantial difference between the position of attorneys representing clients in private litigation and attorneys representing taxpayers before the Bureau of Internal Revenue.

I can give no definitive answer to the questions I have just asked. There are times when a failure to speak may be a misrepresentation. But I will venture the statement that most tax attorneys would rarely volunteer information under the circumstances stated. And I would be the last to condemn them for not doing so.[9] I would not know how to answer their argument that except where

[9] Samuel Williston would not condemn him. "The lawyer must decide when he takes a case whether it is a suitable one for him to undertake and after this decision is made, he is not justified in turning against his client by exposing injurious evidence entrusted to him. . . . [D]oing something intrinsically regrettable, because the only alternative involves worse consequences, is a necessity in every profession." Williston's autobiography tells of one of his early cases which illustrates the difficulties involved in this type of situation. Williston's client was sued in a finan-

the rules of practice dictate otherwise tax proceedings in the Treasury are predominantly adversary proceedings calling for no higher ethical standards than those imposed upon attorneys engaged in general practice. At times one encounters a revenue agent or a conferee who is genuinely interested in ascertaining the taxpayer's correct tax liability wherever the chips may fall. But this is the exception rather than the rule. Treasury representatives are subject to many pressures, and as a rule their conduct closely resembles the conduct of attorneys in private litigation. They put the most favorable face upon the facts supporting the Treasury side of the controversy, as taxpayers do upon the facts supporting their side; and they argue, sometimes with considerable vehemence, that the precedents require a conclusion in favor of the Government. Certainly they are not, and do not pretend to be, acting as impartial referees. I do not say that they should. They are servants of a Government which needs revenue badly, and they would be more than human if they were not at least a little partisan on behalf of that Government. All these considerations lead to doubt whether the tax attorney has a responsibility to the Treasury over and above the responsibilities enumerated in Department Circular 230 and those described in the Canons of Ethics which are incorporated by reference in that Circular.

Whatever special rules may apply to the conduct of a case before the Treasury, it seems clear enough that they cease to apply when a civil tax case reaches the litigation stage, either in the Tax Court, the federal district court, or the Court of Claims. Like other "legal battles fought in a court room," these proceedings are "fights." The parties, one of which is the Government, are in a law suit which does not differ in any essential respect from any other law suit. A judge is in charge of the trial, and counsel for both sides are functioning as advocates. The Government has full power to investigate the facts underlying its case. It may call witnesses to testify to those facts and it may cross-examine the taxpayer's witnesses. It has the advantage involved in a presumption of correctness for the deficiency letter and all findings made by the Bureau of Internal Revenue. The taxpayer generally has the burden of proof. No special Treasury rules impose any inhibitions upon the conduct of his attorney. I do not see that the taxpayer's attorney has any obligation affirmatively to present facts hostile to his client's case. He may do so to minimize the impact of the adverse facts upon the judgment of the court if they should be presented by the other side. But here, again, the problem is one of judgment, not of ethics, and the attorney for the taxpayer certainly has no obligation to present the other side's case. He may be obliged to submit to judgment against his client if he knows some critical fact which completely disposes of the case, but he is certainly not required to submit evidence which merely points in the direction of judgment for the Government.

There is general agreement among tax attorneys, I think, that no special rules apply to the conduct of criminal fraud cases. These cases are primarily criminal cases involving taxes and not tax cases involving criminal law. The question is whether the taxpayer is to be charged with a crime. His liberty, as well as his property, is in peril. On the basis of independent investigation by its agents the Government is asking the question whether the taxpayer is guilty of wilful failure

---

cial matter. Williston at once went through his letter file painstakingly, sorting and collating it. As the trial approached, the plaintiff's lawyers did not demand to see the correspondence or ask for its production. Williston states that he did not feel bound to disclose the correspondence. At the close of the trial in the course of the remarks the Chief Justice stated as a reason for his decision a supposed fact which Williston knew to be unfounded. He had in front of him a letter showing the Judge's error. Williston says: "Though I have no doubt of the propriety of my behavior in keeping silent, I was somewhat uncomfortable at the time." Williston, Life and Law 271 (1940).

to report his correct tax liability. The facts leading to investigation are not usually facts disclosed in the taxpayer's return; indeed, they are usually facts not there disclosed. The Government rarely reveals the evidence upon which it proposes to base its charge; in fact, some Government attorneys seem at times zealous to preserve a degree of secrecy which will enable the Government to surprise the defendant at the trial of the case. Of course the Government has the burden of proving the crime beyond a reasonable doubt. But in assembling its proof the Government does not to any marked degree rely on representations made by the taxpayer's attorney; on the contrary, it specifically assumes the responsibility of gathering its own information. Under these circumstances the tax attorney owes the Government no duty beyond the obligation not to present what he knows to be untrue. His duty to his client is undivided and he need not disclose any information not to his client's advantage. This type of case may even present a duty to advise the client not to co-operate with the Government, but to place upon the Government the whole burden of investigation. Under the Fifth Amendment to the Constitution a fraudulent taxpayer cannot be compelled to be a "witness against himself."

Another question sometimes arising in the doubting minds of tax attorneys is whether they are free at all stages of a tax controversy to make legal arguments in which they do not sincerely believe. Should they discard arguments that do not persuade them and restrict their advocacy to the arguments they personally believe to be sound? Some will say that the question is academic because of the propensity of lawyers to achieve convictions on the side of any cause in which they are engaged. Brandeis once said that "the lawyer is not often harassed by this problem partly because he is apt to believe at the time in most of the cases he actually tries, and partly because he either abandons or settles a large number of cases he does not believe in." But this capacity for "self-sown sincerity" is not unlimited, and the question I raise needs an answer.

In its most acute form this question arises in criminal cases in which the lawyer is representing a client he knows to be guilty. But the same essential question may confront the tax lawyer representing a client who in the belief of the lawyer owes the tax asserted by the Government. The same question arises in a reduced degree when several arguments present themselves to the mind of the tax lawyer, some of which he believes to be good arguments and some of which are unconvincing to him. Should he cast aside the arguments which do not persuade him, and urge upon the Treasury and the courts only those in which he does believe?

The classical solution of this problem was suggested a long time ago by Dr. Johnson. Boswell asked Johnson what he thought of "supporting a cause which you know to be bad." Johnson answered:

> Sir, you do not know it to be good or bad till the Judge determines it. I have said that you are to state facts fairly; so that your thinking, or what you call knowing, a cause to be bad, must be from reasoning, must be from your supposing your arguments to be weak and inconclusive. But, Sir, that is not enough. An argument which does not convince yourself, may convince the Judge to whom you urge it: and if it does convince him, why, then, Sir, you are wrong, and he is right.

My answer would be to much the same effect. A tax lawyer's judgment may dictate that it would better serve his client not to present an argument which will do worse than fall flat by implying that he has no better argument. But ethics do not require him to discard any arguments. As I have indicated, once he has taken a case, the tax lawyer is obliged to present arguments even though they may contribute to tax avoidance or conflict with his own notions of what the law should be. Equally, he had better not cast away an argument just because it is not con-

vincing to him. That may be the very argument which would persuade the Government representative or a judge to decide the case in his favor. It is no objection to an argument that the lawyer has to put his tongue in his cheek when he presents it; "a lawyer is required to be disingenuous." Advocacy requires a certain capacity for insincerity. A tax lawyer need not believe in every argument he presents. In the first place, he may not know whether or not it is valid, or what he thinks he knows may be wrong; Omar Khayyám anticipated tax law when he observed: "a hair perhaps divides the False and True." In the second place, an advocate is engaged to dissemble, to pretend; the legal profession and our prevailing system of advocacy make a virtue of some capacities which may on other occasions be vices. The tax lawyer would be breaching his duty to his client if he indulged a sensitivity of conscience which has a higher place in other contexts than it has in a system of law which acts "under the impression that truth is best discovered by powerful statements on both sides of the question."

Representing Broader Interests

As I come to the end of this inconclusive discussion of the ethics of tax advocacy, I find myself wanting to be sure that the reader does not misunderstand my attitude upon one point. I have argued that a tax lawyer should be careful not to let his private notions of fiscal policy intrude into work for a client on a tax case except as his knowledge of policy considerations may help him the more intelligently to represent the client. But I do not want anyone to infer from this discussion that I object to participation by tax advisers in efforts looking to the improvement of tax law. I feel strongly to the contrary. To me it is one of the tragedies of the time that tax advisers do not use more generally for their Government, as well as for their clients, the special knowledge their education and experience have bestowed upon them. I think that they should use this knowledge actively, affirmatively, and even aggressively. The country most sorely needs the contribution they are so well qualified to make to the serious problems the Government faces at home because of its obligation to take a leading part in international affairs.

The tax adviser is not disqualified from activity on this front because he represents taxpayers. The shoe is on the other foot. The representation of taxpayers gives to tax advisers the experience that theory always needs if it is to ripen into maturity. It teaches them what will work in practice, as distinguished from what looks good on paper. It enriches the whole outlook of tax advisers, and makes their advice to their Government more realistic and dependable. It makes them all the more qualified to express a constructive opinion about what is wrong with tax law and what should be done to improve the tax system. On the other hand, it is necessary to be on guard against a tendency to assume that what is best for clients is best for the United States. Much representation of clients sometimes makes lawyers captives of their clients' opinions, and an analysis of many tax betterment proposals from tax lawyers quickly reveals that the lawyers are promoting the special interests of their clients. A tax lawyer needs to preserve an independence of outlook, unclouded by prejudices acquired from his clients. His clients do not always know what is good for them, and there is a sense in which what is good for the United States is good for clients.

No doubt some tax lawyers feel constrained to abstain from activities on behalf of a better tax system because they think that their clients may object. Clients have no right to object if the tax adviser handles their affairs competently and faithfully and independently of his private views as to tax policy. They buy his expert services, not his private opinions or his silence on issues that gravely affect the public interest.

I suspect that the thinking of some tax advisers exaggerates the objections clients have to activities on behalf of improvement in the tax system. It is true, as Adams once observed, that taxation is "a group contest in which powerful interests vigorously endeavor to rid themselves of present or proposed tax burdens," and that "class politics" is of its essence. But more and more in recent years there has developed in businessmen, and that wealthier segment of the population which furnishes tax clients, a realization of the need of more expert attention to the tax problems than can come from persons within the Government. It is one encouraging sign of the times that taxes have captured the interest of a wide public. Sometimes that interest expresses itself in pressure politics and propaganda, and attempts to advance the cause of the few at the expense of the many. But objectivity is also spreading its more wholesome influence. At least, it is no longer a mark of condemnation of a tax adviser that he serves his country on the tax front.*

NOTE

1. *The taxpayer's responsibilities.* If a taxpayer's adviser tells him that a receipt is excludable from gross income in the adviser's opinion, but that the question is debatable, does the taxpayer have an obligation to explain on his return that he has omitted the item? If he takes a debatable deduction, ought he to label it so that an overworked revenue agent, thumbing rapidly through a pile of returns, will stop short at his? Does the taxpayer in such a case have a heavier moral obligation if his taxable income is so small that his return will probably otherwise escape notice?

Are we our brother's keepers? Suppose a physician is asked by Mrs. Smith to bill her husband's corporation for services rendered to her. Is he entitled to assume that the corporation, on paying the bill, will charge the amount to Mr. Smith's salary or personal account rather than deduct it as a business expense? What if Mrs. Smith asks that the bill make no reference to the fact that she was the patient?

2. *Responsibilities of the government employee.* What are the responsibilities of the government employee in tax matters? May the taxpayer assistance unit, in advising taxpayers on the preparation of their returns, properly assume that the Internal Revenue Service's rulings are the final authority, or should the taxpayer be informed that a particular ruling has been disregarded by the courts though the Service continues to adhere to it? If reliable information received from one taxpayer establishes the right of another taxpayer to a tax allowance (e.g., the husband's right to a dependency exemption for children in his divorced wife's custody), is it proper for the government to deny the allowance, either administratively or in the courts, on the ground that the second taxpayer has not met his burden of proof? Are government attorneys bound by the canons of professional ethics? Can they rely conclusively on the orders of their superiors in tax matters? See 16 Bulletin of A.B.A. Section of Taxation 273-274 (1963).

3. *"Tax practice" as the practice of law.* If an accountant, in the course of preparing a tax return for a client, reads §74, the Regulations, and some cases in order to decide whether a sum of money should be reported as a taxable prize or excluded from gross income, has he engaged in the practice of law? What if he advises a client for whom he regularly performs accounting services that its taxes on the sale of property can be reduced by selling it on the installment plan, having first read some cases and rulings to resolve ambiguities in the language of §453? If this is permissible, would the result be different if the same services were performed for a client who came to an accounting firm solely for this advice, or if the firm had on its staff an attorney (or an accountant who had gone to law school but was not admitted to practice as an attorney) who concerned himself exclusively with such problems? See In re Bercu, 273 App. Div. 524, 78 N.Y.S.2d 209, affirmed without opinion, 299 N.Y. 728 (1948) (certified public accountant advised client on the proper year to deduct city taxes, after examination of cases and rulings; held, unauthorized practice of law):

* Mr. Paul suffered a heart attack and died while testifying in the public interest before the Joint Committee on the Economic Report. Warm tributes to his career may be found in the Congressional Record for February 6 and 7, 1956, pp. 1799-1801 and 1859-1860. — Ed.

We must either admit frankly that taxation is a hybrid of law and accounting and, as a matter of practical administration, permit accountants to practice tax law, or, also as a matter of practical administration, while allowing the accountant jurisdiction of incidental questions of law which may arise in connection with auditing books or preparing tax returns, deny him the right as a consultant to give legal advice. We are of the opinion that the latter alternative accords to the accountant all necessary and desirable latitude and that nothing less would accord to the public the protection that is necessary when it seeks legal advice.

Respondent is most persuasive when he challenges the consistency of recognizing an accountant's right to prepare income tax returns while denying him the right to give income tax advice. As respondent says, precisely the same question may at one time arise during the preparation of an income tax return and at another time serve as the subject of a request for advice by a client. The difference is that in the one case the accountant is dealing with a question of law which is only incidental to preparing a tax return and in the other case he is addressing himself to a question of law alone.

The preparation of an income tax return is not primarily a matter of law and generally and mainly is not a matter of law. It may usually be prepared by one having no legal knowledge, from instructions prepared for lay consumption, or by one having only incidental legal knowledge. A taxpayer should not be required, therefore, and is not required, to go to a lawyer to have a tax return prepared. It is a practical, reasonable and proper accommodation to business men and the accounting profession not only to permit accountants to prepare tax returns but to permit them, despite the risks involved, to assume jurisdiction of the incidental legal questions that may arise in connection with preparing tax returns. It is quite another thing to say that apart from preparing a tax return and from doing the accounting work in connection with the return, and accountant should be permitted as an independent consultant to pass upon specific questions which are questions of law, especially when the occasion for such consultation is apt to be, as it was in this case, a particularly knotty question of law. The distinction is altogether valid and desirable. The law here, as elsewhere, is a rational and practical adjustment of conflicting interests, objectively calculated to be of the greatest public benefit.

For a stricter approach, see Gardner v. Conway, 234 Minn. 468, 48 N.W.2d 788 (1951) (in preparing a tax return for a client, an accountant who described himself as an "income tax expert" and "tax consultant" advised on family partnership problem, use of joint return with common law spouse, etc.; held, accountant or other layman may not hold himself out as "tax consultant" or resolve "difficult or doubtful questions of the interpretation or application of statutes, administrative regulations and rulings, court decisions, or general law" even in preparation of a tax return); see also Anchin, Block & Anchin v. Pennsylvania Coal & Coke Corp., discussed in 3 J. Taxation 83 (1955) (another aspect of this litigation is reported at 134 N.Y.S.2d 737).

As to the custom in this area, see Bancroft v. Indemnity Insurance Co., 203 F. Supp. 49, 56 (W.D. La. 1962), holding that an insurance company was liable under an accountants' professional liability policy for loss caused to a taxpayer by bad advice (failure to take account of §304, supra page 659, in advising on the tax consequences of a sale of stock to a related corporation). In answer to the defendant insurance company's argument that the loss was not within the terms of the policy because the insured was pro tanto engaged in the unauthorized practice of law, the court said that it would take judicial notice "of the fact that in Monroe, Louisiana, as elsewhere, C.P.A.'s regularly render opinions and advise their clients on matters of federal and state income tax liability as a routine matter in performance of their professional duties," that lawyers frequently refer their clients to accountants for such advice, and that knowledge of "this almost universal practice" could be imputed to the defendant. Query: if an accountant's activity would otherwise constitute the unauthorized practice of law, is it excused by the fact that the client is referred to the accountant by his attorney, or by the fact that the services are rendered by the accountant to the attorney?

There have been a number of negotiations between the American Bar Association and

the American Institute of Certified Public Accountants in an effort to avoid or resolve attorney-accountant conflicts in this area, and these groups have created a National Conference of Lawyers and Certified Public Accountants which issued a Joint Statement of Principles in 1951. 37 A.B.A.J. 517 (1951). What is, or should be, the relation between this National Conference and non-certified accountants and others who seek to prepare tax returns, advise clients, or perform similar services for a fee?

4. *Treasury enrollment.* Persons who wish to practice before the Treasury Department (e.g., representing taxpayers in disputes with revenue agents or before the Appellate Division) must be enrolled under Treasury Department Circular 230, discussed by Paul, supra page 976. A "Treasury card" is issued to an attorney or certified public accountant upon a showing that he is in good professional standing in his state; other persons must pass a written examination. Treasury Circular 230 provides that practice before the Treasury Department "shall be deemed to comprehend all matters connected with the presentation of a client's interest," and that an enrolled agent shall have the same rights as an enrolled attorney:

> Provided, That an enrolled agent shall not have the privilege of drafting or preparing any written instrument by which title to real or personal property may be conveyed or transferred for the purpose of affecting Federal taxes, nor shall such enrolled agent advise a client as to the legal sufficiency of such an instrument or its legal effect upon the Federal taxes of such client: And provided further, That nothing in the regulations in this part shall be construed as authorizing persons not members of the bar to practice law.

Does this proviso bow entirely to local law concepts on the unauthorized practice of law, or is it a springboard for creating a federal standard? In Agran v. Shapiro, 127 Cal. App. 2d 807, 273 P.2d 619 (1954), a certified public accountant sued a client to collect a fee for representing him in negotiations with a revenue agent on his right to a net operating loss, the services including five days' research in the county law library. Following Gardner v. Conway, supra, the court held that the accountant's activities constituted the unauthorized practice of law, and said that the proviso of Treasury Circular 230 quoted above "could only have been intended as a disavowal of any intent upon the part of the Secretary of the Treasury to confer authority upon enrolled agents, not members of the bar, to perform acts upon behalf of others in connection with matters before the department which would otherwise constitute the practice of law." A further opinion in Agran v. Shapiro, on remand to the trial court, is reprinted in 3 J. Taxation 80 (1955).

In 1956, prompted by varying judicial interpretations of Circular 230, the Secretary of the Treasury issued a statement which asserted that enrolled persons, "whether agents or attorneys, have been satisfactorily fully representing clients before the Department for many years" and that "there presently appears no reason why the present scope and type of practice should not continue as it has in the past." As to the "second proviso" of Circular 230, quoted above, he said:

> It is not the intention of the Department that this second proviso should be interpreted as an election by the Department not to exercise fully its responsibility to determine the proper scope of practice by enrolled agents and attorneys before the Department. It should be equally clear that the Department does not have the responsibility nor the authority to regulate the professional activities of lawyers and accountants beyond the scope of their practice before the Department as defined in §10.2(b) and nothing in Circular 230 is so intended.

On the power of Congress to pre-empt the field of standards for practice before a federal agency, see Sperry v. Florida, 373 U.S. 379 (1963) (Patent Office's licensure procedures for patent agents preclude state requirement of admission to bar). In this case, the Supreme Court noted a "divergence in opinion" between Noble v. Hunt, 95 Ga. App. 804, 99 S.E.2d 345 (1957) (C.P.A. may recover fee for services in representing plaintiff in fraud matter before Treasury Department and Tax Court), on the one hand, and In re Kearney, 63 So.2d 630 (Fla. 1950) (attorney may not practice in Florida as "federal tax counsel" before Tax Court and Treasury Department without being admitted to state bar), and Agran v. Shapiro, supra, on the other.

Treasury Circular 230 exempts from enrollment certain persons, including the taxpayer himself, his full-time employees, officers of a corporation, members of the taxpayer's immediate family if serving without compensation, and trustees acting for their trusts. In 1959, exemption was extended for a person who prepared a return for the taxpayer, but only with respect to tax liability for the taxable year covered by the return, and only before revenue agents (other than conferees) of the Audit Division of the District Director's office.

5. *Practice before the Tax Court.* A "Treasury card" does not permit the holder to practice before the Tax Court, which has its own rules for admission to practice. Section 7452 provides that no "qualified person shall be denied admission to practice before the Tax Court because of his failure to be a member of any profession or calling," but persons who are not attorneys must take a written examination as a condition to admission. An announcement by the court states that the examination tests the applicant's ability to prepare "pleadings, motions, briefs, etc.," and his knowledge of legal ethics and of judicial interpretations of the Internal Revenue Code, and it has been described by Chief Judge Tietjens of the Tax Court as "a limited, or specialized bar examination." According to Judge Tietjens, "those who pass it and otherwise demonstrate acceptable qualifications are enrolled, in a sense, as lawyers with a practice limited to this Court." 1962 Annual Reports of A.B.A. 342. Rule 2 requires all practitioners before the Tax Court to carry on their practice "in accordance with the letter and spirit of the canons of professional ethics as adopted by the American Bar Association."

6. *Tax practice as a specialized calling.* Would it be desirable to recognize "tax practice" as a specialized or independent calling, to establish a training and examination procedure, and to permit attorneys and certified public accountants (or others) to hold themselves out as "tax practitioners" or "tax specialists" after meeting these special requirements? Arguing that the *Bercu* approach (supra) "merely eliminates one group — which includes many competent practitioners and some incompetent — and permits the vacuum to be filled by another — which also includes many competent practitioners and some incompetent," a commentator has proposed a Treasury enrollment procedure requiring lawyers to demonstrate enough knowledge of accounting "to act intelligently in tax matters" and accountants to demonstrate a parallel understanding of legal materials and procedures. Rembar, The Practice of Taxes, 54 Colum. L. Rev. 338 (1954). Although the House of Delegates of the American Bar Association has approved in principle the establishment of a procedure entitling lawyers to recognition as specialists in particular fields, a special committee of the A.B.A.'s Section of Taxation has expressed "serious misgivings as to whether it is possible to establish a basis of certification of special tax proficiency that would be meaningful to other lawyers, and not misleading to laymen, unless the standards were set sufficiently high so that, as a practical matter, most lawyers in the active practice in the field of taxation would be unlikely to qualify." 1962 Program and Committee Reports, A.B.A. Section of Taxation 9.

PART II

Federal Estate and Gift Taxation

Introduction

The taxes that are the subject of Part II are not important sources of government revenue. The Federal Government has collected $40 to $100 billion in taxes annually since World War II; of this amount, estate and gift taxes have yielded only between $0.5 to $2.0 billion a year. With heavy commitments for arms and foreign aid in prospect for some time to come, total tax levies are not likely to be greatly reduced. But estate and gift taxes will continue to produce only a modest part of the total, and any future increases in total collections are likely to be accompanied by a decrease in the relative contribution of the estate and gift taxes. The revenue from these taxes is dwarfed not only by the enormous yields from the taxation of personal and corporate income; it is meager even by comparison with the federal taxes on alcohol and tobacco. Before World War II, estate and gift taxes contributed a larger share of total federal tax revenue than they have since, their proportion during the fiscal period 1935-1941 being about 7 per cent of the total. But during that period, total federal tax collections averaged only $5 billion per year — a low level, which, unhappily, is not likely ever to be approached again.

Raising the rates would increase the yield of the federal estate and gift taxes, but no foreseeable increase would convert them into serious competitors of the federal income tax. In fact, even if a draconic Congress were to transmute the federal estate tax into an escheat measure, taking 100 per cent of the net estate, its yield would still be only a small part of total tax revenues. Estate tax returns filed in 1961, for example, reported net estates (gross estates less allowable deductions for funeral and administration expenses, debts, charitable bequests, and so on) aggregating $9.6 billion. Outright confiscation of these estates, then, would have produced — along with a group of new Congressmen, no doubt — only about 12 per cent of total federal expenditures for that year. If the present exemption of $60,000 per estate had been allowed by the hypothetical Congress, the yield would have been reduced to about $6 billion. In the same year, federal income and excess profits taxes produced about $62 billion in revenue, and the federal taxes on alcohol and tobacco a total of more than $5.1 billion. It is not surprising, then, that when cold and hot wars have created a need for more billions in government revenue in recent years, Congress has raised these funds by increasing the income tax rates, rather than by changing the estate and gift tax schedules.

State governments, too, have looked elsewhere than to death and gift taxes to satisfy the need for funds. During the fiscal year 1962, for example, death and gift taxes produced for the states only about $0.5 billion out of about $20.6 billion

in tax collections, or about 2.5 per cent of the total; in only two states (Connecticut and New Hampshire) did the yield from these taxes represent 5 per cent or more of total collections. Their yield was relatively somewhat more important before World War II, but even then they ranked much behind collections from state taxes on retail sales, gasoline, tobacco, alcoholic beverages, and motor vehicles.

The raising of revenue, of course, is not the only function of taxation. Indeed, some taxes are not expected to produce any revenue; if the Treasury reported a sharp increase in the yields from the taxes on adulterated and renovated butter, filled cheese, firearms, or narcotics, Congress would not applaud but rather would start an investigation.

Unconstrained by a conception of taxation for revenue only, contemporary economists have stressed the contribution that taxes may make toward stabilizing the national economy.

In this view, tax policy may be a counter-cyclical weapon, deliberately employed to combat manic-depressive fluctuations of the business cycle. Thus when inflation threatens, taxation can be used to sop up excess consumer purchasing power, to discourage investment, or to encourage savings. By reducing the demand for goods and services, such tax collections would serve to moderate or prevent inflation of the price level. When unemployment develops, on the other hand, taxes can be reduced to encourage spending, thus increasing the demand for goods and services and putting men and machines back into production. The federal personal income tax is suited to these tasks, it is asserted, because the progressive rate schedule acts to increase rapidly the financial pressure on the taxpayer during a "boom," while it works equally rapidly to diminish that pressure during a recession. This characteristic has been termed "cycle-sensitivity" or, because the tax responds automatically to changes in income (without even a change in the prescribed rates), "built-in flexibility."

Just as estate and gift taxes lag far behind the income tax in the power to raise revenue, so they are far less promising as counter-cyclical instruments. To be sure, decedents' estates vary in value with changes in the price level, and therefore the progressive federal estate tax possesses a degree of "built-in flexibility." If gifts are larger during "booms," as seems likely, the gift tax yields should rise and fall with the business cycle. But the impact of gifts and inheritance on the nation's total pattern of consumption, saving, and investment cannot be great; the force that carries the threat of price inflation during full employment is the generally increased national income, not the fact that the wealth of a few persons may have been augmented to some extent by gift or inheritance. The personal income tax, with stepped-up rates if necessary, can accomplish infinitely more in the way of checking inflation than even a confiscatory estate tax.

Whatever slight counter-cyclical pressure the estate tax might exert would not be felt promptly (as in the case of an income tax withheld at the source, for example), but rather would follow sluggishly, because of an almost inevitable delay in computing and collecting the tax. Moreover, abrupt alteration of the estate tax rates discriminates unfairly among taxpayers, since the tax liability falls according to the accident of the date of death. To be sure, sharp changes in income tax rates penalize those taxpayers whose earning patterns happen to be abnormal, but these inequities are proportionately less serious than in the case of the estate tax. The incomes of most taxpayers rise and fall with the business cycle, but inheritance — if it comes at all — is likely to come only once or twice in a lifetime. An increase in the gift tax rate, on the other hand, would lose much of its effectiveness if taxpayers postponed the making of gifts in anticipation of a rate re-

duction in a downswing of the business cycle. Although an increase in income tax rates can also be vitiated to some extent by postponing or accelerating certain transactions, the danger is not as great because taxpayers generally have less control over income items than over donative transfers. It is not surprising, then, that economists have not regarded estate and gift taxes as helpful tools for stabilizing the economy at a high level of employment and production.[1]

What then is the function of these taxes, which neither raise substantial amounts of revenue nor serve to stabilize the nation's economy? The answer may be found in the history of estate and gift taxation, for the proponents of these taxes have not sought to conceal their aims.

In a 1906 message to Congress, advocating a progressive inheritance tax, President Theodore Roosevelt said:

> . . . [T]he prime object should be to put a constantly increasing burden on the inheritance of those swollen fortunes which it is certainly of no benefit to this country to perpetuate.[2]

A little earlier, in a speech on laying the cornerstone of the House of Representatives office building, he had been a bit more detailed:

> . . . I feel that we shall ultimately have to consider the adoption of some such scheme as that of a progressive tax on all fortunes, beyond a certain amount, either given in life or devised or bequeathed upon death to any individual — a tax so framed as to put it out of the power of the owner of one of these enormous fortunes to hand on more than a certain amount to any one individual; the tax, of course, to be imposed by the National and not the State Government. Such taxation should, of course, be aimed merely at the inheritance or transmission in their entirety of those fortunes swollen beyond all healthy limits.[3]

The suggestion was greeted with enthusiasm by the liberal and radical press, and with dismay and predictions of doom by more conservative commentators. Somewhat earlier, Andrew Carnegie had announced his support of increased inheritance taxation in a magazine article that attracted widespread attention, including a cordial compliment from John D. Rockefeller. Carnegie said:

> The growing disposition to tax more and more heavily large estates left at death is a cheering indication of the growth of a salutary change in public opinion. The State of Pennsylvania now takes — subject to some exceptions — one tenth of the property left by its citizens. The budget presented in the British Parliament the other day proposes to increase the death duties; and, most significant of all, the new tax is to be a graduated one. Of all forms of taxation this seems the wisest. Men who continue hoarding great sums all their lives, the proper use of which for public ends would work good to the community from which it chiefly came, should be made to feel that the community, in the form of the State, cannot thus be deprived of its proper share. By taxing estates heavily at death the State marks its condemnation of the selfish millionaire's unworthy life.
>
> It is desirable that nations should go much further in this direction. Indeed, it is difficult to set bounds to the share of a rich man's estate which should go at his death to the public through the agency of the State, and by all means such taxes should be

graduated, beginning at nothing upon moderate sums to dependents, and increasing rapidly as the amounts swell, until of the millionaire's hoard, as of Shylock's, at least

The other half
Comes to the privy coffer of the State.

This policy would work powerfully to induce the rich man to attend to the administration of wealth during his life, which is the end that society should always have in view, as being by far the most fruitful for the people. Nor need it be feared that this policy would sap the root of enterprise and render men less anxious to accumulate, for, to the class whose ambition it is to leave great fortunes and be talked about after their death, it will attract even more attention, and, indeed, be a somewhat nobler ambition, to have enormous sums paid over to the State from their fortunes.[4]

Although these statements of Roosevelt and Carnegie, like subsequent defenses of our existing estate and gift taxes, were undoubtedly a response to the "robber baron" era of American history, they did not sound a wholly new note. Throughout the nineteenth century death taxation had been advocated primarily as an instrument for the equalization of wealth. Indeed, Jeremy Bentham had used the very phrase "equalization of fortunes"[5] and John Stuart Mill had suggested "as a possible mode of restraining the accumulation of large fortunes in the hands of those who have not earned them by exertion, a limitation of the amount which any one person should be permitted to acquire by gift, bequest, or inheritance."[6] This drive toward equalization has drawn its strength from several sources: a moralistic abhorrence of idleness or profligacy, thought to be a result of unearned wealth; the belief that the economic well-being of the community requires that all its members earn their own livings; and an ethical insistence upon equality of opportunity. No doubt these sources, and others, have contributed in different degrees to the views of individual supporters of gift and estate taxation.

Although the history of the relationship of democratic thinking to the institution of inheritance is still to be written, one may surmise that much of the popular support for death taxes in our country has stemmed from the "democratic dogma," no doubt with a strong tinge of puritanical disapproval of idleness. The burgeoning of state inheritance taxes in the eighties and nineties of the last century must have been an offshoot of agrarian and labor unrest, and, though the present federal estate tax was adopted in 1916 under the pressure of war, its roots and later history are both bound up with the democratic dream of equal opportunity for all. Even before the freedom to *amass* a fortune was challenged by the income tax, there were doubts whether such a fortune should be *passed along* intact to those who had not earned it. American fiction has often glorified the poor boy who became the head of an enterprise by marrying the boss's daughter, but there is no record of similar enthusiasm for the boss's son who took his father's place by inheritance.

Theorists have developed a number of other defenses of inheritance taxation. It has been suggested, for example, that the death tax is an appropriate toll charged by the state for use of the probate machinery and for other services in facilitating the transfer of private property at death. Others have argued that the state is collecting a belated fee for protecting the property during the decedent's lifetime or, more cynically, that it is levying a kind of penalty for any tax evasion that the decedent may have indulged in during life. Still others assert that inheritance comes as a windfall; therefore the tax imposes no sacrifice on the heirs,

6 Principles of Political Economy, Book V, c. II, §3.

and they have an ability to pay that justifies the levy. One of the most influential of American authorities on public finance, E. R. A. Seligman, based his own support of the inheritance tax on arguments like these, rejecting the equalization of wealth theory as "very distinctly socialistic."[7] But it is hard to escape the conclusion that today's gift and estate taxes rest squarely on equalitarian foundations, to which these other theories are little more than decorative buttresses. Consequently one's attitude toward the tax is probably governed by the degree to which one wishes to see inequality of inheritance reduced. It is worth noting that for social and economic reasons some may favor equalization of *inherited* wealth without objecting to the same extent, if at all, to fortunes achieved by the personal effort of their owners.

Only an examination of the Treasury's files would disclose the extent to which estate and gift taxes have succeeded in their purpose of breaking up great family fortunes. Only since 1932 could important results have been achieved in this direction; before then, a net estate of $5 million, for example, would have been subjected to a federal tax of only about $500,000.[8] Between 1932 and 1950, as a result of several increases in rates, the tax on an estate of that size moved upward from a little more than $1 million to about $2 million.[9] The top tax bracket, reached by estates that exceed $10 million, has been 77 per cent since 1941. There have been examples since then of enormous estates that were really hard hit by death taxes. The $19.5 million estate of Robert W. Goelet was reduced to a net of less than $3 million by federal taxes of $11.5 million, state taxes of $4 million, and administration expenses of $1 million.[10] The estate of Mrs. Andrew Carnegie fared somewhat better, the federal and state tax bill being a little more than $11.5 million on an estate of $20.5 million of which $2.5 million was left to charity.[11] After the charitable legacies and taxes were paid, $6.5 million was left for the private beneficiaries.

In the case of the largest estates, the tax burden is often kept within manageable limits only by substantial bequests to non-profit family foundations or other institutions. The Edsel Ford estate paid nearly $25 million in federal estate taxes, but the figure would have been vastly larger if the Ford Foundation had not received all the decedent's nonvoting stock in the Ford Motor Company.[12] Henry Ford's estate, variously estimated at $70,000,000 to $500,000,000[13] would also have gone primarily to the federal government had it not been for his huge bequest to the Ford Foundation. Of course, since the tax rate does not reach 100 per cent, such charitable transfers do not come entirely out the Treasury's share of the estate. Even in the largest estates, nearly 25 per cent of the charitable contribution is taken from the decedent's other beneficiaries. But a charitable transfer may enable the individual heirs to retain control of the family fortune, either when nonvoting stock is transferred to the foundation or, if the foundation is in

---

7 In 1943 the Soviet Union, which had reinstated the institution of inheritance after its initial abolition, repealed its heavy inheritance tax altogether. Gsovski, Soviet Law of Inheritance: I, 45 Mich. L. Rev. 291, 299 (1945). Among American states, only Nevada shares this distinction. Nev. Const., Art. X, §1.

8 The taxes paid in the early twenties by a group of large estates are reported in 37 Trust Companies 242 (1923); see Myers, The Ending of Hereditary American Fortunes (J. Messner, Inc., 1939) 276-290, 302-303, 327-332, 343, 356, 361.

9 State taxes (to the extent that they exceed the credit for state death taxes, see page 1325 infra) would impose an additional burden in most cases, but they would not ordinarily approach the federal tax in magnitude.

10 New York Times, August 18, 1950, page 7, col. 6.

11 Id., September 22, 1948, page 36, col. 6.

12 Id., September 28, 1947, page 24, col. 1.

13 Id., April 19, 1947, page 1, col. 4; October 29, 1948, page 22, col. 6.

friendly hands, even when voting stock is transferred to it.[14] On the other hand, if the entire estate had been left to the individual heirs, a sale to raise cash to meet the necessarily larger tax liability might have either created an unknown and potentially troublesome minority stockholding group[15] or terminated the family's control altogether. One need not deny the strength of the humanitarian impulse to suggest that charity is rewarded in these cases. Indeed, with stratospheric estates there may be no practicable alternative to becoming a benefactor of mankind.

The table below, compiled from Treasury reports, presents a composite view of the federal tax liabilities reported by certain large estates during 1959. It will be noted that the effective federal estate tax rate was 25 per cent on net estates of $1 to $2 million and 43 per cent on net estates of $5 million and over. Because the state tax liability is not reported, the total tax burden cannot be computed, but the credits taken for state death taxes under §2011 (supra note 9) disclose that these state taxes were not less than the amounts set out in lines 8 and 9 of the table.

TAXATION OF CERTAIN LARGE ESTATES[16]

(Returns filed in 1959)

In millions of dollars

	Gross Estates	
	$1-2 million	*$5 million and over*
1. Number of estates	759	84
2. Gross estate (aggregate)	$1038	$865
3. Charitable deductions (aggregate)	$ 60	$207
4. Other deductions (aggregate)	$ 265	$220
5. Net estate before exemption (aggregate)	$ 712	$438
6. Total federal estate tax (aggregate)	$ 189	$190
7. Effective federal estate tax rate (line 6 divided by line 5)	25%	43%
8. State death taxes	$25 or more	$40 or more
9. Effective state death tax rate (line 8 divided by line 5)	3.5% or more	9.1% or more

In estimating the extent to which moneyed dynasties are dying out under today's tax structure, it must be remembered that inter vivos gifts may escape the estate tax altogether. The federal gift tax rate is only three-quarters of the estate tax rate, so a sizeable fortune may be transferred at a comparatively modest tax

---

14 The House version of the Revenue Act of 1950 would have denied the charitable deduction when the contributor or his family had control of the foundation to which shares of a family corporation were transferred. The provision was eliminated by the Senate. See Senate Finance Committee, S. Rept. No. 2375, 81st Cong., 2d Sess., pages 38-39.

15 In the case of the Ford Motor Company, a successful suit by a minority stockholder led to Henry Ford's purchase in 1919 of all minority interests. See Dodge v. Ford Motor Co., 204 Mich. 459, 170 N.W. 668 (1919); Couzens v. Commissioner, supra page 919; Swards, The Legend of Henry Ford (1948) 64-74.

In 1956, the Ford Foundation sold part of its holdings in the Ford Motor Company, and these shares were given voting rights before the sale.

16 Compiled from Treasury Department, Statistics of Income. The information is taken from returns filed by citizens and resident aliens during the calendar year 1959, irrespective of date of death, and does not reflect corrections resulting from the Internal Revenue Service's audit of the returns. One other matter of importance is that the "net estate before exemption," upon which the tax rate is here computed, does not include several items of economic value to the heirs, e.g. tax-exempt life insurance. From the point of view of the heirs who receive such items, the effective tax rate is lower than the table indicates.

cost. A lifetime gift of $2.5 million, for example, would entail a gift tax liability of about $750,000 if made by a single person or about $635,000 if made by a married person. With large gifts, especially by persons of advanced age, there is always the possibility that the transfer will have to be treated as a gift "in contemplation of death," subject not merely to the lenient gift tax but to the estate tax as well. But the Revenue Act of 1950 mitigated this peril by restricting the "contemplation-of-death" clause of the estate tax law to transfers occurring within three years of the donor's death (§2035(b)). If this stimulates gifts by the rich, the effectiveness of the estate tax will be reduced pro tanto.

Moreover, in gauging the effectiveness of the estate and gift taxes it must be noted that they are no longer attuned primarily to the great hereditary fortunes that gave rise to the enactment of the federal estate tax in 1916. Much more modest transfers have been brought within their ambit by subsequent changes in the law. Congress has become more sensitive to economic inequality; an estate of $100,000 is considered a fair target for a certain amount of social leveling, although there is no clear and present danger that inheritances of this amount will create a class of industrial lords and aristocratic idlers.

If estate and gift taxes have not yet fulfilled all the hopes of their supporters, they have also fallen short of confirming the fears of their opponents. Enthusiasm for making money may be dampened by knowledge that the government will ultimately be an uninvited heir; on the other hand, there is the tantalizing possibility that the businessman now works harder to insure that his chosen heirs will receive a competence after taxes. Similarly, the possibility that business risks will be avoided and investment channeled into placid backwaters because of the tax may be countered by the possibility that greater risks will be undertaken because only thus can substantial sums be accumulated for the heirs. No conclusion as to the effects of estate and gift taxation on incentives can be more than a guess.

If we assume for the moment that the businessman's pursuit of gain is neither slackened because the prize no longer attracts him, nor spurred on by a desire to win a greater prize, what is the consequence of a death tax? Adam Smith formulated a classic view of the incidence of death taxes: "Taxes upon the transference of property from the dead to the living fall finally as well as immediately upon the person to whom the property is transferred." [17] Notwithstanding a certain looseness of language, which at times leads us to speak of a tax "on" the deceased, it is obvious that it is the living heirs, not the decedent, who bear the brunt of an inheritance or estate tax. And the heir — unlike the unionized wage earner whose income tax has been increased — can do little or nothing to shift the burden of the tax along to others in order to recoup the portion of his legacy to which the government has helped itself. He cannot ask a higher price for his own goods or services, because he is in competition with others who, not having suffered as he, are not impelled to raise their prices. He may work more diligently, but though this would increase the amount of work done in the world, thus fulfilling one of the announced aims of death taxation, it would not shift the "incidence" of the tax to others.[18]

What of the decedent: Could he during his life have shifted the tax by anticipation, so to speak? If the tax was established immediately before his death, and he did not foresee its enactment, he could have done nothing to prevent the tax

[17] Wealth of Nations, Book V, c. 2, Part II, Appendix to Article I and II.

[18] This is not to say that the tax will have no effect on prices. By reducing the heir's demand for goods and services below the level which would have prevailed in the absence of a tax, it will tend to reduce the level of prices. The heir may be a beneficiary of this deflation, though of course it will be dispersed throughout the economy. It will also be counteracted to some extent if government spending increases because of the tax's yield.

from falling, as Smith said, "finally as well as immediately" upon his heirs. But if he anticipated the tax at an earlier date, he might have adjusted to it in various ways. One adjustment is not really an example of shifting but of avoidance: He might have made lifetime gifts, taking advantage of the gift tax's exemptions and lower rates. Or, as suggested earlier, he might have worked harder to build up an estate, after taxes, equal to what he would have aimed for had there been no tax.

Could he, however, without additional work, have passed the anticipated tax along by increasing the price at which he sold his goods or services? The classical economist would say that higher prices are feasible only when the marginal costs of producing identical goods or services have gone up. Since by definition the marginal producer is making no profit, presumably he is not troubled about a future estate tax. Hence he will not regard the tax as a cost of doing business and will neither raise his prices nor be forced out of business by his failure to do so. Therefore, runs this analysis, the fortune-builder whose behavior we are examining cannot raise *his* prices without losing his customers to the marginal firm. Critics of this theory have pointed out that even a tax that is not a direct cost of production will have an impact on the producer's profit expectations. If the tax leads him to decide that the reward no longer justifies the risk, he may reduce the scale of his operations or leave the industry altogether. Such action in turn would affect the supply of goods and thus influence prices. Although the estate tax may exert pressure on the level of prices in this way, however, the fortune-builder himself will not have succeeded in shifting the tax in the sense of recouping it from others.
